And then there was the time when the Duke of Kent used the Clark's swimming pool in Victoria, British Columbia, and asked for 12 towels for him and his party and a pair of slippers for his personal use. But she explains that they were fresh out of towels because somehow all of their supply had been sent to the laundry and they had overlooked keeping a few for spare use, as they usually did. But not in the least dismayed, Mrs. Clark appealed to a young bride living next door who considered it a great privilege to furnish their sole and only dozen towels and her husband's only pair of slippers for the personal use of the Duke.

> After the swimming party—

Mrs. Clark relates—

> the dear little bride decided to keep as souvenirs for herself, her heirs, and assigns forever the things that the Duke of Kent had so graciously condescended to borrow. And so both families had to do without towels until our regular supply came back from the laundry a week later, and the bridegroom without his sandals—permanently.

But Foreign Service also had its ordeals for the Clarks.

There was the assassination of King Alexander of Yugoslavia.

If my memory of the incident serves me well, the King was traveling to France by sea. Upon reaching Marseilles, as I recall, he was warned that inadequate security measures had been taken for his own protection but he paid no particular attention to those admonitions. Instead, choosing what was considered to be proper conduct and ceremony in a friendly country, over personal safety, the King dressed in an admiral's uniform and was an easy target for the assassin's bullet.

In any event, Mrs. Clark vividly remembers that the assassination of King Alexander caused considerable political reverberations in Europe and great stress and strain on consular officers in Belgrade, where the Clarks were stationed at the time.

But their most harrowing experience occurred during one of the worst storms of the century which hit the Caribbean while they were stationed in Santo Domingo in 1930. There was no official record of the velocity of the wind because the anamometer broke when it reached 200 miles per hour. The hurricane raged for 9 hours, leaving in its wake thousands of people dead and tens of thousands homeless; with no electricity, no means of communication, no water and no food and with stark disease and pestilence staring the survivors in the face. In the great task of rehabilitating the area Mrs. Clark did much to assist her husband who took a leading part in this grim program.

Mrs. Clark recalls:

> We lost everything we had, furniture, fixtures, books, papers, personal belongings; literally everything we owned except the clothes on our backs, even the shoes off my feet.
>
> And to add to our worries, our newborn baby, Reed Paige, became desperately ill. But the Lord was good to us. Look at him today, happily married, with a lovely wife and two healthy children.

Yes, and a fine young gentleman, this Reed Paige. Following the family tradition of Government career service, he has been employed for quite some time by the Passport Division in the Department of State.

Mr. Clark retired on April 3, 1943, and died on September 5, 1958, but Mrs. Clark still maintains membership in the University Club of Washington, of which her husband was a charter member under William Howard Taft who served as first president of the club and later became the 27th President of the United States.

She is an active member of Dacor House: Diplomatic and Consular Officers' Club, where Mrs. Willis and I frequently play bridge with her and a host of her friends.

And Mrs. Clark always finds time to participate as an interested and interesting member of the Democratic Club.

Just last week Mrs. Willis inquired, "Jeanne, whatever made you come to Washington back in 1918, 45 years ago?"

> Well—

She replied—

> this was during World War I and I was teaching school. Your husband, Ed, should know because I taught him.
>
> I had deep admiration for President Woodrow Wilson; he had such great talent and capacity for leadership. He had been expounding his 14-point program and to tell you the truth I really believe he was the one who attracted me to the Capital City. As a matter of fact, I think if the great powers on earth at the time and especially the people of this country had listened to him and followed his advice concerning the formation of a meaningful League of Nations we would be living in a better world today. But that is history now and I can only say that these 45 years have gone by very swiftly and I have never had any cause to regret one moment of my work.

Regret indeed. On the contrary, Mrs. Clark has every reason to rejoice over every minute of her fruitful work and activities during the past 45 years.

Mr. Speaker, it is comforting to me personally to know that this remarkable lady from my hometown of St. Martinville, La., is playing at least some part in the total effort connected with our national defense and security. I wish we had more Jeanne Bertrand Clarks in Government and I pray that her contribution to that great endeavor may continue to be blessed with successful accomplishment.

Mr. WILLIS. Mr. Speaker, I ask unanimous consent that the gentleman from Louisiana [Mr. Boggs] may extend his remarks at this point in the Record.

The **SPEAKER** pro tempore. Is there objection to the request of the gentleman from Louisiana?

There was no objection.

Mr. BOGGS. Mr. Speaker, I want to commend my good friend and colleague from Louisiana for bringing to the attention of the House the distinguished service which Mrs. Clark has been rendering to our Government for many years.

It has been my good fortune to know Mrs. Clark quite some time. Mrs. Boggs and I have had the pleasure of meeting her on many occasions, including functions at the Democratic Club, and always enjoy her interesting conversation and ready wit.

Mrs. Clark is a competent and faithful Government employee and I join her own Congressman from the Third Congressional District in paying a deserved tribute to one of the outstanding citizens of his hometown of St. Martinville.

Mr. WILLIS. Mr. Speaker, I ask unanimous consent that the gentleman from Louisiana [Mr. Hébert] may extend his remarks at this point in the Record.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Louisiana?

There was no objection.

Mr. HÉBERT. Mr. Speaker, I first became acquainted with Mrs. Clark when my close and personal friends, ED WILLIS and his good wife, Estelle, came to Washington some 15 years ago. The three of them together have been guests at my home in Virginia a number of times and we always look forward to their visits.

Mrs. Clark is a lady of culture and refinement and ED WILLIS has every reason to be proud of her devotion to duty and her attainments over her long years of Government employment.

Mr. WILLIS. Mr. Speaker, I ask unanimous consent that the gentleman from Louisiana [Mr. THOMPSON] may extend his remarks at this point in the RECORD.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Louisiana?

There was no objection.

Mr. THOMPSON of Louisiana. Mr. Speaker, I want to associate myself with everything that the gentleman from Louisiana, ED WILLIS, has said about Jeanne Bertrand Clark. In fact, I am proud to regard myself as one of Jeanne's personal friends.

Mrs. Thompson and I have had the good fortune to dine at Mrs. Clark's on a number of occasions and both the delicious French dishes and conversation are something to remember.

Mrs. Clark is highly intelligent and full of good, practical sense. I, too, would feel better if we had more like her in Government.

MUTUAL SECURITY BILL

Mr. HARSHA. Mr. Speaker, I ask unanimous consent that the gentleman from New York [Mr. BARRY] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. BARRY. Mr. Speaker, each year the printed matter attendant on the mutual security bill is voluminous, so much so that it is impossible for most Members of Congress to read, let alone digest a good portion of this considerable reading matter. Even those officials who—it has been reliably reported or at least we hope it "managed" to be reliable—have sought remedy and solace in speed reading courses would find the task impossible. As a result much of this matter falls unread into the convenient Washington depository—the wastebasket.

Therefore in the dutiful exercise of their responsibilities it has become necessary for Members who cannot conceivably find time to read all this to search elsewhere for information. Some avail themselves of writings in newspapers, newsmagazines and other reflective, but succinct commentaries which assist in informing them of divergent viewpoints surrounding the foreign-aid program. Over the years as experience added to our knowledge, the assessment of these programs has shifted and changed. This year is no exception especially with the publication of the Clay report and with the administration's subsequent recommendations now before the Congress. Therefore, I recommend as helpful to my colleagues three short, yet informative columns by distinguished and knowledgeable Americans.

The views of our foreign-aid program explored in these articles crystallize the spectrum of opinion prevailing in Congress as well as the Nation. In my judgment these articles define the conflicting views which the House will be asked to resolve in the mutual security debate which will ensue in the weeks ahead. Mr. Speaker, I ask unanimous consent then that the articles appear in the RECORD at this point. Following are the columns which appeared in the Los Angeles Times on March 31, 1963, by the Honorable Barry Goldwater, U.S. Senator from Arizona; Walter Lippmann, Washington Post columnist; and Nick B. Williams, editor, of the Los Angeles Times.

[From the Los Angeles Times]

THE U.S. MESSAGE MUST INCLUDE HOPE, RESPECT

(By Nick B. Williams)

Any American who is concerned about the trend of the cold war with the Communist nations—and I think most Americans are concerned since Cuba—ought also to be concerned about the appeal of our individualistic system to the peoples of Asia, Africa, South and Central America, and much of Europe.

The Communists are selling one ideology and we are selling another that is philosophically opposed to it. In such a competition, meaning so much to us, we ought to concentrate our basic thinking on what is right and what is wrong with the cause we espouse—why others are converted to it, or reject it.

In concentrating on this, we ought to try hardest to examine our message not as it sounds to us, but as it must sound to those we seek to convert.

We have got to understand why, for example, communism appeals so strongly to some of the South American people despite our own much more tangible attempts to reinforce their economies.

A major argument currently being made within the United States against the continuance of much of our foreign aid program contends that men do not become Communists because they are poor—and hence the cure for communism is not to be found in raising the level of an infected nation's economy. I am beginning to believe there is a good deal of validity in this argument. Certainly the minor increases that we usually have been able to achieve have not cured it.

The answer, I suspect, is much more complex than boosting the economy of a have-not nation, although that probably will prove to be an integral factor in the answer. The important elements in our message, in the sale of individualism, must be a combination of hope for better living conditions—not too long delayed—and mutual respect. And of these two elements, the mutual respect may be the more important.

Most people in these emerging nations are not ideologues. They are not personally committed to grand philosophical concepts—neither our concept of individualism nor the Communist concepts. The vast majorities want only to live as well as those around them, with the respect of those they know. And in those nations where they have turned away from individualism, or are not turning toward it, we ought to find out why our message seems to them to miss that formula.

It is foolish for us to sit here comfortably in the United States and denounce those who turn against us. It is foolish also for us to take refuge in such promises as, "The Communists are better organized for subversion." That surely is true—but it doesn't help us in the cold war simply to say it.

In the upper intellectual levels, the concept of individualism has a far greater attraction than the Communist concepts—we do lose intellectuals to communism but we convert a far greater number of intellectuals away from communism. The struggle for men's minds, so often made to seem a struggle for the intellectual sophisticate, is not that at all. It really is a struggle for the minds of the least sophisticated, the least educated, the minds of the masses.

Until we understand that, and develop the kind of message that reaches them, we are going to be wasting our lives and substances in propping up facades.

[From the Los Angeles (Calif.) Times, Mar. 31, 1963]

THE FOREIGN AID DEBATE: ARE WE THROWING GOOD MONEY AFTER BAD?

(By BARRY GOLDWATER, U.S. Senator from Arizona)

How silly can we get in our efforts to distribute foreign aid money throughout the world?

Perhaps the case of Brazil can highlight that question for the benefit of American taxpayers. They have a right to know since they have footed the bill to the tune of over $100 billion since the end of World War II.

Brazil's finance minister, Francisco San Tiago Dantas, has concluded his discussions in Washington for a loan which is reputed to be in the neighborhood of $400 million.

But it was a very close thing. There was a time during the negotiations when Brazil threatened not to accept American aid. Think of that.

There is no telling what might happen to the New Frontier's plans for the Alliance for Progress if we hadn't been able to convince the Brazilians that they should avail themselves of the seemingly endless American largesse.

The trouble arose from a report issued by the House foreign affairs subcommittee on inter-American affairs. The report bore the name of Lincoln Gordon, American ambassador to Brazil, and said that the Communists have infiltrated Brazil's Government under President Joao Goulart.

When news of this report reached Brasilia, Goulart ordered his Foreign Minister in Washington to suspend all negotiations for U.S. aid. He called off the discussions pending a clarification of the report by the State Department.

The State Department, of course, obliged with a statement to the effect that Communist infiltration of the Brazilian Government is not sufficient "to have a substantial influence on Brazilian Government policy."

It is understandable that the administration would want to avoid any aid difficulty with Brazil while President Kennedy was in Costa Rica proposing a massive spending program designed to fight Castro communism with political, social, and economic reform.

But it isn't clear why a State Department official's name should appear on a report warning of the dangers of communism in Brazil if the State Department doesn't believe that infiltration is very substantial.

The fact of the matter is that 3 of the 15-member Brazilian Cabinet are said to be notorious proponents of the Marxist-Leninist political philosophy, while Goulart's press secretary is reputed to be a self-declared member of the Communist Party.

Not only that, but the negotiations for providing Brazil with millions of American dollars got off to a very doubtful start right at the beginning. The trouble stemmed from an announcement in Rio that the Brazilian finance minister was coming here to get American money so that his country could build up a trade program with the Soviet Union.

After his arrival, the finance minister revised his story and said that trade with Russia would be only part of the program which Brazil hoped to build with many other countries.

Any way you slice it, there is very good reason to doubt whether Brazil is completely in tune with American anti-Communist objectives in the western hemisphere. And we find this situation prevailing despite the fact that, since 1946, the United States has poured almost $2 billion into Brazil in loans, grants, military aid and food.

So the question arises of whether we should send good money after bad. I don't believe there is any justification for advancing funds to a government to help it develop a trade program with the enemy, particularly when that government is in danger of being taken over lock, stock and barrel by the Communists.

[From the Washington (D.C.) Post]

The Foreign Aid Debate: Gamble on Brazil May Prevent Violence

(By Walter Lippmann)

The foreign aid program, which began with the Marshall Plan in 1948, has always been a gamble, has never been a sure thing.

In Europe it has been a brilliant success. But 15 years ago nobobdy could know that it would be. In fact, such were the poverty and paralysis of France, Italy and Germany that there was a serious possibility of a general collapse into communism.

The Marshall plan was expensive. But because it worked, all would agree today that it was cheap at the price.

Now we are concerned with foreign aid in this hemisphere. The problem is not what it was in postwar Europe. There the purpose of aid was to enable advanced and highly developed countries to recover from war.

Our purpose in this hemisphere is more complicated and difficult. Broadly speaking, it is to help our neighbors achieve peaceably, and with liberty if not with democracy, a revolution out of their semi-feudal past. Our hope is that they will in fact achieve by progressive government what, failing that, their people will attempt to achieve by communism.

Our Latin American policy would be easier to explain if we forgot about peaceable revolution and concentrated on the simple task of giving unlimited military support to any government, indeed to any dictator, who was unqualifiedly anti-Communist. Such a policy would earn much applause in certain quarters. The trouble is that it would not last very long. For this is an age when the mass of men will no longer put up with their ancient poverty and servitude.

Knowing this, we are looking to the progressive governments, as in Mexico, Costa Rica, Venezuela, Colombia, and Brazil, to carry out the progressive revolutions which are the alternative to the Castroite kind of revolution. It is, of course, a gamble and nothing is easier than to think up the many reasons why it may be lost.

The biggest gamble in all our foreign aid in this hemisphere is in Brazil. This is not only because Brazil is the biggest country in Latin America and the geographical heart of the South American Continent but also because in Brazil there are the biggest stakes to be won or lost.

If the progressive revolution fails in Brazil and the country descends into revolutionary violence, the whole continent is certain to become involved. It is possible more or less effectively to contain the revolutionary influence of a small island like Cuba. It would be a wholly different thing with a continental mass like Brazil, which has a common frontier with every country in South America except two.

On the other hand, the prospects of success in Brazil are bright. For while Brazil has its desperately poor masses, it is not a primitive and undeveloped country. It has a certain resemblance to Italy, before its brilliant recovery, when there was desperate poverty and backwardness in the south and high technical progress in the north.

If we study the agreement just worked out in Washington between Brazilian Finance Minister Francisco San Tiago Dantas and David Bell, who now manages foreign aid, we are bound to marvel at the political courage of the Goulart government. To end the inflation and to reestablish its international credit-worthiness, the Brazilian Government has adopted a program which only a very strong government, strong in its hold on popular support, would dare to undertake.

The Goulart government is going to raise tax collections by 25 percent. It has eliminated the subsidy of wheat, which has doubled the price of bread. It has eliminated the subsidy of petroleum products, which raised the price of gasoline 80 percent. It has increased commuter railroad fares five times. It is cutting down the expansion of bank credit to a third of what it has been. It is freezing government employment and is trying to freeze government pay.

It is an astonishing program. Yet it is said that the Goulart government, which is left of center, is strong enough to carry out the program. We must hope that it will be, and surely the administration has been right in deciding to help it.

For it would be hard to name any item in our whole global foreign aid program which, if it succeeds, will do so much good.

CROSSROADS FOR THE GOP

Mr. HARSHA. Mr. Speaker, I ask unanimous consent that the gentleman from Ohio [Mr. ASHBROOK] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. ASHBROOK. Mr. Speaker, I wish to call to the attention of the House a very interesting article which recently appeared in National Review. We obviously are entering the season for Republican presidential hopefuls to start flexing their muscles and turn their ear to the ground. Lest the Republican Party be led once more down the primrose path to defeat, it is necessary that we nominate a candidate in 1964 who will not run on a "me-too" platform. With each succeeding reversal of the Kennedy administration, it is becoming more and more obvious that the people want a candidate who will turn us away from economic socialism with its dishonest fiscal chicanery and reassert American patriotic pride in firm foreign relations.

I know of no one who seriously believes that Governor Rockefeller would turn us away from economic socialism. His pronouncements in the field of foreign policy—witness the Godkin lectures at Harvard—indicate that he would sacrifice our national sovereignty to further his grand Atlantic design. Yet, many Republicans still take the view that he could win and this at least would be better than what we have now.

Mr. William A. Rusher, publisher of the National Review, presents a forthright rebuttal to the argument that a conservative cannot win in his article "Crossroads for the GOP." It clearly indicates that if the conservative majority of the Republican Party will come into the next convention with strength and nominate a truly representative candidate such as Senator BARRY GOLDWATER that he will have an excellent chance to carry the country in 1964 and reverse the socialistic tide which is engulfing us.

I heartily commend this article to the Members of this body.

Crossroads for the GOP

(By William A. Rusher)

America's most accomplished tea-leaf readers have now concluded their study of the November election results, and they are turning up with an interpretation so unexpected and so unsettling that many of them profoundly wish they had never investigated the matter at all.

Just about all of them have long agreed that the only relevant question, in choosing a Republican presidential nominee, is "Who has the best chance of winning?" And it seemed perfectly safe to let this problem merge imperceptibly into the technically subordinate question, "Who can carry New York and California?"—on the hitherto sound principle that these two large States are indispensable if a Republican nominee is to win nationally. The 1964 answer to this not terribly complicated conundrum is, of course, supposed to be Nelson Rockefeller.

Imagine, therefore, the shock to the neural ganglia of these practiced pragmatists when a hard look at the 1962 election returns revealed: (1) that neither Nelson Rockefeller nor any other Republican, real or nominal, has much more prospect of wresting New York and California from John F. Kennedy in 1964 than Mao Tse-tung; (2) that the GOP has, nevertheless, an astonishingly good chance of upending Kennedy nationally, by taking most of the 165 electoral votes of the Southern and border States away from him; and (3) fasten your seat-belts, please—that the man with the best chance of carrying these States, and therefore of winning, is not Nelson Rockefeller, nor even George Romney or William Scranton, but Arizona's soft-spoken and conservative junior Senator, BARRY GOLDWATER.

Before accepting such a bizarre conclusion, the analysts leaned back, polished their pince-nez and took a relaxing stroll around the block. Like the TV commentator whose early Univac, on election night 1948, predicted on the basis of the Connecticut city returns that Truman would defeat Dewey, they secretly felt that what the damned machine really needed was a healthy kick.

THE ROCKEFELLER SHOWING

But, in 1962 as in 1948, the statistics refused to lie. Rockefeller defeated incumbent Democratic Gov. Averell Harriman 4 years ago by 573,034 votes. Kennedy, however, managed to carry the State against Nixon in 1960 by 383,666. In 1962 the Democrats nominated for Governor a cigar-store Indian named Robert Morgenthau, and frugally held their campaign expenditures to just $420,000—the smallest such figure in the modern political history of the Empire State. Rockefeller and the GOP, determined to "win big" in order to make the indispensable demonstration of puissance in supposedly crucial New York, publicly admit to having spent $2,184,000, or more than five times as much as the Democrats. And that, of course, doesn't include the salaries of the windrows of ghostwriters, analysts and advisers palmed away in various Rockefeller family foundations and businesses. Rockefeller himself campaigned tirelessly for almost a full year before November—kissing babies, patting cows, and munching blintzes as if there were no tomorrow. His opponent, on the other hand, in his all but motionless 2-month campaign, richly earned the mocking sobriquet, "the Democratic Calvin Coolidge." Small wonder that Rockefeller's official campaign manager openly predicted, the day before the election, that his tiger would win by 800,000—perhaps even by a million—votes.

And yet on election day 1962 Rockefeller's margin over Morgenthau was actually 43,865 votes less than his 1958 margin over Governor Harriman. And when we take into account the 141,877 votes rolled up by the gubernatorial candidate of New York's brash new Conservative Party—which is now a legal party in the State, and which has sternly warned that it will run a full slate of independent presidential electors against any liberal nominated by the GOP in 1964—Rockefeller's overall margin sinks to a phthisic 387,292. Seldom has so much been so mauled by so little.

Nor can the Governor's apologists take refuge in the proposition that 1962 was a slow year for the New York GOP generally. On the contrary, it was an uncommonly good year. The party actually increased its already husky majority in the legislature. Rockefeller, however, far from leading the ticket, trailed his chief running mate, Senator JACOB JAVITS, by 190,830 votes. He even trailed his own attorney general, a relatively unknown—to put it mildly—named Lefkowitz, by 29,485. And these figures do not even take into account the fact that the total vote for the lesser offices was naturally lower. JAVITS' actual margin over his own rivals, for example, was 855,726, and Lefkowitz' was 602,935—as against Rockefeller's aforementioned 387,292 in the contest that piled up much the largest total vote.

Add to all this the fact (reported by independent pollster Samuel Lubell within weeks after the election) that 80 percent of the 1960 Kennedy voters who deserted the Democrats to support Rockefeller for Governor in 1962 have already decided to back Kennedy over Rockefeller 2 years hence, if it comes to that. What, then, are the odds that Nelson Rockefeller can take the Empire State away from John F. Kennedy in 1964? Ask your bookie.

Nor is Rockefeller's synthetic reputation as a dragon-slayer enhanced by considering his other supposititious long suit: California. Richard Nixon, a native son, had to wait until the absentee ballots were counted to be sure he had wrested it from Massachusetts' John F. Kennedy in 1960, and actually lost the governorship to Kennedy's man Brown (a sort of west coast Morgenthau) by over 300,000 votes in 1962. Does anybody, in the teeth of such statistics, seriously suppose that Nelson Rockefeller of New York can carry it against President Kennedy in 1964?

Well, say there is no kingdom then for Nelson. Can the Republican Party do better? Surprisingly enough, the signs are multiplying that it can; that, in fact, 1964 can prove as dramatic a turning point in the fortunes of the GOP as 1932 did for the Democrats. It will take courage; it will take imagination; it will compel the GOP to break the familiar mould that has furnished it with every Presidential nominee for a quarter of a century—but it can be done. One can almost prophesy that it will be done—if not in 1964, then inevitably in 1968. The Republican Party, like it or not, has a rendezvous with a brand new idea.

PROSPECTS IN THE SOUTH

And that brings us to the second great lesson of the 1962 elections. Ever since Reconstruction, the Southern States have been as relentlessly Democratic as Rose Kennedy herself. This mulish but understandable prejudice has forced them into unnatural association with northern entities and ideas that every true southerner instinctively loaths (Mencken once described the Democratic Party as "two gangs of natural enemies in a precarious state of symbiosis"), but it worked: it provided almost every Democratic presidential candidate for 80 years with a guarantee of well over 100 electoral votes before he opened his mouth.

But, as the Bible reassuringly predicts, "This too shall pass away." Erosion has steadily undermined the one-party South—most notably during and since World War II, which ruthlessly homogenized American youth and—perhaps even more important—laid the foundations of a modern mixed economy in this once, almost wholly agricultural region. Swifter means of communication and transportation—national newsmagazines, television networks and jet aircraft—have further diluted the ancestral tendencies. In scores of Southern cities today, white-collar and professional workers drive home to split-level suburban ranch houses every evening, looking and acting for all the world like their northern and western counterparts.

And they are voting Republican. In the 11 States of the old Confederacy, according to Time, Republican candidates for the House of Representatives received 31 percent of all votes cast in 1962—as against only 16.3 percent in 1958. And this, mark you, despite the fact that a substantial number of seats were not even contested by the GOP. In Alabama, hitherto presumed to be as safe for Democracy as Tammany Hall, a smooth-talking 43-year-old Republican named James Martin, who had never sought public office before, ran against veteran Democratic Senator LISTER HILL, lost by just seven-tenths of 1 percent, and carried every major city in Alabama.[1] And other strikingly strong showings were made by Republican gubernatorial or senatorial candidates in such unfamiliar territory as Arkansas (30.8 percent), South Carolina (42.6 percent) and Texas (45.9 percent).

It takes no seer, therefore, to recognize that the Republican Party is at last within measurable distance of becoming what it has never been since Reconstruction: a truly national party, with a powerful State-by-State organization and successful local candidates in the South as well as elsewhere.

And what are the Republicans of this new South saying? What will they be arguing, as they foregather with their fellow Republicans of the North and West in the convention of 1964? "Nominate Rockefeller?" Far from it. With an unanimity that cannot fail to impress, they are calling for a conservative GOP and a conservative presidential candidate.

"I am against Rockefeller," says 34-year-old Tad Smith, recently retired Republican State chairman of Texas, "because his nomination would, quite simply, destroy the Republican Party of Texas. At one resignation rally after another, lifelong Democrats now turning Republican have warned me that they will vote for a conservative Republican in 1964—but not for Rockefeller or any other liberal." And the same story is told by leading Republicans in State after State across the South.

But the showing of Southern Republicans in 1962, encouraging as it may be, is still almost uniformly short of the 51 percent in each State that would be needed to carry the South's electoral votes in 1964. Is there any evidence that a Republican presidential nominee could improve on this showing by the GOP's local candidates? Once again, the answer is an emphatic Yes—provided he is a conservative.

In the first place, it should be remembered that voting Republican for the Presidency is far commoner in the South than voting Republican for congressional candidates (a practice which threatens the prized seniority of conservative Southern Democrats in the Congress). The following Southern and Border States have all gone Republican, primarily as a means of conservative protest, in at least two of the three presidential elections during the past 11 years: Florida, Kentucky, Maryland, Oklahoma, Tennessee, Texas, and Virginia. (Louisiana and West Virginia went Republican once apiece.) There is no reason to suppose that any of these States is beyond the grasp of a Republican candidate chosen precisely because of his proven appeal to the South.

In addition, consider the cold estimate of the vigorous young men who are the Republican State chairmen in two of the Democratic Party's strongest remaining southern redoubts: John Grenier, of Alabama, and Wirt Yerger, Jr., of Mississippi. Both insist that their own States will vote for a conservative Republican, if one is nominated in 1964. Says Grenier: "It'd be the easiest campaign I ever ran."

Moreover, their prediction is echoed by some surprising sources. Within the past 2 months, a senior Democratic Senator from the Deep South confided to a friend that, in his opinion, GOLDWATER could carry all 165 Southern and Border State electoral votes against Kennedy in 1964, and underlined his view by quoting Attorney General Robert Kennedy as having told him privately that the First Family fears GOLDWATER far more than Rockefeller.

As a matter of fact, as already noted, the logical path we have traced has already been trodden by just about every serious student of the 1962 election results, regardless of party or personal bias. Certainly conservative Republicans have no patent on the obvious conclusion. JACOB JAVITS, for example, took one horrified glance, added 2 and 2, got 4, and bellowed a warning against the Republican Party ever courting the South. Joseph Alsop, with the vichyssoise of his most recent White House dinner still fringing his petulant lower lip, perceived the danger at once and recoiled in horror at the racist venality of any Republican attempt to take southern votes away from Kennedy.

NATURE OF THE COUNTERATTACK

Which brings us to the nature and validity of the inevitable counterattack. Alsop may, perhaps, be dismissed as too intemperate to argue with. (The author personally witnessed, during the Republican convention of 1952 in Chicago, a distasteful scene in which Alsop shrieked to all within earshot that the late Robert Taft was running "a straight fascist campaign—straight fascist.") But Joe Alsop is scarcely the whole problem. Even disregarding the slightly mildewed laurels and still smoldering ambitions of Nelson Rockefeller, the New York GOP has naturally enjoyed, and will not readily give up, its familiar role as "Most Popular Girl at the Ball." More broadly, the liberal Republicans, who have won every convention since (and including) 1940 by urging the necessity of wooing liberal votes in the big cities of the North, are certainly not going to accept demotion without a fight. So the cry is up: any Republican concession to southern sentiment is a venture in sheer racism, and will lose the GOP crucial votes in the North and West.

---

[1] Nor can Martin's amazing showing be dismissed as merely a nonrepeating one-shot reaction to the Meredith dispute at nearby Ole Miss. The Republican Party polled 43 percent of the Alabama vote in the 1960 presidential election.

It is tempting to dismiss this argument by observing that the GOP will have to drink deep indeed at the racist trough before it equals the record of John Kennedy's own southern allies on this score. The Democratic Party for 80 years has run with the hares down South on the race issue, while riding with the hounds up North—nominating loudly integrationist presidential candidates, while calmly raking in, on locally segregationist platforms, 95 percent of all Senate and House seats (not to mention governorships and legislatures) south of the Mason-Dixon Line. If Joe Alsop really means to demand consistency on this subject, in short, he should be forced to include his famous dinner host in the general anathema and seek his vichyssoise elsewhere hereafter.

But there is another and better answer. As Roscoe Drummond recently pointed out, the Republican Party in the South is, in general, far less committed to all-out segregation than the Democrats. And there is a sound reason for this, already hinted at: the Republican Party is strongest in the southern cities and suburbs, where the tides of social change are tending to run fastest. It was the primitive "wool hats" of the Alabama backwoods who saved LISTER HILL for John Kennedy, and it is they, in State after State of the South, who are the really hard-shell segregationists.

On this issue of integration, truth is difficult to separate from emotion. The southern Republicans understand and accept the fact that they cannot dictate a national Republican platform, or candidate, committed to segregation. They make, on the other hand, no apology for opposing the Warren Court's breezy ventures in social pioneering—and it may well be that here they have something to teach conservatives of the North. If it is objected that, nonetheless, a gap remains between northern and southern Republican sentiment on this issue, the only honest answer is that the American society is deeply riven on the subject, and no party that pretends to national scope can, by definition, do other than reflect—as the Democratic Party has for 80 years reflected—this division in itself.

Certainly there is not a shred of evidence that any large bloc of votes now sustaining Republican dominance in any northern or western State will bolt to the party of Kennedy (and EASTLAND, and ELLENDER) because the GOP chooses to bid vigorously for the support of the new middle class of a changing South. Republican National Chairman William Miller was much nearer the mark when he exhorted the December meeting of the Republican National Committee: "Don't let them give you a sense of guilt (about seeking votes in the South)." The American people, North and South, are entitled to be heard on the question of which party is treating the complex issue of race relations most honestly and with the most real statesmanship. As a matter of fact, one of the tantalizing byproducts of a 1964 decision by the GOP to nominate a conservative would be precisely this: that it would compel the Democrats, for the first time in almost a century, to pay a reasonable amount of attention to their own hitherto captive Southern conservatives.

But what the Republican delegates in 1964 will want to do is win, and it is here that the case for a conservative (meaning, in practice, BARRY GOLDWATER) must be rested and can be won. No Republican—not Rockefeller, not GOLDWATER, and neither Romney nor Scranton—has a serious prospect of carrying either New York or California against Kennedy in 1964. Probably any one of them can hold the GOP's Midwestern heartland, and such peripheral fiefs as northern New England and certain of the Mountain States, amounting in all to perhaps 140 electoral votes with 270 needed to win. But GOLDWATER, and GOLDWATER alone (for in this respect Scranton and Romney are in no better position than Rockefeller), can carry enough Southern and border States to offset the inevitable Kennedy conquests in the big industrial States of the North and still stand a serious chance of winning the election.

Whether Senator GOLDWATER is willing to shoulder the burden of a campaign of this sort—first against Nelson Rockefeller's millions, and then against John Kennedy and the massed batteries of the American left—is not presently known. Certainly a man could be forgiven for praying that he might be spared that cup.

But the arithmetical imperatives speak with a logical force of their own, and it is not in the final analysis BARRY GOLDWATER's personal wishes that are paramount: it is the overarching necessities of the Republican Party, and, in a larger sense, of the Nation itself.

And this remains true, whatever we believe will be the final outcome of the 1964 election. For what if, despite everything, 1964 is fated to be a Democratic year? How can the Republican convention, then, best build for a successful future? By turning its back on the new, conservative and increasingly Republican South and gumming blintzes with Nelson Rockefeller? Or by nominating a candidate who—win or lose—will galvanize the party in a vast new area, carry fresh scores and perhaps hundreds of southern Republicans to unprecedented local victories, and lay the foundations for a truly national Republican Party, ready to fight and win in 1968 and all the years beyond?

TAX-FREE FOUNDATIONS

Mr. HARSHA. Mr. Speaker, I ask unanimous consent that the gentleman from New York [Mr. LINDSAY] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. LINDSAY. Mr. Speaker, from time to time it is alleged that some foundations represent overly large concentrations of economic power and that others abuse their tax-free privileges. Congress has inquired into foundations in the past and presently an inquiry is being conducted by the House Small Business Committee. Responsible foundations have always cooperated to the fullest extent with such inquiries. Foundations enjoy tax benefits and therefore have a public status. Foundations recognize this and regard their affairs as open to the public. They have denied no inspection to the Congress.

Foundations are a halfway mark between public and private interests. By being essentially public, but nongovernment, they further the free system. They have helped "humanize" the free enterprise system. They have done good works, and will do more.

In the midst of a good deal of discussion of the role of foundations in the modern society, a constructive piece by Ben Hibbs, former editor of the Saturday Evening Post, appeared in the March 16th issue of the Post. The article discusses the Ford Foundation and is, in my judgment, the best piece that has yet been written on the foundation world.

Mr. Hibbs points out in his article how a grant of $980,000 to Swarthmore College triggered a self-sustaining drive by Swarthmore which resulted in four times as much money being raised from other private sources. Last fall the Ford Foundation announced a series of grants for new college-development programs, which totaled $114.7 million spread among 35 universities and colleges. The funds will be matched by $277 million more to be raised by the recipients.

One of the great values of foundations is that they are relatively free to experiment in areas where the Government would not dare to experiment. An example in the education world is the plan called "continuous learning," a system under which pupils progress at their own speed in various subjects without being promoted specifically from grade to grade. Mr. Hibbs' article tells us about this experiment.

With the consent of the House of Representatives, I am placing Mr. Hibbs' article in the CONGRESSIONAL RECORD with the hope that my colleagues in the Congress will take time to read it.

[From the Saturday Evening Post, Mar. 16, 1963]

MR. FORD'S BUSY BILLIONS

(By Ben Hibbs)

Thousands of institutions in America enjoy an unusual privilege: They pay no taxes, even though their incomes may run well into the millions of dollars annually. They are the Nation's tax-exempt foundations, and under the circumstances it is not surprising that they have frequently come under attack by a variety of critics and under close scrutiny by Congress.

In the past, most of the foundations have emerged from these attacks smelling sweet enough to satisfy their inquisitors. Now once again, however, they are the target of congressional investigation, and this time they are up against a formidable adversary, WRIGHT PATMAN, veteran Congressman from Texas.

PATMAN, who heads the House Small Business Committee, has had a staff of researchers digging into the affairs of the foundations for months. Last July he launched his attack from the floor of the House, and in January he issued an interim report, 135 pages long, specifying the sorts of skulduggery he had discerned.

Big business and wealthy persons, he said, often established foundations primarily as a cover to escape taxes, not from motives of sweet charity. Some foundations exerted powerful influence over the business firms which had given them birth. Others were competing unfairly with small business by investing their tax-exempt funds in a variety of commercial ventures.

Many foundations, the Congressman said, were skirting the law, some actually violating it flagrantly. And even if none of these abuses existed, PATMAN insisted, foundations as a whole still represented a dangerous concentration of economic power. Through their huge investments they had become a potent influence in the financial marketplace, not always for good. He strongly implied that the tax-exempt privilege was in itself a sinful invention which penalizes all the taxpayers.

PATMAN obviously has done his homework with great diligence, and he seems able to document many of his charges with clear-cut examples. Yet almost nothing in the Patman investigation thus far has given Congress and the public any glimpse of the powerful and usually constructive role which the foundations—particularly the large ones such as Ford, Rockefeller, Carnegie, Kellogg, and Sloan—have come to play in our society. When questioned from the floor of the House about this other side of the coin, Congressman PATMAN replied that his purpose was to investigate the finances of the foundations—their assets, investments, and income—and not their philanthropies. Yet it is impossible to bring the foundations into focus without taking note of the profound way in which they are reaching into the lives of nearly all of us.

Never before in the history of this country have so many large blocks of private capital been set aside for human welfare. There are today in America about 15,000 tax-exempt institutions which qualify as foundations. Many are small and relatively local in scope—often devoted to a single project dear to the heart of the founder. Others are huge and incredibly diverse in their activities. The Ford Foundation, which is by far the largest, listed its net assets at about $2.3 billion as of September 30. During the past fiscal year it made grants of more than $200 million. Its benefactions, which have now reached a total of approximately $1.8 billion, have gone to 4,950 institutions in all 50 States and 67 foreign countries. Ninety percent of this money has been handed out in the United States.

Figures compiled by the Foundation Library Center in New York indicate that the foundations now have total assets of about $13 billion and their grants currently add up to approximately $700 million annually. Much of this is used as seed money—to initiate or back innovations and experiments, to demonstrate, to lead the way.

Fear has been expressed by thoughtful people that the power of foundation money—reposing, as it does, largely in a small group of professional philanthropists—could run amok someday and damage our institutions and our way of life. And occasionally large groups of citizens have been outraged by certain foundation activities in such areas as civil rights, race relations and far-out experiments in education.

In view of the power they unquestionably exert and the controversies they sometimes provoke, it seems reasonable to ask just what the big foundations are up to. What, for instance, does the Ford Foundation do with all that money?

WHY TEACHERS GIVE UP

The answer, of course, is: many things. To see one specific example from the beneficiary's viewpoint, consider the case of Swarthmore College, a coeducational institution of distinguished academic standards located on the outskirts of Philadelphia. Its student body numbers about 950, its faculty about 120.

When Courtney Smith, then 36 years old, became president of Swarthmore in 1953, one of his early decisions was that faculty salaries must be raised. He was still grappling with this thorny problem in 1955 when the Ford Foundation electrified the academic world by announcing that it had just appropriated $260 million to help raise the salaries of teachers in all the 630 private, regionally accredited, 4-year colleges and universities in this country. It was and remains the largest single giveaway program in the history of American philanthropy.

Ford, which over the years has leaned toward the educational field in its benefactions, had been studying the disgracefully low estate of college-faculty salaries. It found that in 1955 the median annual salary of full professors was $7,100—as contrasted, for example, with the median earnings of $15,000 for doctors. The median for all faculty grades was $5,200.

In effect college teachers were subsidizing the education of other people's children. As a result many faculty members, particularly the younger ones, were giving up the unfair financial struggle and turning to other occupations. Many others on the threshold of their careers, who yearned to teach, took a long look and fled in other directions.

Even with its massive resources, Ford could not hand out enough money to correct these inequities. But foundation officials thought they might be able to ignite a brush fire—or, hopefully, 630 brush fires—that would grow into a solid blaze of accomplishment across the country. This is the way the foundation works. "We like to start things," Henry T. Heald, president, said to me. "Then if the idea is valid other people take over where we leave off."

Most of the money granted in the faculty-wage program was given with the stipulation that it should be invested in endowment funds for at least 10 years and the income used exclusively for salaries. Swarthmore College got $908,000. This in itself did not solve Courtney Smith's problem. Put out at a safe 4 percent interest it would yield $36,320 and permit an average pay hike of about $300. But the Ford money did serve as a potent shot in the arm.

Through alumni fund drives, Swarthmore had been raising about $100,000 annually. Now, inspired by the Ford grant, the alumni board decided to double this amount and earmark the second $100,000 for salaries. Within 3 years the new goal had been reached, and the contributions have continued at or above that level ever since. President Smith now had almost four times as much new spending money as was produced by the Ford grant alone and was able to give his teachers substantial increases. Swarthmore salaries had long been far above the general academic average. Today they are in the top 10-percent bracket, enabling the college to compete with the Ivy League schools for teaching talent.

This experience was repeated, in varying degrees and in many ways, in hundreds of colleges throughout the country. Perhaps the greatest good, however, came from the enormous publicity given the huge Ford grant. The announcement, together with statistics on salaries, hit the front pages; radio and television joined the chorus; editorial writers wrote about the financially neglected profession of teaching. Attention was focused, and the public conscience was aroused.

Today faculty wages are still far too low in comparison with earnings in other learned professions, but progress has been made. The median for all ranks has risen from $5,200 in 1955 to $7,486, and faculty people, generally speaking, are less hopeless about the future than they were 10 years ago. Although the foundation itself is careful not to claim too much credit, many college officials will tell you that the massive Ford grant of the middle 1950's had quite a lot to do with this salutary change of climate. As foundation officials had hoped, their salary program did ignite a lot of brush fires.

With that triumph under its belt, Ford embarked in 1960 on another massive college project that in total grants may eventually surpass the $260 million salary program. The man handling this new project is James W. Armsey, director of the foundation's special program in education. Armsey, 45, had had a distinguished career in education administration before he joined the foundation staff in 1956.

"The administrators of even the best colleges and universities," Armsey said to me, "are so bedeviled by money problems that they are hard put to find time to run their schools. We are trying over a period of years to give some of them a lift."

As of last autumn the foundation had announced at yearly intervals three packages of grants in this new college-development program. They totaled $114.7 million and went to 35 private universities and colleges. The Ford funds, which this time must be matched by $277 million raised by the recipients, are more or less unrestricted—that is, they may be spent for a wide range of physical and academic projects. However, each institution being considered was required to submit a detailed analysis of itself, its needs, and its plan of expenditures.

Swarthmore College again received a grant, $2 million this time, to be matched on a 3-to-1 basis. "But," said Joseph B. Shane, vice president of the college, "even if Swarthmore had been turned down in the end, the study which we put together for Ford was a highly worthwhile project in itself. It was a revealing exercise in self-examination."

In the academic world these days a pious old saying is being twisted around a bit, with no sacrilegious intent, to read, "Ford helps those who help themselves." College presidents in faraway States, it is said, have been known to face reverently toward the foundation offices in New York City and repeat these words as a hopeful incantation.

THEY CARE ABOUT THE JOB

The Ford Foundation occupies nine floors of a blocky office building at 477 Madison Avenue. The permanent professional staff numbers about 100, but you will rarely find more than two-thirds of these men and women at their desks on a given day. The others will be out in the field, investigating, assessing, administering. Talks with many members of the staff showed they are for the most part mature but relatively young men who discuss their many projects eloquently and with fervor. Many come from the educational field, but there are also lawyers, journalists, former Government executives, men from the business and financial world—and one ex-labor-union official. They obviously have one thing in common: high enthusiasm for their jobs. Despite the hard work and the occasional headache when a program flops, it seems to be fun to give away the late Mr. Ford's millions for mankind.

Started in 1936, the Ford Foundation remained a relatively small family trust, devoted chiefly to local charities in Michigan, until the late 1940's. Then under the wills of the elder Henry Ford and his son Edsel it received some 90 percent of the stock of the Ford Motor Co. Unquestionably one of the motives behind these huge bequests was the determination of the Ford family to prevent the company from falling into the hands of outsiders through confiscatory inheritance taxes. But the wills specified that the vast sums were to be used for the purpose of advancing human welfare.

The enlarged foundation opened for business in the autumn of 1950 with assets of close to a half billion dollars. In the intervening years it has sold about two-fifths of its Ford stock and diversified into a wide variety of other securities. Its worth has multiplied fivefold in 12 years through the increase in value of Ford stock and the growth of other investments. About two-thirds of its capital remains in nonvoting Ford stock. Ford stock sold to the public is converted at the time of sale into voting stock. Thus the foundation cannot have control over the company.

It is equally true that the Ford Motor Co. does not run the foundation. The fund is administered by a board of 15 distinguished trustees headed by John J. McCloy, the financier, who also has served in several important governmental posts. All policy matters and all appropriations must be approved by the board. Edsel Ford's sons, Henry II, who is now chairman of the board of the Ford Motor Co., and Benson, vice president of the company, are foundation trustees. So is Donald K. David, a Ford Co. director. These three men are the only link with the company.

Foundation President Henry Heald, 58, is a tall, handsome man of scholarly attainments and forthright manner. After a long career in engineering and education he became chancellor of New York University in 1952 and moved to the presidency of the foundation in 1956. He likes to speak of the foundation as a "wholesaler" of philanthropy—meaning that it usually makes its grants to sound institutions which have the know-how in their own fields to parcel out the money effectively. Thus some of its institutional grants filter down, as scholarships and fellowships, to hundreds of persons. Dr. Heald also emphasizes the experimental nature of many of the foundation's projects.

"When we see a good new idea in education or some other field," he said, "we often put our money behind it and give it a chance to prove or disprove itself. If it is indeed good it may well become an effective demonstration whose effects will spread and grow. If it fails—as happens now and then—well, we've simply lost a bit of money. Because we are a private philanthropy we are not frightened by occasional defeat. And again because we are private and are not bound by civil service pay scales, as Government agencies are, we can get highly competent people to block out and administer our programs."

Occasionally the foundation creates a brand new agency to carry out some program. One of these, the Fund for the Republic, turned out to be a hot potato. It was one case in which a foundation managed to enrage a considerable segment of the American public.

The purpose of the fund, which opened its doors in 1953 with a $15 million grant, was to do battle for our constitutional liberties. CLIFFORD P. CASE, now a U.S. Senator from New Jersey, was its first president, but was succeeded in 1954 by Robert M. Hutchins, who had been associate director of the foundation itself. Hutchins, a voluble liberal, waded into the civil rights fray with such vigor that for a time he and the fund were in the headlines almost constantly. It was the McCarthy era, and targets for Hutchins were not lacking.

Hutchins, however, made so much noise that many people got the idea that the fund was the Ford Foundation, or at least its major project. In this case, the tail was wagging the dog. And the sharp criticisms which Hutchins' tactics provoked inevitably bounced back to the foundation itself.

Today foundation officials speak of the fund with marked reticence. "It did some good," they say, "but——." No further grants were ever made, and officials point out, a bit defensively, that there was never any expressed intent to give the fund any more money. It was, they imply, a one-shot experiment.

A DISOWNED SUBSIDIARY

The Fund for the Republic still operates, rather quietly, in Santa Barbara, Calif., and Hutchins still heads it. Its chief function now seems to be to make studies and publish reports on social and governmental problems. No longer connected with the foundation in any way, it is reported hard up for spending money. Hutchins, always a phrasemaker, sometimes refers sadly to his enterprise as a "wholly disowned subsidiary."

Another special agency, which by any yardstick has been a whopping success, is the Fund for the Advancement of Education which the foundation created in 1951 and has continued to support all out. Housed in the same offices as the foundation itself, it is charged with initiating and carrying out scores of experimental programs to improve our schools all the way from kindergarten through college. It is headed by Clarence H. Faust, president, and Alvin C. Eurich, vice president—a couple of ex-educators who posses tough enough hides to push ahead on their projects despite occasional bombardments of brickbats from members of their former profession.

This is the arm of the foundation which is backing much revolutionary experimentation in public school education. Many of its projects have already proved their worth. Others, still in the demonstration stage, are eyed with doubt by some educators and by those parents who want only hard-core, old-fashioned schooling for their children—with no fancy new ideas, please. Thus the foundation has become a big hunk of yeast in the general ferment which seethes through the whole educational field.

From its earliest beginnings, Ford's education fund has put massive infusions of money and work into the growing battle to train teachers more effectively. For one thing, it has insisted that teachers should be given more liberal-arts education and fewer courses in the teaching techniques. The fund's conviction is that there are teachers whose own education, to put the matter charitably, has been superficial.

As a part of this campaign, Ford has given heavy backing to internships for teachers—an idea borrowed from the medical schools. A liberal-arts A.B., for example, may do graduate work for an M.A. in pedagogy and within the same school year get paid part-time wages by a local school board for intern teaching under the eyes of experienced teachers. This system is now widely employed in school systems located near universities. Public school administrators generally proclaim it a huge success.

Ford also backed television as a teaching tool when TV was still new enough to be controversial. And it was largely Ford money which in 1961 got that "flying-antenna" airplane off the ground in Indiana—the plane that broadcasts lessons, recorded by experts, to classes of public schools in a six-State area. This experiment, incorporated as the Midwest Program in Airborne Television is so successful that the corporation hopes eventually to become largely self-supporting through fees paid by the schools. That's the way Ford likes to have its experimental programs work out: Point the way with money and counsel, and then, after the idea catches hold, move on to something else.

Another innovation massively supported by Ford is team teaching—a system whereby several teachers of the same grade work in groups, cooperatively, shifting classroom work from one to another. In English, for example, one may be a whiz at teaching grammar while another's specialty is poetry. At intervals the large classes are broken into smaller groups for discussions. The plan is being adopted more widely every year.

Still newer, more complicated and more controversial is the plan called continuous learning—a system under which each pupil progresses at his own speed in each subject without being promoted specifically from grade to grade. It is close to special tutoring on a mass production basis.

One school system which has received substantial Ford money to try out continuous learning and other experiments, and to extend its team-teaching plan, is that of Newton, Mass., a suburban city of 92,000 on the outskirts of Boston. Newton has long been a front-runner in educational innovation, and its present school superintendent, Charles E. Brown, who is just 37, has a national reputation. When I visited Newton last summer, task forces of teachers were planning their complex new regimen.

Said Bettina King, principal of a junior high where one continuous-learning program is being launched, "We have talked and talked about these things, and now finally, with Ford money and Dr. Brown's blessing, we have a chance to find out whether they are as good as we think they are." Initial results of the new methods are promising, but it will take at least 3 years to determine their validity.

Educators in Oregon are now embarked on a statewide school-improvement program with Ford support. It involves 9 private and public colleges and universities, which train 88 percent of all the State's teachers, and 26 school systems, which enroll 52 percent of the public school students. In this case the Ford money will be spent on a host of innovations—team teaching, widening the range of subjects, flexible scheduling of the students' time, the use of nonprofessionals—housewives and others—as teacher aids, variable grouping of students for classroom instruction, programs for gifted students, more attention to the dullards, more effective guidance programs.

Through its grantee institutions Ford has awarded fellowships for graduate study to thousands of young men and women: some for work pointing directly to college teaching; some for science and other occupations; some for foreign studies. A favorite remark around the foundation is that "the America of the future must know more about this world that it is trying to lead."

Ford is trying to improve university-level business schools, which in quality have been down at the bottom of the educational totem pole along with teachers' colleges. Several years ago it also gave $90 million to privately supported medical schools to strengthen their faculties. And the foundation expects to launch shortly a course of instruction at Columbia University for successful men in middle life who have decided that business is for the birds and want new careers in something which they believe will be more satisfying, such as teaching or public service.

It is also handing out eating money—this time directly, with no intervening agency—to scores of serious writers, composers, painters, performers and others in the arts, to enable them to work uninterruptedly for a time without having to grub for a living. Results are piling up in this field: books published, new music performed, paintings sold.

Commenting on Ford's list of benefactions, Francis Keppel, recently appointed U.S. Commissioner of Education who for 14 years was dean of Harvard's Graduate School of Education, said to me, "You can't even keep track of all the things they are into, but, the good Lord willing, may they continue. What an encouraging thing it is, in this critical time for education, to have a rich foundation which steps in with its money and starts doing the things that some of us can only shout about."

Yet the foundation's projects in education are only part of its sprawling program. It is also operating in the gray areas of the big cities, trying to do something about juvenile gangs and helping municipalities coordinate and make some sense out of the confused jungle of welfare agencies. It has devoted money to mental health, to the problems of the aged, the chronically unemployed, the submerged thousands who earn their living as migrant farm laborers. Several years ago it handed out $200 million to improve the services of nonprofit hospitals across the Nation. It is also devoting some attention and money to one of the world's most critical situations, the population explosion, and as a part of this program it is backing new research on birth control. Here, of course, it is beginning to stick a toe into deeply troubled waters.

The foundation also has a vast and growing foreign program—or, rather, numerous programs, with the emphasis frequently on education. In a recent case—a typical one—the University of Chicago was awarded over a million dollars to support educational programs in Pakistan. Oklahoma State University, with another million, also will work to improve the Pakistan schools. The University of Brazil is using Ford money to train scientists who will be needed as the nation's industry grows. And in January the foundation announced a multipronged $2 million program to strengthen the artistic, educational and cultural resources of West Berlin.

Several months ago the trustees took a long look at the Ford Foundation's past, then peered ahead and announced that they would go on doing pretty much the same types of things in the 1960's.

It has been suggested that the foundations of this country are now at their peak; that their functions gradually will be usurped by the Government with its proliferation of welfare programs and its vast resources; that the foundations eventually will spend all their money and cinder out. Maybe, but thus far there is little evidence to support this prediction.

The Ford Foundation, for example, not only gives away its income but occasionally dips into capital for grants. Over the years it has disposed of about $600 million of its assets in this way, and yet its book net worth continues to grow. "Under our charter," said President Heald, "we could give away everything and go out of business." But it is doubtful that Dr. Heald or anyone else at Ford believes this will happen. Certainly the Ford Foundation still finds more to do, in scores of fields, than it can finance. It consistently turns down worthy ideas simply because there isn't enough money.

A reporter's guess is that the foundations will continue to flourish. They will make occasional mistakes, sponsor failures now and then, and irritate some citizens.

There will be abuses of the tax-exempt privilege such as Congressman PATMAN has found. Yet on balance it must be expected that they will continue to accomplish much that is good. The better foundations are, in a sense, the flowering of the genius and conscience of the private-enterprise system.

COST-PRICE SQUEEZE WORST SINCE 1934

Mr. HARSHA. Mr. Speaker, I ask unanimous consent that the gentleman from Illinois [Mr. FINDLEY] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. FINDLEY. Mr. Speaker, the cost-price squeeze for Illinois farmers is the worst since the depression year of 1934.

The U.S. Department of Agriculture shows parity ratio for March dropped to 71 for Illinois farmers—the lowest level since 1934 when it was 67. Parity ratio shows the relationship between prices of things farmers need to buy, and prices farmers get for their own produce.

Kennedy farm policies have been a tragic failure, and have contributed to today's cost-price squeeze. Heavy dumping of Government corn on markets under the feed-grains program is one of the major factors which caused a sharp decline in cattle and hog prices the past few months.

The Department of Agriculture has kept monthly figures on parity ratio for Illinois farmers since 1938. Prior to that year the ratio was averaged only once a year. March's parity ratio of 71 is the lowest on record since 1934.

A NEW PEARL HARBOR

Mr. HARSHA. Mr. Speaker, I ask unanimous consent that the gentleman from Michigan [Mr. JOHANSEN] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. JOHANSEN. Mr. Speaker, I visited America's newest Pearl Harbor last Saturday. Its real name, of course, is Miami, Fla.

I was there 1 week to the day after the surprise attack—the Washington order banning Cuban exile raids against their island's Communist captors. Incidentally, I made the trip at my own, not the taxpayers', expense.

The implications of this disastrous ban are global, but its impact is centered in Miami.

The bulk of the Cuban exiles live there. Headquartered there are the diverse U.S. agencies and working-level U.S. officials charged with the distasteful task of enforcing—and explaining—the ban, and I talked with several of these officials.

It is to Miami that American-captured anti-Castro raiders are brought after their seizure on the high seas or on tiny Caribbean islands—and I saw the first such group of prisoners.

And it is Miami—technically Dade County—which has become the boundary of the house arrest imposed upon would-be Cuban raiders under the Washington decree.

Despite all the official explanatory and fumbling alibis, the ban on exile raids against Cuba is a self-inflicted military, psychological, and policy Pearl Harbor.

It is one more proof of the cumulative effect of blunders; one more reminder that incompetence and mismanagement have a special kind of deadly momentum.

A military Pearl Harbor? Yes, because puny as these exiles' raids may now be they can keep Castro off balance, possibly even long enough for the administration to muster an effective course of action of its own. A bee buzzing around a motorist's head can cause a disastrous wreck. And it should not be forgotten that Castro himself started with a handful of men and a series of minor forays.

Bear in mind, also, that this is not only a raid ban but an aid ban. The administration restrictions cut off outside support for anti-Castro rebels within Cuba and thus become a death knell for these freedom fighters.

A psychological Pearl Harbor? Decidedly so. The ban creates—if not confirms—an impression of doubletalk and doubledealing. What becomes of the President's September 13, 1962 pledge:

> We shall continue to work with Cuban refugee leaders who are dedicated as we are to that nation's return to freedom?

The promise to the ransomed Bay of Pigs prisoners that their brigade's battle flag would be returned to them in Havana is now hollow mockery. And what about the wall of dedicated men around Cuba the President talked about at San José?

Bitterness and uncertainty—that was the description of the Cuban exiles' state of mind I heard in Miami last Saturday. Is there any wonder? And do millions of Americans not share these feelings?

A policy Pearl Harbor? Unequivocally, yes. A State Department official in Miami with whom I talked was later quoted in the press as saying the raids "tend to take the control away from the United States."

That, of course, is the official line, coming directly from the White House. But, one may ask, what control? The administration lost control of its Cuban policy and course of action when it refused to take the risks of firmness and when it blabbed its fears to the world and to our enemies.

The Government of the United States will never regain that control—or wipe out its newest, self-inflicted Pearl Harbor defeat—until it recovers its nerve, its will, and the high purpose vowed by the President in his inaugural address:

> This hemisphere intends to remain the master of its own house.

FIFTIETH ANNIVERSARY OF ROCKEFELLER FOUNDATION

Mr. HARSHA. Mr. Speaker, I ask unanimous consent that the gentleman from Indiana [Mr. HARVEY] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. HARVEY of Indiana. Mr. Speaker, the trustees of the Rockefeller Foundation are announcing the observation of the 50th anniversary of the operation of this pioneering philanthropic agency. John D. Rockefeller was not only an astute businessman, he was also even when a young man of modest means, a charitable one as well. He and those of his family who have succeeded him have epitimized the spirit of our Republic which is an enlightened free enterprise system.

The initial effort of this great foundation was in the field of health—an effort to combat and eliminate malaria, yellow fever, and the hookworm. In this successful program a total of $14 million was spent. The value of this contribution to society can never be evaluated in dollars; it can be said that it has brought relief and protection to millions of people. This was, moreover, the real beginning of a mass attack on those debilitating diseases and might even be said to be the forerunner to our present National Institutes of Health.

Starting with an initial endowment of $35 million it has spent more than $763 million or several times its income. More than 16,000 scientists have been awarded foundation-financed fellowships and scholarships for advanced studies through grants totaling over $61 million. Twenty-eight of these have won a Nobel Prize.

The foundation has known no national boundary lines, no prejudices or fetishes in their efforts to improve the lot of humanity. It has had an ideal and labored ceaselessly to achieve it. The entire Nation owes this organization a great debt; we should endeavor to encourage such enlightened progress by our national policies originating in the Congress.

URBAN RENEWAL IN THE DISTRICT OF COLUMBIA

Mr. HARSHA. Mr. Speaker, I ask unanimous consent that the gentleman from Iowa [Mr. Kyl] may extend his remarks at this point in the Record and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. KYL. Mr. Speaker, in the annual report of the Government of the District of Columbia for the fiscal year 1961, the following significant statement appears:

> Despite a greater rate of progress in urban renewal during 1961 than in previous years, it has been recognized that improvement must be made in the organization of the city's total urban renewal effort.

On March 12, 1963, the Washington Post said editorially:

> At whatever cost to bureaucratic sensibilities and traditions, the city must find a way to resolve routine difficulties and make routine changes without jeopardizing the entire work at every stage. The city is now confronted with unanswerable evidence that the responsibility for redevelopment must be concentrated in one public agency.

On March 30, 1963, the Washington Post declared editorially that:

> In 1955 the city accepted with enthusiasm an urban renewal program entitled "No Slums in 10 Years." Eight years have now passed, and as Mr. Dowdy, the chairman of the House District Subcommittee, observed at the beginning of the recent hearings, the slums are still very much with us.

The Washington Post editorial went on to say:

> Since urban renewal is a vastly complex and cumbersome procedure that occasionally generates cases of real hardship, and since many millions of public dollars have been spent on it in Washington, these hearings are altogether desirable. They will demonstrate that Congress does indeed have the power to remedy its two most obvious weaknesses. Operating responsibility must be centralized in one agency rather than spread among three competitors. And the city must be given the authority to redevelop commercial neighborhoods, an authority that Congress has already offered to every other American city.

The Washington Post of March 30 published a letter from Joseph J. Honick, executive director, Adams-Morgan Light Commercial Institute, protesting the proposed removal of a number of light commercial firms from the Adams-Morgan urban renewal project area. Mr. Honick stated in his letter that:

> To date, according to RLA figures, of the more than 800 small businesses that have been dislocated by urban renewal, more than 40 percent have gone out of business. The contention that many of these firms were marginal operations may or may not be valid.

Perhaps the 320 small business firms that have gone out of business following dislocation by the urban renewal program in the District of Columbia were on the editorial mind of the Washington Post when it declared that:

> Since urban renewal is a vastly complex and cumbersome procedure that occasionally generates cases of real hardship, and since many millions of public dollars have been spent on it in Washington, these hearings are altogether desirable.

A resolution adopted on April 8, 1963, by the independent citizens of the Adams-Morgan urban renewal project area, a group of homeowners and small business owners, protested the eradication of all licensed rooming houses no matter how well run from the Adams-Morgan Urban Renewal Project Area.

The Board of Commissioners of the District of Columbia have expressed some sympathy with the small businessmen of the Adams-Morgan urban renewal project area, and with the owners of licensed rooming houses in that area.

The new president of the U.S. Chamber of Commerce, Edwin P. Neilan, has called on local chambers of commerce to lead their communities away from the Federal Treasury, saying that:

> A revival of grassroots initiative and sense of responsibility is badly needed.

The Evening Star of March 28, 1963, reported Mr. Neilan as saying that businessmen must counteract the work of Federal officials who are on the road selling their subsidy programs, including urban renewal, as painless panaceas for almost every type of community program.

I include as part of my remarks, items from the Washington Daily News and Evening Star, and the text of a resolution adopted April 8, 1963, by the independent citizens of the Adams-Morgan urban renewal project area.

[From the Washington Daily News, Feb. 22, 1963]

SIXTEEN CITIZENS OPPOSE RENEWAL PLAN: ADAMS-MORGAN REVOLT FORMS

A citizen revolt against the Adams-Morgan urban redevelopment plan has been organized by an "Emergency Committee To Save Our Homes and Businesses in the Adams-Morgan Area."

The committee was formed by 16 citizens who invited Col. Thomas K. Fullerton, Assistant Engineer Commissioner, to hear complaints against various features of the plan. The plan has been approved by the National Capital Planning Commission and is awaiting a public hearing.

Colonel Fullerton listened for 3 hours and invited the group to arrive at a consensus on specific points and bring it to the city heads.

After he left, the 16 citizens agreed to oppose these points:

Scattered site public housing; elimination of commercial rooming houses and light industry; inclusion of residential structures marked for rehabilitation in the officially designated Adams-Morgan urban renewal area, and displacing families before construction of public housing in which to relocate them.

The group wants licensed rooming houses retained, with strict code enforcement. It also wants an industrial park development to accommodate light industry now in the area.

It is opposed to public rehabilitation of residential buildings.

"Why not let private industry rehabilitate them?" the group said.

[From the Washington Evening Star, Jan. 23, 1963]

THE FRANKENSTEIN OF URBAN RENEWAL

Robert J. Lewis, in his able presentation of the effect of the sleeper clause in the Redevelopment Land Agency's plan for the Adams-Morgan urban renewal project, exposes the Frankenstein of urban renewal which stalks our neighborhoods.

He makes it clear that we visionaries, in our anxiety to conserve and restore the beauty and usefulness of our cities, have created, instead of the constructive machinery we sought for this purpose, a monster capable of destruction. Under the manipulation of our local RLA, this urban renewal monster now menaces the cherished property rights of every private owner of land in this city.

"Mistakes were inevitable in our early attempts," we told each other as we ruefully observed the new ugliness rising in the place of the old ugliness of the Southwest redevelopment area, and as we found the slums of the Southwest transferred to other areas by the evacuation of problem families ahead of the bulldozers.

"We will do better as we start urban renewal operations in other sectors," we said. "Meanwhile, we must find some way of controlling the taking power of this other independent agency, the Public Housing Authority, which is invading our neighborhoods. It has now expanded its bureaucracy and its taking powers to the point where 1 out of each 100 District of Columbia residents is living in publicly subsidized housing, with no cessation in sight. Its mass conversion of land from private to public ownership is swallowing the residential districts at an appalling rate and our protests are met with the excuse that they must provide homes for families displaced by urban renewal."

All this we have told ourselves as we tried to sustain faith in the miracles we hoped to achieve through the broad powers of urban renewal. But now we find that the mistakes of the past are to be compounded in the Adams-Morgan project. The RLA and the National Capital Housing Authority, acting under the comfortable cloak of immunity from citizen control enjoyed by independent agencies, are teaming up into a power combine to seize at random the dwellings of private property owners and convert them to permanent public ownership for public housing at prices less than they were bought for and at prices lower than that at which they would be available to anyone else.

Furthermore, Mr. Lewis tells us, that the RLA makes no secret of its plan to follow this same policy as it extends its operations into other parts of the city.

Let us no longer delude ourselves about the future of urban renewal. Let us admit that our anxiety for progress and our naivete have led us to sell our American birthright for a mess of pottage. And in proclaiming our error let us call upon Congress to help us subdue the monster we helped to create before its evils are allowed to further undermine American property rights in Washington and other cities across the length and breadth of our country.

MARGUERITE SNYDER.

There is a sleeper clause in the urban renewal plan which has just been OK'd by the Redevelopment Land Agency and the National Capital Planning Commission which will, if approved by the District Commissioners, allow homes all over Washington to be seized by the RLA and sold to the National Capital Housing Authority to be used as permanent public housing units. That means that your home and my home can be seized for that purpose or any other purpose.

The appalling magnitude of the RLA's power is beginning to dawn on the people of Washington.

According to the District of Columbia Redevelopment Act of 1945, the RLA can seize any real property in an urban renewal area of the city without giving you any reason. If you doubt that, look at the Southwest area or Columbia Plaza area where hundreds of houses and business properties have been seized by the RLA.

There is a law pending before Congress and sponsored by the Federal City Council that will, if enacted, turn the whole city of Washington over to the RLA for 40 years. And when that law becomes effective, the RLA and the National Capital Planning Commission can seize your home, office building, store, garage, or what have you without giving you any reason.

Other cities such as Chicago have voted urban renewal out. The citizens of Washington cannot do that because they have no vote.

It does not do the value of your real estate any good for it to be generally known that it is subject to seizure at any time at the whim of a few power-hungry men in the RLA and the NCPC.

William Webster.

A Resolution Adopted by the Independent Citizens of the Adams-Morgan Urban Renewal Project Area at a Meeting Held at 8 P.M., April 8, 1963

Whereas the following significant statement appears in the annual report of the government of the District of Columbia for the fiscal year 1961: "Despite a greater rate of progress in urban renewal during 1961 than in previous years, it has been recognized that improvement must be made in the organization of the city's total urban renewal effort;" and

Whereas the Washington Post, the major uncritical backer of urban renewal in the District of Columbia to date, surprisingly has this to say about urban renewal in an editorial on March 12, 1963: "At whatever cost to bureaucratic sensibilities and traditions, the city must find a way to resolve routine difficulties and make routine changes without jeopardizing the entire work at every stage. The city is now confronted with unanswerable evidence that the responsibility for redevelopment must be concentrated in one public agency;" and

Whereas the Washington Post, in an editorial entitled "Rehearing for Renewal" published on March 30, 1963, said: "In 1955 the city accepted with enthusiasm an urban renewal program entitled 'No Slums in 10 Years'. Eight years have now passed and, as Mr. Dowdy, the chairman of the House District Subcommittee, observed at the beginning of the recent hearings, the slums are still very much with us. His subcommittee's inquiry will endeavor, he said, to find out precisely what Congress can do to increase its efficiency.

"Since urban renewal is a vastly complex and cumbersome procedure that occasionally generates cases of real hardship, and since many millions of public dollars have been spent on it in Washington, these hearings are altogether desirable. They will demonstrate that Congress does indeed have the power to remedy its two most obvious weaknesses. Operating responsibility must be centralized in one agency rather than spread among three competitors. And the city must be given the authority to redevelop commercial neighborhoods, an authority that Congress has already offered to every other American city;" and

Whereas the Adams-Morgan urban renewal program, if given the green light by the Board of Commissioners, District of Columbia, in its present form without major surgery will generate many new "cases of real hardship" (the telling phrase of the Washington Post editorial of March 30) including the following: (1) the eradication from the Adams-Morgan urban renewal project area of scores of small businesses at the very time when the Congress is doing everything it can to help small businesses (Joseph J. Hornick, executive director, Adams-Morgan Light Commercial Institute, in a letter to the Washington Post (March 30, 1963) has this to say: "To date, according to RLA figures, of the more than 800 small businesses that have been dislocated by urban renewal, more than 40 percent have gone out of business. The contention that many of these firms were marginal operations may or may not be valid"); (2) the eradication of all licensed rooming houses no matter how well run (they will of course remain in other parts of the city); and (3) the inclusion in the Adams-Morgan urban renewal project and its eminent domain procedures of some of the finest streets and residential areas in the Nation's Capital for the purpose of obtaining clearance by District and Federal Government agencies for a program which is primarily concerned with the redevelopment of a few commercial concerns at 18th Street and Columbia Road which could not obtain urban renewal aid under the present laws without the inclusion of large residential areas; and

Whereas it is a betrayal of the urban renewal process, and a subversion of the plain intent of the Congress, to classify as "slum" and "blighted" the Kalorama Triangle and its many fine streets including Waterside Drive, Allen Place, Ashmead Place and Biltmore Street (the Kalorama Triangle was the subject of a major feature story with pictures in the Sunday Star magazine, March 17, 1963, pictures which never have been presented by the National Capital Planning Commission and the District of Columbia Redevelopment Land Agency because they prove that the Kalorama Triangle area is not "slum" or "blighted". This Sunday Star article said, in part, that: "Former President Eisenhower was a Triangle resident earlier in his career. The Triangle's Gold Coast, along Connecticut Avenue, housed former Chief Justice Charles Evans Hughes and Vice President Barkley. Today it shelters Justice Tom Clark, former Ambassador William Bullitt and Mrs. Kennedy's social secretary, Letitia Baldridge, among others"); and

Whereas it is also a betrayal of the urban renewal process and a subversion of the congressional intent to classify as "slum" and "blighted" the residential areas of Columbia Road, Lanier Place, the 1700 block of U Street (North Side), Crescent Place (known as millionaire's row), and the Embassy area of 16th Street including the famous Hotel 2400 and Marshall Field's former million-dollar townhouse; and

Where as a number of Members of Congress have introduced bills in the Congress to fight slums by making it more profitable to improve property than to let it run down and decay with the benefit and encouragement, as at present, of decreased taxes; and these bills would provide tax abatement for the preservation and improvement of property in the District of Columbia as is done in other cities in this country and in other cities in other nations—a step once seriously considered by the Board of Commissioners, District of Columbia; and, further, such bills would save millions of dollars in taxes by not placing all of the property improvement "eggs in the basket" of urban renewal which, after 8 expensive years of operation and the expenditure of more than $100 million has, according to Congressman John Dowdy, and the Washington Post of March 30, 1963, left the slums "still very much with us" despite its glowing promises to end slums in 10 years; and some of these tax abatement bills, introduced by Representatives Abraham J. Multer, John Kyl, and Harris B. McDowell, Jr., are before the House Committee on the District of Columbia; and

Whereas the finest and most interesting urban renewal programs in the Nation's Capital are in such areas as the Kalorama Triangle, Georgetown, Foggy Bottom, and Capitol Hill, according to the Washington Evening Star, which has published many articles on this subject, and these citizen-led improvement programs have not cost a cent of public funds; while the Southwest urban renewal program has become mired in controversy, has cost nearly $100 million in public funds, has worked untold hardship on the residents thereof and is lifeless and dead in appearance with vast areas still unoccupied; and

Whereas the independent citizens who are homeowners and small businessmen in the 230-acre Adams-Morgan urban renewal project area firmly believe in the basic American principles that every man's home is his castle, and that the Government should not interfere with and control our lives, and that Government should be our servant and not our master: Now, therefore, be it

Resolved, That the independent citizens of the Adams-Morgan urban renewal project area wholeheartedly endorse bills introduced by Representatives Abraham J. Multer, John Kyl, and Harris B. McDowell, Jr., to provide tax abatement for the improvement of property in the District of Columbia and urge the House District Subcommittee headed by Congressman Dowdy to hold hearings on these bills as well as on Congressman McDowell's bill to establish in the government of the District of Columbia a Department of Housing and Planning in order to provide, as strongly urged by the Washington Post, in its editorials of March 12 and March 30, 1963, that "Operating responsibility * * * be centralized in one agency rather than spread among three competitors; and be it further

Resolved, That all citizen and civic groups and preservation societies of the District of Columbia rally to support the U.S. Chamber of Commerce the new president of which, Mr. Edwin P. Neilan, has called on local chambers of commerce to lead their communities away from the Federal Treasury, saying that "a revival of grassroots initiative and sense of responsibility is badly needed," and his objections to urban renewal.

HOME RULE FOR THE DISTRICT OF COLUMBIA

Mr. HARSHA. Mr. Speaker, I ask unanimous consent that the gentleman from Iowa [Mr. Kyl] may extend his remarks at this point in the Record and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. KYL. Mr. Speaker, on this day I have introduced a bill to grant complete and genuine home rule for the residents of the District of Columbia. Simply stated, the bill would reserve as a new District of Columbia only the central portion of the District which is the site of the White House, Capitol, and major office buildings in the major complex. It would retrocede all residential and commercial portions of the District to the State of Maryland.

While home rule is a major consideration, it is not the only compulsion for this type of legislation. Passage of this act would relieve the Congress of the time-consuming chore of legislating for the District.

When our Republic was very young, there were many worries about influences on the new Federal system. This Government was a new experiment. There were many divergent views on almost all questions of government in this new Nation. As a matter of fact, many of the uncertainties were not to be settled until the middle of the 19th century when a bloody war was fought to prove whether "this Nation or any nation so conceived and so dedicated—could—long endure."

The genuine purposes for creation of a city apart as the seat of government have long since disappeared. I cannot think that those who created the District out of property donated by a group of 18 citizens, could have projected the denial of rights to self-government for all time.

This bill retains a District of Columbia which is actually the specific site of the Federal Government. Thus, we satisfy a constitutional question. I presume that some might argue our right to retrocede a portion of the District, but commonsense dictates that this question has been decided in the early retrocession of almost one-third of the District to the State of Virginia. To argue that changes in the District are impossible is to preclude any future argument, however justifiable, that the central government could be moved temporarily or permanently to a safer area of the United States.

Mr. Speaker, each year the Congress is presented with several proposals for home rule. These proposals, as a collection, are a mockery because they always provide self-government only to a point. Some of the proposals seem to say, "We will approach self-government gradually. We will go a step at a time, educating the residents to govern themselves."

Another type of provision calls for some kind of unique status with nonvoting representation in the Congress.

Most home rule bills seem to provide a kind of self-government akin to a secondary school student council which finds the students going through the actions of self-government which they do not have.

Residents of the District of Columbia are citizens of the United States who should have the right to local self-government in the city and county, in their State and in the Nation. To settle for anything less is to say that all Americans are equal but some are more equal than others. To settle for anything less is politically fraudulent.

One Member of the House has said we must not reduce the size of the District or create a Washington, Maryland, because we have to retain a Federal city, a Capital City for the Nation. I assume this means we must retain a separate spot of 60 square miles which suggests a garden spot, a center of culture, a center of learning, a center of government, a mecca for the constituents who visit this area.

So Farmer Brown comes to visit the Federal city. Perhaps he stays in a motel in Virginia or Maryland. He visits the Lincoln, Jefferson, and Washington Memorials, the Archives, the Smithsonian, the National Gallery, the Capitol, the House and Senate, and the office buildings of those two bodies. All of these buildings are located in the District created by my bill. Then he wants to visit the Arlington Cemetery, which is not in the District, and goes from there to Mount Vernon. To him, these two locations are part of the Nation's Capitol, though we know they are not.

We probably would just as soon he did not see certain large areas of the District of Columbia which are part of the Federal City—much to our shame. To the average citizen, these spots are not as much a part of the Capital as are the Tomb of the Unknown Soldier, the Iwo Jima statue, the Masonic Shrine, or Mount Vernon.

On the other hand, some have suggested, that maybe the residents of the District do not want to be a part of Maryland, nor perhaps of any other State. I think they are in the minority. Not all District of Columbia residents have urged home rule. Some, perhaps, profit personally from a "less than complete citizenship" status. There are some who perhaps feel a bit sheltered by the sometimes benevolent Federal City. There may be comfort in not having to make civic decision. It is possible here, to do a lot of griping without having to do anything about the situations which earn criticism.

As a matter of fact, one home rule missionary, on being confronted with my proposal said, "But heavens, then we would have to put up with county government and State government and all that."

Likewise, some worry about loss of Federal payments to the city. As a matter of fact, certain Federal payments are now denied to the District but are available to the States. Legislation can be provided at the proper time to accomplish necessary economic adjustments. If Congress cannot be trusted to do this little job it certainly cannot be trusted with the entire problem of governing the District.

When we talk about the District and suffrage, we frequently overlook a very apparent evil. If the situation is not an evil, it is certainly ridiculous. If John Smith moved to Washington from the Midwest in 1933 to take one of those temporary jobs in a temporary office in a temporary office building to work in a program supported by a temporary tax, and has lived here ever since, the chances are he voted in his native State by absentee ballot. He voted for candidates he never met or heard of and helped make decisions on matters he did not understand. He effectively canceled the vote of another citizen who lived in that native State and who had an opportunity to know the issues on which he voted. In a very real sense, he disenfranchised the person who resides in the State who did not vote as he did.

Mr. Speaker, as part of the Record, I include part of a learned treatise on retrocession written by Prof. R. P. Franchino in the Georgetown Law Journal, volume 46, 1957–58:

Retrocession—Historical Development

The District clause of the Constitution circumscribes a relatively precise area for the Capital City. This area has been diminished by Congress retroceding to Virginia the part originally contributed by that State. Inasmuch as the citizens of the retroceded area enjoy both home rule and national representation, the question of the propriety of retrocession is particularly significant in determining whether such franchise may be afforded to the present citizens of the District.

If one construes literally the area designation and the word "exclusive" in the District clause of the Constitution, it would seem that a congressional act of retrocession would be invalid as an attempted constitutional amendment by mere legislation. Yet congressional retrocession to Virginia is an accomplished fact.

At the very inception of congressional residence in the District, there had been proposals for retrocession of the ceded areas with a view to restoring franchise to the people concerned even though it was stated during a committee deliberation that such retrocession was unjustified since Congress would afford franchise eventually. A proposal, which was ultimately to achieve success, was submitted by a committee of the town of Alexandria to the House of Representatives in 1846. In essence the proposal contended as follows:

1. The lack of self-government in the area in question was bad government and time would aggravate rather than improve the situation.

2. The lack of franchise deprived the people of political rights and privileges dear to the American citizen, and in spite of a wise and moderate exercise of exclusive jurisdiction such circumstances should certainly excite the sympathy of every Member of Congress.

3. Notwithstanding these disadvantages, the people would be willing to continue if there were the compensating benefits of direct associations with the fame and glory of the Federal Government. However, this was lacking in the Virginia area since the Federal buildings were located on the northern side of the Potomac River.

4. Since Congress had failed to act on requests to revise the antiquated local Code in keeping with the progress in other States, the Virginia area had been prejudiced. The only way to remedy this situation would be by retrocession.

5. The denial of franchise rights in this 10 mile square was inconsistent with the increase of it elsewhere.

6. The exclusive clause and the area designation were designed to protect Congress' deliberations from disturbances and popular outbreaks and to limit the maximum area to be encompassed. It was not intended to prohibit Congress from relinquishing jurisdiction over part of the whole if this were consistent with the purpose of the act of cession. The right to abandon would seem to follow the right to acquire.

7. The only condition (and it would be implied) which attached to the grant to Congress would be that a later retrocession or abandonment of jurisdiction should not defeat the original purpose of the grant. A retrocession to Virginia would still continue congressional jurisdiction over the Maryland area where the Federal Government was operating.

8. Congress, regardless of the mode of acquisition of public lands, has complete title. This is true as to the territories, forts, arsenals, and the District of Columbia. Whenever the lands no longer are necessary or useful to the original purpose, Congress may, and should be empowered to, convey the land away.

9. Congress has in the past acquired public lands, constituted such areas as territories but retained jurisdiction. Upon acquisition of statehood, congressional relinquishment of jurisdiction has been held proper.

10. A sound construction of the Constitution and the repeated and well-established usage of the Government, should leave no doubt that Congress has the power to retrocede and legislation should be effectuated to this end.

It is to be noted that the proposal contended that the use of the word "exclusive" and the specific designation of the area did not preclude Congress from retroceding part of the District if such disposition were consistent with the purpose of the Capital City. The Congress had relinquished jurisdiction over territories, forts, and arsenals to which the United States held complete title when they were no longer necessary for their original purpose and this practice had been upheld.

The proposal, or memorial as it was then designated, was reported favorably by the House District Committee. Its conclusions were as follows:

1. The area of Virginia constituted one-third of the whole and had not yet been used as public grounds or for buildings necessary for the seat of the Government. Thus exercising control of the Virginia area was an unnecessary and unjustified distraction of Congress from its more important duties.

2. The Federal disbursements were being made in the Maryland area and would continue to be so made. Thus the advantages were being enjoyed by the Maryland area while the burdens were being assumed by both areas.

3. The inability of Congress to fashion a single code of laws for the entire Capital required the Virginia area to continue to tolerate its antiquated laws.

On the constitutional question, the committee concluded:

4. The assumption that Congress' power to change the size and location of the District was exhausted upon acceptance of the area was incorrect. If Congress had accepted less than 10 miles square in the first grant, it could have accepted further cessions to make up the difference. Also, Congress as a matter of necessity could change the location if a foreign invasion was feared, or if an unhealthy situation arose in the Capital so as to endanger the lives of Federal officials, or if its location became inaccessible or otherwise impractical. In addition, such a limitation would apply to the like power over forts and arsenals which view would be contrary to the usages of Congress.

5. There were three constitutional bases for retrocession by Congress: (a) exclusive legislation over the District, (b) to dispose of, and make all needful rules and regulations respecting the territory or other property belonging to the United States, and (c) when Congress ceases to exercise exclusive legislation, the area would revert back to the ceding State. Although, under this third basis a congressional act is not necessary, it would seem advisable as declaratory of the other two bases.

6. The assumption that this was a multilateral contract and any deviation from its terms needed the approval of all the contracting parties was incorrect. Neither Virginia nor Maryland, by their acts of cession, made the permanence of the seat of government a condition of the grant. Nor is there anything in the acts of cession or surrounding circumstances to sustain the view that there existed a tripartite contract between the United States, Virginia, and Maryland which would require the assent of both States to a retrocession to either. On the contrary, the cession acts show that each State contracted only with the general Government and did not contemplate the necessity of action by any other State. This conclusion is further supported by the fact that each State offered to cede the whole of the 10 miles square clearly intending that it and the United States be the only parties to the contract.

Congress followed up the favorable report by passing an act of retrocession conditioned upon a majority vote of acceptance by the people of the town and county of Alexandria. The election was favorable with 763 for retrocession and 222 against it. On September 7, 1846, President Polk issued a proclamation, declaring Alexandria County retroceded to Virginia.

In order to reach an objective conclusion as to the constitutionality of the act of retrocession, one should look to the original acts of cession. The Virginia act does mention Maryland but only to the extent that it may participate in the location of the 10 miles square. It also states in paragraph 2 that the area in question "shall be, and the same is hereby forever ceded and relinquished to the Congress and Government of the United States, in full and absolute right, and exclusive jurisdiction * * * pursuant to the tenor and effect of the eighth section of the first article of the Constitution of Government of the United States."

In the light of the above, it cannot be said that the Virginia act in any way considered the State of Maryland as an official party to the contract. In fact the tenor of the words used seems to indicate that Congress had complete and unlimited power to use the land as it saw fit circumscribed only by the District clause. Thus the words of this grant provide a weak argument for proving a multiparty contract.

There were 18 private property owners who contributed the original grant. They initiated their participation by entering into an agreement on March 29, 1791. The consideration accruing to them was "the great benefits we expect to derive from having the Federal city laid off upon our lands." The conditions in this compact made no reference to a grant by other parties. The consideration proviso does not reflect any matter other than the proprietors concern for the benefits to accrue to them because their land was involved.

In summary, the above discussion would support a congressional act of retrocession of part of the original District area providing such transfer does not interfere with the primary purpose of the area, i.e., a location for the proper functioning of the Federal Government free from State control.

On the other hand, partial retrocession preserves the essence of the District clause, a home for the Federal Government under its exclusive control, but merely modifies its territorial limits.

The above conclusion permitting partial retrocession but prohibiting total retrocession might appear to be inconsistent. It permits Congress the power to retrocede but limits the full exercise of such power. This results from the fact that the propriety of the lesser power (partial retrocession) is not dependent upon a finding that the greater power (total retrocession) is valid.

HOSPITAL CARE FOR THE AGED—OUR MOST PRESSING DOMESTIC PROBLEM

Mr. **WILLIS**. Mr. Speaker, I ask unanimous consent that the gentleman from California [Mr. SHELLEY] may extend his remarks at this point in the RECORD.

The **SPEAKER** pro tempore. Is there objection to the request of the gentleman from Louisiana?

There was no objection.

Mr. **SHELLEY**. Mr. Speaker, on March 28, 1963, I joined with the gentleman from California [Mr. KING] and a number of other Congressmen, in introducing the Hospital Insurance Act of 1963. My bill, along with others introduced, will meet one of the most pressing domestic issues facing the 88th Congress.

Mr. Speaker, hospital care for the aged is, if we consider the tremendous prosperity and advancements of our country, a provision for our older citizens that is long overdue. It is indeed fitting that we, the leading world power, reflect a high degree of care for those who have labored in our fore in order that we might attain this position. All our achievements are not mere fortune, they represent the cumulative effort, to a large degree, of our senior citizens who are not to be forgotten assets of our society. In view of the wealth and resourcefulness of this country, we owe our older citizens a moral, if not an actual, obligation to provide them with a sound plan for medical care for the aged.

The number of senior citizens currently stands at 17½ million but this figure is subject to constant enlargement as the medical profession increases our longevity. These citizens represent a wealth of skill and knowledge that we can ill afford to squander by not providing substantial medical assistance for them. In the 1961 hearings before the House Ways and Means Committee, Secretary Ribicoff, then Secretary of Health, Education, and Welfare, and now U.S. Senator, stated that—

> People over 65 are in hospitals, on the average, over 2½ times as much as younger people; * * * for those over age 65, 2,332 days of care per 1,000 persons (are required while) * * * for people up to age 64 there are only 883 days of care required for every 1,000 persons."

This testimony highlights the apparent need for increased medical attention while subsequent testimony showed the financial impact of such medical aid for our aged. The vast majority of our citizens over 65 are living on fixed incomes that do not ascend with other prices. For instance, in the past 15 years hospital costs have tripled, from $9.39 a day in 1946 to $32.28 in 1960. It would have taken great insight for anyone to foretell or provide for contingencies such as this in 1946.

Mr. Speaker, it is well known, that a potentially sufficient retirement reserve for older citizens can easily be destroyed by a serious illness, especially when we consider the average income. The Bureau of Census statistics show that in 1959, 55 percent of those over 65, had incomes of less than $1,000, 23 percent made between $1,000 and $2,000, 9 percent between $2,000 and $3,000, while only 13 percent made over $3,000 per year. One can easily see that a short hospital visit would be catastrophic in the face of such average meager resources.

Hospitalization's increased bite on the budget does not mean that the rise is not warranted by better hospital services. The rise is justified but its impact upon our elderly is not. It is not equitable in a society as rich or affluent as ours, that the senior citizens should bear the brunt of tripled hospital costs solely with their limited resources.

For these pressing reasons I introduced my bill which is comparable to that of the administration's and will provide the following features: First, all costs of in-patient hospital services for up to 90 days, with the patient paying $10 a day for the first 9 days and at least $20, or for those individuals who so elect all such costs for up to 180 days with the patient paying the first 2½ days of average costs, or all such costs for up to 45 days; second, all costs of care in skilled nursing homes facilities affiliated with hospitals for up to at least 180 days after transfer of the patient from a hospital; third, all costs above the first $20 for hospital out-patient diagnostic services; and, fourth, all costs of up to 240 home health care visits in any one calendar year by community visiting nurses and physical therapists. All of this can be provided by the time-tested method of distributing the benefits through the social security system. The costs will be borne, since it is financed nationally, by a nominal rate of one-quarter of 1 percent of what has been contributed by the employer and the employee. In addition the maximum taxable wage base will be raised from $4,800 to $5,200. My bill has the additional merit of being part of an actuarially sound system of social security that is administered in the hands of a competent agency.

Mr. Speaker, my bill will meet one of the criticisms launched against prior bills designed to provide hospital care for the aged. For health benefits only it will cover all those who reach 65 before 1967 thereby preventing any discrimination against those who have not been able to contribute to social security during their working life. It is only just that we allow those who have not qualified under social security to benefit from this remedial legislation. In fact, many were excluded by social security laws from participating in the system until coverage was recently expanded in the 1950's. Some of these were close to retirement or already retired when their kind of work was covered by the plan. Now that the social security includes practically everyone, my bill takes this into consideration.

Mr. Speaker, a period of adjustment, beginning after 1966 and up to 1971, sets a limited requirement for coverage but by 1972 requirements for coverage for health and cash benefits will be the same. This method was devised to meet a temporary situation which would currently exclude 2½ million people and then to return to the time-tried method of requiring at least a minimum contribution in order to qualify for benefits at a time when most people will be able to qualify.

Mr. Speaker, in my view, it is important that we have a uniform system that is nationally enforced in order to get the full benefit of many participants. With a vast program of hospital care for the aged we can provide maximum benefits at a minimum cost to each citizen. This system will not be limited by the underwriting restrictions imposed upon private insurance companies. Therefore our senior citizens will get coverage that is both more comprehensive and more extensive in terms of the number covered than they could get by purchasing voluntary health insurance. The fact that private insurance is often inadequate is pointed out by Mr. Walter Reuther of the United Automobile Workers and AFL-CIO, when he stated:

> Many of the people now counted as insured do not have insurance worthy of the name.

Mr. Speaker, the onerous burden of hospitalization does not press only upon the improvident who have not made allowances for the future. The unforeseeable costs of hospital care affects also those who anticipated retiring on a medium sized income. To subject all people over 65 to a needs test would force many who retire on modest means to struggle on until they are destitute before qualifying for and meeting the needs test. A hospital-care-for-the-aged plan based upon right rather than need would avoid the humiliation of forcing our senior citizens to meet a needs test. A needs test is violative of the ingenuity we as a people can exhibit when providing for our elderly.

Another meritorious factor, Mr. Speaker, of my bill is that by making the benefits a right it will encourage early treatment. If our senior citizens are not precluded from sufficient hospital treatment at an early stage, because of financial reasons, their life expectancy and productivity can be raised.

Mr. Speaker, this legislation is not the beginning of what some opponents of a sound hospital care for the aged program label as socialized medicine. This is purely a scare label that, upon examination, is meaningless. The hue and cry raised by opponents is based upon fallacious reasoning because the bill provides that there will be a choice of doctors and hospitals. Freedom of the doctor-patient relationship is an important one which this legislation clearly recognizes, clearly continues, and clearly enhances. There is absolutely no encroachment here. An initial alarm of socialized medicine is customarily registered when Federal remedial legislation is proposed. The alarm was sounded when the social security disability insurance provisions were introduced. Is there any Member of Congress who would rise now and maintain that this alarm was anything other than false? Mr. Speaker, the same alarm will be proven false when this bill has become the law of our land.

It is my fervent hope that a suitable hospital program for the aged will become the law of our land—and, become the law very soon.

DADE COUNTY, FLA., RECEIVES ALL AMERICA CITY AWARD FROM LOOK MAGAZINE

Mr. WILLIS. Mr. Speaker, I ask unanimous consent that the gentleman from Florida [Mr. FASCELL] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Louisiana?

There was no objection.

Mr. FASCELL. Mr. Speaker, much attention has been paid in recent weeks, both in Congress and in the press, to Florida's Fourth District, represented by me. Some of this attention has been stimulated, I regret to state, by evidence of tensions, and confusions rising out of the Cuban refugee assistance and relocation problems in Greater Miami. Recent hearings conducted by my colleague, the gentlemen from Florida, Congressman CLAUDE PEPPER, and myself, in Miami, Fla., as well as hearings today before the House Banking and Currency Committee, all have dwelt on the problem areas of the Greater Miami situation.

But, Mr. Speaker, there is a more encouraging side—yes, even a bright side—to existence in Dade County, and it is this to which I call the attention of my colleagues today.

Complicated as the situation has been the past 3 years due to the sudden influx of approximately 200,000 persons escaping the tyranny and oppression of Castro's Cuba into the Greater Miami area, the local governments, churches, institutions, and private citizens have opened their purses and hearts and made tremendous effort to solve the problem. National recognition has been accorded their fine efforts.

Doubtless, this has weighed heavily in the consideration of Dade County, Fla., for receipt of the 1962 All America City Award bestowed annually by Look magazine and the National Municipal League. I am proud to state that Dade County has now won the All America City Award for the second time—in 1957 Dade received an award jointly with the city of Miami for establishing a metropolitan form of government in the county.

You are doubtless aware, Mr. Speaker, that the all America city program is now in its 15th year. The All America City Awards are given each year to 11 U.S. communities selected by a jury of distinguished citizens and experts on government impaneled by the National Municipal League, which is cosponsor with Look magazine of the annual awards competition. The all America cities jury, which selected the winners for 1962, was composed of Dr. George H. Gallup, director, American Institute of Public Opinion, former president, National Municipal League; Mrs. Hazel Blanchard, president, National Education Association; Albert C. Boyd, president, American Chamber of Commerce Executives; William T. Gossett, former vice president, the Ford Motor Co.; Mrs. Herbert E. Hawkes, president, American Association of University Women; Leo Kramer, assistant to the president, American Federation of State, County, and Municipal Employees, AFL-CIO; Roy B. Martin, Jr., mayor of Norfolk, Va.; Willard V. Merrihue, board chairman, Effective Citizens Organization; Vernon C. Myers, publisher, Look; James M. Osborn, research associate, Yale University; Mrs. Robert J. Phillips, president, League of Women Voters of the United States; Dr. Donald H. Webster, director of Bureau of Governmental Research and Services, University of Washington.

In announcing the award, Dade County was cited "for the vigorous action of its citizens in bringing about major improvements in their city, and thus setting an example of good citizenship to the Nation."

Vernon C. Myers, publisher, Look magazine, personally presented the award plaque at a dinner meeting of the Miami-Dade County Chamber of Commerce in Miami, Fla., on April 4, attended by dignitaries, officials and members of the metropolitan county government, city of Miami officials, representatives of surrounding local governments, members of the chamber of commerce, and interested citizens.

It is my pride and pleasure, Mr. Speaker, to place in the Record the news story covering the award which is in the April 23 issue of Look on the newsstands today:

ALL AMERICA CITY: DADE COUNTY, FLA.

> Dade County (Greater Miami) received an All America City Award in 1957 for the work its citizens did in forming a then-unique metropolitan government. Metro was an attack on the complex problems that resulted from the lack of a government agency with unified authority over public services, traffic, public safety, and taxes in a cluster of 27 cities. Since 1957, Dade County citizens who favor Metro have had to defend it four times. Through the work of the League of Women Voters, the chamber of commerce, and the chamber's government research council, Metro has been upheld at the polls. In 1959, business leaders organized ICBM (Independent Citizens for Better Metro) to draft qualified people to run for the county commission. Three of four ICBM candidates were elected.
>
> Dade residents, teaming with various national religious organizations, have solved many of the problems caused by the huge (130,000) influx of refugees from Cuba. In 1961, when proposals were made in the State legislature to close public schools that might be desegregated, a Dade County Citizens Committee for Better Schools was formed. The group rallied enough statewide support to defeat the legislation. To date, 30 Dade schools have been desegregated without incident.

INTER-AMERICAN SOLIDARITY—A TRIBUTE TO THE ORGANIZATION OF AMERICAN STATES

Mr. WILLIS. Mr. Speaker, I ask unanimous consent that the gentleman from Florida [Mr. Fascell] may extend his remarks at this point in the Record and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Louisiana?

There was no objection.

Mr. FASCELL. Mr. Speaker, 100 years ago, Abraham Lincoln gave utterance to a statement prophetic of our times:

> The dogmas of the quiet past are inadequate for the stormy present. The occasion is piled high with difficulty and we must rise with the occasion. As our case is new, so we must think anew and act anew.

One of the most hopeful signs that America has risen to the challenge inherent in these words is President Kennedy's 10-year program of inter-American cooperation known as the Alliance for Progress.

As with many improved world conditions, we sometimes unwittingly turn our backs on the evidences of progress while bemoaning our inability to achieve our goals. When one views the present status of the modern world's oldest international organization and the upward steps taken by the 21 sovereign nations that are today members of the Organization of American States, one is filled with pride and gratitude at the tangible expressions of Simon Bolivar's dream of long ago.

For it was in 1815 that the great liberator, Simon Bolivar, whom we honor as the "Father of Pan Americanism" wrote, in exile, his famous "Jamaica Letter" and committed to paper his desire for an "America fashioned into the greatest nation in the world, greatest not so much by virtue of her area and wealth as by her freedom and glory."

In 1890 the First International Conference of American States was held in Washington and established the International Union of the American Republics, naming the Commercial Bureau of the American Republics as its central office.

Nineteen hundred and ten saw the renaming of the Commercial Bureau to "Pan American Union," today the General Secretariat of the OAS, and its headquarters "House of the Americas," was dedicated.

During succeeding years there have been many strides toward achievement of greater communication and understanding between the Americas. Each day comes greater recognition on the part of all that our involvement with each other's lives and futures is total, that the welfare of one is the welfare of all in this hemisphere. We share—despite differences of locale, climate, tradition, and language—a common inheritance, a common hope for the future, and common objectives—the preservation of freedom and expansion of the democratic ideal that "what blesses one shall bless all mankind."

As our President said during his recent visit to the University of Costa Rica at San Jose:

> We are embarked upon a great adventure together and that is the task of demonstrating to a watching world that freemen can conquer the ancient enemies of man, poverty, ignorance, and hunger; of protecting freedom against those who would destroy it; of bringing hope to those who search for hope; of extending liberty to those who lack it.

Mr. Speaker, in following the leadership of President Kennedy, who on last February 11 proclaimed April 14 as Pan American Day and the week of April 14 through April 20 as "Pan American Week," I take this opportunity to bring to the attention of my colleagues the outstanding achievements of the Organization of American States and to urge their continued support of our national intent to implement our mutual aspirations by the creation of an era dedicated to peace, plenty, and progress.

U.S. IMMIGRATION SERVICE MERITS HIGH COMMENDATION

Mr. WILLIS. Mr. Speaker, I ask unanimous consent that the gentleman from Florida [Mr. Fascell] may extend his remarks at this point in the Record and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Louisiana?

There was no objection.

Mr. FASCELL. Mr. Speaker, as we approach the Easter season, which heralds the renascence not only of religious ideals and fervor, but also of renewed physical vigor and joy in daily living surrounded, as we are, by all the glorious sights and fragrances of springtime, perhaps we may well give thought to the wellsprings of our national greatness—the essential qualities which symbolize America.

Strip away the outward trappings of a militarily strong world power, one which has pioneered great technological and scientific advances, a nation of vigorous and materially blessed citizens, and what do we find?

Mr. Speaker, I am sure that you and my colleagues will agree with me that the greatness of our Nation lies not in these more tangible accomplishments—important as they are in the contemporary world—but in the spiritual qualities of tender compassion, generosity of spirit, and warmth of heart which over the years has come to symbolize America in the yearning minds of the oppressed, the hungry, and the needy in all parts of the world.

I am led to think on these things because of the recent remarks by Mario T. Noto, Associate Commissioner, U.S. Immigration and Naturalization Service, at a Kiwanis Club luncheon in Miami, Fla., on March 29, 1963.

Mr. Noto addressed himself to the subject of "Public Opinion and Enforcement of Immigration Laws." In delineating the scope of the responsibilities and activities of the U.S. Immigration and Naturalization Service, the efficient and comprehensive outline of the mundane workings of the Service seemed to be constantly blurred by the insistent image of the true America which obviously motivates the dedicated workers in the Immigration and Naturalization Service, which persistently came through.

As Mr. Noto observed, public opinion needs to be fully and accurately informed before it can truly evaluate and come to a conclusion. Incomplete knowledge frequently leads to a distorted viewpoint. On too many occasions, alas, the Immigration and Naturalization Service has been depicted, cartooned, and lampooned as a service which administers laws with a heavy hand with no thought or regard of human welfare. As in many other areas of public life, the distortion is frequently more dramatic and more easily remembered than the plain unvarnished truth.

It is unfortunate that little is known by the general public of the qualities of humaneness and compassion shown by the Service to many deserving ones. In the current Holiday magazine, in an article on the Department of Justice, you find this paragraph:

> In talking with immigration officials, little unknown acts of compassion come to light. Not long ago a bright Hungarian student came to the University of Washington, but his temporary visa expired before he could finish his studies. Quietly and on its own, the Service made private arrangements for the boy to fly to Brazil and return a few days later with a new permit.

At this point, Mr. Speaker, I should like to quote some of Mr. Noto's remarks:

> At the very outset, the Service has made great strides in creating the most favorable impression of America upon the arriving traveler. We have set our best foot forward to show to the world the true American image. This was exemplified by our own President when at the dedication of Dulles

International Airport at Washington, D.C., on November 17, 1962, he said:

"Most of all, I want to commend those who will be working here, those who fly our planes, those who man those planes, those members of the Immigration Service who will be the first American that visitors will see here in the United States, and I hope it will be possible, building on what has been done here at Dulles Airport, that we will make sure that all of our airports and all of our piers at the seas, and all of the people who work on them, show a face of America to the world which is our best face."

These are the Immigration inspectors and especially the corps of Immigration receptionists. It is of interest to you that we have placed a number of them at the Miami International Airport because this city is the gateway from Central and South America.

When we think in terms of the millions of persons who are examined each year by the Service, and compare it to the few stories which appear in the press which indicates a lack of understanding or compassion for the individual, the true measure of the application of governmental commonsense is revealed.

Untold are the hundreds of stories which invoke and manifest humane understanding and compatability for our fellow man. But, on the contrary, occasionally a story is reported in the press which although not calculated, nonetheless results in portrayal of a ridiculous or harsh Service. Thus, from these, public opinion becomes aroused and because it is as powerful as it can be, it becomes a substitute for facts. But, even when the truth is later established, it is too late because the image conjectured is beyond repair.

Let me bring the issue into sharper focus; we in Government believe that our people must be more adequately informed so that their attitudes and reactions will be based upon reality. When we speak of compassion of Government and men toward our fellow man we need go no farther than this city. For here in this State and city, government, and private persons have demonstrated their acceptance of the plight of the unfortunate Cuban refugee who has been granted asylum from tyranny and communism. As to them, both government and people have enforced the law with understanding and sympathetic compassion.

The eyes of the world are focused upon us today. They test our tolerance and attitudes toward those who seek asylum from communism. And here in this very city, the United States of America has telescoped its answer. It has manifested and proved to the world that we are tolerant and helpful. The true spirit of America and its patriotism which was so aptly exemplified by the Founding Fathers of this Nation has been shown again in Miami. The fire and the passion for liberty and freedom which the refugee has is known only too well by Americans, for we too have shed blood for such causes.

When the Castro regime in Cuba began to show to the world first its adherence then its adoption of Marxism and Leninism, this country of ours gave refuge to those who fled from that land of tyranny. As of December 31, 1962, there were 153,520 Cubans in the United States in temporary status. Included in that group were 91,621 who had been paroled into the United States as refugees from Cuba. The others had been in the United States but could not return because of their rejection of Castro and his regime.

You will recall that on December 29, in this city, speaking to the released Cuban prisoners of Brigade 2056, our President said:

"I assure you that it is the strongest wish of the people of this country that Cuba shall one day be free again."

When that day arrives, you of this city will long live in the hearts and minds of all peoples because at a time of need you unselfishly gave shelter and comfort to these unfortunates. You will serve for all time to remind us that tolerance and compassion can be side by side with the enforcement of law. For when the final story is told with objectivity and fairness, public opinion will acclaim your city and State as a monument to sanctuary and hope, which freedom loving peoples in the world will long cherish.

Mr. Speaker, I do not intend to gloss over without recognition the more practical aspects of the activities of the U.S. Immigration and Naturalization Service—its administering of the immigration laws which are applicable to aliens who are a minority of the peoples among us and which laws transcend a multitude of areas in the field of social welfare, domestic relations, national security, criminal laws, and various others. In the implementation of the immigration laws one finds the undesirable alien who is of the criminal, immoral, narcotic classes, and many others who hold disregard and contempt for our laws and are a blight upon our society—669 such aliens were deported in the last fiscal year. Subversives in our midst, working to foist the alien and cancerous Communist doctrine upon our society, after due process of law, have been deported.

However, it is the quality of mercy which is the natural corollary of true justice, as expressed in the day-to-day activities of the U.S. Immigration and Naturalization Service which I wish to extol today.

In conclusion, Mr. Speaker, I wish to commend Mr. Noto for his public recognition of the qualities of unselfishness, tolerance, and compassion which he has correctly attributed to the citizens of Greater Miami who I am proud and privileged to represent as Congressman for the Fourth District of Florida.

CARL ESTES DAY

Mr. WILLIS. Mr. Speaker, I ask unanimous consent that the gentleman from Texas [Mr. PATMAN] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Louisiana?

There was no objection.

Mr. PATMAN. Mr. Speaker, Carl Estes, publisher of prominent newspapers in northeast Texas at Longview, is an outstanding, public spirited, civic minded, and patriotic American.

Just recently the city of Longview, where he has resided over a long period of time, honored him by setting apart a day, April 3, 1963, in his honor.

I shall always be grateful to Carl Estes for his substantial and effective efforts in behalf of the Lone Star Steel Co., which greatly contributed to the location, establishment, and success of that steel company, which is located in the district which I have the honor to represent.

The Dallas Morning News, Friday, April 5, 1963, carried the following news item:

Carl Estes Day Proclaimed in Longview

LONGVIEW, TEX.—Carl L. Estes, publisher of the Longview News and Journal and widely known in the industrial development field, was honored Wednesday by the city commission, which set apart the day in his name in connection with Texas Industrial Week.

Carl Estes Day in Longview was proclaimed by Mayor J. Clyde Tomlinson as one of his last official acts before he retires from office next week.

A copy of the proclamation, inscribed on a plaque, was presented to the publisher by the mayor at a ceremony attended by all members of the commission.

"My colleagues and I are delighted to have this opportunity of honoring you," said Tomlinson. "You have done more for east Texas than any man."

The action was taken by the city, the resolution said, "as a token of our esteem and respect and in public recognition of the unparalleled leadership and invaluable contributions he has made and continues to make toward establishment of a strong economic base through industrial growth and expansion in Longview and our neighboring region."

Publisher Estes, the proclamation continued, "has long been the leading exponent of industrial development in Longview and chief salesman of this area's advantages to industry, has led personally and with signal success campaigns which resulted in bringing in many basic industries to the Longview area, and continues to support personally and through his publications every effort for new and expanded industry in our area."

The Shreveport Times, April 5, 1963, carried the following news item:

Carl Estes Day Held in Longview

LONGVIEW, TEX.—Carl L. Estes, Longview newspaper publisher and widely known in the industrial development field, was honored Wednesday by the Longview City Commission, which set apart the day in his name in connection with Texas Industrial Week.

Carl Estes Day in Longview was proclaimed by Mayor J. Clyde Tomlinson as one of his last official acts before he retires from office next week.

A copy of the proclamation, inscribed on a plaque, was presented to the publisher by the mayor at a ceremony attended by all members of the commission. "My colleagues and I are delighted to have this opportunity of honoring you," said Tomlinson, "you have done more for east Texas than any man."

The Dallas Morning News, April 6, 1963, carried the following editorial:

Longview's Estes

Most east Texans don't need to be told why Longview celebrated Carl Estes Day. For decades this colorful publisher and industrial leader has been a crusader for the advancement of east Texas. It is gratifying to any man when those who know him best express their appreciation. To Mr. Estes and to his Longview News & Journal, the Dallas News joins in felicitations.

The Governor of Texas, the Honorable John Connally, sent the following message:

Governor's Telegram

LONGVIEW NEWS & JOURNAL,
Longview, Tex.

Congratulations to Carl Estes and the citizens of Longview on Carl Estes Day. In his role as publisher of an outstanding newspaper and as a citizen he has contributed greatly to the journalism profession and the growth, progress, and vitality of Longview and east Texas. He is esteemed throughout the State and Nation for his dedicated service to humanity. Best wishes for continued health and happiness.

JOHN CONNALLY,
Governor of Texas.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to Mrs. HANSEN, for April 22, 23, 24, 25, and 26, on account of business in her district.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the CONGRESSIONAL RECORD, or to revise and extend remarks, was granted to:

Mr. WHITTEN and to include extraneous matter in the remarks he made today on H.R. 5517.

(The following Members (at the request of Mr. HARSHA) and to include extraneous matter:)

Mr. CAHILL.

Mr. PILLION.

Mr. MACGREGOR.

(The following Members (at the request of Mr. WILLIS) and to include extraneous matter:)

Mr. STEED.

Mr. BOLAND.

ADJOURNMENT

Mr. WILLIS. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 32 minutes p.m.), under its previous order, the House adjourned until tomorrow, Wednesday, April 10, 1963, at 11 o'clock a.m.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

664. A letter from the Comptroller General of the United States, transmitting the fourth annual compilation of General Accounting Office findings and recommendations for improving Government operations (relating for the most part to the fiscal year 1962) (H. Doc. No. 96); to the Committee on Government Operations and ordered to be printed.

665. A letter from the Chairman, Joint Committee on Internal Revenue Taxation, transmitting a report covering refunds and credits of internal revenue taxes for the fiscal year ended June 30, 1960, pursuant to section 6405 of the Internal Revenue Code of 1954 (H. Doc. No. 97); to the Committee on Ways and Means and ordered to be printed.

666. A letter from the Secretary of the Air Force, transmitting copies of the Air Force report entitled "Semi-Annual Research and Development Procurement Action Report," which covers the periods for January 1 through June 30, 1962, and July 1 through December 31, 1962, pursuant to section 2357 of title 10, United States Code; to the Committee on Armed Services.

667. A letter from the Comptroller General of the United States, transmitting a report on the examination of the accounts and financial statements of the general supply fund, General Services Administration, for the fiscal year ended June 30, 1962; to the Committee on Government Operations.

668. A letter from the Acting Archivist of the United States, transmitting the report of the Archivist of the United States on records proposed for disposal under the law; to the Committee on House Administration.

669. A letter from the Secretary of the Treasury transmitting a draft of a proposed bill entitled "A bill to authorize the President to proclaim regulations for preventing collisions at sea"; to the Committee on Merchant Marine and Fisheries.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. PATMAN: Committee on Banking and Currency. H.R. 3881. A bill to authorize the Housing and Home Finance Administrator to provide additional assistance for the development of comprehensive and coordinated mass transportation systems in metropolitan and other urban areas, and for other purposes; with amendment (Rept. No. 204). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. BONNER:

H.R. 5539. A bill to promote State commercial fishery research and development projects, and for other purposes; to the Committee on Merchant Marine and Fisheries.

H.R. 5540. A bill to remove the percentage limitations on retirement of enlisted men of the Coast Guard, and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. BONNER (by request):

H.R. 5541. A bill to grant increased benefits to persons receiving cash relief under the Panama Canal Cash Relief Act of July 8, 1937, and to extend cash relief benefits to widows of recipients; to the Committee on Merchant Marine and Fisheries.

By Mr. BROWN of California:

H.R. 5542. A bill to assist the States in providing necessary instruction for adults not proficient in basic educational skills through grants to States for pilot projects, improvement of State services, and programs of instruction; to the Committee on Education and Labor.

By Mr. CELLER:

H.R. 5543. A bill to extend the provisions of the act of October 11, 1949 (63 Stat. 759, ch. 672; 32 D.C. Code 417), to authorize the commitment of persons of unsound mind found on Federal reservations in Loudoun County, Va., to St. Elizabeths Hospital in the District of Columbia; to the Committee on the Judiciary.

By Mr. CORMAN:

H.R. 5544. A bill to amend section 220(h) of the National Housing Act to permit the insurance under that section or section 203(k) of a loan made to a homeowner for the purpose of paying the cost of public improvements for which (by assessment or otherwise) he is legally liable; to the Committee on Banking and Currency.

By Mr. DIGGS:

H.R. 5545. A bill to promote the cause of criminal justice by providing for the representation of defendants who are financially unable to obtain an adequate defense in criminal cases in the courts of the United States; to the Committee on the Judiciary.

H.R. 5546. A bill to amend the Social Security Act to provide that the Secretary of Health, Education, and Welfare shall, under certain circumstances, disclose the current addresses of husbands and parents who have deserted their families; to the Committee on Ways and Means.

H.R. 5547. A bill to effectuate and enforce the constitutional right to the equal protection of the laws, and for other purposes; to the Committee on the Judiciary.

By Mr. GARMATZ:

H.R. 5548. A bill to provide that the tax on admissions shall not apply to admissions to a moving picture theater; to the Committee on Ways and Means.

By Mr. HARRIS:

H.R. 5549. A bill to repeal section 303(b) of the Interstate Commerce Act, as amended, relating to the water-carrier bulk commodity exemption, and for other purposes; to the Committee on Interstate and Foreign Commerce.

H.R. 5550. A bill to amend section 309 of the Communications Act of 1934, as amended, in order to grant to the Federal Communications Commission authority to grant special temporary authorizations for up to 60 days for certain nonbroadcast operations; to the Committee on Interstate and Foreign Commerce.

By Mr. LIPSCOMB:

H.R. 5551. A bill to amend the act of May 25, 1920, relating to conveyances of certain parts of rights-of-way by railroad companies; to the Committee on Interior and Insular Affairs.

By Mr. MATHIAS:

H.R. 5552. A bill to amend the act entitled "An act to provide for a mutual-aid plan for fire protection by and for the District of Columbia and certain adjacent communities in Maryland and Virginia, and for other purposes;" to the Committee on the District of Columbia.

By Mr. PERKINS:

H.R. 5553. A bill to provide that persons who served in the Army or Navy during World War I may, if they possess certain qualifications, wear the Distinguished and Presidential Unit Citations and Combat Infantryman's and Medical Badges; to the Committee on Armed Services.

H.R. 5554. A bill to provide for the award of the Good Conduct Medal to certain veterans of World War I; to the Committee on Armed Services.

By Mr. RIVERS of South Carolina:

H.R. 5555. A bill to amend title 37, United States Code, to increase the rates of basic pay for members of the uniformed services, and for other purposes; to the Committee on Armed Services.

By Mr. ROBISON:

H.R. 5556. A bill to provide a deduction for income tax purposes, in the case of a disabled individual, for expenses for transportation to and from work; and to provide an additional exemption for income tax purposes for a taxpayer or spouse who is physically or mentally incapable of caring for himself; to the Committee on Ways and Means.

H.R. 5557. A bill to amend the Internal Revenue Code of 1954 to provide that the cost of all medicine and drugs for the taxpayer and his spouse, rather than only the excess of 1 percent of adjusted gross income as otherwise provided, may be included in computing the medical expense deduction where such taxpayer or spouse is 65 or over; to the Committee on Ways and Means.

By Mr. RODINO:

H.R. 5558. A bill to amend the Area Redevelopment Act to clarify the areas which may be designated as redevelopment areas; to the Committee on Banking and Currency.

H.R. 5559. A bill to amend the Immigration and Nationality Act; to the Committee on the Judiciary.

By Mr. SHORT:

H.R. 5560. A bill to amend the Tariff Act of 1930 to impose additional duties on cattle, beef, and veal imported each year in excess of annual quotas; to the Committee on Ways and Means.

By Mr. BATES:

H.R. 5561. A bill to promote State commercial fishery research and development projects, and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. FULTON of Pennsylvania:

H.R. 5562. A bill to clarify paragraph 4 of section 15 of the Pay Readjustment Act of 1942 (56 Stat. 368); to the Committee on Armed Services.

By Mr. HEMPHILL:

H.R. 5563. A bill to clarify paragraph 4 of section 15 of the Pay Readjustment Act of 1942 (56 Stat. 368); to the Committee on Armed Services.

By Mr. KYL:

H.R. 5564. A bill to retrocede a portion of the District of Columbia to the State of Maryland; to the Committee on the District of Columbia.

By Mrs. MAY:

H.R. 5565. A bill to provide for the payment of debt service construction charges, and increased operation and maintenance charges when irrigable lands are taken for nonagricultural uses under Federal programs; to the Committee on Interior and Insular Affairs.

By Mr. MILLIKEN:

H.R. 5566. A bill to prevent the importation of flat glass which is the product of any country or area dominated or controlled by communism; to the Committee on Ways and Means.

By Mr. OSTERTAG:

H.R. 5567. A bill to amend title II of the Social Security Act to provide minimum benefits under the old-age, survivors, and disability insurance program for certain individuals who have attained age 72; to the Committee on Ways and Means.

By Mr. PATTEN:

H.R. 5568. A bill to authorize the establishment of a Youth Conservation Corps to provide healthful outdoor training and employment for young men and to advance the conservation, development, and management of natural resources and recreational areas; and to authorize State and community youth employment programs; to the Committee on Education and Labor.

By Mr. POOL:

H.R. 5569. A bill to amend the Civil Service Retirement Act to permit the recovery by the Government of amounts due the Government in the settlement of claims under such act, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. THOMPSON of Louisiana:

H.R. 5570. A bill to provide for the disposal easements in Intracoastal Waterway, Lake Charles deep water channel; to the Committee on Public Works.

By Mr. TEAGUE of California:

H.J. Res. 377. Joint resolution proposing an amendment to the Constitution of the United States relative to equal rights for men and women; to the Committee on the Judiciary.

By Mr. COLLIER:

H. Con. Res. 133. Concurrent resolution to request the President of the United States to urge certain actions in behalf of Lithuania, Estonia, and Latvia; to the Committee on Foreign Affairs.

MEMORIALS

Under clause 4 of rule XXII,

The SPEAKER presented a memorial of the Legislature of the State of Hawaii, memorializing the President and the Congress of the United States relating to the elimination of monopolistic and restrictive practices in the drug industry, which was referred to the Committee on the Judiciary.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. ARENDS:

H.R. 5571. A bill for the relief of Noble Frank Smith and his wife, Viola Smith; to the Committee on the Judiciary.

By Mr. BROYHILL of Virginia:

H.R. 5572. A bill for the relief of Maurice Diran Sobajian; to the Committee on the Judiciary.

By Mr. CAMERON:

H.R. 5573. A bill for the relief of Mrs. Concetta Momtaloa De Piro; to the Committee on the Judiciary.

By Mr. CAREY:

H.R. 5574. A bill for the relief of Frank Zgagliardich; to the Committee on the Judiciary.

By Mr. FINNEGAN:

H.R. 5575. A bill for the relief of Mr. Demos Botsaris; to the Committee on the Judiciary.

By Mr. HALL:

H.R. 5576. A bill to provide that Lt. Col. Frank W. Bailey shall be retained on active duty until August 31, 1963; to the Committee on Armed Services.

By Mr. MULTER:

H.R. 5577. A bill for the relief of Evangelista Gravina; to the Committee on the Judiciary.

By Mr. OLSEN of Montana:

H.R. 5578. A bill for the relief of Charles Sakellaris; to the Committee on the Judiciary.

By Mr. OSTERTAG:

H.R. 5579. A bill for the relief of Mrs. Maria Curatolo; to the Committee on the Judiciary.

By Mr. ROSTENKOWSKI:

H.R. 5580. A bill for the relief of Odette A. Eid; to the Committee on the Judiciary.

By Mr. ROYBAL:

H.R. 5581. A bill for the relief of Mrs. Alfred Stahl; to the Committee on the Judiciary.

H.R. 5582. A bill for the relief of Chizuyo Hoshizaki; to the Committee on the Judiciary.

By Mr. SIKES:

H.R. 5583. A bill for the relief of Brig. Gen. Fred C. Gray; to the Committee on the Judiciary.

By Mr. SMITH of California:

H.R. 5584. A bill for the relief of Capt. Ransom C. Aplin; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

83. By Mr. NORBLAD: Petition of Leo R. Volker of Newport, Oreg., and 34 others petitioning the Congress to preserve the Monroe Doctrine; to the Committee on Foreign Affairs.

84. By the SPEAKER: Petition of Lawrence W. O'Rourke, city administrator, city of commerce, Los Angeles, Calif., relative to posthumously commending Congressman Clyde Doyle upon a long and distinguished career of public service; to the Committee on House Administration.

EXTENSIONS OF REMARKS

Provocative Questions Concerning Space Program

EXTENSION OF REMARKS

OF

HON. CLIFFORD P. CASE

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Tuesday, April 9, 1963

Mr. CASE. Mr. President, the New York Times of April 7 contained an editorial that raises a number of provocative questions concerning our space program.

Those of us who serve on the Aeronautical and Space Sciences Committee have a particular responsibility to make sure that, as the Times put it, we are putting first things first and that we are getting our money's worth. Of particular interest to me is the question of duplication of facilities. The complex of NASA installations and laboratories has been growing at a staggering rate.

Is each new facility really necessary? This is the question we must ask and to which we must find the "hard" answer. Is, for example, a separate new electronics research center, such as NASA has proposed for the Boston area, truly essential? This is a question which I raised publicly some time ago and which I believe our committee will want to explore thoroughly when the authorization bill comes before us.

In this connection, I ask unanimous consent to insert in the RECORD the text of the Times editorial and of a recent statement concerning my inquiry to Air Force Secretary Zuckert with regard to alleged duplication of facilities by NASA.

There being no objection, the editorial and statement were ordered to be printed in the RECORD, as follows:

[From the New York Times, Apr. 7, 1963]

CONFUSION IN SPACE

The latest Soviet space achievement, another lunar exploration, emphasizes the need for a searching look at the U.S. space program, its organization, its management, its goals.

From the beginning, our program has been hampered by a dichotomy of organization and effort. The National Aeronautics and Space Administration was supposed to concentrate on developing the peaceful uses of space; the military were to work hand in hand with it. In practice NASA has preempted the man-in-space program, and in many areas in which the military should be concerned has exhibited a propensity for empire building and politics; laboratories and installations which duplicate some already existing in the Armed Forces have been bestowed, with prodigal hand, upon various deserving sections of the country.

Specific instances of this kind of duplication have been cited in recent weeks. Some congressional eyebrows were raised recently when an expensive electronics research center was proposed for the Boston area, home bailiwick of the youthful new Senator from Massachusetts. Now the Air Force in a memorandum has suggested that some $77,671,000 of projected NASA construction costs represent unnecessary duplication of existing facilities. NASA, for instance, proposes to build at Moffett Field, Calif., a life sciences research facility at a cost of $4,880,000. This despite the fact the Air Force has long maintained superb bioastronautics laboratories, which NASA has declined to use.

There are two key questions which should be answered: The first is: Are we putting first things first? And the second is: Are we getting our money's worth?

We agree with Dr. Edward Welsh, executive secretary of the National Aeronautics and Space Council, that Russia will not hesitate to use space for military purposes, and that, as Dr. Welsh put it, the "ability to defend ourselves in space against threats from space (an antisatellite capability, for instance) is as essential as preparedness in any of the other defense dimensions." Yet the military development of space applications clearly has been subordinated to NASA programs and goals.

This subordination of security goals and the organizational split in our space program, with the unnecessary duplication it has entailed, create doubt that all the money appropriated for space is being utilized wisely. The President himself, in defending his space program at his news conference, cast doubt on whether all the funds were well spent. Congress should make a detailed study of the entire program, and particularly of its organization, its management, and its goals.

INQUIRY OF SECRETARY ZUCKERT BY SENATOR CLIFFORD P. CASE

Senator CLIFFORD P. CASE, Republican, of New Jersey, disclosed that he has telegraphed Secretary of the Air Force Eugene M. Zuckert requesting an expeditious report on a news story concerning an Air Force memorandum complaining that the National Aeronautics and Space Administration seeks "millions of dollars for facilities which would duplicate Air Force facilities."

The news story quoted NASA Deputy Administrator Hugh Dryden as saying he had been told an Air Force memorandum had been prepared charging that NASA is asking for construction of $77,671,000 in facilities, which the Air Force asserts would duplicate Air Force facilities.

Early in February, Senator CASE in a speech before the New Jersey State Chamber of Commerce said:

"A new proposal of the administration, which deserves very close scrutiny in this connection, is the proposal in the new budget to establish a basic electronics research center in the Greater Boston area, with a starting cost of $6½ million and with a projected payroll of about 2,000 persons. The eventual cost of the facility is estimated by the National Aeronautics and Space Administration at about $50 million.

"As a member of the Senate Aeronautical and Space Sciences Committee, I shall insist on the fullest possible airing of the need for construction of this Government facility in the face of the tremendous electronics know-how and competence in private firms concentrated in several States. And, second, if the need for a Government basic electronics research center is demonstrated, why should not the facilities of the already existing Air Force Flight System Development Center located in the same area be used?"

Last month the New Jersey Council for Research and Development, a statewide organization of business, industry, labor, education, and government promoting the growth of research and development in New Jersey, wrote Senator CASE that New Jersey was an ideal location for the proposed electronics research center and pointed out that in recent months several hundred engineers have been laid off in the Camden and Moorestown area. Senator CASE responded that if the need for such a facility is proven, all areas of the country should be considered, including New Jersey. He added that he agreed with the council that the scientific and educational qualifications of New Jersey are outstanding.

Improvement in Train Service

EXTENSION OF REMARKS
OF

HON. WILLIAM T. CAHILL

OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 9, 1963

Mr. CAHILL. Mr. Speaker, on February 27, I addressed the House and complained about the type of service being rendered by the Pennsylvania Railroad to passengers between New York and Washington. I called to the attention of the House the overcrowding of passenger trains, the antique equipment being used and the dangerous conditions being permitted by the railroad. While I know that my comments did not bring about the results that I am about to mention, I nevertheless felt constrained to bring to the attention of the House the effort on the part of the Pennsylvania Railroad to improve the service for passengers particularly between New York and Washington, announced in a release from the Pennsylvania Railroad under date of April 3 and in an article in the Washington Post under date of Saturday, April 6, 1963. John B. Dorrance, general manager of passenger sales of the Pennsylvania Railroad, announced that 50 modern stainless steel coaches with completely new interiors will be added to the fleet of Pennsylvania Railroad day-and-night trains between New York, Philadelphia, Baltimore, and Washington starting in September. It is also my understanding that additional dining cars, mail cars, and express cars are scheduled for rehabilitation during the coming year. Mr. Dorrance has announced that the additional coaches will more than double the number of modern cars in the New York-Washington service. This is indeed good news for the traveling public and is an indication that the railroad is sincerely interested in improving the passenger service for the citizens of this country. I have stated on several occasions that I was convinced that the railroad was trying to drive passengers away and was attempting to discontinue passenger service. This type of action on the part of the railroad is a clear indication that the railroad does intend to continue passenger service and is seriously interested in improving it. Even the railroad will admit it has had inadequate and unsatisfactory accommodations for passengers between New York and Washington. Its desire and positive efforts to correct these conditions certainly deserve notice and commendation. Therefore, Mr. Speaker, I compliment the Pennsylvania Railroad, Mr. Dorrance, and the other officials responsible for this change in policy. I am satisfied that a continuation of this progressive policy will go a long way in restoring the confidence of the traveling public in the railroad and thus reduce appreciably the losses now being sustained by the railroad in their passenger service.

I would also like to report to the Congress that as a result of my comments I was privileged to meet representatives of the railroad, headed by Mr. Bart Viviano, assistant vice president. I have been assured by Mr. Viviano and by other representatives of the railroad that every effort will be made to eliminate overcrowding and that a sincere effort on the part of the railroad is being made to improve service. The recent action of the railroad would seem to confirm Mr. Viviano's assurances.

I believe, Mr. Spreaker, fair play dictates that having openly criticized the Pennsylvania Railroad, I now bring to the attention of this Congress the efforts on the part of the railroad to remedy the situation which prompted my criticism.

Special Captive Nations Committee

EXTENSION OF REMARKS
OF

HON. CLARK MacGREGOR

OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 9, 1963

Mr. MACGREGOR. Mr. Speaker, I want to commend our colleagues Congressman DANIEL J. FLOOD and Congressman EDWARD J. DERWINSKI and the many other Members who are dedicated to the establishment of a Special House Committee on Captive Nations.

I support House Resolution 14 which would establish the special committee. This action is clearly in the interests of the United States and will help to fulfill our real responsibility to those persons living under the domination of foreign powers.

There is one additional point that needs to be made and to which I want to give special attention today. It is now evident that Cuba is a captive nation in every sense of the word. We should now add Cuba to the group of nations whose people no longer have the opportunity to determine their own form of government or to participate in the day-to-day procedures of their governing authorities.

As free citizens, we in this country must come to recognize that the captive nations as a group constitute not only a primary deterrent against a hot global war and further overt aggression by Moscow's totalitarian imperialism but also a prime positive means for the advance of world freedom.

The international Communist organization has consistently shown that it fears a growing world knowledge of and interest in the captive nations. Advancement of this kind of factual understanding serves to explode the myths of Soviet unity and exposes the true meaning of imperialist totalitarianism and economic colonialism throughout those areas controlled by communism.

We need to do everything we can to bring the facts to all the world. I am proud to give my support to House Resolution 14 and I urge my colleagues to do the same and I respectfully urge on the President of the United States to affirm his support.

Laxities, Illegalities, Flagrant Abuses in U.S. Procurement

EXTENSION OF REMARKS
OF
HON. JOHN R. PILLION
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 9, 1963

Mr. PILLION. Mr. Speaker, the Comptroller General of the United States, in his reports to the Congress, has disclosed innumerable instances where business firms in concert with, or independent of, Government procurement officials, have extorted countless millions of dollars out of U.S. taxpayers.

Our Government procurement programs are riddled with flagrant violations of law. There exists a combination of utter incompetency, negligence, and civil and criminal conspiracy.

Mr. Speaker, the following are three briefs extracted from the reports of the Comptroller General issued on March 29, 1963.

HAZELTINE CORP. UNJUSTLY ENRICHED BY $428,800

Grumman Aircraft Engineering Corp. designed and developed the Navy's WF–2 attack early warning airplane. In November 1958, and January 1959, Grumman subcontracted with Hazeltine Corp. for the production of spare parts and modification kits for the WF–2's airborne radar system. The contract was issued under the provisions of a cost-plus-a-fixed-fee contract which had been awarded to Grumman for the production of the WF–2 aircraft by the Bureau of Aeronautics, Department of the Navy.

In his report to the Congress, the Comptroller General disclosed that the purchase orders issued to Hazeltine by Grumman under this contract, totaled more than $3,050,000.

The GAO found that the prices negotiated for these purchase orders were $428,800 greater than needed to cover the costs Hazeltine could reasonably expect to incur. Even though the purchase order awards were under the surveillance of the Navy, the Comptroller General found no evidence whatever to indicate that the Navy questioned the prices agreed upon by Grumman and Hazeltine. As a consequence, the padded prices agreed upon by Grumman and Hazeltine were passed on to the Government under Grumman's cost-plus-a-fixed-fee contract with the Navy.

The GAO pointed out that had the Navy or Grumman obtained and studied Hazeltine's most recently experienced costs or vendors quotations before the formal purchase orders were awarded, the overstated charges to the Government of $428,800 could have been avoided.

The Comptroller General cited a number of specific instances wherein a study of Hazeltine's cost data would have permitted the Government to avoid these excessive costs:

(1) Hazeltine's proposal included estimated material costs of $1,511.10 for each of 29 radar receivers. At the time Hazeltine prepared its proposal, it had cost information which indicated that it had incurred material costs of only $1,071.66 a unit for producing the exact same radar receiver under a previous purchase order.

(2) Prior to preparing its price proposal, Hazeltine obtained a price quotation of $1,926 for each of 18 computer assemblies. However, in pricing out the 18 computer assemblies in its proposal, Hazeltine included an estimated cost of $2,145 for each unit.

GAO's review disclosed that Hazeltine's proposal to Grumman included cost allowance of over $14,100 for items which had not even been ordered and for costs which would not be incurred.

It was also discovered that Hazeltine's price proposal included an estimated cost of $7,800 for certain components of the frequency modification kits, none of which were either ordered by, or delivered to, Grumman.

The Comptroller General, during the course of his review, found that "Hazeltine's comments to the GAO were directly contradictory to Hazeltine's representations to Grumman."

Mr. Speaker, under Grumman's cost-plus-a-fixed-fee contract with the Navy, it undertook the responsibility of awarding subcontracts at reasonable prices. It is evident that Grumman, by failing to adequately review Hazeltine's price proposal, did not properly discharge these responsibilities.

Neither is it reasonable for Hazeltine to retain the $428,800 it acquired through failure to disclose and by cost padding.

The Department of the Navy, having failed to adequately review its procurement procedures on this contract, must take such action as is necessary to obtain full recovery of Hazeltine's unjust enrichment.

AIR FORCE NEGLIGENCE IN BOEING-WESTINGHOUSE CONTRACT

On April 10, 1959, the Air Force Air Materiel Command awarded a contract to the Boeing Company for the production of Bomarc interceptor missiles, weapon support equipment, and related spare parts.

The incentive type of contract used in this procurement provides for the contractor and the Air Force to agree, prior to production, on an estimate of costs to be incurred. This is the initial target cost, and an initial target profit is determined by applying an agreed percentage to such costs. Any overstatement of target costs proportionately increases the contractors target profit.

The Comptroller General, in his review of this contract, disclosed that the Government will incur unnecessary costs of about $404,500 in the form of unwarranted profits because:

(1) Westinghouse, to which Boeing had subcontracted a portion of the contract work, quoted prices to Boeing that were based on cost estimates that were higher than those justified by its most recent experience;

(2) Boeing, without adequately reviewing this price, included it in its proposed initial prime contract target price; and

(3) The Air Force not only accepted Boeing's proposed price for the subcontracted items without adequate review, but also allowed target and incentive profits to be based on this price although the subcontract price was only tentative and was subject to redetermination.

The GAO clearly pointed out that, at the time of negotiations on the prime contract, later and more reliable cost data were available to the prime contractor—Boeing—which showed that actual costs experienced under prior purchase orders were substantially lower than the amounts proposed by the subcontractor. Boeing should most certainly have considered this in negotiations with the Air Force.

The following examples by the Comptroller General indicate the extent to which Westinghouse padded their materiel costs:

(a) GAO's computation, based on previous purchase orders for identical equipment, showed that unit materiel costs for antenna subassemblies should have been $5,976 rather than the $10,948 proposed by Westinghouse.

(b) GAO's computations showed that the unit materiel costs for receiver/transmitter subassemblies should have been $3,232 rather than the $9,196 proposed by Westinghouse.

(c) GAO's computations showed that the unit materiel costs for control unit subassemblies should have been $2,085 rather than the $5,042 proposed by Westinghouse.

Mr. Speaker, Boeing failed to evaluate the reasonableness of the bases on which the materiel estimates were established or to relate the proposed materiel prices to known materiel cost data available at Westinghouse.

The Air Force negligently accepted these prices without change.

Mr. Speaker, the profiteering of the civilian contractors in this case could not have been possible had the Air Force carried out its responsibility to review the detailed support of Boeing's cost proposal, and to review Boeing's procedures for satisfying itself that the subcontract costs in its proposal were based on the latest available cost data.

DEPARTMENT OF THE ARMY WASTES $1.2 MILLION IN FIRE EXTINGUISHER PROCUREMENT

Mr. Speaker, in his report to the Congress on March 29, the Comptroller General disclosed that the U.S. Army Corps of Engineers incurred unnecessary costs of more than $1.2 million in the procurement of new, higher priced, portable fire extinguishers.

The Comptroller General charged that the Army authorized wide usage of these new high-cost fire extinguishers without properly evaluating the benefits to be obtained in relation to the increased costs involved. As a result, large numbers of the new type extinguisher were procured and issued for use even though a subsequent study indicated that substantially less expensive extinguishers would have been adequate.

This new type of extinguisher was adopted by the Army in May 1959, for use in fighting liquid-fuel and electrical fires. A Corps of Engineers report on the new extinguisher stated that its estimated cost was the same as the cost of the item replaced.

Mr. Speaker, it is a proven fact that the average procurement cost of the new extinguisher was $20.19 compared with a cost of $13 for extinguishers identical to those already in use.

By October 1959, the Corps of Engineers had decided to replace 16 other fire extinguisher models with the new type of extinguisher without evaluating the benefits to be obtained in relation to the relatively high cost of the new extinguisher.

Mr. Speaker, had the Corps of Engineers continued to use the completely adequate current models, their procurement costs for the 102,678 extinguishers in question would have been $849,147. The Army chose, however, to purchase the new extinguishers at a cost of $2,073,295, which represented wholly unnecessary excess costs to the Government of $1,224,148.

The Comptroller General pointed out that a fundamental management failure occurred in this procurement, in that a program was adopted and allowed to proceed without followup evaluations to assure that the costs involved were warranted in relation to the actual benefits obtained. A timely comparison of planned costs with the actual costs being incurred would have shown at a much earlier date the need for a critical review of the program. Had this review been made, a substantial part of the excess cost could have been avoided.

Mr. Speaker, the collusion and connivance between U.S. procurement officials and business firms has reached alarming proportions.

The Comptroller General's reports themselves cannot cure this evil. There must be a fixing of responsibility and accountability; appropriate disciplinary action by all departments; and a strict enforcement of the applicable civil and criminal laws.

All the criminal laws written will not deter crime or protect the public interest without effective enforcement agencies, procedures, and actions. These abuses can only be deterred by making examples of the offenders.

The repeated shocking losses and wastages in our military procurement clearly indicate that the present corrective measures being taken by our responsible officials are inadequate and ineffective.

Opportunities in Biomedical Engineering

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 9, 1963

Mr. HUMPHREY. Mr. President, I was recently privileged to address a conference sponsored by Northwestern University Biomedical Engineering Research Center in Chicago, Ill. Northwestern University has participated in a program of the National Institutes of Health relating to the cooperation between medicine, biology, and engineering. The biomedical engineering research center is the first project of its kind in the Nation. It brings together in harmony and teamwork the disciplines of medicine, biology, and engineering as a new development in the healing arts.

I ask unanimous consent that excerpts from my address be printed in the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

OPPORTUNITIES IN BIOMEDICAL ENGINEERING FOR CHICAGO AREA INDUSTRY

AN OPENING ABSTRACT

As this audience is aware, for a number of years, I have been recommending improved abstracting of scientific information.

Let's start right off, therefore, with an "abstract" of the principal points which will be submitted to you this evening. They are:

No. 1. We are at just the dawn of a dramatic era of biomedical engineering.

Aerospace medicine, alone, has hardly begun to yield its fantastic potential for us earthbound civilians.

No. 2. In this era, to move ahead, as rapidly as possible, will require:

Advancement of the state-of-the-art in many individual disciplines.

The teamwork of all interested disciplines. Here, I refer to the individual and combined efforts of medical science, the physical and engineering sciences, agencies of the U.S. Government, the universities of our land, particularly their colleges of engineering, schools of medicine, and teaching hospitals, private American industry, and professional and trade organizations.

Each has an expanded role to play. Each must function at its highest level of efficiency.

I shall concentrate as I know you would wish, on what the Federal Government should be doing with you and on what you can do in conjunction with it.

No. 3. The path ahead—rewarding as it is and will ultimately be—will not be easy, scientifically, technically, or, indeed, financially. Optimism is necessary, but so is realism as to the practical obstacles ahead.

Now, let's turn to each of these phases in turn.

THE VAST OPPORTUNITIES

I have had 5 years of contacts and correspondence with biomedical engineers in the United States and throughout the world. What they have said and written confirms in my judgment this fact: Biomedical engineering offers some of the most profound opportunities for human service to be found anywhere in health science.

Biomedical engineering offers, too, some of the most inspiring opportunities for the American economic system to demonstrate further:

Its sense of public service.

Its creativity and efficiency.

Its awareness that there is profit to be made in leading the world in meeting tomorrow's needs with tomorrow's answers.

American industry is moving rapidly ahead into the automation era. Industry knows that systems engineering is the key to that era. And, systems engineering will be the crux of tomorrow's health services, tomorrow's hospitals, tomorrow's laboratory research into organ systems.

Biomedical engineering, moreover, offers particular opportunities for us of the Midwest and the upper Midwest, provided we aggressively grasp these opportunities.

For a layman who still marvels at the miracle of flight, what is being done in electronics today seems incredible: Miniaturized instrumentation—radio "pills" devised many years ago to relay information from inside the human body—successful cardiac pacemakers—heart-lung bypass machines—the almost unbelievable range of existent uses of ultrasound and infrared among other elements of the electromagnetic spectrum.

And more marvels, further applications are on the way:

The development of physiological monitoring systems, particularly for intensive postoperative patient care in the Nation's hospitals.

The development of electronic instrumentation which may one day enable the blind to "see," the deaf to "hear," as already the mute are being enabled to "speak."

The development and refinement of additional artificial internal and external organs, to replace diseased or amputated organs.

The simulation of biological phenomena by analog computers, leading to increased understanding of the nature of living processes.

Specifically, the development of bold new systems concepts for understanding of that most fantastic of all instruments—the human brain—how it learns, how it remembers, how it thinks, how it sleeps.

The use of digital computers for the mass input, "massaging," evaluation, output of biomedical data of unheard of complexity—about a single individual or a million or 10 million individuals.

And other applications, too numerous to even highlight.

TEAMWORK NECESSARY

Yesterday's achievements of this type have taken sweat and some tears; and so will tomorrow's.

Never before have individual scientific disciplines been called upon to develop faster and to collaborate more closely with other disciplines.

The Ph. D. and the M.D., the biophysicist and the biochemist, the electrical engineer and the neurosurgeon—these and a vast number of other types of teams will be communicating with one another, working with one another as never before.

Traditional compartments between disciplines have now been shattered by interdisciplinary breakthroughs.

Telemetering developments, alone, from orbiting space satellites and man-to-the-moon rockets have altered and will revolutionize old sciences and engineering.

THE TASKS OF MANY ORGANIZATIONS

It behooves every discipline, every organization, every industry, to appraise its past, present, and future role.

Medical science, in particular, will have to revise both its undergraduate and postgraduate medical education.

The physical sciences and engineering will have to improve their curriculums. And they, like the life sciences, will have to increase the numbers of their future specialists, as well as their generalists.

Business, trade, professional, and other not-for-profit organizations must reexamine their present services in terms of tomorrow's needs.

Fortunately, there is abundant indication that this is being done, particularly by professional groups.

I need only cite the forward-looking plans of, to cite but three groups: the Engineering Joint Council Research Committee; the Institute of Radio Engineers and its long-established Professional Group on Medical Electronics; and the work by the International Federation of Medical Electronics, among others in this category, and the work of the Foundation for Medical Technology in other not-for-profit areas.

In all of this concurrent effort, the Federal Government has special obligations.

FOUR TASKS OF THE EXECUTIVE BRANCH

No one need be reminded in detail that your Government is spending in the order of $14.7 billion a year for research, development, testing, and evaluation.

The overwhelming proportion of that total ($7.4 billion) is, of course, for military objectives, with civilian space, nuclear energy, and medical activities the three largest components thereafter.

Let me submit four tasks of the Federal agencies, as I see them, in this area:

1. To act in concert with one another so as to expedite the progress of biomedical engineering.

We need more interagency planning on biomedical engineering, and more interagency funding of projects of common interests, more interagency consistency in fellowship and other education programs.

NASA, the Atomic Energy Commission, the Department of Defense, the National Institutes of Health, the National Science Foundation, and the Federal Aviation Agency are only beginning to realize common programing.

NO EASY AUTOMATIC "SPIN OFF" FROM SPACE SCIENCE

2. The Federal agencies must act further to help convert military and space science and technology into civilian technology. There was a day when some folks assumed a "spin off" of civilian byproducts would occur automatically.

Fortunately, the National Aeronautics and Space Administration is now more realistic. It is aware that miracles of adaptation of space devices to users—here on earth—are not going to occur by themselves. An aggressive, grassroots effort to assist universities and private industry in civilian-type application is essential.

President Kennedy has, as you know, soundly proposed a Federal Engineering Extension Service. Such a Service would enable the great colleges of engineering of our land to serve as local packagers of information so as to meet the special needs of local industry. Engineering colleges should then, in effect, parallel the magnificent job which has been done down through the years, by colleges of agricultures. By means of the vast county agent system, the Department of Agriculture and the land-grant colleges have revolutionized American farming and made its productivity the envy of the world. Similarly, any company in the Chicago area, or in any other area, should be able to get the benefit of the counsel of its engineering schools. They, in turn, should be able to draw upon the sum total of federally sponsored information, and, to the extent feasible (without impairing proprietary rights) of privately sponsored information.

3. Information and communication are, in my judgment, the key.

There is no single greater task, as I see it, than for each Federal agency to put its information and communication house in order and for all Federal agencies to put their mutual Federal information house in order.

In this way, you in Evanston and your counterparts anywhere in the 50 States should be able to learn promptly, easily, about anything and everything (not classified for military reasons) for which you have paid as taxpayers.

Right now, there may be as many as 150,000 federally supported research and development tasks underway. Perhaps one-sixth of them are in electronics alone. You're paying the bill for these projects. You personally should be able to tap into the vast bank of information about nonclassified projects, present and past.

In my view, a scientist or an engineer (whether at Northwestern University or any private company) should be able, by telephone, by letter, by telegram, by visit, to draw upon an automated network of federally sponsored information resources in every region of our country.

In the same manner, when you and I make a telephone call from Chicago or Evanston (or anywhere else in the United States), we tap into a system of local, regional, national, and international switchboards. Most of the switching of our signals, from our house, office, or laboratory, to a person 1 mile or 3,000 miles away, is done automatically and in a matter of seconds or minutes.

The day should not be long distant when, in a similar manner, any individual can receive swiftly signals from the scientific repositories of the earth. He may want to receive these signals by ear, or by sight; e.g. through a print-out from the world's "pool" of library and other information centers, or to have the information magnified from microfilm or microform, displayed visually on a TV-like console at his desk.

If that sounds "Buck Rogerish," I can assure you that the makings of this system are actually already in existence—in bits and pieces.

DON'T BE BASHFUL ABOUT YOUR INFORMATION NEEDS

You of the world of university and industary have a right to expect that your Government will serve you.

Do not hesitate to acquaint Federal agencies with your specific information needs. Tell them what you want and the way you want it. Don't be bashful.

I have found that, for too long, even our leading private citizens and companies have tended to resign themselves to poor Federal information service. The information that they wanted came in too slowly, or they were flooded with irrelevant information which was totally useless in terms of their particular request.

Sometimes the poor service was relatively unavoidable because Federal service was underfinanced and undermanned. But now there is no excuse for any agency's failing to provide taxpayers with information which you need and want and which is useful to our free enterprise system and to the service of human health.

Last September the subcommittee, of which I am chairman, held a 5-hour hearing, at which representatives of the Bureau of the Budget and of every single major science agency in the U.S. Government testified.

Perhaps the most remarkable and enlightening testimony was that given by the able Deputy Secretary of Defense, Roswell Gilpatric.

Mr. Gilpatric readily conceded that the Defense Department has not begun to perform the information service which our subcommittee has long urged upon it.

He promised to improve the management of Defense information. He has been true to his word. In the last 5 months, there has been a whirlwind series of actions within the Defense Department and within what has heretofore been known as the Armed Services Technical Information Agency in particular. My hope is that out of these actions and out of the new Defense Documentation Center will come the first systematic management and dissemination of Army, Navy, Air Force, and Advance Research Agency information.

Following our hearing, there has been vigorous followthrough from the President's Office of Science and Technology. Two landmark reports have just emerged from the President's Science Advisory Committee—one from its Panel on Information, one from its Panel of Life Sciences. Both reports provide valuable impetus to biomedical information advances.

OUR REGIONAL OPPORTUNITY

We have considered national efforts and studies. Now, what of the needs of the Midwest?

Here is a fourth phase of Federal obligation, but it is also a phase involving our own responsibility.

You are probably familiar with the fact that for some time now, I have been taking steps to help correct what I regard as a very disturbing imbalance in the geographic distribution of Federal contracts for research and development.

The Midwest and the upper Midwest have been getting the "short end of the stick" not deliberately, but because of a combination of nondeliberate, nonplanned developments. Government decision after government decision—apparently unrelated—have created a condition in which nearly half of all the defense procurement is on the west coast, and another fifth on the east coast.

These areas have earned much of this support, in part through their superb graduate centers in research and technology. They were in early, and they are reaping the fruits of early labors.

But they have no monopoly or near-monopoly in industrial or university skill—far from it.

It is not just a matter of regional pride when I point to the magnificent untapped talents and know-how in our own region. It is in the natural interest to orchestrate the human resources of the Midwest with those of the west and east coasts.

We of the Midwest have some of the greatest medical resources in the world. We have some of the finest engineering and industrial resources.

The harmonious marriage of midwest engineering, industry, and medical resources is essential.

The talent and know-how of all three must be refined, polished, sharpened and matched to tomorrow's Federal and private requirements.

UPGRADING SKILL THROUGH EDUCATION

Everyone in this audience must be on the alert to learn what our citizens and what Uncle Sam will need and want, and to upgrade our ability to fulfill those needs and wants.

Excellence in education—undergraduate and postgraduate—is the indispensable foundation for upgrading our regional skills.

And that is, of course, precisely what Northwestern University's magnificent biomedical engineering research center will offer.

The world will "beat a path" to Northwestern's "door," because Northwestern is determined to "beat a path" to frontiers of man's knowledge.

Meanwhile, I welcome the recent establishment in Bloomington, Ind., of the Aerospace Research Application Center, partially supported by NASA, but having strong private support, as well, I note, too, that Midwest Research Institute at Kansas City in a recent pilot project found around 50 commercial applications for space technology. But this is only the beginning of what we of the Midwest must do to identify opportunities and equip ourselves to fulfill them.

ECONOMIC DIFFICULTIES AHEAD

And, now, a word of caution. I have mentioned the potential profits from this vast new field.

Make no mistake. There are potential losses, as well, in endeavoring to serve both the Federal and the private market.

The files of our subcommittee contain letters from many electronic and other companies, telling of their difficulties in selling more than a few prototype models of their most advanced instrumentation.

The American M.D. and the American hospital are not the easiest customers to sell; nor should they be. Where human life is involved, every effort has to be made to minimize avoidable risk when new techniques or instruments are proposed. Inevitably, modern science will prove cautious about installing new devices until there has been careful basic and applied research and adequate clinical trial. This takes time, money, skill, and standards.

We must always carefully balance our zeal for the new with respect for the old. We must always respect the right of the M.D. to demand the most solid scientific proof of the safety and efficiency of new instrumentation.

There are over 6,500 hospitals in our Nation. Potentially, they offer a great economic market, but in actuality, the hospitals of our country have some of the severest financial problems of any community institutions. Selling new instrumentation to them in large quantities has proven an enormously difficult task for even the largest, best established electronic and other companies.

And so, although I am happy to speak of the promise ahead, I do also want to sound this note of realism.

Industry will need its most careful marketing surveys, maximum engineering efficiency, and great patience and perseverance, if it is to serve this unusual and difficult market.

But always remember, it is a market worth serving.

The Federal Government can and should help you, insofar as possible.

But each of you must also shoulder your own burdens.

CONCLUSION

An old Chinese proverb reads that "If every man would sweep in front of his own doorstep, the world would soon be clean." Yes, we are all enlisted in the struggle to cleanse the world of disease and disability. The world indeed, stands on the threshhold of a new day in diagnostic, preventive, curative, and restorative medicine.

I know that this great intellectual community of the Chicago area has a tremendous part to play in the fashioning of that new day.

The Springfield Armory, Selected by President George Washington as National Armory, Designated as National Historical Landmark by National Park Service

EXTENSION OF REMARKS

OF

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 9, 1963

Mr. BOLAND. Mr. Speaker, last week, on April 2, the Springfield Armory in my home city of Springfield, Mass., was officially designated as a registered national historical landmark by the National Park Service, U.S. Department of Interior, under provisions of the Historic Sites Act passed by Congress in 1935. An armory in Springfield produced weapons for Gen. George Washington's Continental Army during the Revolutionary War. Shortly after President Washington's inauguration in 1789, the first Chief Executive and father of our country visited Springfield and subsequently recommended the establishment of a national armory there. Since that time the Springfield Armory has contributed to America's national defense and arsenal of small weapons.

Unfortunately, I could not go to Springfield for this dedication, because the appropriations subcommittee on which I sit was holding hearings, but I did send the following telegram for the occasion:

APRIL 1, 1963.

COL. C. L. P. MEDINNIS,
Commanding Officer, Springfield Armory, Springfield, Mass.:

Regret cannot join with you personally on this momentous occasion as the Springfield Armory is officially designated as registered national historical landmark, but congressional duties necessitate my remaining in Washington. Ever since President Washington selected and Third Congress approved Springfield as site of national armory, the community and arsenal have grown together in importance, have made innumerable contributions to national security in wartime and to national culture in peacetime. We in Greater Springfield can justly be proud of the Springfield Armory, its history, its tradition, its weapons development in the past and its most recent contribution, the M–14 Springfield rifle. The fact that the M–14 Springfield remains as the Army's standard rifle is testimony to the skills and hard work of the craftsmen and researchers at this arsenal. The armory has had a glorious history and it will also have a useful future as the Army's small weapons research and development center of the Nation. Let it be said on this historic occasion that I am a firm believer in the Nation's arsenal system which has sparked the arming of this Nation in every crisis of its history and has contributed such outstanding weapons as the M–1 Garand and the M–14 Springfield rifle to the national arsenal. However, we must not rest on our laurels. Now is the time for a renewed effort in research and development at Springfield to produce new generations of small weapons so vital to the Nation's defense even in the space age.

EDWARD P. BOLAND
Member of Congress.

Mr. Speaker, under leave to extend my remarks, I would like to have printed in the CONGRESSIONAL RECORD newspaper stories telling of the dedication, taken from the Springfield Daily News of April 1, another on April 2, another in the Springfield Union on April 3, an editorial in the Springfield Daily News on April 3, and the address by Col. C. L. P. Medinnis, commanding officer of the Springfield Armory.

The articles follow:

[From the Springfield (Mass.) Daily News, Apr. 1, 1963]

REPRESENTATIVE BOLAND IN DEFENSE OF THE M14—URGES RENEWED EFFORT IN SMALL ARMS RESEARCH AND DEVELOPMENT

WASHINGTON, D.C.—U.S. Representative EDWARD P. BOLAND, Democrat, of Springfield, today, on the eve of the official designation of the venerable Springfield Armory as a national historic landmark, spoke out in defense of the arsenal system and particularly its latest product, the M–14 Springfield rifle.

The local representative sees the recently much criticized M–14 Springfield as a fit contributor to a long tradition of military small arms development here.

At the same time, the Congressman, who wrote to Col C. L. P. Medinnis, commanding officer of the gun plant, to say he would be unable to attend the ceremonies, urged that there be a renewed effort in research and development to produce a "new generation of small weapons vital to the Nation's defense, even in the space age."

After expressing his regrets at being unable to attend the landmark plaque ceremony at the armory, Representative BOLAND wrote:

INNUMERABLE CONTRIBUTIONS

"Ever since President Washington selected and the third Congress approved Springfield as the site of the national armory, the community and the arsenal have grown together in importance and have made innumerable contributions to the national security in wartime and to the national culture in peacetime.

"We in Greater Springfield can justly be proud of the Springfield armory, its history, its tradition, its past weapons development and its most recent contribution—the M14 Springfield rifle.

"The fact that the M14 Springfield remains as the Army's standard rifle is testimony to the skills and hard work of the craftsmen and researchers at this arsenal.

"The Springfield armory has had a glorious history and it will also have a useful future as the Army's small weapons research and development center of the Nation.

"Let it be said on this historic occasion that I am a firm believer in the Nation's arsenal system which has sparked the arming of this Nation in every crisis of its history, and has contributed such reliable weapons as the M1 Garand and the M14 Springfield rifle to the Nation's arsenals.

MUST NOT REST

"However, we must not rest on our laurels. Now is the time for a renewed effort in research and development at Springfield to produce new generations of small weapons so vital to the Nation's defense even in the space age."

The 10 a.m. dedication event will take place in front of the main administration building, Armory Square, where a permanent bronze marker will be unveiled.

Dr. Murray N. Nelligan of the Department of the Interior will present the plaque and certificate.

[From the Springfield (Mass.) Daily News, Apr. 2, 1963]

ARMORY IS ESTABLISHED AS NATIONAL LANDMARK—GUN PLANT ON HILL JOINS MOUNT VERNON AND TICONDEROGA AS HISTORICAL U.S. SITE

Pleasant weather today was a fitting background as the 169-year-old Springfield Armory took its place as a national historic landmark along with Valley Forge and Mount Vernon and other revered places in the Nation.

While some 2,000 gathered in a large semicircle around the flag-bedecked armory administration building, Col. C. L. P. Medinnis, commanding officer of the armory, accepted a Department of the Interior certificate, and a few minutes later John C. Garand, inventor of the M–1, one of the "guns of glory" of the arsenal, unveiled a plaque.

The Interior Department official, Dr. Murray Nelligan, remarked that the ancient gun plant, established by Gen. George Washington, had a right to stick out its much respected military chest since it is to be one of only 350 locations in the Nation deemed important enough in American history to be selected as a landmark.

"The armory takes its place now with Mount Vernon, with Fort Ticonderoga, with Old North Church, and the USS *Constitution*," commented Dr. Nelligan, "certainly a coveted honor which the people and city of Springfield can share."

Introduction of the brief dedication program was made by Colonel Medinnis, who also conducted a tour of the historic spots within the arsenal, ending with a visit to the Benton Small Arms Museum and a luncheon at the officers club for special guests.

After the reading of congratulatory telegrams and letters from Senator Edward M. Kennedy, Representative Edward P. Boland, and Maj. Gen. Nelson M. Lynde, Jr., commanding officer of Army Weapons Command at Rock Island, Ill., Colonel Medinnis spoke on the history of the gun plant, its contribution to the Nation's military growth, and its close relation with the city of Springfield over more than a century and a half.

STARTED IN 1777

The armory began with the establishment of a laboratory and depot in rented buildings in 1777, Colonel Medinnis said, Springfield was chosen as the site of a national armory primarily because of the presence of a considerable number of skilled gunsmiths, blacksmiths, and craftsmen.

General Washington, he said, visited the city shortly after his inauguration in 1789 and, convinced of its potentialities, recommended the establishment of an armory, which was agreed by the 3rd Congress.

"Today this installation," said the commanding officer "is the only manufacturing arsenal which can call itself an armory. The Springfield Armory was so designated from the very beginning and, because of long historical association, the term has remained unchanged."

He then traced the development of small arms, and made note of the presence on the platform with him of Mr. Garand, who was the first designer of a semiautomatic rifle, first issued in 1937.

WAR PRODUCTION

In 1795, he noted, there were 40 people employed and 245 muskets produced at the Armory; in 1864, 276,000 rifles were produced and during World War II, more than 4 million Garands were produced by a peak work force of 14,000.

Springfield Armory is today a member arsenal of the Army Weapons Command with headquarters at Rock Island, and furnishes modern weapons to all elements of the Armed Forces. Commenting on the famous names of those who commanded or worked in the armory, the commanding officer said that the Benton Museum, one of the stops on the tour of the grounds, contains historical mementos of not only the armory but also the saga of American military greatness.

The tour included the main administration building, erected in 1817; the high point of Shays' Rebellion in 1786; the original guardhouse, erected in 1880, now referred to as "honeymoon house" for newly assigned lieutenants, and the officers club, the oldest building or post erected in 1808.

The main arsenal, officers' row, and watershops area were also visited before the museum and the luncheon program which ended the official phase of the observance.

Visitors included Col. John W. Carroll, commander of Westover Air Force Base; Mayor Charles V. Ryan, Joint Civic Agencies President Bernard H. McMahon, and other community and military leaders.

The plaque placed on the facade of the administration building reads:

"Springfield Armory has been designated a registered National Historic Landmark. Under the provisions of the Historic Sites Act of August 21, 1955, this site possesses exceptional value in commemorating and illustrating the history of the United States, U.S. Department of the Interior, National Park Service."

[From the Springfield (Mass.) Union, Apr. 3, 1963]

U.S. Landmark Title Achieved—Armory Named Historic Site at Ceremony

The Springfield Armory was formally designated as a national historic landmark at a ceremony at the armory grounds attended by about 2,000 persons Tuesday.

Col. C. L. P. Medinnis, armory commanding officer, accepted a Department of Interior certificate and John C. Garand, inventor of the M1 rifle, unveiled a plaque.

FACILITIES TOURED

Colonel Medinnis recited a history of the armory and conducted special guests on a tour of armory facilities.

The plaque designating the armory as a national historic landmark notes, "This site possesses exceptional value in commemorating and illustrating the history of the United States."

The armory joins Valley Forge and Mount Vernon and some 350 other sites as national landmarks.

Congratulatory telegrams included one from Senator SALTONSTALL, received during the afternoon. It said:

"Sorry I could not be with you this morning. Since Revolutionary days, the armory has been a vital part of the Springfield economy and has played an important role in our Defense Establishment. This is an important day for the armory and a reminder of the role which is played in the history of our country and its continuing significance to Springfield."

[From the Springfield (Mass.) Daily News, Apr. 3, 1963.]

National Historic Landmark

Connecticut Valley residents hardly need to be reminded that the U.S. Armory at Springfield is a national historic landmark, but that designation given to the armory yesterday by the Department of the Interior may be a helpful guide to citizens in other parts of the country.

There were some positive reasons for locating the armory at Springfield. Even in colonial times, there were gunsmiths, blacksmiths and other skilled craftsmen in Springfield. There were also some negative reasons. Any site below the Enfield Rapids could be attacked by enemy gunboats, but a location above the navigability limits of the Connecticut River would be safe. West Springfield was then larger than Springfield, and the former used its political influence to keep the armory out of West Springfield, and thus to keep the west side girls out of the ogling range of the armory soldiers.

The armory, with its wartime expansions and its postwar layoffs which flooded the labor market with skilled craftsmen, was largely responsible for Springfield's industrial development. However, the armory's role is not only historic, it is present. The armory is not only the Nation's oldest manufacturing arsenal; it is also today the U.S. Army's principal research and development center and pilot manufactory for small arms.

The Springfield Armory is a national historic landmark, but it is also a vital part of the National Defense Establishment, and of the region's industrial complex. The armory is 169 years old, but it must help the country prepare for the common defense until that day when the poetic prayer of one of the armory's most famous visitors is answered, and the "huge organ" of "burnished arms" gently whispers "peace."

Springfield Armory Being Named National Historic Landmark

(Speech by Col. C. L. P. Medinnis, April 2, 1963)

Congressman BOLAND, distinguished guests, ladies, and gentlemen, as commanding officer of the Springfield Armory it affords me the greatest pleasure to welcome you this morning to this uniquely historic post for the presentation of the plaque and certificate officially designating the Springfield Armory as a registered national historical landmark.

Under the provisions of the Historic Sites Act passed by the Congress of the United States in 1935, the Secretary of the Interior was directed to make a survey of the historic sites of the United States "for the purpose of determining which possess exceptional value as commemorating or illustrating the history of the United States."

A program for the registry of such landmarks was initiated by the National Park Service some years ago and on December 4, 1961, my office was notified that the Springfield Armory had been designated as such a site.

We are here today for the presentation of the plaque and certificate officially marking this designation.

As you are all aware, the Springfield Armory traces its history back to the year 1777 when a laboratory and depot were established in rented buildings in what is now the downtown district of the city of Springfield.

Following the Revolutionary War, all manufacture and repair work was stopped but Springfield was retained as a storage depot for the New England area. President George Washington visited this city shortly after his inauguration in 1789 and, convinced of its potentialities, recommended the establishment of a national armory here. His approval of the local area was adopted as a law by the Third Congress.

Springfield was chosen as the site of a national armory primarily because of the presence of a considerable number of skilled gunsmiths, blacksmiths and craftsmen. The availability of such a great number of artisans prompted Gen. Henry Knox, the then Gen. George Washington's most experienced artillery officer, to recommend Springfield for its march toward history.

Since then, the Springfield Armory and the community of Springfield have been mutually interdependent. The armory attracted additional arms industries to the area, and the supply of competent gunsmiths, in turn, has continued to be an important factor in enabling this post to continue its activity.

The designation of this installation as a registered national historical landmark is a source of considerable pride to all of us in this area. We at the Springfield armory are particularly proud of this recognition for it constitutes a tribute to the leadership and the personnel of past and present years who have had such a great part in shaping the great traditions of this installation.

The names of Superintendents David Ames and Benjamin Prescott, the first leaders of the armory, immediately come to mind since they were the first to formulate the plans which led to the basic foundations of the arsenal system. Then, too, the name of Lt. Col. Roswell Lee, the first of the military commanders here whose name has been perpetuated in the local chapter of the Masons; Maj. J. W. Ripley; Capt. George Dwight; Capt. Alexander B. Dyer; Maj. J. G. Benton for whom the city's Benton Park and this installation's small arms museum have been named—all these are names which have contributed to the history not only of the Springfield Armory but also to the city of Springfield. All these men were particularly outstanding in their work effort and also active in the affairs of the city during or after their service at this installation. Their names have been indelibly recorded, as attested by various parks, streets, and other landmarks bearing their names.

There are still other names of men from the Springfield Armory who have contributed to the march of history.

They are men like Thomas Blanchard who designed a machine for turning gunstocks. This very machine, which is to be seen in the Armory Benton Small Arms Museum, was the forerunner of all modern lathe machines.

There is also the name William R. "Billy" Bull, who as an armory employee, used his marksman's eye to such excellent advantage that he traveled to England and outshot all rifle marksmanship competitors to gain the world title.

Names such as Erskine Allen, James Cranston, and Lucian Bruce were connected with early developments of small arms; while John E. Murphy and Daniel J. Manning were principally responsible for developing the Model 1903 Springfield Rifle, one of the "guns of glory" which saw service from the Walls of China in the Boxer Rebellion to the beginning of World War II.

Still with us today and already a legend for his work in our field is the name of John C. Garand, the inventor of the M1 rifle which bears his name. He is unique in the fact that his brainchild was he first successful semiautomatic rifle and that much of the machinery he designed for the manufacture of M1 rifle components is still admired and copied by machine-tool and small arms industries. Springfield Armory is honored in claiming him as one of its family.

There is still another side to the Springfield Armory story and this concerns primarily the city of Springfield.

Any historic research into the annals of Springfield would necessarily show the great part this post has played in its history and development. No better illustration of how this is recognized can be cited than the inclusion of the view of the main arsenal here in the seal of the city, which was adopted when Springfield became a city in 1852. The complete seal pictures the town at the time. In the upper part of the seal may be seen the main arsenal just as it appeared then and has existed to this day. Many of you undoubtedly remember the poem "Arsenal at Springfield" written by Henry Wadsworth Longfellow.

This attention was certainly warranted since the armory's role as an influential social institution in the community is clearly evident when it is realized that most religious denominations established in Springfield were a direct outgrowth of the armory work community.

All denominations, Baptists, Episcopalians, Methodists, Catholics to number a few, came to life as a result of religious creeds of armory employees. Most of them met as combined churchmen for the first time in either the U.S. chapel—a room in the second floor of the present administration building—or military hall here on post.

Two of the offspring of these early religious groups can be seen today in the Universalist Church and St. Michaels Cathedral.

In addition to the prestige the armory has brought to the city because of its manufacturing activities it is interesting to note that the city and the armory gained prominence from the great national horse show held in Federal Square at this installation in 1856. This was the first show of its kind in the United States and attracted persons from all over this country and Canada.

New England and particularly the Connecticut Valley benefited from the founding of the armory for it was here at this installation that a beginning was made in the development of the fine-crafts industry for which this part of the country is so famous. Furthermore, the armory gained distinction throughout the industrial world by being a pioneer in the development and manufacture of interchangeable parts in connection with rifle production, a feature later adopted by industry as essential for all mass production of fabricated articles.

Honored guests, please forgive all of us at the Springfield Armory, if we appear to be blowing our own horn at this time. The fact of the matter is that we are proud to have our tradition, our background, our accomplishments brought to the attention of the Nation. The pride we have shared in our establishment we are now happy to share with the Nation since it is for this Nation that this Springfield Armory has existed at all.

The registering of the Springfield Armory as a national historic landmark gives due recognition to the important role of this Federal arsenal and this site in the cultural history of the United States.

I would, at this time, like to give full attention to the role played by the U.S. Department of Interior, National Park Service, for this opportunity in bringing to the attention of the Nation the national significance of this installation. The Department of Interior now becomes a full partner in this event of today.

It is with a deep sense of personal pride, accomplishment and satisfaction that I accept this plaque and certificate in behalf of all Springfield Armory personnel, both past, present and future.

This marker is received in trust for all to commemorate the location of the Springfield Armory in the historic annals of this Nation.

It is our hope that future generations will remember full well the significance of this event.

This plaque and certificate support this objective.

This concludes our presentation ceremony. I want to thank you all for witnessing the event. It is my earnest hope that all of us will remember this dedication in our future thoughts and deeds.

Springfield Armory Named as National Historic Landmark on April 2, 1963

The date of April 2, 1963, will be of double-barreled significance to the Springfield Armory, according to Commanding Officer Col. C. L. P. Medinnis.

On that date, the local U.S. Army Weapons Command installation will mark not only its 169th anniversary but also its commemoration as a national historic landmark. The event will be witnessed by key military, congressional, civic, and historical groups of this area.

Naming of the Springfield Armory as a national historic landmark developed as a portion of the registry program instituted by the Department of Interior, National Park Service. The registry is a method by which the Federal Government recognizes sites classified as of exceptional value irrespective of ownership. Such sites are not of the national park system. The registry, in effect, identifies important segments of American heritage and brings them to the attention of the American people.

The event will be highlighted on April 2 with a half-hour dedication ceremony beginning at 10 a.m., immediately in front of the Main Administration Building, Armory Square, where a permanent bronze marker will be unveiled.

Dr. Murray H. Nelligan, of the Department of Interior, Philadelphia, Pa., will present this installation with its plaque and certificate. Other invited guests include Congressman Edward P. Boland, Democrat, of Massachusetts, U.S. Army Weapons Command, civic officials from Holyoke, Chicopee, Westfield, and Springfield; the Springfield Joint Civic Agencies; regional historical groups; and representatives of military units within the Greater Springfield area; key Springfield Armory personnel and representatives of the installation labor groups.

Employees of the Springfield Armory will also be given an opportunity to observe the dedication ceremony.

Specially invited guests of Colonel Medinnis will then be taken on a tour of the major historic sites within the installation. The tour itinerary will include halts at the main arsenal, the west and middle arsenals, the site of Shays' Rebellion, and the dam at Watershops Pond. The final stop of the tour will be the Benton Small Arms Museum at the armory.

The Department of Interior summed up its reasons for choosing the Springfield Armory as a national historic landmark in four data-packed paragraphs which have now become part of the official record. The four paragraphs follow:

"The Springfield Armory, dating from 1794, is the U.S. Government's oldest manufacturing arsenal. Since the dates of its establishment, the armory's ordnance products have figured in every American war, and its name has become synonymous with some of the finest of the world's military arms. The armory is significant also as the site of the defeat of the most dangerous threat posed by Shays' uprising in 1786–87, when the rebellious farmers of Massachusetts were thwarted in their attempt to seize the arms and supplies stored at the Springfield depot.

"The availability of skilled gunsmiths, blacksmiths, and other artisans had made Springfield a firearms manufacturing center prior to the Revolution and for this reason Gen. Henry Knox was prompted in 1777 to propose the town as a laboratory, a manufacturing and repair depot for military arms in the war with Britain. In 1789, the newly elected President George Washington inspected the Springfield site and subsequently recommended it as the location of a national armory.

"The Springfield Armory was the site of the abortive attack by Capt. Daniel Shays and his followers in the Massachusetts uprising of 1786–87 known as Shays' Rebellion. For several months prior to the attack, debt ridden and disgruntled farmers had roamed Massachusetts, preventing county courts from sitting and rendering judgment for debt. In late 1786, Shays and his followers gathered for an assault on the supply depot at Springfield where a quantity of arms, ammunition and supplies were stored. They attacked on January 25, 1787, but were repulsed by the defending garrison. The revolt continued for a few weeks more but the farmers never again made so dangerous a threat.

"Springfield Armory today is the U.S. Army's principal research and development center and pilot manufactory for small arms. A museum in the armory has exhibits not only telling the history of the armory but also interpreting in vivid fashion the story of America's military growth and power. A boulder adjacent to the armory grounds on State Street marks the site of Shays' attack in January 1787. The armory is located at Armory and Federal Squares, Springfield, Mass."

Reform of Congressional Procedures

EXTENSION OF REMARKS

OF

HON. CLIFFORD P. CASE

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Tuesday, April 9, 1963

Mr. CASE. Mr. President, those of us who have been pressing for modernization of the congressional organization and procedures were greatly encouraged by a forthright article on congressional reform by Senator Hubert H. Humphrey. The article appeared in the New York Times Magazine on April 7.

In his usual vigorous fashion, the senior Senator from Minnesota, who is also the majority whip, made an impressive case for action to improve the functioning of Congress.

His interest will be, I am sure, most helpful in securing hearings on the measures to this end which have already been introduced, including my own bill in which Senator Clark joined. Senator Clark and I have already written to the Rules Committee urging that hearings be held, and we welcome the support and interest of the Senator from Minnesota.

I am confident that if hearings are held, the case for action looking toward improvement in specific problem areas will be demonstrated beyond question. That the need for reform is widely recognized is indicated by the response to a recent poll I made of teachers and practitioners of political science.

I ask unanimous consent that the article by Senator Humphrey be printed in the Record, together with a news article also from the New York Times of April 7 which summarizes the comments to which I refer.

There being no objection, the articles were ordered to be printed in the Record, as follows:

[From the New York Times, Apr. 7, 1963]

Congress Scored on Archaic Rules—Senator Case's Poll Shows Support for Revisions

(By Cabell Phillips)

Washington.—If Congress is to restore its prestige and effectiveness it had better give prompt attention to its archaic methods of doing business, a cross section of the Nation's political scientists believes.

This nearly unanimous opinion emerges from a nationwide poll of more than 200 teachers and practitioners of political science. The poll was recently completed by Senator Clifford Case, Republican, of New Jersey, who requested comment on a bill he had introduced calling for a special commission to study and make recommendations on congressional reorganization.

One important consensus from the comments is that Congress, as an institution, is losing status in the public mind as an effective arm of Government in comparison with the executive and the judiciary.

While both the Presidency and the courts have geared their thinking and their operations in consonance with the needs of modern times, many believe, Congress, as one respondent put it, gives the impression of "limping along in the harness of the horse and buggy age."

This rather prevalent viewpoint was expressed as follows by Prof. Edgar W. Waugh of Eastern Michigan University:

"Measured by the individual capacities of its Members (this) Congress compares very favorably with any of its predecessors, but when measured by its collective capacity to get things done, it looks much worse. Each House has become, so to speak, a prisoner to procedures which are patently out of step with the swift tempo of the nuclear space age. This needs to be corrected, and swiftly."

Professor Waugh added that it had become essential "to bring the executive and legislative branches into a closer and more cooperative relationship without damage to the balance on which our Government is founded, and without impairing the values provided by a loyal opposition."

The Case bill, one of several introduced this year for congressional reform, centers on a study commission composed of both Members of Congress and experts from other fields of public life. The bill defines 12 problem areas on which the commission would concentrate.

These problem areas cover such subjects as the scheduling of congressional business, staffing and procedure of committees, rules of floor procedure, conflicts of interest of the Members, travel and other spending allowances, financing of congressional election campaigns and "the strengthening of the congressional power of the purse."

The bill has been referred to the Rules Committee but no hearings have been scheduled.

The last substantial reform of congressional procedures occurred under the Legislative Reorganization Act of 1946. Its principal achievement was a drastic reduction in the number of standing committees, and provisions for professional staffing of some of those committees. However, rules that contribute most to the cumbersomeness of congressional procedures, the right of committees to bottle up unwanted legislation, the seniority rule in the choice of chairmen, unlimited debate in the Senate, have not been altered in a century.

Virtually all the political scientists replying to Senator Case's inquiry applauded his idea for a broadly based study of reforms. Their viewpoints about what is wrong with Congress and what needs to be done about it fell into several broad categories.

A large group felt that Congress will continue to lose stature in the public eye until it modernizes its procedures. Addressing himself to this point, Prof. John W. Baker, chairman of the department of political science at the College of Wooster, Wooster, Ohio, wrote:

"I consider Congress to be the vital center of our representative democracy, and yet I find it very difficult to convince students of this fact. They have seen too many cartoons of Senator Snort and his ilk. Congress has been the butt of too many derogatory jokes. They have heard too much pool reporting of congressional activities. They have also read too much responsible reporting which has pointed out the weaknesses of Congress as it is functioning at present."

[From the New York Times, Apr. 7, 1963]

To Move Congress Out of Its Ruts: Americans Know That That Body Could Do a Better Job Than It Does; a Senator Offers His View of What Is Wrong and How Legislators Could Be Made More Effective

(By Hubert H. Humphrey)

(Hubert H. Humphrey, the senior Senator from Minnesota, serves on four committees, including one on reorganization of Government.)

Washington.—Sixteen years ago, the United States held a monopoly of atomic weapons. Jet aircraft were barely operational. The space age could be found only in science fiction magazines. Television was an 8-inch infant in electronics laboratories. The Nation's elementary schools had classrooms to spare. The cold war could be seen on the horizon only by a handful of political wise men. Europe was near economic collapse, Africa was still a continent of colonies and Chiang Kai-shek still ruled the Chinese mainland. Cuba, to most Americans, was a plush and pleasant vacation spot. Fidel Castro was a teenager.

It was 16 years ago when the U.S. Congress last turned to the tedious task of self-criticism and produced a major legislative reform. Since the Legislative Reorganization Act of 1946, Congress has changed little. The structure is the same. The committee lineups are almost identical. The traditions are preserved. And the basic attitudes of Congress toward its own prerogatives and centers of power are still tuned to 1946 or the more distant past.

But the needs of the Nation and the demands on Congress have multiplied.

Since 1946 the Nation's population has increased 33 percent, its Government has grown to include many more services and duties, its problems are infinitely more complex, and its involvement in world affairs is no longer fractional and irregular but rather total and constant.

The essential problem of Congress today is simply that there is more to do but only the same number of men to do it. The Members of Congress have to find enough time to fulfill their thousands of obligations and to develop a congressional system in which they can use their time most effectively.

The most pressing day-to-day demands for the time of Senators and Congressmen are not directly linked to legislative tasks. They come from constituents. And the constituency of a Member of Congress is not limited to his home State or district. He gives priority attention to the people back home, but as a U.S. Senator or Representative, his constituency is the whole Nation.

The image of a Member of Congress engaged in debate of issues or in study and reflection on the problems of the Nation and freedom is accurate for only a fraction of his time. At any point in his workday, the Congressman is more likely to be talking about a housing development with municipal officials, or phoning an executive agency for an answer to a constituent complaint, or dictating a letter to a citizen who wants some information for his son's term paper for a school civics class.

Speedy air travel, the low cost of telegrams, or long-distance telephone calls and campaigns to encourage citizens to "write your Congressman" have turned most congressional offices into operations resembling a complex of train station, post office, airline terminal, and communications center. My own experience may or may not be typical, but it is significant of the increased personal workload for Members of Congress.

In 1949, I moved into an office of four rooms. My staff and I had the use of two telephone lines. An average of 50 letters a day were received. Thirty telephone calls a day were considered heavy. A personal visit to the office by a constituent on any day was a special event.

In 1962, my office had doubled to eight rooms. Now, 12 telephone lines funnel an average of 500 calls into the office each day, and I keep two private lines just to be sure I will be able to get through the crowded switchboard to reach my staff. One hundred and twenty personal visitors, not counting large groups of students or tourists, come into the office each day, about half of them constituents from my home State.

How does the Member of Congress handle this workload? He has a staff to help, and he and his assistants work long hours at a fast pace. Any citizen who doubts that he is getting an honest day of work for the salary he pays his Congressman need only walk by the Senate or House office buildings late at night or on weekends. Most of the lights are burning through the evening hours, and many still shine after midnight on any night of the week.

Congressmen do not complain about the demands on their time for service to constituents. They perform that service because it is their job, because it is vital for their political survival, and because they know that the individual citizen with a need, complaint or idea cannot even hope to dent the surface of big government unless he works through his elected representative.

But Members of Congress do complain often that they have little time to perform their duties as legislators. This is perhaps the central, general problem and defect of Congress today: The inability of Congressmen to find the time to inform themselves of the issues they face, to give their best talents to committee assignments, and to legislate responsibly.

The day is long gone when a Member of Congress could be satisfied with mastery over two or three limited, precise subjects and follow a policy of voting the party line on other issues. Today, the Senator or Congressman is expected to be thoroughly informed on hundreds of different subjects and issues, from agricultural economics in Minnesota to the administration of foreign aid in Bolivia, from Federal housing needs in New York to Soviet strategy in the Middle East, from a flood control project in California to the merits of a man-on-the-moon spaceship project.

The complexities and variety of issues which Members of Congress must master will continue to increase in an age of nuclear power, scientific advances, fast-changing social patterns, and international involvement and leadership by the United States.

The pattern is already evident: At the time of the last Legislative Reorganization Act, the 79th Congress (1945 and 1946) initiated 12,656 bills or resolutions. The 87th Congress (1961 and 1962) initiated 20,316 bills or resolutions, a 60-percent increase in the congressional workload.

Most of these measures were relatively routine, but each took some time from Congress in general and individual Members in particular.

There has been a comparable increase in the flow of major, controversial, and thus time-consuming legislative proposals. Traditionally, the average congressional session has seriously considered and attempted to hammer out one major new program or reform in a single year. The second session of the 87th Congress last year made a serious effort on many major legislative programs, including the trade bill, tax reform, social security financing of health insurance, authorization to purchase United Nations bonds, and the Communications Satellite Act.

A realistic accounting by the White House concluded that the 87th Congress approved, and the President signed into law, 73 major legislative proposals. The 83d Congress, representing the first 2 years of the Eisenhower administration, approved 29 major legislative proposals. The 87th Congress of 1961 and 1962 approved a total of more than 1,000 public bills. The 83d Congress of 1953 and 1954 approved about half that number.

These figures are not mentioned to play a sort of partisan numbers game, but rather to emphasize the increased legislative workload of Congress and its Members.

The result of that heavy workload, in 1962, was one of the longest peacetime sessions of Congress in history. Congress met continually from early January to mid-October. In the final month, a few oldtimers on Capitol Hill grew frustrated enough to look back fondly on the year 1923, when Warren Harding was President and the Congress convened in March just long enough to recess until December.

But even 9- or 10-month congressional sessions do not solve the problem of the individual Senator or Congressman who must find the time to inform himself about the legislative issues he faces.

Most Members of Congress are dedicated and conscientious legislators and public servants, aware of the power they hold over the dollars and destiny of the American people and so many others throughout the world. If they are given extra time, or rather freed from unnecessarily time-consuming duties, they will spend most of it tackling the huge task of informing themselves.

Several steps can be taken to give them that extra time. These are not the final answers to the time problem of Members of Congress, but they would help.

First, more joint meetings of congressional committees. A legislative question involving disarmament and arms control, for example, normally requires consideration by the Foreign Relations and Armed Services Committees of the Senate and the House and the Joint Committee on Atomic Energy. Joint meetings would save the time of Members serving on more than one of these committees.

Second, more standing joint committees including Members of both the House and the Senate. Such committees would save time, particularly toward the end of each congressional session, by paving the way to speedier conference agreements between the Senate and the House on controversial issues.

Third, more efficient scheduling of the workdays of Congress. Certain days could be scheduled specifically for floor debate and action by the full House or Senate. Other days could be restricted exclusively for hearings and action by the congressional committees.

In the early months of the session, the full House or Senate would meet only a few days each week. As committees completed their action in the later months of the session, the Senate and House would meet more often. This pattern would save time for Members, and end the absurd necessity of Members literally running from committee room to Senate or House Chamber when issues in which they are involved are up for action at different places at the same time.

Fourth, modification of the morning hour in the Senate, in which Members read miscellaneous speeches of marginal or undated importance and insert various articles into the CONGRESSIONAL RECORD. Instead, Members would be permitted to send their morning hour speeches and articles to the clerk for insertion in the RECORD, without taking their own time and the time of other Senators to read them word for word.

Fifth, a requirement in the Senate that Members restrict their remarks to the issue formally listed as the business of the Senate. In a debate over agricultural programs, for example, a Senator would not be able to spend an hour discussing a totally unrelated subject. This rule of germaneness now applies only to debate in the House of Representatives.

Sixth, a summer recess of Congress of at least 3 weeks. This would take time away from legislative duties, but ultimately, I am convinced, would save time. The immediate value would be the opportunity for Members of Congress to spend some time with families and constituents in a period (June or July) when schools are closed and citizens are not tied at home because of weather.

The indirect value would be the change of pace and rest such a recess would give to each Member. He would return for the final busy weeks of the session refreshed for more efficient performance of his legislative duties. Congressmen are human beings; they get tired and their nerves can become frayed from long months of pressure and hard work. A summer recess would probably reduce the inevitable tensions and bickering so common in the final weeks of congressional sessions.

Seventh, modification and adoption of the British question period, in which administration leaders would report on and answer questions of general importance before the full Senate and House. This would save time, help to keep Members of Congress better informed on administration programs and policy and sustain the necessary frequent contact between the executive and legislative branches of Government.

This final suggestion, and some of the others, would have a valuable side effect; it would save the time of high administration leaders who have their own crucial problems of too many duties for too few hours.

It is not unusual for the Secretary of State and the Secretary of Defense and other Cabinet officers to give basically the same testimony and answer basically the same questions for several different congressional committees. The Secretary of State, for example, might be called early in the session to outline the foreign aid program, including military aid, to the Senate Committee on Foreign Relations. He will then repeat the same testimony to the Senate Armed Services Committee, and again to the House Armed Services Committee.

The result, I believe, is an excessive demand on the time of these officials. Secretary of State Dean Rusk made 54 personal appearances before congressional committees during the 87th Congress, 29 in 1961 and 25 in 1962. Secretary of Defense Robert McNamara spent a total of 203 hours before congressional committees during the 87th Congress, 88.74 in 1961 and 114.25 in 1962.

Standing joint committees, more joint meetings of committees, and a question period for the full House or Senate would save the time of Congressmen and these high officials, and serve to inform all Members of Congress more thoroughly.

Another congressional defect which tends to waste time, and to cause confusion and occasional conflict between Members, rests with the lineup of Senate and House committees. New problems and programs created by a world transformed by nuclear power and the space age are being handled by a congressional committee system which has changed little in 50 years.

There were 2 weeks of confusion following introduction of my bill in 1961 to establish a U.S. Arms Control and Disarmament Agency. This measure was first assigned to the Foreign Relations Committee, then switched to the Government Operations Committee, then back to the Foreign Relation Committee. At one point, it almost went to the Armed Services Committee. (The bill finally remained with Foreign Relations, was approved, and signed into law.)

The Communications Satellite Act bounced from committee to committee before it was finally processed and sent to the floor last year. At one time or another, this bill involved the Interstate and Foreign Commerce Committee, the Foreign Relations Committee, the Government Operations Committee, the Space and Astronautics Committee, and, of course, the Appropriations Committee.

Is a more up-to-date committee lineup, responsive to modern problems and modern opportunities, needed? I believe it is, and that a thorough review of the present committee and subcommittee lineups and jurisdictions is necessary.

That review would be one of the prime responsibilities of a Joint Committee on the Organization of Congress, which would be established by a resolution sponsored by Senator JOSEPH S. CLARK, Democrat, of Pennsylvania, and 31 other Senators representing both parties. A companion measure in the House agrees that this committee of seven Senators and seven Representatives should conduct a complete review, the first since 1946, of Congress and produce recommendations for its improvement.

I expect this Joint Committee on the Organization of Congress to be established. Its work will be one of the most significant efforts of the 88th Congress. And its task will be difficult, because there is little popular interest or direct political advantage in the tedious effort for procedural reform within Congress.

But the American people want good government, and sense that the legislative branch has not been performing its functions with the order and effectiveness the Nation deserves. The waning weeks of the 87th Congress included fights over such petty issues as what room the Appropriations Conference Committee should meet in, and long delays over minor details of legislation.

Displays of bickering and pettiness tend to obscure the real record of achievement written by recent Congresses and to diminish the respect and confidence of the people in their own representative government. Perhaps the greatest need in Congress today is not so much for studies, procedural changes, and committee modernization. It may rather be a more thoroughly responsive attitude by Members of Congress, who need to realize that the rules and traditions of Capitol Hill are not sacred, and that the national interest and public service are more important than individual or committee powers and prerogatives.

Chairman Evins Addresses Independent Dairies—Urges Support for President's Tax Proposals

EXTENSION OF REMARKS

OF

HON. TOM STEED

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 9, 1963

Mr. STEED. Mr. Speaker, yesterday and today the Nation's Capital has as its guests the members of an outstanding small business organization, the National Independent Dairies Association.

This group is holding its sixth annual convention here in Washington, and at a luncheon yesterday, its members were privileged to hear an address by the chairman of the House Small Business Committee, our distinguished colleague, Representative Joe L. Evins, of Tennessee.

During the course of his remarks, Chairman Evins detailed some of the important advantages to be gained by small business if the President's tax proposals can be adopted. He urged the members of the National Independent Dairies Association, as well as all other independent small businessmen, to support these proposals.

Chairman Evins described the President's tax proposals as one of the greatest single actions that can be taken at this time to provide immediate assistance to small business.

I am sure that the statement of Chairman Evins will be of interest to all of the Members of the House, and I am, therefore, asking that it be reproduced in the Record, as follows:

REMARKS OF REPRESENTATIVE JOE L. EVINS, DEMOCRAT, OF TENNESSEE, CHAIRMAN, HOUSE SMALL BUSINESS COMMITTEE, BEFORE THE NATIONAL INDEPENDENT DAIRIES ASSOCIATION, MAYFLOWER HOTEL, APRIL 8, 1963

I

Mr. Chairman, members of the National Independent Dairies Association, and friends, certainly I am pleased and delighted at the opportunity to meet with you today.

I appreciate the kind remarks of my good friend, Lynn Paulson. They are flattering, but I assure you undeserved.

Let me return the compliment by paying a tribute not only to Lynn but also to our friends here in the audience who are members of this great organization.

II. COMPLIMENTS COUNSEL AND ASSOCIATION

I want to tell you that your general counsel, Lynn Paulson, is one of the most dynamic and effective trade association representatives in Washington. His contacts with Members of Congress are effective. He gets the job done and he is always doing a good job in your behalf. He is an oldtimer around these parts—and I might add with a New Frontiersman's outlook.

The members of your association have achieved virtual perfection, as you provide a grateful citizenry with the cleanest, most nutritious, and most wholesome product to be found anywhere in the world, milk.

You are engaged in a business where the profits are too low and the risks too high.

You are in a business where you must meet the competitive power of some of the largest economic giants in the entire United States.

We all appreciate the importance of small business to our economy and I believe our small independent dairies represent one of the finest segments of all small business enterprises. You are doubly important.

You are not only a group of small businessmen who have fought courageously and relentlessly to keep your industry from becoming monopolized by a few big companies but you are also the purveyors of a commodity that is literally vital to our people.

On one thing all persons agree, That of all foods known there is none more important to the health of the individual than milk.

It is the sustaining food of infants, growing children, youths, young men, full-grown adults, and the aged.

The products of your industry nourish not only the sick and disabled but also the toughest and healthiest and huskiest of athletes. I don't exactly know into which one of these categories I belong; but, one thing I do know, we at our house buy our milk only from the small independent dairies.

I am sure that there must be a high degree of satisfaction to the people in your industry to know and to realize that you are engaged in such a beneficial type of enterprise, and that your contribution to the welfare of your community is immense. It is indeed unmatched by nearly any other type of commercial activity.

So, you have these rewards. On the other hand, we know that the members of your industry also have your problems.

Barriers and obstacles have been placed all too frequently along the competitive trail which you must travel.

I refer particularly to the character of the competitive forces and practices with which you have been compelled to compete and to contend—price discriminations, boycotts, loss-leader sales, corporate mergers, conspiracies, and other forms of unfair competition.

Abe Fortas, a well-known antitrust attorney, tells the story about a small independent dairyman fighting a giant in your industry in an FTC proceeding involving the Robinson-Patman Act. A small dairyman was being cross-examined. This independent testified that the respondent had not made available to him advertising allowances which were offered to his large competitors. The attorney asked the dairyman, "And have you suffered as a result?" With a sad look on his face, the little dairyman summed up the situation in these words, "Mr. Lawyer, how would I know? I suffer so much."

Lynn Paulson has acquainted me and the members of our Small Business Committee, from time to time, with the problems and sufferings of your industry and he has indicated that they have been plentiful.

I believe the worst of the storm, however, is over and that you can now look forward to a less turbulent era of competitive coexistence.

III. ANTITRUST LAWS—AGENCIES FOLLOW COMMITTEE RECOMMENDATIONS

(a) Subcommittee established

As you gentlemen well know, the House Small Business Committee, during prior sessions of Congress, established a special subcommittee concerned exclusively with the problems of the dairy industry.

The committee investigations and hearings were conducted in Washington and throughout the country in the interest of fair competition and of maintaining the competitive position of members of the Independent Dairies Association.

The chairman of this subcommittee was our distinguished colleague, Congressman Tom Steed of Oklahoma. We of our committee feel that as a result of his work we have helped to bring about a better climate and helpful developments for your industry.

(b) FTC actions

The Federal Trade Commission and the Antitrust Division of the Department of Justice are following through on the recommendations of our committee. For instance, following the Small Business Committee hearings in Dallas in 1957, formal complaints were issued by the Federal Trade Commission against two giant members dominant in the dairy industry.

About 1 month after the committee hearings in Denver in 1959, the Commission issued a formal complaint against one of the dominant members of the industry doing business in that area.

The company allegedly was competing unfairly by discriminating in price.

(c) Supreme Court action

Less than 2 months ago the Supreme Court made it clear that the sale of milk below cost by a national dairy chain when made with the intent to injure competition, was illegal and in violation of the Robinson-Patman Act.

This recent and far-reaching decision, incidentally has breathed new life into this particular statute, and it portends other and further vigorous action to preserve our free enterprise system and promote competition, by the Federal Trade Commission and the Department of Justice.

(d) Loss-leader selling

Another matter of concern to your industry and your association is loss-leader selling. I have in mind the practice of using milk as a loss leader.

I believe this is one type of merchandising that we could do without.

It is harmful to small business. The Supreme Court has told us that it is deceptive to consumers, commenting that "it plays on the gullibility of customers by leading them to expect what generally is not true; namely, that a store which offers such an amazing bargain is full of other such bargains."

As you know, the Robinson-Patman Act prohibits the sale of goods at unreasonably low prices or below cost when it is done with the intent to injure a competitor. This is a criminal statute which the Supreme Court just recently told us is entirely constitutional and enforcible. The Antitrust Division, therefore, as a result of this decision, is now in a position to deal more effectively with the loss leader problem than previously.

The Supreme Court's decision seems to point the way for more relief for your industry in the future from the very harmful practice of loss leader selling.

The Department of Justice has recently announced that a grand jury had indicted a large chain grocery store and a large dairy organization for conspiring in a price-fixing agreement in violation of the antitrust laws.

I want to add that the evidence in these cases was first developed during the course of hearings by the House Small Business Committee. So we feel our committee has been most helpful.

I know you gentlemen are aware also of the recent decisions of the Federal Trade Commission against one of your giant dairy competitors requiring this company to divest itself of some of the smaller dairies it had acquired.

In addition, this company was told that it may not purchase or acquire any other dairy within the next 10 years.

A similar order against another chain dairy organization was also entered several months ago and a number of similar cases, I am advised, are presently pending before the Commission.

All of these actions, I believe, indicate a renewed vigor to enforce the antitrust laws, prevent unfair competition, with which your companies have been faced in the past, and they portend a climate of fair competition and better opportunity for the future.

(*e*) *Committee action*

The day-by-day work of the House Small Business Committee serves to promote this climate of fair competition for our small and independent business establishments and to preserve our free enterprise system and the balance of opportunity for all in our country.

(*f*) *Merger cases*

It is difficult to talk about any aspect of our antitrust laws without thinking of the high degree of concentration and mergers existing in our economy.

One aspect of the corporate merger problem reminds us that normally one of the fruits of owning your own business is the realization and perhaps the hope that after you have operated your business for 25 or 30 years and you are ready to retire, that you could sell your business and receive in one big lump sum sufficient money to insure a comfortable means of living for you and your family during your retirement period.

There is this law, however, section 7 of the Clayton Act, that tends to deprive an independent businessman of this privilege of selling his business just to anyone he might choose.

This law says, in effect, that a company may not buy your business if a lessening of competition is apt to result.

Generally this means that you cannot sell your business to any of the large chain dairy organizations.

I would like to suggest, therefore, if you are entertaining the idea of selling your business, that you look to another small business concern as a prospective buyer.

Present indications are that the Federal Trade Commission and the Antitrust Division of the Department of Justice are not going to permit giant members of your industry to increase their capacity by purchasing independent dairies and thereby lessening competition.

(*g*) *Failing company doctrine*

Occasionally you hear talk about the so-called failing company doctrine, wherein a big corporation is permitted to buy another concern provided the company is in a failing or bankrupt condition.

Now I feel that I must warn you that this apparent exception in the antimerger statute is a bit deceptive.

This doctrine was applied once in a case by the Supreme Court, but this was more than 30 years ago.

During the years that have elapsed since that decision, the problem of corporate acquisition and mergers has become acute. Conditions have changed.

Two months ago the Federal Trade Commission in a report told us that corporate mergers increased in 1962 over 1961.

This fact, coupled with the present climate, indicates that in the future greater effort will be made to enforce these laws and the courts urged to interpret them more strictly.

I wanted to supplement the advice and counsel given to you by your own able General Counsel, Lynn Paulson, by expressing the belief that the Federal Trade Commission and the Antitrust Division of the Department of Justice may well interpret, in the future, this so-called failing company doctrine very conservatively and very strictly, with the result that the dominant members in the dairy industry are not going to be permitted to buy up small dairy companies unless they are hopelessly insolvent and determined efforts have been made to find other buyers.

IV. ANNOUNCEMENT OF PROGRAM OF SMALL BUSINESS COMMITTEE

And now may I turn to another matter.

Earlier this year when I announced the designation of subcommittees and outlined the program of work and activities of the House Small Business Committee for the 88th Congress, I made a statement that it was my plan initially to designate only four subcommittees—in addition to the work of the full committee—I made further announcement that, from time to time, as particular problems arose and developed, that I would consider the designation of an additional subcommittee on special small business problems to hold hearings and look into matters singular to particular industries as they might develop.

This continues to be my plan for the work of our committee.

The four subcommittees which I have announced to date include: No. 1, Foundations: Their Impact on Small Business—Representative **WRIGHT PATMAN**, Democrat, of Texas, chairman.

This subcommittee will continue to be concerned with the growth of tax-exempt foundations and whether or not these foundations, operating under a charter of Congress, are being used for and serving a charitable purpose or whether such foundations are being used as a device, scheme, or gimmick to avoid taxes and to compete unfairly against small business.

The members of the subcommittee are: Representative **WRIGHT PATMAN**, Democrat, of Texas, chairman; Representative **JOE L. EVINS**, Democrat, of Tennessee; Representative **WILLIAM H. AVERY**, Republican, of Kansas; Representative **JAMES ROOSEVELT**, Democrat, of California; and Representative **RALPH HARVEY**, Republican, of Indiana.

No. 2, Small Business and Government Procurement—Representative **ABRAHAM J. MULTER**, Democrat, of New York, chairman.

With the tremendous amount of Federal procurement, both military and civilian, it is vitally essential that small business receive a just and fair and equitable portion of Government contracts and subcontracts. This subcommittee will be concerned with endeavoring to increase the numbers of contracts and the dollar amounts of contract awards of not only defense contracts and civilian procurement but also an increasing amount of awards in the field of research and development.

During the fiscal year of 1962, research and development awards granted to small business by the Department of Defense increased from 2.9 percent for the preceding year to 3.5 percent. However, during the first 6 months of the present fiscal year—that is, from July through December 1962—this percentage declined to 2.7. We hope this declining trend can be reversed.

Since many of these research and development awards lead to the discovery of new processes, new products, many of which become patented, it is especially important that small business be permitted to share fully in this activity.

The members of the subcommittee are: Representative **ABRAHAM J. MULTER**, Democrat, of New York, chairman; Representative **TOM STEED**, Democrat, of Oklahoma; Representative **H. ALLEN SMITH**, Republican, of California; Representative **JAMES ROOSEVELT**, Democrat, of California; and Representative **HOWARD W. ROBISON**, Republican, of New York.

No. 3, Taxation—Representative **TOM STEED**, Democrat, of Oklahoma, chairman.

This subcommittee will be concerned with helping to write tax legislation and to develop tax policy favorable to small business. President Kennedy has recommended substantial changes in our tax laws. Many of the President's proposals are designed specifically to assist small business.

It is evident that if the President's proposals are enacted into law, American small business will be the principal benefactors.

For instance, corporate income tax rates for small business concerns will drop from 30 to 22 percent, effective January 1.

If your company is not incorporated you could still profit because individual income tax rates would be reduced under the President's proposed legislation now pending in the Congress from 20 percent down to 14 percent.

Should a small independent company earn unusually high profits in any one year, the tax on these higher profits could be paid as if they were earned over a 5-year period.

The new bill proposes that tax treatment of capital gains be altered in such a manner as to benefit especially small business taxpayers.

I believe the President's tax proposal for small business constituted one of the greatest single actions that can be taken to assist small business immediately, and I believe that you gentlemen will want to work with and cooperate with Congressman **STEED**, the chairman of this subcommittee, as you did in the past on the milk hearings and milk investigations affecting your industry.

The members of the subcommittee are: Representative **TOM STEED**, Democrat of Oklahoma, chairman; Representative **ABRAHAM J. MULTER**, Democrat of New York; Representative **ARCH A. MOORE, Jr.**, Republican of West Virginia; Representative **JOHN DINGELL**, Democrat of Michigan; and Representative **HOWARD W. ROBISON**, Republican of New York.

No. 4, Distribution Problems Affecting Small Business—Representative **JAMES ROOSEVELT**, Democrat, of California, chairman.

This subcommittee will be concerned with marketing and distribution problems and particularly the difficult problem concerning dual distribution whereby a manufacturer sells direct to its own outlets and also to competing independent merchants.

Representative **ROOSEVELT** and his subcommittee plan to hold a series of hearings, beginning the latter part of this month, covering dual distribution practices in several different industries, such as petroleum, steel, glass, paint, shoes, and perhaps some others as well.

I noticed in your own industry bulletin, following the announcement of our subcommittees and scheduled program, Lynn Paulson advised you that our House Small Business Committee had not for the 88th Congress designated a subcommittee dealing with the problems in the dairy industry.

I have mentioned earlier that it was my feeling that much had been accomplished in this area in previous sessions and that the Federal Trade Commission and the Department of Justice are following the recommendations and reports of our committee for action in behalf of your industry.

I also stated, and I am happy to repeat, that I shall be pleased to give consideration to the naming and designation of a special subcommittee for any new or particular problems that may arise in your industry, the dairy industry, should we feel that the facts and circumstances warrant such action.

The members of the subcommittee are: Representative **JAMES ROOSEVELT**, Democrat, of California, chairman; Representative **TOM STEED**, Democrat, of Oklahoma; Representative **ARCH A. MOORE, Jr.**, Republican, of West Virginia; Representative **JOHN C. KLUCZYNSKI**, Democrat, of Illinois; and Representative **WILLIAM H. AVERY**, Republican, of Kansas.

V. IMPORTANCE OF SMALL BUSINESS—CONCLUSION

In creating the House Select Committee on Small Business in 1941 at the outbreak of

World War II, during the 77th Congress, the Congress made clear its determination to keep itself informed as to whether or not the needs of small business receive adequate consideration.

In passing the Small Business Act of 1958, the Congress demonstrated its continuing interest in small business. In that law the Congress proclaimed:

"It is the declared policy of the Congress that the Government should aid, counsel, assist, and protect, insofar as is possible, the interests of small business concerns in order to preserve free competitive enterprise, to insure that a fair proportion of the total purchases and contracts for property and services for the Government (including but not limited to contracts for maintenance, repair, and construction) be placed with small business enterprises, to insure that a fair proportion of the total sales of Government property be made to such enterprises, and to maintain and strengthen the overall economy of the Nation."

This is the declared policy of our country.

Today, 95 percent of all American business enterprises are small business.

Some of these small businesses grow into industrial giants.

Some are family, one-man firms. They live for awhile and fade or leave the scene of commercial activity.

Still others operate at about the same level of activity over a number of years, even generations.

Collectively, these small independent businesses constitute a broad-based economy unparalleled in the world.

They provide stability.

They bring new vigor, new ideas to our entire economy.

Because I feel so strongly that small business is vital to the strength and future of our country, I was highly honored by the action of the Speaker of the U.S. House of Representatives, Speaker McCormack, when at the opening of the 88th Congress, he asked that I serve as chairman of the Select Committee on Small Business.

After sober contemplation of the responsibilities entailed, which would be in addition to my already considerable duties as a member of the Committee on Appropriations, I consented to fill the post.

This committee over the years has served to preserve our free competitive enterprise system and to help small business not only to exist but to succeed, this during a period of war when small business was mobilized to make a significant contribution to the war effort.

Since that time, the committee has been reestablished by each succeeding Congress.

During the intervening 2 years, the committee has on many occasions proven to be a powerful force on behalf of the American small business community.

During the 88th Congress and for whatever time I may be privileged to serve as chairman of this committee, it is my hope that we may continue this tradition of aiding small business while also adding new responses to the constantly evolving problems confronting our Nation's small enterprises.

Small business does not exist in a vacuum.

Like other segments of our society it is subject to the forces of which it is a part.

Because our committee works hard to assist small business in matters of financing, securing Government contracts, prevention of absorption of small business by corporate consolidation and mergers, and the promotion of tax and trade policies favorable to small business, we have infrequently been charged by critics who regard these programs as coddling or favoring small business.

They have asked why should the Congress—the supreme legislative body of our Nation, sworn to act in the entire public interest rather than for any particular industry or group—act to help the small businessman.

The answer is because it is impossible to help any segment of our economy without helping all of it.

A thriving small business community contributes to the prosperity of our total national economy.

Equality of opportunity must be present everywhere or soon it will be present nowhere.

Furthermore, there is an even more basic reason for this consideration.

Small independent business of this Nation has a very special function to fulfill.

Small business is creative, dynamic, and flexible. These are the qualities that cause and encourage our economy to thrive and to prosper.

Small businessmen have helped to make our free enterprise system and to help make America great.

We want to preserve and to perpetuate this system and conditions that have made America great.

One of the bywords of this Republic from its earliest days has been e pluribus unum, from many—one, one composite Nation—stronger because it is composed of many diverse parts.

This then is the greatest strength of our country—that we have room for all.

Just as we need the output of our industrial giants, so we must preserve the diversity, the adaptability, the vitality and the creativity of our smaller, independent businesses.

All of us, working together, in a free America, with opportunities open to all, are an unbeatable team in war or peace.

HOUSE OF REPRESENTATIVES

Wednesday, April 10, 1963

The House met at 11 o'clock a.m.

The Chaplain, Rev. Bernard Braskamp, D.D., offered the following prayer:

Galatians 2: 20: *The life which I now live, I live by the faith of the Son of God, who loved me, and gave himself for me.*

O Thou God of all grace and goodness, may we contemplate the meaning of this Holy Week with a humble spirit and a contrite heart.

Grant that we may daily have within our souls the glorious feeling that by commemorating and observing the Lenten service we have been spirtually enriched.

We rejoice that by the cross and resurrection of our Lord, Thou hast sealed and certified unto us the truth of Thy eternal love for all mankind.

On Easter Sunday may we share in the resurrection of the risen Christ by rising with Him in newness of life to build that blessed highway which humanity shall walk together in His spirit of love.

In His name we pray. Amen.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. McGown, one of its clerks, announced that the Senate had passed without amendment a bill of the House of the following title:

H.R. 4423. An act permitting the Secretary of the Interior to continue to deliver water to lands in the third division, Riverton reclamation project, Wyoming.

The message also announced that the Senate had passed bills of the following titles, in which the concurrence of the House is requested:

S. 4. An act to establish a National Wilderness Preservation System for the permanent good of the whole people, and for other purposes;

S. 18. An act to change the name of Harpers Ferry National Monument to Harpers Ferry National Historical Park;

S. 138. An act to redesignate the Big Hole Battlefield National Monument, to revise the boundaries thereof, and for other purposes; and

S. 932. An act relating to age limits in connection with appointments to the U.S. Park Police.

SILENT SPRING

Mr. CONTE. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the Record.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. CONTE. Mr. Speaker, I am introducing legislation today that is of the utmost importance. It is also timely in that this legislation, immediately enacted, will help stem the time of another "silent spring." My distinguished colleague the gentleman from Michigan [Mr. Dingell] and others have already called attention to the great problems that confront us through the continued and unwise use of chemical pesticides. Many of my distinguished colleagues have warned about this in the past, and many of us in this House have been concerned with this problem for a long time. We were happy when Miss Rachel Carson received a national audience with her bestselling book, "Silent Spring," which warned of the uncontrolled use of chemical pesticides and said that synthetic chemicals could upset the balance of nature and endanger man's existence.

This legislation, in the form of two bills, will help to insure the maintenance of the critical balance between the life-giving products and the life-destroying byproducts caused by the misuse of insecticides.

In regards to the first bill, I think that it is essential that before any Federal Government program involving the use of pesticides or other chemicals designed for mass biological controls there should be advance consultation with the Fish and Wildlife Service and with State wildlife agencies. This is the Chemical Pesticides Coordination Act, and would be a vastly important improvement over present standards.

The other bill would amend the act of August 1, 1958, in order to prevent or minimize injury to fish and wildlife from the use of insecticides, herbicides, fungicides, and pesticides.

I would seriously hope that these bills be examined by this Congress in this session. This 88th Congress could perform a great service to the Nation by quickly and sensibly putting these excellent and necessary bills in the form of public laws.

Thank you.

DISTURBING NEW EVIDENCE ON CIA

Mr. ROGERS of Florida. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Florida?

There was no objection.

Mr. ROGERS of Florida. Mr. Speaker, additional reasons why CIA was unable to produce photographs of the Russian military buildup in Cuba last autumn were revealed by Secretary McNamara and Pentagon intelligence chiefs in testimony released by the House Defense Appropriations Subcommittee.

According to testimony, CIA had been photographing the wrong end of the island—the eastern end—despite reliable intelligence reports that the buildup was at the western end.

Earlier, poor weather conditions were blamed for CIA failures. However, as I stated on February 28, weather conditions under which CIA had operated were generally as cloudy and difficult as those which the Air Force encountered the morning of October 14 when its first flight obtained conclusive photographs of Soviet offensive strength in Cuba.

Mr. Speaker, this disturbing new evidence renews the valid questioning of CIA which has been going on for some time now. It makes close, constant congressional review of this Agency through a joint House-Senate watchdog committee such as I have proposed even more imperative.

ELEANOR ROOSEVELT MEMORIAL FOUNDATION, INC.

Mr. CELLER. Mr. Speaker, I ask unanimous consent to take from the Speaker's desk the bill (H.R. 4715) to incorporate the Eleanor Roosevelt Memorial Foundation, Inc., with Senate amendments thereto, and concur in the Senate amendments.

The Clerk read the title of the bill.

The Clerk read the Senate amendments, as follows:

Page 3, line 1, strike out ", Incorporated".

Page 3, line 18, strike out "and".

Page 3, line 18, after "health" insert ": and the furtherance of international good will".

Page 4, strike out lines 9 to 22, inclusive, and insert:

"(5) to take by lease, gift, purchase, grant, devise, or bequest from any public body or agency or any private corporation, association, partnership, firm, or individual, and to hold absolutely or in trust for any of the purposes of the corporation any property, real, personal, or mixed, necessary or convenient for attaining the objects and carrying into effect the purposes of the corporation, subject, however, to applicable provisions of the law of any State (A) governing the amount or kind of property which may be held by, or (B) otherwise limiting or controlling the ownership of property by, a corporation operating in such State;".

Page 10, line 11, strike out "Foundation, Incorporated"," and insert "Foundation",".

Amend the title so as to read: "An Act to incorporate the Eleanor Roosevelt Memorial Foundation."

The SPEAKER. Is there objection to the request of the gentleman from New York?

Mr. MATHIAS. Mr. Speaker, reserving the right to object, would the distinguished chairman of the Judiciary Committee explain the nature of these amendments and their effect upon the bill as it has already passed?

Mr. CELLER. The amendments in general are technical except one; namely, adding to the purpose of the incorporation the expansion of international good will.

Mr. Speaker, I received a letter from Senator KEATING, the distinguished junior Senator from the State of New York, this morning. He is a member of the Subcommittee on Federal Charters, Holidays, and Celebrations of the Judiciary Committee. He said he inserted, or, rather, his committee inserted that provision because he felt that Mrs. Eleanor Roosevelt in her lifetime spent a great deal of time in an endeavor to establish international good will. He also said that statement was self-explanatory.

I would say that the purpose would be to improve the image that Europeans have of the American abroad. I think that image was greatly distorted, and one of the purposes of this, of course, would be to improve that image. I will say also that I do not think we need have any fear on this score.

Mr. Speaker, in all probability I will be a member of the board of directors of this organization. I do not think I would breach any confidence when I say that. There is a provision in the charter to the effect that we have the right to make, alter, or amend the charter itself. We have the right of visitation and the right to examine programs and so forth. If anything is done of an untoward nature under that clause with reference to the spread of international good will, I certainly would know about it and report back to the committee and we would have the right to alter, amend, or change the Federal charter.

Therefore, Mr. Speaker, I do not think there is anything about which to be concerned by the addition of that language.

Mr. MATHIAS. Would the gentleman say that the purpose and intent of this amendment would be to permit acts of international good will of a private, eleemosynary rather than political nature?

Mr. CELLER. Yes. As was explained before the gentleman's subcommittee this morning, some of the moneys to be raised would be used for scholarships abroad. In other words, foreigners would come to this country, and vice versa, again in the interest of international good will.

Mr. ROOSEVELT. Mr. Speaker, would the gentleman yield?

Mr. MATHIAS. I yield to the gentleman from California.

Mr. ROOSEVELT. May I just say in furtherance of what the chairman of the Judiciary Committee has just said, that to be very specific about it there is now in operation an international fellowship program for cancer research which would be supported by this Foundation. It was thought that without some language as proposed on the Senate side, the support of that program might not be justified. Further than that, I have conferred with the members of the committee and they assure me that this, plus such other things as carrying on the interest that my mother had in children throughout the world, would be the type of thing and only this type of thing which would be considered.

Mr. Speaker, may I simply add to what the chairman of the full committee has said. I am not so sure that I will always be returned to Congress, but the chairman, of course, is assured of reelection, nevertheless if I am there—and I hope to be there—I too would certainly resent and I would come back to the House if I were a Member of this group and ask action on the part of the House to prevent anything else in the construction of that language.

Mr. MATHIAS. May I ask the gentleman from California [Mr. ROOSEVELT] about the other amendment of the Senate? It affects or strikes out language which the gentleman from California himself suggested.

Mr. ROOSEVELT. If the gentleman will yield further, my understanding is—and I am subject to correction by the lawyers—that this was inserted by the Senate because they did not want a terminal date to become a precedent in Federal charters. However, in the Senate report there is language which merely indicates that it is the understanding that a one-time effort shall be made for fundraising, and that no fundraising shall continue after November 1, 1965, which would be the anniversary of my mother's death.

I would like to reiterate, and I hope that it would be the understanding of the distinguished gentleman from Maryland [Mr. MATHIAS] and everybody in this House, that they concur in the language of the Senate report. I would also ask the help of the gentleman from New York [Mr. CELLER] to see to it that this language was lived up to.

Mr. GROSS. Mr. Speaker, further reserving the right to object, I would like to ask the gentleman from Georgia [Mr. FORRESTER] who handled this bill in the Committee on the Judiciary—that is true; is it not?

Mr. FORRESTER. That is correct; yes, sir.

Mr. GROSS. Mr. Speaker, let me ask the gentleman if, when the bill was before the House under unanimous consent, the bill having been rewritten by his subcommittee of the Committee on the Judiciary, there was any such language as this in it when it passed the House; and if it was not the understanding that this bill would not be amended to put in language of this kind?

Mr. FORRESTER. I will say this; it was certainly the understanding that there would be nothing added to this legislation which would in anywise complement the particular language which was cut out by the subcommittee and the full committee and brought to the floor of the House.

Mr. GROSS. Mr. Speaker, I will say that this bill would not have gone through the House by unanimous consent if this language had been in it and I object to the passage of it today.

Mr. FORRESTER. Mr. Speaker, will the gentleman reserve his right to object to permit me to say something?

Mr. GROSS. Yes.

Mr. FORRESTER. Mr. Speaker, this legislation was amended in the Senate in only three particulars, two of them being virtually technical. One of them struck out the provision which was inserted at the instance of the gentleman from California [Mr. Roosevelt] which put a stop date on solicitation of funds. The Senate saw fit to take that out. The best answer I can give to that is that it was taken out on account of the fact that they did not want to establish a precedent. Very frankly, I did not see much merit to that argument, but they did incorporate in their report on the other side that they hoped that the solicitations would cease sometime in the year 1965. That is a part of the Senate report. So far as that is concerned I do not think we have too much to worry on that.

The gentleman had some apprehension and I knew he had some apprehension concerning the granting of any power from the international standpoint that would bear the impress or the implied approval of the Congress of the United States and thereby perhaps create some embarrassing situation sometime or other as to whether this was the act of a private corporation or the act of the Government or whether it was done with the permission or with the implied consent of the Government.

I might say here and now that in the hearing we had this morning it was understood and is now understood by the various members of the committee that the language promoting international good will is not to be construed as to permit any involvement in politics or political questions, or even of any political objects which might, because of this phrase, cause embarrassment to the United States.

Mr. GROSS. Mr. Speaker, let me interrupt the gentleman to point out that there is no such restrictive language in the bill. Mr. Speaker, I object to the present consideration of the bill.

Mr. CELLER. Mr. Speaker, will the gentleman yield?

Mr. GROSS. I yield to the gentleman from New York.

Mr. CELLER. I think we must construe the words "international good will" within the context of the purposes of the Federal Charter. For the purpose of this charter, the phrase must be construed in connection with the obvious purposes of the foundation. We have been assured by the representatives of the foundation that the activities of the foundation will be entirely in furtherance of charitable and educational purposes. The kind of thing that I believe the foundation has in mind is the granting of scholarships and educational and charitable assistance, for example, to underprivileged children.

Mr. GROSS. If they meant some of these things, why were they not put into the bill, if they were going to restrict it, and confine it?

Mr. CELLER. You do not put all those details in a bill. This very debate will be a check and a limitation on anything the directors might do. But I repeat, we have a right to alter and amend, and we have the power of visitation, under the terms of the bill. We have actual control over the situation. I do not think the gentleman need have any fear.

Mr. ROOSEVELT. Mr. Speaker, will the gentleman yield?

The SPEAKER. The Chair understands the gentleman is reserving the right to object.

Mr. GROSS. I am, Mr. Speaker, and I yield to the gentleman from California [Mr. Roosevelt].

The SPEAKER. The Chair wants to understand the parliamentary situation. The gentleman from Iowa has objected on two occasions. The Chair has construed the continuance of the colloquy to mean that the gentleman reserves the right to object.

Mr. GROSS. Yes, I reserve the right to object, Mr. Speaker, and I yield to the gentleman from California.

Mr. ARENDS. Mr. Speaker, I make the point of order that a quorum is not present. We have a lot of work to do today. I did not know this was going to take this long.

The SPEAKER. The regular order is, Is there objection to the request of the gentleman from New York?

Mr. GROSS. Under those circumstances, Mr. Speaker, I object.

CALL OF THE HOUSE

Mr. ARENDS. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

Mr. ALBERT. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 18]

Brademas
Bray
Burton
Corbett
Daddario
Diggs
Farbstein
Fino
Fuqua
Gallagher
Grant
Green, Oreg.
Harris
Healey
Jones, Mo.
Kilburn
Lesinski
Mailliard
Powell
Shelley
Sikes
Walter

The SPEAKER. On this rollcall 412 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

ELEANOR ROOSEVELT MEMORIAL FOUNDATION, INC.

Mr. CELLER. Mr. Speaker, I ask unanimous consent to take from the Speaker's desk the bill (H.R. 4715) to incorporate the Eleanor Roosevelt Memorial Foundation, with Senate amendments thereto, and concur in the Senate amendments.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from New York?

Mr. HALL. Mr. Speaker, I object.

SUPPLEMENTAL APPROPRIATION BILL, 1963

Mr. THOMAS. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill (H.R. 5517) making supplemental appropriations for the fiscal year ending June 30, 1963, and for other purposes.

The motion was agreed to.

Accordingly, the House resolved itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill H.R. 5517, with Mr. Bolling in the chair.

The CHAIRMAN. When the Committee rose on yesterday all time for general debate on the bill had expired. The Clerk will read the bill for amendment.

The Clerk read as follows:

CIVILIAN INDUSTRIAL TECHNOLOGY

For necessary expenses, not otherwise provided, of advancing civilian industrial technology, including services as authorized by section 15 of the Act of August 2, 1946 (5 U.S.C. 55a), but at rates for individuals not to exceed $75 per diem, and hire of passenger motor vehicles, $500,000, to remain available until expended.

Mr. GROSS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. Gross: On page 4, strike out lines 13 through 19.

Mr. GROSS. Mr. Chairman, my amendment would cut out the $500,000 appropriation in this bill for civilian industrial technology.

I should like to quote from the hearings with respect to this item, which ought to have been properly considered and brought to the floor in the regular appropriation:

> Mr. Thomas. One would come to the conclusion from what you say that what has been going on in the last 10 or 15 years has been to the embarrassment and chagrin of private industry and it has been caused by Government, and that is not an accurate picture. You do not want Government to go to private industry and tell them to hire x scientists?
>
> Mr. Hollomon. Absolutely not.
>
> Mr. Thomas. That follows from your statement.
>
> * * * * *
>
> We do not want Government in business—

Said Mr. Thomas—

> and here you are doing just that.

Mr. Thomas goes on to point out that the employees of this outfit have an average grade level of 11.5, in other words, they are paid well above the average.

The gentleman from Ohio [Mr. Bow], a member of the Deficiencies Subcommittee, said yesterday on the floor:

> Where is the urgency in starting this program under a supplemental appropriation? Is this the time or the place to lay the foundation for a highly controversial program which may grow into another gigantic Government research effort?
>
> None of the 110 national trade and professional associations in the construction industry were consulted by the Department of Commerce before formulation of its proposed program.

He said further:

> The proposed program threatens to tamper with the delicate free enterprise mechanism of America's largest domestic fabrication industry.

Mr. Chairman, I submit that this is neither the time nor the place to appropriate half a million dollars for the furtherance of this organization. Let it come in the regular appropriation bill.

Mr. ROONEY. Mr. Chairman, will the distinguished gentleman yield?

Mr. GROSS. I yield to the gentleman from New York.

Mr. ROONEY. Does the gentleman from Iowa realize that this money is for research in the textile industry, which is very sick at the present time?

Mr. GROSS. It does not make any difference whether it is for the textile industry, agriculture, or any other industry.

Mr. ROONEY. No, it is not for agriculture. And, as far as I am concerned, it is not for research in the building construction industry.

Mr. GROSS. I am saying this is neither the time nor the place, for this appropriation as the gentleman from Ohio has well stated, and the gentleman from Texas [Mr. THOMAS] seriously questioned it. I urge adoption of my amendment.

Mr. THOMAS. Mr. Chairman, I ask unanimous consent that all debate on this amendment and all amendments thereto close in 3 minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. THOMAS. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, my able and genial friend, the gentleman from Iowa recited the record just exactly right. I did ask those questions: I wanted to know and our committee wanted to know. The amount of money involved here is not $500 million but $1,250,000. We cut the request about 60 percent. This money is needed to do some research in first, textiles and, second, the building industry. Do you know what the biggest industry in the United States is? It is the construction industry.

Mr. BOW. Mr. Chairman, will the gentleman yield?

Mr. THOMAS. Surely, I yield to my colleague.

Mr. BOW. Since we only have 3 minutes, may I say I reserved on this item in the committee. I opposed it and I spoke against it yesterday. May I point out to the gentleman that there is not a single person in the building industry who has requested this fund. In fact, the building industry and all segments of it are against it. I would support the amendment of the gentleman from Iowa.

Mr. THOMAS. May I quote a classical argument by Dr. Detlev W. Bronk who is past president of the National Academy of Sciences and National Research Council. He said the best money that industry can spend is for research. This is merely supporting and holding the hands of industry—it is not telling industry what to do. He gave this classical example. He said—compare the transportation industry, the railroads, with the communication industry, like A.T. & T. He said, for the last 30 or 40 years the railroads have spent virtually nothing on research. And where are they today? They are in trouble. Compare that with the A.T. & T. which is certainly one of the blue ribbon industries of America. He pointed out that in the last 30 or 40 years they have spent hundreds of millions of dollars for research. This money is badly needed, gentlemen, and I hope the House will support the committee. We only gave them seven jobs. Let us vote down this amendment. This money is for the general good of the Nation and of the industry of the Nation.

Mr. OLIVER P. BOLTON. Mr. Chairman, will the gentleman yield?

Mr. THOMAS. I yield to the gentleman.

Mr. OLIVER P. BOLTON. Do I understand the gentleman is suggesting the recommendation of $500,000 of Federal money for research by the Federal Government as contrasted to money being spent by and in private industry?

Mr. THOMAS. No, this is to set up an organization to assist and advise industry. If industry does not want this help, it does not take it. This does not call for the spending of a nickel for research by the department itself.

The CHAIRMAN. The time of the gentleman has expired.

The question is on the amendment offered by the gentleman from Iowa [Mr. GROSS].

The question was taken, and on a division (demanded by Mr. GROSS), there were—ayes 94, noes 132.

So the amendment was rejected.

The Clerk read as follows:

EXECUTIVE OFFICE OF THE PRESIDENT

Office of Emergency Planning

Salaries and Expenses

For an additional amount for "Salaries and expenses", $240,000.

Mr. HOLIFIELD. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I believe this is the proper place where the authorization requested by the Bureau of the Budget and the President for $61 million in supplemental funds for civil defense would appear if it did appear. If the gentleman from Texas [Mr. THOMAS] will bear with me a minute, I would like to ask him this question. I refer to page 4 of the report, the last line of the civil defense section:

> The committee suggests that the provisions now in hand or on order are adequate for the time being and until more experience is obtained with this program.

I would like to direct this question to the gentleman: As I understand, there is a stock on hand of these very meager and austere rations which amounts to about $3.38 a person which are as yet undistributed. Is that true?

Mr. THOMAS. If the gentleman will pardon me, will he repeat his question?

Mr. HOLIFIELD. My understanding is that under prior purchase there is at this time an inventory of concentrated foods and radiation equipment and other items which would go into shelters and is now in inventory for distribution. Is it the thought of the committee, and I refer again to the language you use:

> There is on hand or in storage provisions adequate for the time being.

I take it that if these supplies are distributed and if there be need for the stocking of the remaining spaces which have been surveyed, is it the intention of the committee to furnish money in the future for the filling of these other shelters? Or are we just going to break off at this point?

Mr. THOMAS. May I say to my genial friend from California that as the matter stands today they have about $111 million; $40 million or $45 million in provisions is in warehouses ready to be distributed. Perhaps some $30 million or $40 million has been distributed, and the remainder is being put in the pipeline as fast as it can be done.

There is no objection to that. Does that answer the question?

Mr. HOLIFIELD. That was my understanding.

My question goes to the point, Will funds for further stocking of the shelters be furnished after the present stock is exhausted?

Mr. THOMAS. May I say to the gentleman and the committee, I think I am safe in saying it was unanimous. If I am wrong, I hope the members of the committee will correct me. There are not enough funds to complete stocking of all the shelters that have been marked. We took the position that they should spend the $111 million. It is already there, and there is no effort to take that money from them. So what happens? Here is what bothered the committee, and I hope it will bother the gentleman. After all, the Government has no strings on this equipment—crackers, water jugs, and other things. It has no authority to go into this building and put a guard there. They do not have the money to do that. On the other hand, you cannot ask the building owner who is giving the space in the building for nothing to spend the money to guard this stuff. I do not think there is anyone in OCD who would question that. It is only a matter of a few weeks or a few months that the material may deteriorate. We have a lot of souvenir hunters in this country. We just took the position to look, wait, and see what happens for awhile.

The CHAIRMAN. The time of the gentleman from California has expired.

Mr. HOLIFIELD. Mr. Chairman, I ask unanimous consent to proceed for 5 additional minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

Mr. BOW. Mr. Chairman, I object.

Mr. ROGERS of Florida. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I would like to pursue just a bit this civil defense item that the chairman of the subcommittee has been explaining.

I was hopeful that since the Congress had approved the program the committee would see continued good in it.

As I understand it, many of the buildings—are furnished free. I would be hopeful, if the Senate sees fit to add this item, that in conference the committee might give favorable consideration to continuation of this appropriation .

Mr. THOMAS. I will say to the gentleman from Florida we will give careful, prayerful consideration.

Mr. ROGERS of Florida. That gives me great assurance, and I am satisfied with the answer that you will give it prayerful consideration.

Mr. EDMONDSON. Mr. Chairman, will the gentleman yield?

Mr. ROGERS of Florida. I yield to the gentleman from Oklahoma.

Mr. EDMONDSON. I think that is probably the strongest endorsement we have had yet from the gentleman from Texas. I am glad to know he is going to take it to somebody above and pray.

Mr. HOLIFIELD. Mr. Chairman, will the gentleman yield?

Mr. ROGERS of Florida. I yield to the gentleman from California.

Mr. HOLIFIELD. I was shut off and was not given additional time.

I would like to pursue this for just a moment and refer for a moment to the last response of the gentleman from Texas.

It is true these supplies, once they are put in the shelters, are not under Federal control. But this program envisages a partnership in the operation between local city, counties, and the States, and the Civil Defense organization. This is a partnership by the municipalities and other political subdivisions. These buildings are relinquished for this purpose under contract with the Office of Civilian Defense. Therefore, I believe if we are going to have a partnership program in the United States and not put all the expense on the Federal Government, this is a chance for us to show the partnership and to let the local people do that. They can do it, I am sure. There could be some pilferage in this program. There is some from the storage warehouses of grain in our surplus commodity situation. But there are people who are interested in this subject on the local level. There are some 5,000 county and State and city organizations that are participating on a partnership basis, and I am sure they will protect these vital commodities for their people.

I thank the gentleman for yielding.

Mr. OLSEN of Montana. Mr. Chairman, the availability of nuclear weapons to an enemy power interposes a continuing threat to our national security. There has already been a Cuban crisis. There will be other Cubas. The proliferation of nuclear weapons imposes an increase in this threat. One of the keystones of an effective defense system on our homefront is the development of a system of shelters equipped and stocked to protect our people from the fallout effects of a nuclear attack. Since August 1961 this has been an important part of our defense thinking. The first and most important step in this program has been to take an inventory of existing radiation shielding throughout our Nation so that we will know what we now have and what we should provide for.

The national fallout shelter survey was initiated in December 1961. Stocking of identified shelter spaces meeting minimum Federal criteria for fallout protection is now going on.

Some concept of the magnitude of the program is gained when we consider that it involved the work of over 10,000 employees of private architect and engineering firms, the efforts of 5,000 county and municipal governments, the cooperation of over 100,000 building owners, the services of over 2,600 manufacturers and shippers, and the use of 81 Federal warehouses for the stocking of shelter supplies. The survey reached into every town and hamlet. As originally projected the expected gross yield of the survey was 50 million shelter spaces; however, the survey identified shelter space for 104 million Americans—more than double the amount of space which was anticipated. It is estimated about 70 percent of these can be brought into use as working shelter systems.

Ninety-three million dollars was originally allocated for the purposes of this survey. Through the adoption of sound and modern business procedures and engineering techniques the actual cost of the survey was reduced to less than $68 million. The balance of the money originally provided for survey work was applied to the procurement, warehousing, and transportation of shelter stocks and provisions for approximately 47 million of these spaces.

The total cost of the program has been estimated at $238 million, of which the $68 million is the cost of survey and marking the shelters and $170 million, the cost of provisioning them. One hundred and seventy-six million dollars, or approximately 75 percent of the total cost of the program has been met out of fiscal year 1962 and fiscal year 1963 appropriations. The supplemental request for $61.9 million, which we are considering today, is to complete the initial effort and to maintain the data on a current basis.

Another purpose for which these funds are needed is to complete the marking of identified shelter space. A final purpose is to provision shelter space for an additional 23 million people at a cost of approximately $58.9 million. Current and previous year appropriations have provided provisioning needs for 47 million shelter spaces.

These funds are urgently needed now. If they are not forthcoming the continuity and efficiency of survey operations would be seriously impaired. Both the Corps of Engineers and the Bureau of Yards and Docks which have the responsibility for supervising the survey contracts with private architect and engineering firms conducting the survey must know now if operations are to continue in order to plan for keeping their trained professional personnel for this purpose. Current producers and suppliers of shelter stocks must be able to continue production and if production lines are shut down because of the unavailability of funds, additional Government costs to resume production would be incurred which could otherwise be used to stock additional shelter spaces. If no supplemental funds are made available at this time, the joint effort of the Federal Government and hard-won volunteer local government and private building owner participation in this program would be brought to a premature and confusing halt. Public support would be undermined by our procrastination and indecision and the hard-won local participation in this joint undertaking would be seriously crippled. The net results would be the unavailability for use of many potential shelter spaces, creating shelter voids in areas where none need exist and resulting in an unnecessary risk which seems inexcusable to the public in any new national crisis.

In conclusion, I would like to remind you that this vital program has been conducted by responsible people. This is evidenced by their performances in the past 18 months. When one considers that the allocated $93 million easily could have been spent to accomplish only one-half of what has been accomplished, and that their competent management of the program has saved the Government $25 million which has been used for other purposes for which appropriations would have been necessary, I think they should be accorded some recognition for their spending of these public tax dollars in a prudent manner.

I regret terribly the action of the House deleting $3 million from the budget request of Civil Defense budgeted for a fallout shelter survey program.

It is my hope that when the Senate considers this legislation that it will restore, in full, all of the funds which we have deleted for this very necessary program. And I hope when this appropriation bill goes to Conference Committee, this House will reconsider its action and will agree to a restoration of the deleted funds. It would be a small sum to pay as a premium for low-cost insurance providing for the safety of the American people.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

FUNDS APPROPRIATED TO THE PRESIDENT

Disaster relief

For expenses necessary to carry out the purposes of the Act of September 30, 1950, as amended (42 U.S.C. 1855–1855g), authorizing assistance to States and local governments in major disasters, $25,000,000, to remain available until expended: *Provided*, That not to exceed 3 per centum of the foregoing amount shall be available for administrative expenses.

Mr. BOLAND. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. BOLAND:

Page 7, after line 14 insert:

"PUBLIC WORKS ACCELERATION

"For an additional amount for 'Public Works Acceleration', $450,000,000: *Provided*, That no part of this appropriation shall be used for any project that has ever been rejected by the Senate or House of Representatives or by any Committee of the Congress: *Provided further*, That no part of this appropriation shall be used for any project that does not require a financial contribution from State or local sources except projects dealing with preservation of forests in the jurisdiction of the Department of Agriculture and the Department of the Interior."

Mr. LAIRD. Mr. Chairman, I reserve a point of order against the amendment.

Mr. BOLAND. Mr. Chairman, the effect of this amendment is to restore $450 million for the accelerated public works program. This is the amount that was recommended by the Subcommittee on Deficiencies but was stricken out by a very close vote in the full Committee on Appropriations.

Mr. Chairman, the debate yesterday was rather full and complete. Ninety-nine percent of the 4 hours of general debate was taken up by a discussion of the accelerated public works program. It is obvious that words or arguments today will not change any votes, for the arguments on both sides are the same, and they have echoed and reechoed in this Chamber before.

Mr. Chairman, we climbed this hill in the last session of the Congress, and the program authorizing the acceleration of public works was passed by a vote of 221 to 192. And, support for the bill came from both sides of the aisle and from every section of the country.

The purpose of this program, Mr. Chairman, at that time and is now, to relieve the stress of unemployment in economically depressed areas and to build useful and needed and valuable public works throughout the length and breadth of our land and its territories. In the first phase of this program nearly 3,800 projects in over 900 areas of this country have been programed. Applications now on file with the agencies charged with the conduct of this program now total some 6,200, with a dollar value of $1.2 billion.

Mr. Chairman, there are considerable and marked opinions as to this program. It is the kind of a program and the kind of a proposal that sparks and ignites clear and unmistakable differences in political philosophy: Whether to spend more or less in the public sector and whether the Federal Government should assist local and State governments in areas and programs which they cannot handle themselves.

Mr. Chairman, it is interesting to read the RECORD of yesterday and to find the Members giving meaning to their attitudes on these issues; Members whose areas have been the hardest hit by unemployment; Members from Minnesota and Pennsylvania and Ohio and Michigan and Kentucky and Tennessee and West Virginia and a host of other States.

Yes, Mr. Chairman, there is a clash of political philosophy here. Many people, and I am one of them, believe that local governments need the strength and the support of the Federal Government. Think of it: No TVA's; no Hoover Dams; no fantastic reclamation projects like the Upper Colorado River; no stimulation of great national forests and recreation areas; no magnificent waterways to carry the wealth from the bowels of our good earth to the market places of the world; no flood control to protect the lives and the property of the people of these United States if the Federal Government were not to participate in these programs. This program, Mr. Chairman, is an extension of the spirit and the dedication that has gone into all of these programs. It is this, and it is more than that, Mr. Chairman, for it is the kind of a program that brings spirit and life and new meaning to people who do not have employment.

I hope we can once more make the stand here and support the President in providing the $450 million for the accelerated public works program which my amendment proposes to do.

Mr. GIAIMO. Mr. Chairman, I ask unanimous consent to extend my remarks at this point in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Connecticut?

There was no objection.

Mr. GIAIMO. Mr. Chairman, it was most encouraging to learn last week that the unemployment rate has dropped to 5.6 percent—the biggest monthly decline since 1958 when the rate fell from 6.8 to 6.1 percent. Of equal encouragement was the jump in employment of 800,000 for March, a period which normally sees a rise only of 200,000. Employment has reached a March record of 67.1 million, about 800,000 over this time last year. This means the labor force is presently absorbing its own natural growth.

But regardless of the encouragement offered by the latest employment figures, there are still communities and areas in this country that are badly in need of help—chronically depressed areas, which over a long period of time have suffered and still are suffering from substantial unemployment and underemployment.

The Area Redevelopment Act, enacted in 1961, is providing a workable program of alleviating distress and stimulating sustained economic growth. However, this program is designed to solve long-range economic problems, and is not designed primarily to provide the kind of immediate relief these areas require so desperately.

Last year we passed the public works acceleration program which is providing the vital short-term benefits necessary to accompany the long-term restoration of area redevelopment areas.

The Public Works Act of last year authorized $900 million for work on public works projects throughout the country. The $900 million authorized would create an estimated 110,000 man-years of work—the equivalent of employment for 1 year of 110,000 men; plus, of course, the several hundred thousand additional jobs generated by the increased purchasing power of those put back to work. In addition, other related jobs would be created in industries supplying the essential materials for work on the public works projects.

Last year $400 million of the $900 million authorized was actually appropriated. Every State and many congressional districts have already benefited from this original allocation despite severe winter weather that delayed many starts. Thus far, 3,756 projects have been approved. They are estimated to generate 52,000 man-years of on-site employment and are distributed among more than 900 of the 1,228 eligible areas. Work is presently underway on 1,300 of these projects and a total of 45,000 man-months has already been worked.

However, there still exists at this time a backlog of over 6,200 essential and urgent public works projects requiring an additional $1.2 billion in public works funds. There are now nearly 6,000 applications awaiting action.

The $500 million remaining from the original authorization, which has not been appropriated, would generate about 60,000 man-years of on-site employment, which with the 50,000 man-years generated by the $400 million allocated would bring total on-site jobs to 100,000. It is estimated that each man-year of on-site employment creates another man-year of off-site employment. If the total appropriation is approved it will provide employment for nearly 10 percent of the unemployed in those distressed areas eligible for public works projects.

In the State of Connecticut, we have 54 eligible projects, while in the Third Congressional District alone we have 6 eligible projects.

The pending applications involve the city of Meriden, Conn. The projects are as follows: $267,000 for sanitation projects; $353,000 for water systems; $400,000 for improvement of roads; $221,000 for sanitation; $205,000 for water systems; and $80,000 for parks and recreation.

All of these projects are badly needed and will be of great importance to Meriden and its economic future. Meriden's designation as a labor surplus area came in December of 1962 and the city's projects are awaiting the results of our action here today.

As a member of the House Appropriations Committee, I believe that Federal expenditures should be cut wherever possible. I do not believe, however, that the accelerated public works program is the type of program which should be reduced. It is far too important to the economic vitality of our country.

On behalf of the people of Meriden, the State of Connecticut, and all other cities and States whose economic future depends so greatly on this program, I strongly urge restoration of the funds necessary to keep this vitally important and significantly effective program in operation.

The CHAIRMAN. Does the gentleman from Wisconsin [Mr. LAIRD] desire to withdraw his point of order?

Mr. LAIRD. Mr. Chairman, I would like to reserve the point of order until we study it.

The CHAIRMAN. The Chair feels that this matter should be disposed of before we proceed further.

Mr. LAIRD. Mr. Chairman, if that is the case, the only option I have is to insist upon the point of order at this point. I would like to study the point, but if the Chair insists that I make the point of order now, I will.

The CHAIRMAN. The Chair thinks that this is the proper parliamentary procedure.

Mr. LAIRD. I make the point of order against the amendment on the basis that you are legislating in an appropriation bill. This particular language which is added by this amendment is, in fact, legislation.

The CHAIRMAN. Will the gentleman state in what respect it is legislation?

Mr. LAIRD. The legislation is in the proviso as far as the matching formula is concerned, which is contrary to the basic law. The second proviso of the amendment does not follow the basic act which was passed in the last session of Congress and is, in fact, legislation.

The CHAIRMAN. Does the gentleman from Texas desire to be heard?

Mr. THOMAS. I do, Mr. Chairman.

Mr. Chairman, I submit that this language is accurate and in order. The gentleman refers to the proviso "providing further that no part of this appropriation shall". It only deals with this appropriation. It is a limitation on the use of the fund and, therefore, I submit it is in order.

The CHAIRMAN. The Chairman has had an opportunity to examine the amendment and feels that the matter discussed is a limitation on the appropriation. Therefore the Chair overrules the point of order.

For what purpose does the gentleman from Ohio [Mr. Bolton] rise?

Mr. OLIVER P. BOLTON. Mr. Chairman, I offer a substitute amendment.

The Clerk read as follows:

Amendment offered by Mr. Oliver P. Bolton as a substitute for the amendment offered by Mr. Boland:

On page 7, after line 14, insert the following:

"PUBLIC WORKS ACCELERATION

"For an additional amount to carry out the Public Works Acceleration Act, $300,000,000, to remain available until June 30, 1963. No part of this appropriation shall be available (1) for any grant-in-aid under such Act if application for such grant is made after the date of enactment of this Act, or (2) for any administrative expenses in connection with an application made after the date of enactment of this Act for assistance under the Public Works Acceleration Act."

Mr. THOMAS. Mr. Chairman, will my distinguished friend, the gentleman from Ohio, yield, and I ask unanimous consent that this may not be taken out of his time.

Mr. OLIVER P. BOLTON. Gladly.

Mr. THOMAS. Mr. Chairman, may I respectfully request of the Members that we agree on some limitation of time on this amendment and all amendments thereto? I ask our beloved senior Member on the other side, the gentleman from Ohio [Mr. Bow], whether or not we can agree on some time limitation? We had high level debate yesterday. It was carefully done. We must have debated this issue for 3 or 3½ hours. May I suggest to my friend, the gentleman from Ohio [Mr. Bow], that all debate on the Boland amendment and all amendments thereto close in, say, 20 minutes?

Mr. BOW. Mr. Chairman, will the gentleman yield?

Mr. OLIVER P. BOLTON. I yield to the gentleman from Ohio [Mr. Bow].

Mr. BOW. May I suggest that all debate end at 1 o'clock?

Mr. THOMAS. Mr. Chairman, I ask unanimous consent that all debate on the Boland amendment and all amendments thereto end at 1 o'clock.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

Mr. GROSS. Mr. Chairman, reserving the right to object, what is the rush about ramming this bill through this afternoon?

Mr. THOMAS. May I say to my distinguished friend that there is no rush; we debated this at least 3½ hours yesterday. We are not going to say anything today that we did not say yesterday. We are not going to change a vote. At least, that would be my guess. So let us get through with it.

Mr. GROSS. I am informed that there were 22 standing indicating they wanted to be heard.

Mr. THOMAS. Well, I will sit down, for one, and that will make only 21 standing.

Mr. GROSS. Mr. Chairman, I must object to this kind of limitation of debate.

Mr. THOMAS. Then please do not get mad at me if I move to limit the debate.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

Mr. GROSS. Mr. Chairman, I object.

Mr. THOMAS. Mr. Chairman, I move that all debate on the Boland amendment and all amendments thereto close at 1 o'clock p.m.

The motion was agreed to.

The CHAIRMAN. The gentleman from Ohio [Mr. Oliver P. Bolton] is recognized on his substitute.

Mr. OLIVER P. BOLTON. Mr. Chairman, the effect of my substitute would be to restore $300 million to carry out the Public Works Acceleration Act and primarily will place a limitation upon the expenditure of these funds which would prevent the administrator from accepting or processing any further applications. Thus the limitation in this substitute would be word to the world that the Congress wanted to put an end to this program.

Mr. Chairman, the gentleman from Massachusetts stated the issue correctly. This is an indication of a difference in political philosophy, but he erred, in my judgment, in what political philosophy. This is not a question of whether or not we want the Federal Government to assist those local communities which need assistance. This is not a question of whether or not we feel in our hearts that the Federal Government can be of help to those who are unemployed. This is rather a question of whether the House wants to take unto itself the delegated authority that we have under the Constitution, whether we wish to approve, and oversee those expenditures such as those we have under this accelerated public works bill delegated to the President.

We stated, as the gentleman from Ohio stated in the debate yesterday, when the $400 million was granted under the first appropriation, the Congress stated to the authorities that when they came back for the $500 million they must justify their expenditures. This they did not do in the normal course of events. And yet, Mr. Chairman, I find myself on the horns of this dilemma. I believe in this House. I believe in the responsibility for the taxpayers' dollars which we must exercise if we are going to live up to the oath which we took. And yet I know that in this great land of ours there are many areas that have been led to believe by this administration, and have counted on the fact that the money for their projects would be forthcoming. Whether we like it or not, we have been a party to letting this belief exist. Therefore, I have asked this House in this substitute to put back $300 million; yes, for those communities whose projects have already been cleared, for those communities where the need has been demonstrated. I can say to the House that in my own district I have checked those projects, I have followed them closely, and I can answer to this House for the worthwhileness of the projects which have been requested.

Therefore, I hope this House will give very serious consideration to this amendment, which would do two things: First, not cut off the expectations of the communities which the administration permitted to continue by taking in a billion or two of applications that they knew they could not fulfill, and second, to give word that this program will come to an end.

Already in the other body we have word that one of the Members there would authorize an additional billion dollars of public works participation by the executive, if you will, in the public works field. Already the pressure is building up with more and more and more applications that are coming in under this program. And what community would not when they can get 50, 60, or 70 percent of the money as contrasted to 25 or 30 percent?

Therefore, I say that this program has held up the local activity in my area waiting upon this bill. It has been held up for these appropriations. Why? Because they have been permitted to anticipate that this money would be provided under an executive jurisdiction and choice. If they had not been given this hope, their projects would have been considered and processed in the normal manner.

I hope very much the House will pass the language contained in my substitute so as to give notice that from now on programs, whether they be accelerated or not, must be justified and must come to the House in the normal course.

Mr. EDMONDSON. Mr. Chairman, will the gentleman yield?

Mr. OLIVER P. BOLTON. I yield to the gentleman from Oklahoma.

Mr. EDMONDSON. I was concerned about the second part of the gentleman's proviso. I can understand the reasoning on the cutoff of June 30, 1963, but does the gentleman also have a proviso that no application submitted after the passage of this act can be approved, so that communities which have been a little slow in getting their applications submitted and getting them processed will be completely cut out?

Mr. OLIVER P. BOLTON. Yes. No money can be spent in processing further applications under my substitute. Otherwise there will be no end to applications which are attracted to this program because of the size of the Federal contributions. Without a cutoff, as provided in my substitute, it is my judgment that applications will build up to the point where this will become not a 1-year program, but an executive blank check program for public works at an ever higher level of Federal participation.

The CHAIRMAN. The Chair recognizes the gentleman from California [Mr. BALDWIN].

Mr. BALDWIN. Mr. Chairman, I had the House Coordinator of Information phone the Budget Bureau on Friday of last week to ask this question: When the President submitted his budget to the Congress in January of this year he included in his budget statement an estimate that the deficit for the fiscal year 1963 would be $8.8 billion. The question I asked the Budget Bureau was, When this estimate was made, did the President include in the estimated expenditure in this fiscal year before June 30 this $500 million supplemental appropriation? The answer received from the Budget Bureau was that none of the $500 million estimated expenditure was to be spent in 1963 when the President estimated the budget deficit for this year was $8.8 billion.

If that is the case, there is no reason for this $500 million being put in this supplemental appropriation bill, because when supplemental requests are submitted it is expected that the funds are needed to be spent between now and the close of the present fiscal year.

Second, the figures as of March 31 showed employment in this country increased by 400,000 people.

The CHAIRMAN. The time of the gentleman has expired.

(By unanimous consent, at the request of Mr. BECKER, the time allotted to Mr. BECKER was granted to Mr. BALDWIN.)

Mr. BALDWIN. Mr. Chairman, when the administration submitted its $2 billion standby bill to the Congress last year and Mr. Heller came and testified on the bill before our Public Works Committee, the bill submitted by the administration, that is, the $2 billion standby public works bill, had a trigger in it stating that the $2 billion would not become available to be spent unless unemployment had increased by 1 percentage point in the period of 4 months or 6 months directly before the trigger became effective. Now, instead of the unemployment rate increasing in the last 6 months period by 1 percentage point, the opposite has taken place and there has been a reduction in unemployment, the most decisive reduction in unemployment in the last month of any single month in the last 4 years. This, therefore, would mean that under the bill the administration submitted to us last year, the funds could not be used under these conditions at the present time. If we spend $500 million for the accelerated public works program when unemployment is decreasing, then this is changing from a standby program to a never-ending funnel and I do not think anyone ever intended that to be the case.

The CHAIRMAN. The Chair recognizes the gentleman from Louisiana [Mr. BOGGS].

Mr. BOGGS. Mr. Chairman and members of the committee, I take this time simply to set the record straight. I am convinced that the Members of the House understand the issues involved here. This is a program for America—for the cities and towns and villages of America. Involved here are a half million jobs and many projects all over our country. The gentleman who just preceded me, the gentleman from California [Mr. BALDWIN] recently made the assertion that the projects so far allocated had gone in the ratio of 4 to 1 to Democratic districts.

Now let us get the record straight on this thing. As of now, as of March 14, 1963, a breakdown shows the following:

	Democratic	*Republican*
Number of districts in which projects were placed	149	99
Total number of projects	1,652	862
Total APW cost of projects	$210,888,000	$114.149.000
Average number of projects per district	11.1	8.7
Average cost per project	$127,700	$132,600

The CHAIRMAN. The time of the gentleman has expired.

(By unanimous consent, at the request of Mr. ROONEY, the time allotted to Mr. ROONEY was granted to Mr. BOGGS.)

Mr. BOGGS. Mr. Chairman, the record is contrary to the assertion made by the gentleman from California at a Republican meeting here some weeks ago. This program has not been administered on a political basis. It has been administered on the basis of need for the project.

I remember last summer when we debated the authorization for this, the assertion was made here on the floor of the House that enough worthwhile projects could not be turned up to justify the program. As a matter of fact, in my State alone, we have applications involving $120 million while the total amount of allocations for the State amount to $13 million. I am told that nationwide the applications exceed $2 billion. All of these projects are worthwhile projects. So I say to my colleagues, this is for the United States of America and for the development of the United States of America.

Mr. Chairman, last week the majority leader described what would happen to America if the Republicans cut the budget by $15 billion.

When he finished, there were those who claimed that he was exaggerating.

But today, the vote of the House Appropriations Committee on the accelerated public works program stands as evidence that he was not exaggerating.

That, if anything, he was highly accurate. And that the bleak picture of "America last" that he painted was not excessively grim, but was based on reality.

For if the $500 million is not restored, then 250,000 jobs will be eliminated.

A quarter of a million men will not be allowed to work, and this will happen in areas that need these jobs the most.

In areas that are the hard core of unemployment.

In areas where workers have long ago exhausted both their savings and their unemployment benefits.

But the importance of these public works projects is not in just providing jobs—although that is vital in itself.

It is also in allowing our depressed areas to pick themselves up by the bootstraps.

For public works projects are not frills to be added to a community as one would trim a window or decorate a cake.

They are much more elemental.

Public works projects include water and sewer systems, streets, hospitals, libraries, fire stations, police stations, and a host of local facilities that are indispensable to our communities.

The projects must be built eventually.

The longer we wait, the longer we deny employment to the people living in our depressed areas, and the longer we delay applying a needed stimulant to the economy, and the longer we deny ourselves an employed and growing America instead of an America that hobbles along, dragging behind it thousands of depressed areas.

This is why it is the responsibility of this Congress to reverse the Appropriations Committee vote.

To restore the $500 million so that the accelerated public works program can use the full $900 million authorized by the 87th Congress in order to provide a total of 500,000 jobs—half a million jobs.

FACTS ABOUT THE BUDGET AND DEBT

I. THE FISCAL 1964 ADMINISTRATIVE BUDGET

1. Civilian expenditures are being reduced:

	Billion
Total expenditures (increase)	$4.5
Defense, space, and interest (increase)	4.7
All other (decrease)	.2

This is counter to all trends.

Average annual rate of increase over the previous 9 years:

	Percent
Federal civilian expenditures	5
State and local government expenditures	8

Examples of savings reflected in fiscal 1964 budget: $450 million reduction in postal deficit; $300 million avoidance of additional surplus feed grain storage; and $750 million cancellation of obsolescent or unworkable weapon systems, and savings in logistic operations.

2. The budget reflects primarily the increased cost of national security:

The 1964 budget: more than 70 percent of budget goes for national defense, space, and interest; other outlays for national security and cost of past wars raise this to nearly 80 percent.

Kennedy budget increases:

	Billion
Total budget increase over 1961	$17.3
Defense, space, and interest increase (or 73 percent)	12.6
All others:	
Aid to State and local governments	2.3
Antifarm depression	.6
Area redevelopment	.5
Small Business Administration	.2
Conservation and development of natural resources	.5
All other	.6

While the Federal Government receives nearly 21 percent of our total national output or income, it pays out 9 percent in loans, grants, benefits to needy persons, corporations, local governments, etc., and actually uses less than 12 percent to purchase its own goods and services, of which nearly 10 percent goes for defense.

3. The Kennedy record in perspective:

Total of all increases in domestic civilian expenditures:	*Billions*
1st 3 Kennedy budgets (fiscal 1962–64) (or 19 percent)	$4.7
Last 3 preceding budgets (1959–61) (or 25 percent)	4.8

Same, excluding aid to hard-pressed State and local governments:	*Billions*
1st 3 Kennedy budgets (or 12 percent)	$2.4
Last 3 preceding budgets (or 26 percent)	$4.1

	Administrative budget, billions	*Cash budget, billions*
Fiscal 1964 deficit, with tax cut	$11.9	$10.3
Fiscal 1959 deficit, no tax cut	12.4	13.1

A budget deficit in fiscal year 1964, as large in proportion to gross national product as deficit of 1959, would be a deficit of between $15½ and $16 billion.

4. What causes the budget deficit?

The cost of national security (see above).

Had we not inherited an economy well below full employment, all three Kennedy cash budgets would have shown a surplus.

Were it not for the fact that the cash budget for the Federal Government also includes loans to be repaid and long-term capital outlays, all three Kennedy cash budgets would have shown a surplus.

Were it not for Federal aid to hard-pressed State and local governments, all three Kennedy cash budgets would have shown a surplus.

Enactment of the tax bill (because of the extra income it would produce and the acceleration of corporate tax payments) would only add $2.7 billion to the fiscal 1964 budget deficit.

If we slide into another recession, deficit without a tax cut will be larger than projected deficit with a tax cut.

If we attempt to cut back expenditures to balance the budget (requiring major cuts in defense and space and repeal of existing laws), effect on demand, production and employment would result in lower revenues and continued deficit.

The previous administration learned these same hard facts about the rising cost of Government, as it incurred five deficits in 8 budget years, added $23 billion to the national debt, and spent $182 billion more than its predecessor had spent in the previous 8 years.

II. THE NATIONAL DEBT

1. Public debt as a proportion of gross national product is declining in this administration:

	Percent
Fiscal 1947	116
Fiscal 1960	58
Fiscal 1964	53

2. Calendar 1962 increase in net Federal debt was small in proportion:

	Percent
Federal Government	3
State and local government	11
Private business	6
Consumer (including mortgages)	11

3. Increases in gross debt, 1947–62:

	Billions of dollars	*Percent*
Federal Government (June 30, 1962)	$40	15
State and local government (June 30, 1961)	56	332
Private business (Jan. 1, 1962)	271	189
Consumers (Jan. 1, 1962)	206	371

4. Funds required to pay interest on public debt:

Fiscal year:	*As percent of Federal budget revenues*	*Percent of gross national product*
1946	12	2.3
1962	11	1.7

III. FISCAL RESPONSIBILITY IN THIS ADMINISTRATION IS BENEFICIAL

1. Balance of payments deficit is declining:

	Billions
1958	$3.5
1959	3.7
1960	3.9
1961	2.5
1962	1.9

2. Inflation has been held in check:

	Wholesale Price Index	*Consumer Price Index*
January 1961	101.0	103 .8
December 1962	100.4	105.8
Average annual rate of increase		
	Percent	*Percent*
January 1953–January 1961	1.1	1.4
January 1961–December 1962	—.3	1.0

3. U.S. wholesale and consumer prices have remained more stable in the last 2 years than those of any other major industrial country, except Canada.

IV. FEDERAL CIVILIAN EMPLOYMENT

1. There are fewer Federal employees to serve every 100 people in this country now than there were a few years ago.

End of fiscal:	*Percent*
1952	1.6
1958	1.4
1964	1.3

2. Seventy-two percent of Federal civilian employment is in Defense, Post Office, and Veterans' Administration.

3. Increases in Federal services required between 1962 and 1964 (examples):

	Percent up
Number of veterans' pensions	10.0
School enrollment (school lunch and milk programs)	7.0
Visitors to national parks (1961–64)	20.0
Planes landing or taking off (FAA towers)	11.0
Volume of mail (post office personnel up only 3.4 percent)	6.4
Social security beneficiaries (BOASDI personnel up only 9 percent)	16.0

4. Civilian employment, 1952–62:

	Percent
Federal Government (down)	3
State and local government (up)	63

We have heard a great deal during the last few months about the subject of economy in Government. Unfortunately, we have had very little evidence as yet of actual economizing in Government by those who have been talking the loudest.

It is strange, therefore, that those who talk the loudest about economizing have given no credit to those who have achieved the most in economizing on Government expenditures. I refer, Mr. Speaker, to the present administration. There is a myth abroad in the land that the administration simply submits a budget to the Congress and then sits back and defies the Congress to make reductions in this budget. Nothing could be further from the truth. In fact, the administration has had the courage to make continuing efforts for greater efficiency in Government and for lower Federal expenditures.

Let us review briefly the budgetary process through which the administration is achieving improved efficiency in Government expenditures. Before submitting the current 1964 budget to the Congress, the Bureau of the Budget, serving as an arm of the President, reviewed in great detail all the expenditure requests of the various agencies of Government. The Bureau of the Budget obtained very substantial savings during this period by requiring more efficient operations in the various agencies. We can all remember the period prior to January of this year when all the pundits were referring to expected expenditures of more than $100 billion, in some cases substantially more. Yet, in fact, the budget actually submitted to Congress called for expenditures of $98.8 billion. I think we should give credit to the administration for economizing to such an extent. Its effectiveness in obtaining economies is most clearly demonstrated by the fact that the most vocal budgeteers of Congress are accomplishing so little by way of further reductions.

The extent to which the Bureau of the Budget and the administration has achieved economies in Government operations is indicated by a series of facts:

(1) Federal spending for purposes other than defense is a smaller portion of our gross national product today than it was either before World War II or after World War II. In 1939, nondefense expenditures were 8.8 percent of gross national product. In the typical postwar year of 1949, they were 10.1 percent. For the fiscal year 1963, it is estimated they will be only 7.3 percent.

(2) Twenty-five years ago, Federal nondefense spending was roughly equal to State and local spending. Today it is only three-fifths of State and local spending.

(3) Taking all budget expenditures, including defense, the percentage of these expenditures to gross national product is roughly what it was in the late 1950's. For example, in 1955, it was 17.1 percent; in 1963, it is estimated to be 16.7 percent.

(4) Since World War II, civilian employment in the executive branch has grown less rapidly than population, despite the fact that the Federal Government is designed to serve the total population.

(5) Budget expenditures originally proposed for the fiscal year 1964 for all programs, except defense, space and interest, were held below their 1963 levels, despite $1.8 billion of built-in cost increases such as increases in civilian pay, acceleration of public works, increases for public assistance, veterans' benefits and employment security.

(6) Aside from defense, space and interest, budget expenditures are increasing less between 1961 and 1964 than they did between 1958 and 1961. No wonder the vocal economizers are so hesitant to point out the areas where cuts should be made.

The job done by the Bureau of the Budget and the administration before the 1964 budget was submitted is impressive. For example, 42 percent of the 1963 costs of civilian employee pay increases is being absorbed. The economies being made in defense procurement and logistics operations alone exceed the entire annual costs of the new 1964 legislation requested by the President. These Defense Department economies include inventory reforms which will result in savings of over a half a billion dollars in 1964 alone. Increases in Federal civilian employment will be held to less than 1½ percent, considerably less than what it would be if Federal employment increased merely as fast as the population.

But my purpose here today is not simply to credit the administration for the job of economizing before the budget was submitted to Congress—this is not the end of the story. Immediately after the submission of the budget to Congress, the administration began to look for further areas where additional savings could be obtained. They searched for areas where they could trim the very requests they themselves had made to the Congress. This search for increased efficiency in Government is a continuing and unrelenting one by this administration. Moreover, it has been a successful one.

Let us look at the facts since the budget was formally submitted to Congress on January 17. Between that time and April 1—a period of only 2½ months—the President reduced his appropriations requests for the current fiscal year by $236.5 million. Moreover, he also reduced his appropriations requests with respect to fiscal year 1964 by an additional $142.7 million. These reductions do not take into account the President's announced intention to reduce the 1964 request for foreign assistance by $420 million.

These reductions took rare courage, and it is amazing to me that those of us in Congress who search for efficiency in Government have not applauded and publicized these reductions by the administration. Quite the contrary. These cuts have been ignored, and the implication has been widely dispersed that the administration is engaging in wild and reckless increases in Government expenditures.

How have these further reductions by the administration been obtained? In the Department of Defense alone, appropriations requests for military personnel and operations and maintenance in 1963 have been reduced by over $110 million since the budget was formally submitted. Economies of approximately $40 million have been found in grants to States for public assistance under the Department of Health, Education, and Welfare. Readjustment assistance provided under the Trade Expansion Act has been reduced by over $2.5 million. Efficiency in providing housing for the elderly has resulted in reduced requests of $15 million. Readjustment benefits under the Veterans' Administration have been lowered by over $59 million. And there are many others. All of these—I wish to emphasize—are reductions in expenditure requests made by the Bureau of the Budget on behalf of the administration with respect to the current year, and all have been made since the budget was submitted in January.

Similar examples can be pointed to for the fiscal 1964 budget. For example, grants for public assistance have been improved to permit approximately $50 million of savings. Changes have been made in the policy of loans by the Small Business Administration that will result in decreased expenditures of approximately $70 million.

This search for efficiency in Government will continue, and we can reasonably expect that further reductions in expenditure requests will be forthcoming from the administration. I cannot understand why these economies have not been given the publicity they deserve. They have required real courage. I am sure that all the Members of Congress will join with me in lauding the Bureau of the Budget and the administration for their forthright efforts to obtain continuing improvements in the efficiency of our Government operations.

Action taken by the President since the 1964 budget was transmitted in January to reduce the budget, excluding items transferred from 1964 to 1963

FISCAL YEAR 1963

[In thousands of dollars]

	In budget	Amount of supplemental	Difference
Department of Commerce:			
Trade adjustment activities	500	[1] 0	500
Pay increases	5,460	4,985	475
Department of Defense:			
Military personnel	172,100	89,000	83,100
Operation and maintenance	151,564	121,364	30,200
Department of Health, Education, and Welfare: Grants to States for public assistance	250,000	210,000	40,000
Department of the Interior: Pay increases	10,461	9,839	622
Department of Labor: Trade adjustment	2,921	[1] 316	2,605
Treasury Department: Pay increases	23,232	22,687	545
General Accounting Office: Pay increases	780	----------	780
Housing and Home Finance Agency: Housing for the elderly	45,000	30,000	15,000
Small Business Administration: Trade adjustment	3,000	(1)	3,000
Veterans' Administration: Readjustment benefits	59,275	----------	59,275
Other agencies: Pay increases	365,355	364,962	393
Total	1,089,648	853,153	236,495

---

[1] In lieu of the supplemental appropriation reflected in the budget for loans, authority was requested to transfer existing funds from other accounts of the agency.

Action taken by the President since the 1964 budget was transmitted in January to reduce the budget, excluding items transferred from 1964 to 1963—Continued

FISCAL YEAR 1964

[In thousands of dollars]

	In budget	Amount of supplemental	Difference
Department of Agriculture: Land use program	27,000	19,000	8,000
Department of Health, Education, and Welfare: Grants for public assistance	2,950,000	2,900,000	50,000
Department of the Interior: Lead and zinc stabilization program	4,625	----------	4,625
Department of State: Migration and refugee assistance	11,800	10,683	1,117

Total	3,394,975	3,248,239	142,736

The CHAIRMAN. The Chair recognizes the gentleman from Ohio [Mr. HARSHA].

Mr. HARSHA. Mr. Chairman, I rise in support of the substitute for the amendment offered by the gentleman from Ohio to restore $300 million to this appropriations bill to carry out worthwhile projects under the Public Works Acceleration Act of 1962.

Mr. Chairman, this body authorized a program of emergency public works in the amount of $900 million last year. I opposed that bill at that time and I am still opposed to the methods devised by this legislation to construct these projects. These methods completely circumvent our Constitution and take away from the Congress its duly authorized authority to appropriate funds for specific projects on proper justification. It delegates to the President the power and authority of this Congress and I am strenuously opposed to the failure of this administration to properly justify and present specific recommendations for each project and I am extremely fearful that this program may become a permanent program unless this Congress calls a halt to such a possibility.

Mr. Chairman, there are over $2 billion in applications for projects now before the administration and even with these applications, the administration is constructing many ill-advised projects such as ski slides, recreational facilities, and other very nonessential matters. Furthermore, this program necessitates deficit financing and contributes to the necessity for raising the public debt ceiling without getting to the real cause of unemployment.

However, Mr. Chairman, many communities have been misled by the administration and promised funding of their program if they would go ahead and take the necessary initial steps to file an application and make arrangements to provide the necessary local financing to accompany the Federal grant. As a result of this, many communities have undertaken expensive programs and spent many hours in preparing plans to meet the requirements set up by the Federal Government. In some cases, they have even gone so far as to issue bonds to raise the necessary local capital. In short, they have become dependent upon an expected grant from the Federal Government and it is because of this position these communities find themselves in that I feel we have an obligation to them and I, therefore, even over my strenuous objection to the legislation, am willing to provide adequate funds to meet projects such as sewer systems, water systems, sanitary disposal plants, public buildings and other permanent capital investments that will enhance the capital structure of a community.

It is my firm belief that $300 million will meet the demand for worthwhile projects and will cause the administration to delete from their program such ill-advised construction as ski slides, tourist trains, swimming pools, golf courses, and other such recreational attractions. In addition to this, the gentleman's amendment is so worded that it will call a halt to this accelerated public works program with all the discretionary administrative powers improperly vested in the executive office and return this function to the Congress of the United States as set forth in the Constitution.

Furthermore, I would like to add that public works projects never have been effective in achieving anticyclical results during an economic recession. Most public works projects will not provide many jobs for persons who are presently unemployed because much of the cost goes into the purchase of materials, equipment, and for the employment of professional and skilled persons who are not among the large group of unemployed. Furthermore, it normally takes a long time to get public works projects going and they do not provide much employment until economic recovery is well underway.

Nevertheless, Mr. Chairman, because as I said before, many of these communities have been misled into a situation over which they apparently now have no control and I feel we have a responsibility toward those communities to at least provide adequate funds to meet proper projects and I, therefore, am supporting the gentleman's motion to restore $300 million to the appropriations bill.

The gentleman's amendment further will preclude the acceptance of any more applications for accelerated public works programs and under this amendment, the program can be phased out in such a manner as not to create any undue hardship on the communities involved. But let me point out, Mr. Chairman, that there are adequate programs, adequately financed, which will still permit the Federal Government to enter into the same type of projects for which this program calls and the only difference being is that they would not have to be completed within 1 year as the law requires under this program. They would not be limited only to depressed areas, but would include any area in the United States, but the Federal contribution is not quite as high as it is under this accelerated public works program.

In conclusion, Mr. Chairman, let me say that the gentleman's amendment would meet our obligation to the cities and areas affected, yet return the responsibility of this program to the Congress where it belongs. I urge my colleagues to restore this $300 million to the bill so we can meet this responsibility to the communities.

The CHAIRMAN. The Chair recognizes the gentleman from Iowa [Mr. Gross].

Mr. GROSS. Mr. Chairman, for 3½ months the House has been dragging its feet and yet when an amendment is offered in the House today, proposing a $450 million boondoggle, debate is limited to 1 minute per Member recognized on the amendment, and the gentleman from Texas first tried to limit time to 20 minutes, or about one-half minute.

Mr. ROONEY. Mr. Chairman, will the distinguished gentleman yield?

Mr. GROSS. No; I cannot yield. I do not have time to yield. The gentleman set debate limitation. What are you out to do this afternoon? Do you want to vote on this bill tomorrow? You are going to bring it about if you continue these tactics.

Mr. ROONEY. Mr. Chairman, will the gentleman yield?

Mr. GROSS. No; I do not yield. I have had my 1 minute.

The CHAIRMAN. The Chair recognizes the gentleman from Minnesota [Mr. Blatnik] for 1 minute.

(By unanimous consent, Mr. Miller of California and Mr. Shelley yielded their time to Mr. Blatnik.)

The CHAIRMAN. The gentleman from Minnesota is recognized for 3 minutes.

Mr. BLATNIK. Mr. Chairman, many domestic problems have plagued us with ever-increasing seriousness during the postwar years. But the major problem has been how to utilize to the fullest extent the tremendous and magnificent industrial capacity which is ours, and how best to utilize the available manpower. The pattern of the past three recessions clearly demonstrate that with every succeeding recession the problem of recovery becomes more serious and prolonged. Also, at the end of each recovery, the percentage of unemployment rises. This situation is not going to be improved by reducing the amount of money requested for this public works program. Each year we have seen Federal, State, and local governmental units asked to increase fiscal outlays for unemployment compensation, relief, welfare, food stamps, and so forth.

Mr. Chairman, last year we spent over $3 billion for unemployment compensation alone. In more than half of the States unemployment compensation funds have fallen to a dangerously low level. Since 1960, we have spent $10.5 billion for unemployment compensation. If we add on to that the welfare relief costs, the figure goes up to almost $18 billion. Our proposition today in this provision is to help municipalities where the unemployment average is anywhere from two, three, four, yes, even to five times the national average. The economic situation of the workers in many areas is bad. Their problems are distressing. We propose to put about 10 percent of these unemployed to work. Rather than paying them for not working, we propose to pay them to work on facilities that are badly needed to improve the health and welfare of the citizens of their communities. These public works projects will upgrade and improve these distressed communities and will make them more attractive so they can induce small industry to move in.

Mr. McCORMACK. Mr. Chairman, will the gentleman yield?

Mr. BLATNIK. I yield to our distinguished Speaker.

Mr. McCORMACK. The gentleman is making a very impressive argument. The fact that the Bolton substitute was offered to the Boland amendment shows the unsoundness of the position of our Republican friends. First they insisted on knocking out $500 million. The Boland amendment would restore $450 million. The Bolton substitute would provide $300 million. They will probably vote for the $350 million.

Mr. BLATNIK. I thank the Speaker.

Mr. Chairman, I am appalled at the amazing shortsightedness of our Republican colleagues who seem to think that this great country cannot afford to spend the small sum of $450 million to assist its 4.6 million unemployed workers trapped in the economically distressed regions of the Nation. I find it hard to believe that some of my colleagues have the audacity to talk economy to men who are suffering the despair and humiliation of the relief rolls.

The unemployment problem in the Nation is a serious challenge. It is an issue of long duration. It cannot be put on a shelf and forgotten.

Last year, in passing the Public Works Acceleration Act, the Congress took strong affirmative action directed toward meeting the challenge. The APW program has brought new hope to the unemployed in our distressed regions. More importantly, it has restored self-respect to men long out of work. These are good men. They are proud men. They do not want our charity. They want to work. We cannot allow them to become helpless and undeserving victims of poverty in this land of plenty.

Since the initiation of the APW program on October 13, 1962, $394 million of approved funds have been allocated to 3,756 projects. Fifty thousand on-site jobs of 1 year's duration have been created. Experts estimate that accompanying off-site employment provided 50,000 more jobs, bringing the total number of jobs to 100,000. This does not include the additional generated by the increased purchasing power of those back to work.

If the Congress restores the $450 million supplemental appropriation for which the President has asked, about 55,000 new jobs of 1 year's duration would be created. These, plus the accompanying off-site jobs in related service industries, would bring the total number of jobs yielded by the program to 210,000, thus providing work for nearly

10 percent of the unemployed in economically distressed areas under the program. All of these men thus mobilized, moreover, would be working on vital and necessary projects which would make their communities better places to live and work.

Mr. Chairman, the applications for APW funds have been coming into the agencies from local communities at the rate of $450 million a month. ARA now has pending applications for a grand total of 6,211 projects requiring $1.2 billion in APW funds. Last fall the Congress made a firm commitment to assist the economically distressed communities of the Nation. Encouraged, these communities leaped at the opportunities offered and set into motion the machinery to help themselves. Now the Congress has dared to go back on its word of honor to these good people.

Mr. Chairman, this refusal to appropriate funds already authorized and guaranteed would be a serious failure in duty and in honor on the part of this very distinguished body. Unemployment in most eligible areas remains abnormally high. The national economy is still expanding at a slow pace. The only real solution to the problem of unemployment is to provide jobs immediately to accelerate our economic growth. I find it unconscionable that we can consider spending $4.5 billion in foreign aid, and yet refuse to allocate $450 million in domestic assistance.

Now is the time to take our men off relief rolls, to put them to work on important and essential public works projects, and to restore to them their human dignity and self-respect.

The effectiveness of accelerated public works has already been demonstrated. The need is yet urgent. Mr. Chairman, we are not dealing with cold calculations on sheets of foolscap. We are concerned here with people who are hungry, with people who need the chance to have a good job. I sincerely request that my colleagues consider the human cost of discontinuing the accelerated public works program. I am confident that the Members of this great Chamber will have the courage and the compassion to restore to the appropriations bill the $450 million supplement needed to continue this vital assistance to the good people in our Nation's distressed areas.

The CHAIRMAN. The Chair recognizes the gentleman from Wisconsin [Mr. LAIRD].

Mr. LAIRD. Mr. Chairman, in the minute allotted me, I would like to talk a little bit about this question of solving unemployment through this accelerated public works program.

This hearing record which I hold in my hand, is replete with evidence that the unemployment problem in this country cannot be solved by this kind of Federal spending program.

As of February 15, in testimony before the Appropriations Committee, we found there were 2,060 projects approved, with a total cost of $244 million. How many man-years of work did these projects provide? They provided only 29,921. Less than seven-tenths of 1 percent of the total unemployed in the United States were taken care of by this expenditure of $244 million.

These cost figures are conservative. Assuming a minimum average local matching of only 25 percent means that the cost per man-year of unemployment would be $10,225 and the total cost to put 4 million unemployed to work for 1 year would be $41 billion which is almost half of the total estimated expenditures for the current fiscal year.

Of the 2,060 projects listed as approved in the February Directory, 357 of them will produce only 1 man-year or less of employment. Nineteen of the projects approved provide only one man-month of employment.

The impact of this program on the 357 local areas involved most surely is not noticeable.

What happens to the recipient of several months of work when the job is done? He reverts back to the ranks of the unemployed. What has been accomplished? Nothing.

The only manner in which a program of this type could possibly cut the unemployment figure is to plow in staggering sums year after year. Otherwise it is a futile effort in many areas.

We may be getting a nice firehouse or a hospital wing here and there but from the standpoint of relieving unemployment we are jumping into a sponge.

If we are going to use this kind of Federal spending program to solve the unemployment problem in this country today, the testimony before the Appropriations Committee proves beyond a reasonable doubt that the total Federal cost of this program would have to be increased to $32 billion for each year of operation.

The CHAIRMAN. The time of the gentleman from Wisconsin has expired.

(By unanimous consent, at the request of Mr. LANGEN, the time allotted to Mr. LANGEN was given to Mr. LAIRD.)

Mr. LAIRD. Mr. Chairman, the total cost of this program will have to be raised to $32,620 million in fiscal year 1963.

This particular program will not solve the unemployment problem in the United States. We tried this kind of program in the years from 1930 to 1940. All you have to do is to look at the record of the billions of dollars spent during that period of time. This table shows the unemployment level all during that period of time. It was not until World War II that the unemployment level was substantially reduced.

Percent of labor force unemployed

Year:	
1929	3.2
1930	8.7
1931	15.9
1932	23.6
1933	24.9
1934	21.7
1935	20.1
1936	16.9
1937	14.3
1938	19.0
1939	17.2
1940	14.6
1941 (defense and war program)	9.9
1942 (defense and war program)	4.7
1943 (defense and war program)	1.9
1944	1.2

I submit, Mr. Chairman, if we want to get America moving again, we must not go in two directions at the same time, in the direction of increased Federal spending and tax cuts.

The economists who testified before the Joint Economic Committee have told us, and the President of the United States has told us, that the No. 1 priority item, as far as the economy is concerned, is in the area of tax reduction. We cannot ride both horses at the same time. It seems to me that today is our opportunity to make a choice here of sound fiscal management if the No. 1 priority is in the area of tax reduction this is the time not to increase Federal spending.

The CHAIRMAN. The Chair recognizes the gentleman from Florida [Mr. FASCELL].

Mr. FASCELL. Mr. Chairman, I arise in support of the amendment which would restore to the supplemental appropriations bill for 1963 $450 million of the budget request to finance additional projects under the provisions of the Public Works Acceleration Act. This Congress, in 1962, authorized the appropriation of $900 million to be allocated to the President for the initiation and acceleration of public works in areas of substantial and persistent unemployment and underemployment and economic underdevelopment. The Congress appropriated $400 million of the $900 million so authorized. I supported the original authorization, the first appropriation, and support the Presidential request for funding the balance of the authorization because it is clear to me such additional appropriation is fully justified.

Mr. Chairman, the general economic conditions which prevailed in the fall of last year have been improved but not to the extent that justifies the cessation of the assistance contemplated under the Public Works Acceleration Act. The specifics on national unemployment and our economic condition generally are part of the record of this debate, and the hearings of the committees of the House and the Senate which considered this supplemental request. I have no reason to doubt that the same necessity and urgency exists today for the type of assistance contemplated under the Public Works Acceleration Act as did at the time the act was passed.

I would like to relate the details concerning my own area. In my area of south Florida, we are coping with a major economic problem. We have for several years had substantial unemployment. The U.S. Department of Labor long ago determined that there were a sufficient number of unemployed American citizens so as to qualify Dade County as a class D labor surplus market area. However, Mr. Chairman, we have not only the economic difficulty that arises from the usual reasons of unemployment, but we have in addition, the unusual economic distress and unemployment caused by the impact of approximately 150,000 refugees residing in this area who have fled the tyranny and oppression of the Communist government of Cuba.

While a tremendous number, approximately 56,452, of these refugees have been resettled into other areas of the United States, there are still approximately 105,000 refugees who have registered but have not resettled. Since there are many refugees who have not registered, the estimate is that there are approximately now 150,000 refugees residing in this area.

At the present time it is estimated that there is an American labor force of 409,090, of which 382,900 are employed and 27,000 are unemployed, giving us a real unemployment rate of 6.6 percent. The official unemployment rates for Dade County for recent years, according to information obtained from the Department of Labor, are as follows: 1958, 5.9 percent; 1959, 5.2 percent; 1960, 5.2 percent; 1961, 6.7 percent; 1962, 5.8 percent.

However, Mr. Chairman, this does not include the Cuban refugee labor force and the attendant problems of displacement of American workers, and unemployment of Cuban refugees. The labor force of Cuban refugees is estimated at 53,900, of whom 22,500 are estimated as being employed and 31,400 are unemployed, for the fantastic unemployment rate of 58.4 percent. When the total unemployment rate is considered, it is indicated that there has been persistent and substantial unemployment of approximately 12.6 percent which is far above the national average.

Despite the heroic efforts of our local citizens, Catholic, Protestant, and Jewish faiths, local government and voluntary agencies, it soon became obvious that the need of the refugees could not be met solely out of local resources. Two Presidents of the United States and this Congress, at my request, recognized that this was a matter of national concern and responsibility, and accordingly authorized and appropriated funds to assist with the problems of providing for the Cuban refugees. But the economic problem of this existence of unemployment at a high rate in the nonrefugee population as well as the existence of a large labor pool and high unemployment rate among the refugees, has not been resolved by Federal recognition and substantial assistance to the Cuban refugees. The fact is, Mr. Chairman, that there has been tremendous economic pressure as a result of the Cuban refugees residing in our area. They quite logically and normally have sought jobs. Much of this employment has been at reduced wages. They not only have displaced American workers, but have tended to depress the labor market.

We in Dade County have tried to solve the problem of additional employment for Americans through every means known to us. Our chamber of commerce, our industries, our local governments have all cooperated in an effort to attract new industry, expand existing industries, construct public works, float bond issues and in general to do everything to create more jobs and to put Americans to work. We have been successful, but not sufficiently. Substantial unemployment and economic distress still exists. It was because of these unusual circumstances that existed not only in my area but in other areas of the United States that I concur in the need for this administration's proposal for the Public Works Acceleration Act. The need still exists in fact and in statistics. I quote two statistics which give an additional measure of the problem faced by us. Residential construction is a major part of our economy. In 1957 there were 12,500 permits for the construction of single family housing units. In 1962 this had dropped to the low of 5,000. It is no secret that the construction industry in Dade County has been slowed to a walk in the last 3 years. In 1957 there were 698 mortgage foreclosures. In 1962 this had risen to 3,123.

We are not pessimistic at all in Dade County, Fla. We have had a record of fantastic, phenomenal, dynamic growth and economic expansion. The fact is, however, Mr. Chairman, that the time came 2 or 3 years ago when we reached a plateau. To the economic distress caused by this slowdown, was added the burden of the Cuban refugee problem. We are not at all disheartened about our future. We expect to grow and prosper and eliminate our economic distress, but we are realistic in assessing our present problem and acting at all levels of government to resolve the problem. This is why public and private institutions and governmental units in my area were prompt in seeking assistance under the Public Works Acceleration Act.

On October 13 of last year, we appropriated $400 million of the $900 million authorized. Within less than 5 months, the entire amount of the appropriation had been allocated by the President to the participating Federal agencies, and virtually all of it had been committed to projects all over the country. Institutions and governmental units in the district which I have the honor to represent applied for, and the people of the district I represent received, considerable assistance. I was privileged and honored to assist in the processing of the applications and obtaining approval for assistance under the Public Works Acceleration Act. The Area Redevelopment Administration of the U.S. Department of Commerce deserves the highest commendation, as do the participating Federal agencies, for the efficient and prompt manner in which the thousands of applications were received, processed, and acted upon.

Of course there were far more applications than funds, and many areas could not be approved under the priority criteria which was established. The area which I represent was a recipient of approved projects under this program. These approved projects have had an important psychological and economic effect in our community. They have given us just the right amount of assistance to provide enthusiasm and encouragement for additional local efforts to resolve our economic difficulties. The following projects have been approved for Dade County:

Accelerated public works projects, Dade County, approved

Name	Amount	Man-months of work
Jackson Memorial Hospital	$200,000	192
Mount Sinai Hospital, Miami Beach	238,178	228
Construction of branch libraries, Miami	133,000	216
Water system, North Miami	261,000	396
Sewage facility and administration building, Dade County	520,500	1,086
Sewage facility, street repair, and fire station, Miami	534,200	1,128
Variety Childrens' Hospital, Miami	755,162	486
South Miami Hospital addition	103,750	104
Miami Heart Institute	116,200	108
Cedars of Lebanon Hospital	530,210	504
National Cardiac Hospital	156,900	256
Miami Beach water facilities	164,100	336
Medley water facility	73,100	84
North Miami Beach street construction	117,000	120

Notwithstanding the employment which will be provided for by these approved projects, there are still essential and urgent public works which must be constructed, and there still exists substantial unemployment and considerable economic distress in our area. Our institutions and governmental agencies are fully aware of this problem and have continued to seek assistance under the provisions of the Public Works Acceleration Act. The following projects have been submitted and are now pending before the Area Redevelopment Administration for approval under the Public Works Acceleration Act:

Accelerated public works projects proposed	
Renovation of laboratory, Miami	$6,400
Trails, camping facilities, and road construction, Everglades National Park	400,000
Post office modernization and extension, Miami	80,000
Veterans' hospital improvements, Coral Gables	31,000
Doctors hospital addition, Coral Gables	500,000
Coral Gables General Hospital addition	340,500
Cedars of Lebanon Hospital expansion, Miami	350,000
Jackson Memorial Hospital addition, Miami	1,500,000
Miami Heart Institute addition	300,000
North Miami General Hospital addition	87,500
New drainage project, Miami	296,000
Water system improvement, Miami	9,000
New clinics, Florida City	38,000
New waste treatment facilities, Florida City	330,000
Sanitation facilities improvement, Coral Gables	184,000
City streets improvement, Coral Gables	197,000
New libraries, Coral Gables	313,000
New disposal facilities, Miami Beach	2,429,000
Water system additions, Miami	293,000
New water resources, Miami	182,000
New garage, Miami	476,000
New office building, Miami	335,000
New exhibit buildings, Miami	249,000
Improvement of city streets, West Miami	91,000
Water system additions, Miami Beach	213,000
New libraries, North Miami Beach	150,000

Accelerated public works projects proposed—Continued

New disposal facilities, Surfside	$487,000
City streets, additions, Miami Beach	23,000
New drainage, Miami Beach	85,000
New sanitation, Miami Beach	193,000
New sanitation, Miami	1,923,000
Additions to disposal facilities, Miami	1,119,000
Sanitation improvement, Miami	312,000
City streets, improvement, Miami	204,000
Protect buildings, new, Miami	41,000
New drainage, Miami	306,000
Sanitation improvement, Miami	217,000
Protect buildings, new, Miami	43,000
New parks, Miami	49,000
City streets improvement, Miami	36,000
New athletic buildings, Miami	976,000
Protect buildings, new, North Miami	42,000
New municipal buildings, North Miami	296,000
New drainage, North Miami	296,000
Protect buildings, new, North Miami	122,000
Water system additions, Miami	188,000
Water system additions, Miami	438,000
Water system additions, Miami	451,000

As the need for employment in our distressed area continues, so does the need for jobs in the other areas of the United States which are economically distressed, and so does the demand for the initiation and acceleration of additional projects which would serve an essential public need. This demand from the economically distressed areas of our country is proof positive of the need for the budget request in this supplemental appropriation for the Public Works Acceleration Act.

The fact that so many institutions, the county government and various municipalities in the area which I represent have committed their own funds to urgent and essential public works projects which qualify under the provisions of the Public Works Acceleration Act, establishes that the people whom I represent have faith in themselves and in the future, and welcome the participation and stimulus provided by the Public Works Acceleration Act to improve their well-being and that of the entire country.

Finally, Mr. Chairman, the conclusion is obvious that those facts which existed that made it necessary and advisable for the economic well-being of the people whom I represent, as well as the economic well-being of this country for the Congress to pass the Public Works Acceleration Act, still exist not only in the district which I represent but in many other economically distressed areas of the country. Therefore, Mr. Chairman, I support fully the amendment which would restore to the supplemental appropriation bill of 1963 $450 million of the sum requested in the President's budget.

The CHAIRMAN. The Chair recognizes the gentleman from Ohio [Mr. Bow].

Mr. BOW. Mr. Chairman, there has been some discussion here about 500,000 jobs being created by this bill.

I should like to get the record straight and read the testimony of William L. Batt, Jr., the Administrator of this program. Let us get on the record exactly how many jobs are involved in this $500 million. This is his testimony:

> It is estimated that the $500 million appropriation would generate approximately 60,000 man-years of onsite employment, which, together with the 50,000 man-years generated by the first appropriation would bring the total to 110,000 onsite jobs of 1 year's duration.

No; it is not 500,000 jobs. The testimony of the administration is 110,000. So, let us keep the record straight and get away from these wild statements of what this is going to do.

Mr. ALGER. Mr. Chairman, will the gentleman yield?

Mr. BOW. I yield to the gentleman from Texas.

Mr. ALGER. Mr. Chairman, I join my colleagues in disapproving the restoration of money for the accelerated public works program.

Mr. Chairman, I oppose this deficiency or supplemental appropriation bill because we are appropriating money for new projects which is not the purpose of a supplemental appropriation bill. The list of new starts outlined by the gentleman from Ohio [Mr. Bow], clearly shows this improper procedure.

Further, it is wrong to spend additional money for public works at this time of deficit financing. The accelerated public works project was wrong at its inception this year and restoring money to the program is wrong now. Pump priming did not work before in correcting or relieving unemployment and it will not now.

Our country faces fiscal collapse because of wild Federal spending. We must economize to protect our currency value, gold on hand, and our entire economy.

We must bolster confidence in our economy and Government by responsible action now. Let us reduce Federal spending, not increase. Let us cut the national debt, not add to it. Let us then reduce taxes. Each of these steps separately and collectively will bolster confidence in our Government's fiscal self-discipline, and preserve our private economy.

Let us stop financing socialism. Capitalism is the bulwark of our country's economic health, not Federal spending.

Mr. BENNETT of Michigan. Mr. Chairman, will the gentleman yield?

Mr. BOW. I yield to the gentleman from Michigan.

Mr. BENNETT of Michigan. Mr. Chairman, I am in favor of this amendment and expect to vote for it.

Mr. KNOX. Mr. Chairman, will the gentleman yield?

Mr. BOW. I yield to the gentleman from Michigan.

Mr. KNOX. Mr. Chairman, I ask unanimous consent to yield the time allotted me to the gentleman from Ohio [Mr. Bow].

The CHAIRMAN. Is there objection to the request of the gentleman from Michigan?

There was no objection.

Mr. BOW. Mr. Chairman, I simply want to say that I spoke on this bill yesterday, and there is very little more that I can say now. I sincerely hope that we can defeat both of these amendments. I am not in favor of the Bolton substitute, and I certainly am not in favor of the Boland amendment. It seems to me that the gentleman from Wisconsin has certainly covered the situation. What we should do is reduce the spending of the Federal Government and get ourselves a real tax reduction so that we can get the economy of the country going and provide permanent jobs. There is no question but what unemployment is most serious in America today, but you will not solve unemployment by spot jobs, emergency jobs. You have to get the economy of the country going and give them permanent jobs. America does not want temporary jobs or the kind of a program that is going forward under this program. What we need is permanent jobs so that the economy will move again under a proper tax bill.

Mr. KNOX. Mr. Chairman, based upon fact I feel constrained to vote for the amendment to provide the $450 million for the accelerated public works program, because of the economic conditions in northern Michigan. The projects that are pending in the 11th Congressional District of Michigan should bring some relief to our domestic economy.

I believe the appropriation of these funds should carry a high priority over appropriations which the Congress will soon be considering in the form of foreign aid. Each year the Congress has been appropriating $3 to $4 billion for foreign aid, and a great percentage of these funds are channeled into the construction of sewer disposal plants, water systems, roads, and public buildings in foreign countries throughout the world. I do not intend to support the President's request of $4½ billion for foreign aid as I do not believe the appropriation is necessary when we have over $11 billion in foreign aid funds which are unexpended.

I do, however, feel that if the $450 million for the accelerated public works program is properly allocated to distressed areas and areas of high unemployment this could well alleviate problems of considerable magnitude.

I supported the legislation in the 87th Congress authorizing $900 million for this program and will support the amendment providing the remaining necessary funds, to carry out the intent of the 87th Congress.

The CHAIRMAN. The Chair recognizes the gentleman from West Virginia [Mr. Staggers].

Mr. STAGGERS. Mr. Chairman, I think any sound program that would help to solve the unemployment situation in this Nation deserves the support of every well-thinking Member in this body. Unemployment is the No. 1 issue in America today. We might point to many other things, but this is one problem that we, as the elected representatives, must solve. I think the unemployed of America have had great patience with those that are in a position of responsibility, because they look to us for help. They are unemployed through no action of theirs, and many of them have exhausted every avenue to be employed and they are looking to us for leadership. So, I think we do have a responsibility to look ahead and to try to solve this problem. I am against the substitute offered by the gentleman from Ohio [Mr. OLIVER P. BOLTON], and for the amendment as submitted by the gentleman from Massachusetts [Mr. BOLAND].

Mr. BLATNIK. Mr. Chairman, will the gentleman yield?

Mr. STAGGERS. I yield to the gentleman from Minnesota.

Mr. BLATNIK. I congratulate the gentleman, not only for his statement today but, over a period of years, his very sincere and earnest interest and deep concern over this problem. There are many areas of America that have defense plants which keeps their economy going, and some can be heard to say, "There but for the grace of defense go we."

Our economy is not in good shape and the problem of unemployment is going to continue to be more and more serious, becoming more and more of a drag on an already sluggish economy. It is about time Congress began to give some real, concentrated thought and attention to this problem and begin to do something about it. This program is at least a start.

Mr. STAGGERS. That is true; it has been said, "Where the people lack vision, they shall perish." Personally, I feel our job is not to plan just for today or tomorrow alone, but for the years which lie ahead and the generations to come. We cannot long remain a strong and virile nation with the canker of unemployment gnawing at the very heart of our land.

Therefore, let us, as Representatives of this great Nation, and individually as American citizens, do what we believe is for the best interest of our Nation and all of our citizens.

This is a positive program, helping each community which is in need in supplying the fundamentals which are necessary to attract industries and improve the general welfare of the areas and the people by providing clean and wholesome water, sewerage systems, good highways, and the like.

This is building a better America.

The CHAIRMAN. The Chair recognizes the gentleman from Florida [Mr. CRAMER].

Mr. CRAMER. Mr. Chairman, I am opposed to both the substitute and the amendment which have been offered on the basis that these projects, many of them, do not meet an essential need. Certainly they do not meet the unemployment problem in America today.

Mr. Chairman, the history of this whole program clearly shows it to be haphazard, unrealistic, and a public works grab bag. I have here the latest catalog. They are putting these out now about every 15 days from PWAA within ARA. Here is one dated February 15, 1963, and a new one for March 1, 1963. It is getting to be about the size of the Sears, Roebuck catalog. The only difference is there are not any bargains in it.

Mr. Chairman, here is the March 1, 1963, catalog. Listen to this: They talk about doing something about unemployment. Here is their own record. Here is what ARA says will be accomplished in the way of relieving unemployment. There is going to be spent $312 million, according to the latest catalog, and they are going to employ 35,000 people onsite. The average cost is $10,000 per man-year. If they receive the entire $450 million they will employ 50,000 people, or less than 2 percent of the present unemployment. If this is to be the answer, then the cost of employing 1 million of the nearly 5 million unemployed, only 20 percent, would be, at the rate of $10,000 per person, $10 billion.

Mr. Chairman, this has been presented to the people of America as an answer to the unemployment problem. It is obvious that it is not the answer and it is obvious that it is a first-class boondoggle. Here is an example of how little employment results for the dollars spent. Here is a "recreational facility" at Lexington City, Mo., costing $881,000, and it will employ nine people, or will cost at the rate of $90,000 per man per year. Here are other examples of costs per year per man or to employ one man 1 year as taken from the March 1, 1963, Accelerated Public Works Program Directory of Approved Projects, U.S. Department of Commerce, Area Redevelopment Administration, by transposing man-months into man-years.

State	Area	Agency	Project	Cost	Estimated on-site man-months	On-site man-year costs (per man per year)
Alabama	Bibb	Agriculture, Forest Service	Construct buildings, recreational facility	$11,000	1	$132,000
	Choctaw	Health, Education, and Welfare	Lagoon	292,000	140	25,000
	Limestone	Tennessee Valley Authority	Reforestation	4,000	8	16,000
	Macon	Agriculture, Forest Service	Land treatment	33,000	5	70,000
	Marshall	AIP	Reforestation	3,000	7	----------
			Recreational facility	41,000	48	10,000
	Perry	Agriculture, Forest Service	Land treatment	47,000	25	23,000
	Winston	do	Construct buildings, recreational facility	40,000	2	250,000
Arizona	Apache	Interior, National Park Service	Recreational facility	400,000	600	48,000
Arkansas	Van Buren	Agriculture, Forest Service	Land treatment	24,000	3	96,000
California	San Diego	Housing and Home Finance Agency, Community Facilities Administration.	Coroner's office	----------	180	10,000
	Campo	Justice, Immigration and Naturalization Service.	Border patrol station	44,000	30	20,000
Florida	Hollywood City	Housing and Home Finance Agency, Community Facilities Administration.	Beach boardwalk	----------	29	9,500
Georgia	Toccoa	Army, Corps of Engineers	Recreation facility	52,000	43	14,000
Missouri	Washington	Agriculture, Forest Service	Construct building, recreation facility	62,000	15	60,000
	Dent	do	do	----------	20	40,000
	Shannon	do	do	----------	5	20,000
New Jersey	Long Branch, Asbury Park.	Housing and Home Finance Agency, Community Facilities Administration.	Boardwalk	----------	136	10 000
New Mexico	San Miguel	Agriculture, Forest Service	Construct building, recreation facility	154,000	41	45,000
	Taos	do	do	148,000	65	30,000
New York	Niagara County	Army, Corps of Engineers	Pier repairs	240,000	108	25,000
Pennsylvania	Philadelphia	Housing and Home Finance Agency, Community Facilities Administration.	Swimming pool improvement	----------	90	5,000
	do	do	Recreation facility	----------	82	10,000
Puerto Rico	San Juan	Interior, National Park Service	San Juan recreation facility	400,000	480	30,000

Mr. Chairman, the instruction which was put into this accelerated public works program by the Public Works Committee and the Congress was that these projects should be essential and that they should result in the maximum of employment. But this is not being accomplished. This criteria is being ignored.

The CHAIRMAN. The time of the gentleman from Florida has expired.

Mr. CONTE. Mr. Chairman, I ask unanimous consent to yield my time to the gentleman from Florida [Mr. CRAMER].

The CHAIRMAN. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. CONTE. Mr. Chairman, will the gentleman yield?

Mr. CRAMER. I yield to the gentleman from Massachusetts.

Mr. CONTE. Mr. Chairman, I received a telegram from my Governor of Massachusetts showing that my congressional district would be allocated $8 million in specified projects, setting out the amount of money going to each. As I understand it, they are asking for $450 million here. There is a request for $1.2 billion from all over the United States.

Mr. CRAMER. That is correct.

Mr. CONTE. Is there any guarantee that my district will receive this $8 million if this bill goes through?

Mr. CRAMER. I can guarantee that it will not.

The whole State of Massachusetts under this March 1, 1963, catalog receives $7.7 million, and I am sure the administration is not going to put all the money in the gentleman's district. There is a total amount of $7.7 million for the entire State of Massachusetts.

Mr. Chairman, I say this is the same type of sales talk they are trying to use in an effort to try to sell the program—promise everybody everything. This cataloging proves further that this is going to be a permanent program if they receive this money. Bills introduced already are asking for twice as much as the present authorization as an increase—$1.7 billion above the present $900 million.

Here are examples of projects undertaken that clearly show the make-work, unsound spending of this program—and why it needs closer scrutiny than can be given in this deficiency bill:

List of projects which have been approved under the accelerated public works program as of February 1, 1963, which are typical of many approved projects that appear highly questionable as meeting an "essential public need" (as required by the Public Works Acceleration Act) or as to whether they are, in fact, a public works in the nature of a permanent capital improvement or merely maintenance.

Location and agency	State	Project	APW [1] funds
			Thousands
Bridgeport-Bridgeport City: Housing and Home Finance Agency, Community Facilities Administration.	Connecticut	Municipal stadium	$475.0
Johnston: Interior, Bureau of Sports Fisheries and Wildlife	Oklahoma	Fish ponds	121.0
Philadelphia City: Housing and Home Finance Agency, Community Facilities Administration.	Pennsylvania	Swimming pool improvements	40.0
Swain County: National Park Service, Interior	North Carolina	Cemetery maintenance	5.4

---

[1] Accelerated public works.

I trust that everyone appreciates that by voting for the Boland amendment it is casting a vote for these grab bag, boondoggle public works programs, a large number of which, by any description, could not be considered capital improvements as was contemplated in the Public Works Acceleration Act.

The CHAIRMAN. The time of the gentleman from Florida has again expired.

The Chair recognizes the gentleman from Texas [Mr. Dowdy].

Mr. DOWDY. Mr. Chairman, in connection with this additional appropriation for the accelerated public works program, it appears to me that many communities have been promised, and actual commitments made, that they receive grants under the program; certainly, that seems to be the case in a number of communities in my own district.

In further respect to this matter, there is a circumstance which duty demands that I call the attention of this House, and to the Appropriation Committee and other interested committees, which appears to demand investigation, and, perhaps, legislation.

As is well known, there have been a number of questions raised in various areas concerning political influence, conflicts of interest, and even criminal misconduct. Certain investigations are even now in progress, in areas apart from this program.

Over the past several months, I have had several reports from counties in my district advising that offers had been relayed to communities desiring accelerated public works, ARA, and other grants, that for a consideration from the community, usually expressed as "paying his expenses," the Area Redevelopment Administration advisor in the area, would see that the grant was made, or that the loan was made, as the case might be. I do not know whether such offer has been accepted in any instance; I hope it has not, but that information would not likely come to me.

In each instance that such a report has come to me, I have advised the agency involved, but I have not been advised of any action that may have been taken thereon. In one instance, I was advised that similar reports had been received from other parts of the country.

I am also in receipt of a number of notes, the substance of which are, "We protest the political immorality of the Area Redevelopment Administration's advisor here in east Texas."

Whether this presents a case of conflict of interest, representing the Government in an official capacity on one hand and an applicant on the other, or a raw case of political influence being offered on the auction block, the immorality is obvious, and the taxpayers should have safeguards against it.

As a Democrat, I hope, for the sake of our Nation, the people, and my party, that there is an innocent explanation of this, and that it is not widespread. I had desired that an explanation would have come forth before now.

The CHAIRMAN. The Chair recognizes the gentleman from Oklahoma [Mr. Jarman].

Mr. JARMAN. Mr. Chairman, my opposition to this program last year and to a continuation of the program this year can be stated very simply: Based upon personal conntacts in the congressional district which it is my privilege to represent, based upon letters and telegrams, based upon a questionnaire that I have circulated widely in my district in recent weeks covering a number of subjects, I am convinced that the people of the Fifth Congressional District of Oklahoma are fed up with deficit spending and are demanding that we do something about a national debt that now exceeds $300 billion.

They look to me as their Representative, and I share their sentiments, to vote against any program that increases the financial load this Nation is carrying, any program that this Nation can do withouut at the present time. I believe this program fits that category and so my vote will be cast against both the substitute and the amendment.

The CHAIRMAN. The time of the gentleman from Oklahoma has expired.

Mr. ULLMAN. Mr. Chairman, I ask unanimous consent to extend my remarks at this point in the RECORD and include extraneous matter.

The CHAIRMAN. Is there objection to the request of the gentleman from Oregon?

There was no objection.

Mr. ULLMAN. Mr. Chairman, today we must decide whether this House will live up to its pledge to carry through the accelerated public works program. Last fall when the House appropriated the initial $400 million, we committed ourselves to appropriate whatever was needed from the balance of the $900 million originally authorized after we reviewed the administration of the program. The House has a particular responsibility to this program because we were the ones who actually originated it. The accelerated public works program that we have before us was originated by the House and was signed into law even though a different proposal was supported by the Senate and the President.

The local communities, acting on their feeling that the House would live up to its word, have already made many of the necessary preparations for the great variety of sorely needed projects. Following the specific congressional directive, the agencies have done a good job of allocating this money. Needed projects were started so that additional jobs in economically depressed areas could be provided as soon as possible. The administrators are prepared to allocate the additional money as soon as it is available. There is a tremendous backlog of applications from the entire country. Many of the most-needed projects will never get approved because of the lack of funds, but we can certainly make a start. As we know so well, unemployment is still a serious problem. In particular areas the problem is severe. Jobs are needed. Public projects are needed. The agencies and the local communities have met their responsibilities. This House is honorbound to fulfill its pledge and meet this pressing national need.

The House committed itself to passing the balance of the authorized funds when it approved the initial $400 million appropriation on October 4, 1962, by adopting the conference report on the public works appropriations bill. Accelerated public works funds were not included in the origional House-passed bill because the authorizing legislation had not yet become law. In that conference report, the House managers took the unusual step of specifically endorsing a statement in a committee report of the other body:

> The managers on the part of the House endorse the Senate report statements on the accelerated public works program.

That report of the Senate Appropriations Committee stated:

> The committee felt, therefore, that it would be desirable to provide a partial appropriation which would permit this program to get underway at the maximum possible rate for the next 4 months, with the understanding that the administration can submit a supplemental estimate in January, at which time they should be in a position to support a definite program, with specific recommendations for projects to be undertaken and justifications therefor.

There is no doubt that the administrators have fulfilled their responsibility—just the lists of pending applications for direct grants alone took up more than 30 pages in yesterday's CONGRESSIONAL RECORD.

This accelerated public works program was not the President's original proposal nor was it the Senate's—it was a proposal of the House of Representatives. Last year the Senate-passed bill included most of the President's recommendations. It provided for standby authority for the President to start a $2 billion program of public works that would be automatically triggered by a set rate of national unemployment. The House differed with both the proposal and the figure. We felt that any program to meet the serious unemployment situation by providing additional funds for public projects should be initiated by congressional action including the specific details of being automatically set off by some statistical level with the program details to be filled in by administrative action. We determined that $900 million was needed for an accelerated program of needed public projects to supply additional jobs in areas of chronic unemployment. We set a rather short spending time since we specified the funds for fiscal year 1963 which would end just 10 months after initial passage of the bill, but, we provided only enough money to "permit this program to get underway at the maximum possible rate" so that the administrators would have to come back to Congress for a program review before they received the balance of the money.

The people certainly expect the Congress to live up to its commitment. Local communities all over the United States have proceeded on the basis that Congress would appropriate the balance of the money. They have spent money and a great deal of effort in preparing their applications and engineering surveys. Many communities have already gone ahead to fill their responsiblities by starting to raise local matching funds.

One example from my own district. A fundraising drive for $900,000 is now being completed to raise the local matching money for the construction of a badly needed new 141-bed hospital in Klamath Falls. A drive to raise $900,000 for a hospital in a county of only 47,000 is certainly clear indication that the local people are quite prepared to do everything they can to meet what the county court has designated as their No. 1 priority need.

The program administrators have fully complied, even zealously, with the directions and intent of the Congress when they passed the law and made the partial appropriation. The agencies have done a good job with the difficult task of allocating large sums of money for needed public projects all over the United States so that the extra jobs could be provided as soon as possible. Only the partial appropriation was made in order to force the agencies to report back before they received the balance of the money so that Congress could review their administrative practices and experience. The agencies have filed lists of the allocations approved, a review of their administrative practices up to date, lists of the projects now pending, and a statement of their intended practices in the future. There is no doubt that they have come back with a "definite program, with specific recommendations for projects to be undertaken and justification therefor."

Even the administrative cost has been kept to less than 1 percent of the total money appropriated. In carrying out the congressional directive to allocate this money as fast as possible, the agencies are now prepared to allocate the additional money as soon as the bill is signed. Last week, in my own area, the Pacific Northwest, the various State coordinators met, those people who are most knowledgeable about the relative needs of the projects, in order to assign priorities. The agencies have certainly fulfilled their duties and are ready to proceed. The rest is up to the House.

Last fall's information about the redevelopment areas is still true. Their population of 34.3 million provides 19 percent of the country's labor force while suffering from 33 percent of the unemployment. The average rate is above 10 percent, more than twice the national average. Redevelopment areas, as designated under the congressional legislation, are areas that do not respond to national economic upturn. Many of these areas have been chronically depressed for years. As a member of the Ways and Means Committee, I certainly recognize that unemployment is a national problem that extends to the whole country. But, there are many areas with chronic economic problems that will not be helped by a national tax cut, no matter how large. Eighty-four percent of the areas eligible under this program, including three counties and an Indian reservation in my district, are redevelopment areas.

Labor surplus areas, now 190 in all, constitute only 16 percent of the eligible areas, but constitute a serious economic problem. These are areas that have had 6 percent unemployment or more for 9 out of the last 12 months. They respond only sluggishly to a nationwide economic upturn. Many economically depressed areas, especially rural ones, have a difficult time qualifying because many of the unemployed leave where they are as soon as they are out of a job because they know they cannot find jobs. That is a fact not reflected in the statistics. This situation is true of three of the counties in my own district—including my home county.

It might be helpful to include the statistics for some of the counties in my own district.

Redevelopment areas (5b):

Wasco and Sherman Counties: 50 percent above national rate, 1962; 8.6 percent versus 5.6 percent nationally.

Hood River County: 50 percent above national rate, 1962; 8.5 percent versus 5.6 percent nationally.

Labor-surplus areas:

Lake County: 75 percent above national rate, February 1963; 12.1 percent versus 6.9 percent nationally.

Klamath County: 50 percent above national rate, February 1963; 10.3 versus 6.9 percent nationally.

Baker County: 65 percent above national rate, December 1962; 8.6 percent versus 5.3 percent nationally.

In every case the latest available report from the Oregon State Department of Employment reports:

First. Steadily declining work force and population as unemployed men move out of the county to look for work. In one case, Lake County, the population, after reaching a peak in 1960, has now dropped down below the 1950 census population.

Second. In most counties the only available jobs are those for skilled workers—and the unemployed do not have the needed skills in order to fill these jobs.

Third. Particularly high rates of unemployment exist among "young, inexperienced, and poorly trained."

One of the few bright spots in the entire picture is the jobs for the unemployed that have been provided through the accelerated public works program. One of the prime reasons that I so strongly back this program is that it provides the maximum number of jobs possible for those who most desperately need them: the less fortunate and less skilled citizens.

Specific language was written into the bill requiring that the projects meet an "essential public need." From the experience in my own district there is no worry about finding projects that completely fulfill that requirement. As I am sure there are throughout the rest of the country, we have a large backlog of needed public projects that have not been financed because of the lack of funds. This is obviously even more true in those eligible areas due to their economic problems. There are many examples:

Water and sewage facilities: Needed just for health reasons. Many of our communities, such as my own hometown, are now in danger of being prosecuted by the State board of health because of their inadequate water and sewage facilities. Proper facilities would make these areas attractive to new business and new people. The overall economic development plan for two of the counties—and this is a plan formulated by local people, not any Federal agency:

One of the major problem areas in public health is the need of nearly every small community or small town within these counties for sewage disposal facilities. It would make them a more suitable location for people to come to live and certainly more attractive to both employers and potential employees.

Hospitals: The present hospital facilities in Klamath Falls have been declared totally inadequate and a firetrap by the State board of health. An application for a hospital in Klamath Falls, pending since December, provides for a 141-bed facility to serve the entire Klamath River Basin—including parts of two California counties.

Forest Service: Many areas need these direct Federal allocations which so effectively utilized the available labor and provide the maximum amount in wages. The unemployment situation in the timber industry in Oregon shows no present sign of any substantial improvement.

The types of examples could be extended almost indefinitely. There is certainly not the slightest support for any statement labeling these projects "make work" or "leaf raking."

Many of the most needed projects will never get approved even if the full $500 million is appropriated, because there are so many more meritorious applications than there is money to service them. There is a tremendous backlog of eligible applications from the entire country. As of the end of January there were $1.2 billion worth of pending applications and more were coming in at the rate of $450 million per month.

There is certainly no doubt that these funds have resulted in a definite acceleration of these public projects. Half of the presently approved projects have already started and the balance will be started within the next 3 months.

There is a definite need to appropriate the additional money as soon as possible so that these extra jobs can be provided. This House has pledged itself. It has a definite responsibility to appropriate the money to complete the authorized program.

Mr. LENNON. Mr. Chairman, I ask unanimous consent to extend my remarks at this point in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from North Carolina?

There was no objection.

Mr. LENNON. Mr. Chairman, while all Members have considered the merits as well as the long-range implications of the amendment, I believe it should be clearly understood that while the amendment calls for the sum of $450 million, there are applications pending now for accelerated public works projects totaling more than $2 billion. If we adopt the amendment, we will provide for the funding of less than one-fourth of the projects for which applications have been filed by areas declared eligible for these funds.

Last Thursday I requested the Area Redevelopment Administration to furnish me the valuation of applications of eligible areas currently pending with each of the 12 Federal agencies. Mr. Johannas U. Hoeber, Assistant Administrator for public works acceleration, sent me a statistical statement, dated February 15, 1963, described as follows:

Recapitulation by States of the programs submitted by all participating agencies for consideration under the proposed $500 million supplemental accelerated public works appropriation.

This tabulations showed that on February 15 there were $1,227 million in applications for projects under the accelerated public works supplemental appropriation.

I called Mr. Hoeber and reminded him that I was expecting to receive figures on current applications and not figures on applications as of February 15. I called his attention to the fact that while his tabulation of February 15 showed that there were $632 million in applications pending before CFA, I had received a letter from the Commissioner of CFA, dated February 8, stating there were applications in his Agency for more than $900 million in grants. I also called to Mr. Hoeber's attention that while his recapitulation showed applications pending before the Department of HEW for $328 million-plus, I had been advised on February 8 that applications for grants in excess of $450 million had been filed with HEW.

The Assistant Administrator of public works acceleration then stated that the applications for grants shown by their tabulation sheet of February 15 had not been kept up to date and that in fact there were outstanding applications in excess of $2 billion for the accelerated public works program. Apparently, this February 15 statistical sheet was submitted to both congressional committees considering the supplemental request.

The Administrator of ARA stated before the Senate Appropriations Subcommittee on April 4 that while the $400 million appropriation was being allocated and programed, grant-in-aid applications from local communities were being received by CFA at the rate of $300 million a month and by the Department of HEW at the rate of $150 million a month. This is found on page 12 of his statement. These figures clearly substantiate the fact that in the past 4 months applications for grants for these agencies alone amounted to $1.8 billion.

The ARA Administrator further stated that as of September 8, 1962, 1,069 areas were listed as eligible for accelerated public works assistance and this number has now increased to 1,228 areas. I think it should also be kept in mind that applications are pending in the Department of Labor from many areas in the Nation seeking new economic surveys in order to be classified as eligible for assistance under this program. By June 15 applications from eligible distressed areas will likely total $3 billion.

Can we, in good conscience, say to better than three-fourths of the areas applying for assistance under the APW program that we cannot finance your project even though your area was declare eligible for these funds? To meet the demand of these bona fide eligible areas, the Congress would now have to appropriate in excess of $2 billion—and approximately $3 billion by June 1.

This is the responsibility facing us today. Do we appropriate for one-fourth of the pending projects, or do we ultimately appropriate for all eligible projects; $450 million or in excess of $2 billion?

The CHAIRMAN. The Chair recognizes the gentleman from Oklahoma [Mr. Edmondson].

Mr. EDMONDSON. Mr. Chairman, it is apparent that there have been some conversions on both sides of the aisle in the last few hours. I was delighted to see that although yesterday 100 percent of those speaking on the Republican side of the aisle were branding this program as a useless and unnecessary program, today we have had several who are willing to invest $300 million more. I think that is some progress in the matter of conversions from the debate on yesterday.

I do want to caution my friends on the Democratic side of the aisle not to be led astray by the amendment of the gentleman from Ohio [Mr. Oliver P. Bolton], because there are two hookers in it. One of them is the provision that not a dollar may be spent after June 30, 1963, which would be a very serious impediment to the efficient operation of this program. The second one which the gentleman has advocated says that no more applications may be accepted, which would certainly operate to penalize, and would be unfair to, communities which have had delays in processing their applications and getting them in due form.

Mr. Chairman, I urge approval of the Boland amendment.

The CHAIRMAN. The time of the gentleman from Oklahoma [Mr. Edmondson] has expired.

The Chair recognizes the gentleman from Massachusetts [Mr. Boland].

Mr. YOUNG. Mr. Chairman, will the gentleman yield?

Mr. BOLAND. I yield to the gentleman.

Mr. YOUNG. Mr. Chairman, I rise in support of the amendment.

Mr. Chairman, I take this time to address the Committee in support of the amendment offered by the gentleman from Massachusetts to restore the $450 million accelerated public works program funds put in this appropriation bill by the Appropriations Subcommittee, but excluded by the main Appropriations Committee.

I want to commend the subcommittee, Mr. Chairman, on the action which it took with respect to including the $450 million for the accelerated public works program, and the action that the gentleman from Massachusetts is now taking in moving to restore these funds which the main Appropriations Committee cut from the bill. I have observed, in the time that I have been a Member of Congress, that the subcommittee has been extremely careful in scrutinizing budget requests with more than casual care and invariably takes a hard look at all departmental requests—sometimes, I think, too hard as in the case of civil defense, for example. Actually, in the budget item now under consideration, the subcommittee did cut the budget request $50 million or 10 percent—a substantial amount in anybody's language.

Now, Mr. Chairman, the opponents of this amendment have made much of the issue of economy. But, I question whether the basic issue involved here is one of economy. To kill this program at this time might be the most uneconomical action this Congress could take—certainly it would be unjust and inadvisable.

We have heard a great deal about principle. Let us examine this. Congress last session passed a $900 million authorization for the accelerated public works program, pursuant to which the Congress later in the session passed a $400 million appropriation. As a result of the action taken last session, many cities, towns, navigation districts, water districts, and other political subdivisions have gone to great trouble and expense to prepare prospective projects under this program. Whether the opposition to this amendment agree with this program or not, the Congress did approve it and launch it on its way. To stop the program now—at least short of the $900 million authorized—would be a grave injustice to those cities, and so forth, that should be able to rely on the program for at least the full amount of the original authorization. In my congressional district alone, there are pending in various stages about 10 applications amounting to more than $900,000.

Now, why are there so many applications—more than 500 applications from Texas alone; nationally, $1.3 billion in applications—under this program? Obviously, because the folks back home think the program is a good program. It is not a perfect program, to be sure, but it is a good program. It is a local participation program which means that the folks back home have to think enough of the proposed project to bear at least 50 percent of the cost. And the program lends itself much more readily to small projects for towns and villages than do projects under the regular public works program, even though the Government usually bears 100 percent of the cost under the regular program.

The accelerated public works program is a needed program because the local, ad valorem tax-supported political subdivisions, particularly in depressed areas, are not in a position to bear the full weight of the much needed public improvements encompassed in this program.

When I consider the many billions of dollars, Mr. Chairman, that this Congress consistently votes for such programs as foreign aid—much of which is spent for public works projects for foreigners—I feel adverse action by the House on this amendment would be in the category of making this Congress appear to be "millions wise, but billions foolish."

I want to again commend the gentleman from Massachusetts and the subcommittee on the action which is being taken here today, and I support it.

Mr. BOLAND. Mr. Chairman, both these amendments I think have been adequately debated. My only admonition is that we do not get confused. With the gentleman from Missouri [Mr. Bolling] in the chair, with my friend, the gentleman from Ohio [Mr. Oliver P. Bolton] offering a substitute amendment to my amendment, and with the amendment of the gentleman from Massachusetts [Mr. Boland] for $450 million, I would hope that the committee be alert to the parliamentary situation. I suggest that we vote down the substitute amendment of the gentleman from Ohio [Mr. Oliver P. Bolton] which provides $300 million and that we vote for the amendment offered by myself which restores $450 million to this bill.

The CHAIRMAN. The Chair recognizes the gentleman from Texas [Mr. Thomas] to close the debate.

Mr. THOMAS. Mr. Chairman, I want to congratulate my distinguished friend, the gentleman from Ohio [Mr. Oliver P. Bolton], on his amendment. It shows at least that his heart is in the right place even though the amount of money he recommends is not large enough.

May I say to my colleagues that the hunger and the loss of respect of these good people who are unemployed do not recognize the aisle that separates these two able and distinguished parties here. Hunger and unemployment do not recognize party labels. We need all of the $450 million and I respectfully ask the Members, even though I admire my friend, the gentleman from Ohio [Mr. Oliver P. Bolton], and acknowledge that his amendment is better than no bread at all, to recognize that they should vote for all of the $450 million. So I ask you to vote down his amendment and vote for the amendment of the gentleman from Massachusetts [Mr. Boland].

Mr. Chairman, may I say this further word. Somebody talked about the lack of merit in these projects. I have been here a long time as have many of my friends. Go back to your hometown and look at some of these projects that were built 25 years ago. You will find you are still using them. In my town we are still using the city hall, the coliseum, and the biggest charity hospital. This money will put people to work. We can get up here and talk all day, but we all have some common horsesense. We know that when you spend this money and get the dirt flying, people are going to be on the job. Not only that, but the people who saw lumber, who make steel, who make glass, who make pipe, are going to be working, too.

Mr. Chairman, I respectfully submit that we should vote down the amendment of our friend, the gentleman from Ohio [Mr. Oliver P. Bolton], and vote for the amendment of our friend from Massachusetts [Mr. Boland].

Mr. RIVERS of Alaska. Mr. Chairman, to help maintain life in the accelerated public works program, I rise in support of the amendment to restore to the appropriation bill before us, the sum of $450 million initially approved by the subcommittee but stricken by the full committee.

In my opinion there are many reasons for appropriating this item for use in the furtherance of projects all over the country. First and foremost is the fact that the Congress last year, in the process of authorizing the $900 million accelerated public works program impliedly promised our constituents to follow through, on the strength of which promise our fellow Americans all over the Nation have gone to a lot of trouble setting up their respective community projects to create jobs and strengthen their respective areas. Many of these projects have already been started with the $400 million already made available and require additional funding for completion. Many others are being held up by participating Federal agencies pending the appropriation of the remaining $500 million which has been authorized, or substantial portion thereof. Let us, therefore, settle for the $450 million which has been approved by the subcommittee, and thereby keep faith with the public while at the same time going ahead in an orderly and timely manner.

Continuing with reasons why we should adopt this amendment, let me just note that the projects involved will generate jobs to help solve the serious unemployment problem of which all of us are painfully aware. Such help along this line is particularly applicable under this program to the depressed communities wherein live so many of our fellow Americans. Furthermore, most of the projects will meet essential public needs in the communities where they will be effectuated and will, when constructed, constitute capital assets which in any case would eventaully be provided for community improvement. This, in turn, will enable many communities, after establishment of such improvements, to in turn attract private investments for production plants and services, with consequent creation of new jobs and improved local economies.

As concerns my State of Alaska, over 40 community facilities projects are involved all the way from Ketchikan to Nome and Kotzebue, including hospital construction, waste treatment plants, water systems, sanitary disposal sytems, and municipal buildings, and so forth, plus public health facility projects such as pure water supply for 12 Alaskan native communities.

In summary, and for the reasons stated, I am wholeheartedly in favor of this amendment, not only for the benefit of the 49th State which Alaskans are striving to develop and strengthen, but for the benefit of our Nation as a whole.

Mr. BYRNE of Pennsylvania. Mr. Chairman, I am appalled that at this stage in our deliberations, some Members of this body should lower themselves to play politics with the potential livelihood of hundreds of thousands of the unemployed. In more than a thousand communities across the country where joblessness is running at a rate of two, three, even four times the national average, we have an opportunity to put men to work on urgently needed local, State, and Federal public works projects. Just as there is a need in these communities for jobs that will bring dignity to idled breadwinners, so also is there an urgent need for sewers, water systems, streets, hospitals, sewage treatment plants, fire and police stations, public buildings of all kinds.

With the first $400 million that was appropriated for the accelerated public works program, we have been able to make an encouraging start on meeting these two most urgent needs—jobs for our fellow citizens and improvements in the public sector of the economy. But to date, we have only scratched the surface. There is an enormous backlog of projects requested by local governments acutely conscious of community needs—projects which are planned, engineered and ready to go. These have been submitted by the economically hardest hit areas of the country, the ones which for decades have failed to keep pace with the general forward movement of the economy, the areas which failed to share in our recovery from the 1960-61 recession.

The needs of these areas have been well documented. The opportunity for helping them is obvious. What is needed now is for the House to restore the accelerated public works funds cut from the appropriation measure before us. To do less would be to fail in our responsibility to people who look to us for help.

Mr. ST. ONGE. Mr. Chairman, I am in favor of the amendment to restore the sum of $450 million for the accelerated public works program in the supplemental appropriations bill for the current fiscal year ending June 30. This program was authorized by Congress last year under Public Law 87-658, and at that time a sum of $400 million was appropriated. In a way Congress had pledged to the Nation its help in financing these badly needed public works as a means of aiding economically distressed communities. That pledge must be kept.

The remaining $500 million under this program should have been approved without any difficulty. These projects are not a waste. The program of public works is not a boondoggle. It is a very vital and necessary means of giving these communities, especially the small and medium size towns and cities, an opportunity to construct sanitation facilities, water systems, roads, harbor facilities, improvement of city streets, bridges, municipal buildings, and the like. Without this Federal assistance the communities could not undertake these projects.

The Appropriations Subcommittee has seen fit to reduce the original request from $500 to $450 million, and many of us I am sure would be willing to go along with that action. The full Appropriations Committee, however, has completely eliminated even the $450 million recommendation of its own subcommittee, and this will be a great blow to many communities throughout the country which had looked forward to this assistance. I regard this action as a rash and thoughtless act on the part of certain elements who would make a political football of this program.

Unless the funds are restored, I feel certain that the people back home are not going to like this. They have come to regard the accelerated public works program as an excellent method of achieving several purposes for the good of the communities. In the first place, it helps to provide needed projects from which the whole community benefits. It provides a considerable amount of employment and helps to alleviate the economic difficulties in many of these areas. It also helps to improve living conditions and to rejuvenate many localities by attracting new industries and people.

Oftentimes all that an economically distressed community needs is one spark to get it back on the road to prosperity, to attract a new plant or factory, to bring in a new commercial enterprise which is a boon to the area, and this spark can be provided by a road, a water system, new or improved sanitation facilities, harbor improvements, or a bridge. These expenditures later pay for themselves over and over through more employment, improved services, better health, better living conditions, and happier communities. The denial of this assistance will prove very discouraging to municipal officials and to many public-spirited citizens who are giving much time, effort and energy to help their communities. When multiplied on a national scale, this can boomerang and prove very damaging to our national economy.

The popularity of this program is attested by the fact that today there are twice as many applications for this type of assistance from all parts of the country than the amount of money requested for the program. About 1,000 counties in the country, or nearly one-third of all the counties, are suffering from chronic and substantial unemployment, and many of them have submitted applications for public works which would not only bring needed improvements but also help them fight unemployment.

It is estimated that some 6,000 public works projects of all sorts can be realized with the help of this appropriation of $450 million. Matching funds have been provided or are in process of being provided by communities all over the country. All of this should prove to be a great economic boon. I know it will be of tremendous help to Connecticut, which until the end of January of this year received a total of $3,963,000 for various projects under the accelerated public works program. We have a number of applications from our State which have already been approved and many others are pending. The people of Connecticut are, therefore, extremely interested in the action being taken here today.

I feel strongly that Congress has made a pledge to the people on this program, and it must not renege on that pledge. On the basis of this pledge many communities have made plans to raise the necessary funds for these projects. They have every right to expect the assistance promised them. I shall vote to restore the $450 million for this program and I urge all my colleagues to do so.

Mr. WALTER. Mr. Chairman, last fall, when the Congress overwhelmingly voted in favor of the accelerated public works program, it authorized $900 million in expenditures for essential public works projects that would improve the face of our neediest communities and at the same time provide jobs for the jobless.

Although a month after enacting the legislation, the Congress appropriated only $400 million to get the program started, it very specifically instructed the executive branch to come back at this time for the additional funds needed to keep the program moving in high gear.

This was more than a mere budget exercise on the part of the Congress. It was more than a mere promise to the executive branch of a friendly ear to its request for more money. In its very essence, it was a pledge on the part of the Congress to the people in economically stricken communities that more funds would be forthcoming to carry on this program.

On the strength of that pledge and relying on the integrity of this legislative body, thousands of communities assessed their urgent needs and submitted requests for matching funds for their highest priority projects. It was obvious to them, as it must have been to all of us on both sides of the aisle who recommended prompt action by the executive branch to approve these projects and put people to work, that not even the entire $900 million, much less the $400 million actually appropriated, would be sufficient to meet the well-documented needs of these areas. The proof of this lies in the fact that more than a billion dollars worth of requests are now in the hands of Federal agencies and as each of us knows, countless other projects are back in the communities and would be submitted to Washington tomorrow were it not for the freeze that had to be placed on applications because the demand so far exceeded the anticipated appropriations.

Having pledged itself in an unmistakable fashion to the continuance of this program through the appropriation of the remaining $500 million, the Congress cannot now, for whatever reason, turn its back on those whom we promised to help. The $500 million must be restored to the supplemental appropriation if the Congress is to keep faith with the American people.

Mr. BENNETT of Florida. Mr. Chairman, we have been told repeatedly that the most important item in the President's legislative program for this year is a massive, significant, tax reduction. If this is in fact our most important challenge, and the economic authorities seem to agree on that, then we should prepare for it by reducing Federal expenditures wherever possible. There is no better place to start than in the item before us, area redevelopment.

The waste in the program under consideration cannot be better illustrated than by a recitation of locations in Florida which have been singled out for this aid; for example, Broward County and Dade County. They admittedly contain some of the most prosperous areas in our State and country. In fact, we called some of them America's Gold Coast. If these were needy areas, our own State could care for them, but they are, in fact, affluent areas, not distressed areas. The program should be tightened up to make more sense, and our refusal to grant these additional funds at this time would have the double value of removing waste and refusing to add to the Federal deficit by these amounts.

Only by a shepherding approach to our expenditures can we make sense out of a tax reduction, which authorities seem to agree upon as essential to the security and welfare of our country and its economy.

Mr. ALBERT. Mr. Chairman. I regard the adoption of this amendment as vital to the welfare of our country. This is a program for America.

Thousands of our communities are suffering economic distress. Millions of American workers are unemployed and unable to provide for their families. The accelerated public works measure was passed by the Congress last year to assist these people and these communities.

Mr. Chairman, I need not remind this House of the enthusiastic reception given the accelerated public works program by hard-hit American communities. Thousands of meetings have been held to agree upon essential projects. Engineers have been hired.

Plans have been drawn. Municipal elections have been held to approve bond issues.

Mr. Chairman, the depressed American communities have placed their money, their trust, their immediate hopes in the fulfillment of this temporary program. We cannot let these people down.

I need not remind the House that this $450 million will go to help pay for needed, essential public projects. Our many depressed communities need this assistance to help them regain their competitive posture. They must have adequate public facilities to attract new businesses and industries. We must help them break the vicious circle of poverty and lack of opportunity.

Mr. Chairman, at the close of last year's session the Congress made an initial appropriation for this vital program. Several thousands of hard-hit and depressed American communities lined up for help for their essential public projects. This House cannot discriminate against those at the back of the line just because they failed to reach Washington first.

We must carry on this program. I urge the adoption of this amendment.

Mr. ROBERTS of Alabama. Mr. Chairman, I would like to make a brief statement in support of the amendment to restore $450 million for the accelerated public works. I do so, not to defend my vote, but to indicate the effect that it will have on the State of Alabama.

I should also like to state that I am in complete accord with the desires of the Appropriations Committee to reduce expenditures and to cut out all unnecessary programs. I believe this can be better accomplished, however, by curtailing new programs of the Federal Government—that is to say, let us stop this ever-increasing trend toward centralization of government which year by year is costing the taxpayers of this country more and more. Let us attempt to restore the responsibilities of government wherever and whenever possible to the State governments. By so doing, I am sure that we can ultimately reduce the budget and again return to a sound fiscal policy.

In this particular instance, however, I do not believe it wise to curtail programs that will give considerable aid to the unemployed of the country by providing jobs and thus take thousands of persons off relief rolls.

Expenditures, such as proposed in this program, are for the welfare of the people and will also provide sources of revenue by taxation, by increasing productivity in plants, and by placing more individuals on the tax rolls.

In the case of my State of Alabama, the restoration of these funds in the bill will mean that 11 hospital additions and nursing homes can be started; 26 sewage treatment plants and interceptors can be started; 48 community facility projects, such as water systems, parks, road construction, sanitation systems, hangars, courthouses, swimming facilities, drainage programs, clinics, and other necessary community improvements that I believe will materially benefit the country as a whole.

Mr. RAINS. Mr. Chairman, I rise in support of the amendment. I was astounded and shocked to hear last Friday of the committee's vote to kill the balance of the accelerated public works program.

Last year one of our most significant legislative victories was the $900 million emergency public works bill. That hard-fought victory was a bold stroke to combat our persistently high rate of unemployment. The Federal grant funds authorized, plus matching local grants, were designed to stimulate the construction of needed public works and to create hundreds of thousands of jobs to put our unemployed back to work.

In 1962, $400 million of the $900 million was appropriated to initiate the program and it was generally understood that appropriation of the additional $500 million would be made early in 1963.

Once launched, the emergency public works program moved with gratifying speed. Thousands of projects—for hospitals, streets, sewers, and other vitally needed facilities—have been approved and the President's figures show there are now applications on hand for over 6,200 projects in more than 3,000 communities.

Construction activity is rising rapidly and with it site employment and jobs in supporting and supplying industries.

In my own State of Alabama this is what the accelerated public works program has done so far: 94 projects have been approved involving nearly $10 million in funds from the program, and which have directly created 1,300 jobs of a year's duration. Pending applications for Alabama involve 141 projects for a total of $26,725,000 in accelerated public works funds which will create nearly 4,000 jobs. And this is just the direct on site employment—indirectly the projects will provide the stimulus for many more jobs.

Alabama desperately needs these public works projects. She needs the better health and sanitation that these hospitals, sewer treatment works, and water systems projects will bring to her communities. She needs the better facilities that will be provided by the courthouse and municipal building projects. She needs the improvements in her national forests and at dam sites to preserve resources and to use them widely. And she needs the jobs that these useful public works projects will create—jobs that will make it possible for unemployed men to earn a decent living for their family.

Mr. Chairman, the best estimates are that, with approval of the full $900 million, several hundred thousand of our Nation's unfortunate unemployed will be put back to work, either on construction jobs directly or in the factories and mills which supply the materials and in the service trades which benefit from the accelerated economic activity engendered by the program.

Mr. Chairman and colleagues, it would be unthinkable for us to deny the remaining $500 million in Federal funds for this crucial and vital program.

We cannot in good conscience break a moral commitment the Congress gave last year to do something for our country's unemployed.

It is true that our economy has made encouraging progress in shaking off the debilitating drag of the 1958 and 1960 recessions. But we cannot be satisfied with the continued high rate of unemployment which still persists in the range of 5½ to 6 percent of our labor force. We must bend every effort to reduce that rate substantially.

Mr. Chairman, these are not just statistics we are talking about; they are flesh-and-blood fellow Americans whose economic suffering is all the more tragic against our overall setting of general affluence.

I say to my colleagues in the House, on both sides of the aisle, it would be an unforgivably shortsighted and heartless act if we were to fail here today to restore the remaining $500 million of public works fund already authorized by the Congress last year. We cannot callously turn our backs on the plight of the unemployed, nor can we fail to give the additional stimulus to economic growth which these funds will supply.

I yield to no man in the desire to achieve a balanced budget and to prevent the resumption of inflation. At the same time, I think experience has proved that the only way a balanced budget can be achieved is to raise our economy to full employment levels. And I think that the accelerated public works program, just as the President's proposed tax cut, will help provide the stimulus we need to reach the twin goals of full employment and a balanced budget.

Mr. Chairman, I am confident that a majority of this body will uphold the amendment both in the name of human compassion for the unemployed and in commonsense recognition of the need to stimulate the higher rate of economic growth we need to achieve our objectives of a full employment economy.

Mr. FOGARTY. Mr. Chairman, last fall the Congress passed and the President signed S. 2965, a bill authorizing the expenditure of $900 million to speed up action on needed public works projects, thus helping to relieve unemployment and spur economic expansion in those areas which have failed to keep pace economically with the rest of America.

On October 13, the Congress appropriated an initial $400 million to get the accelerated public works program underway. That $400 million has by now been virtually used up.

President Kennedy has asked the Congress to appropriate the remaining $500 million authorized under the bill. Last Friday the Appropriations Committee cut this item from the deficiency appropriations measure.

So that we may decide whether to restore this cut, let us first see what is resulting from the first $400 million appropriation.

This $400 million has accelerated 3,756 public works projects. These have ranged from projects involving water supply and sewage systems to hospital and health facilities; from projects providing for erosion control to improvements in timber stands, trails, and recreational facilties on public lands.

In my own State of Rhode Island this original appropriation resulted in the approval of 26 much-needed projects for various hospital additions and water and sewage treatment works. The amount of Federal funds thus released to Rhode Island projects totaled over $6 million. This in turn, through required local contribution, permitted the total expenditure of nearly $11 million worth of new construction providing an estimated 4,500 man-months of employment. This has truly been a shot in the arm to our Rhode Island economy.

Mr. Chairman, a listing of these projects follows:

Rhode Island—List of approved accelerated public works projects as of Mar. 1, 1963

[All dollars in thousands]

Location	Description	APW	Total	Estimated onsite man-months
5A Providence-Pawtucket, Blackstone Valley:				
DHEW-PHS	Treatment plant	$440	$2,080	1,056
Woonsocket City:				
DHEW-PHS	Woonsocket hospital addition	128		72
	do	50		60
HHFA-CFA	Construct sewage facilities	270		420
Warwick City:				
HHFA-CFA	Sewage treatment	1,548	4,297	
DHEW-PHS	Sewage facilities	1,827		600
	Interceptor sewers	68	341	164
Cranston:				
DHEW-PHS	Sewers	239	478	
	Osteopathic general, construct	125		144
HHFA-CFA	Construct sewage facilities	333		330
Lincoln:				
HHFA-CFA	Construct town hall	125		124
Pawtucket City:				
DHEW-PHS	The Memorial Hospital addition	19	38	12
Providence City:				
DHEW PHS	Rhode Island Hospital addition	88	175	84
	do	68	135	36
	Addition to Roger Williams Hospital	344	687	408
	Sewage treatment addition	67	337	162
	do	193	963	462
	Rhode Island Hospital addition	83		96
	Water supply	110		112
	do	90		150
	Water facilities	20		19
	do	9		12
State total		6,244		4,523

All these are worthwhile projects. But most worthwhile of all is the fact that these projects have created jobs.

Altogether, the 3,756 projects in the Nation have generated over 500,000 man-months of direct employment.

One of the most serious problems facing America today is the problem of unemployment. Latest figures published by the Department of Labor show that unemployment has dropped from 6.1 percent of the workforce to 5.6 percent of the workforce.

This still leaves a critical situation, but it is a substantial improvement.

No sensible person would give the accelerated public works program credit for this drop. But it certainly is a factor, along with the area redevelopment program, the Manpower Development and Training Act, and all the other legislation that this and previous Congresses have passed in attempts to alleviate unemployment in the United States.

We must continue this drive to bring unemployment in America to a manageable level. We must attack this problem on a broad front. The accelerated public works program is one of our weapons in this attack.

The initial $400 million appropriation has created more than half a million man-months of employment, in areas of high unemployment—where the jobs are needed most. The funds are being used to refurbish our communities, to make them better places in which to live, to work, and to invest.

The accelerated public works program has already demonstrated its usefulness to America. We must see that this program continues. This body must restore the $500 million item in the supplemental appropriations bill so that the accelerated public works program can continue.

Failure to so act would have a serious effect on all States throughout the Nation. Again, Mr. Chairman, may I cite the situation as it exists in my own State of Rhode Island, a situation of which I am understandably fully aware and the importance of which is graphically brought home to me everywhere I turn in my congressional district. There are 27 pending projects, each diverse in nature but all united in one characteristic—need. The total Federal contribution on these 27 projects is $7¾ million A description follows:

RHODE ISLAND

Pending projects—$500,000,000

CFA:	
Warwick, Kent County, library	$310,000
Woonsocket, Providence, water supply	270,000
Pawtucket, Providence, waste treatment	750,000
East Greenwick, Kent, town hall	150,000
Cumberland, Providence, water supply	51,000
Warwick County, water supply	75,000
Lincoln, Providence, sanitary sewer	225,000
Narragansett, Washington, sanitary sewer	142,000
South Kingstown, Washington, town hall	58,000
South Kingstown, Washington, administrative building	19,000
South Kingstown, Washington, administrative building	44,000
South Kingstown, Washington, street	20,000
South Kingstown, Washington, street	30,000
Pawtucket, Providence, street	271,000
South Kingstown, Washington, park	16,000
Bristol, Bristol County, sanitary sewer	115,000
Total (16 projects)	2,546,000
HEW:	
Cranston, Rhode Island Medical Center	124,000
Cranston, Rhode Island Medical Center	48,750
Cranston, Rhode Island Medical Center	15,000
Pawtucket, memorial hospital	1,500,000
Providence, Rhode Island Hospital	75,000
North Smithfield, Mercy Hospital	998,500
Narragansett, Washington, sewage treatment plant	160,700
Providence, sewage treatment plant	35,800
Cranston, Providence, sewage treatment plant	1,266,500
West Warwick, Kent, interceptor sewer	750,000
East Providence, Providence, interceptor sewer	251,000
Total (11 projects)	5,225,250
Grand total (27 projects)	7,771,250

Mr. Chairman, I can make no stronger plea for restoration of these funds than to point out that unless we so vote today, none of these projects will get off the ground. From the effect such failure would have on my small State of Rhode Island, we can well visualize what it will mean to the Nation at large.

There are overall, 6,211 projects pending, awaiting congressional action before they can be acted upon. These projects total more than $1.2 billion. And applications are coming in at the current rate of $300 million a month.

The communities which have made these applications are now waiting for action by the Congress. We can do no less than restore the $500 million to the appropriations bill.

Mr. JOHNSON of California. Mr. Chairman, yesterday we held considerable debate regarding the extreme need for action to meet our commitments in the field of accelerated public works. I would like to rise to express my strong support of the proposal to appropriate $450 million to carry on a job which we started last year and have only half financed.

From the first $400 million which was appropriated by the 87th Congress, there were many worthwhile projects carried out in the portion of California which I represent. These were primarily done by the Forest Service, National Park Service, and the Bureau of Land Management who were in a position to move ahead rapidly and put the people back to work.

At the same time, municipal and county government and special public districts proceeded in good faith to meet their obligations in this field. A great variety of important public works programs were developed. Local government has financed the preparation of plans and specifications, completed the engineering, held bond elections or raised its share of the money through direct taxation, and now stand ready to proceed on an accelerated public works program.

If, at this crucial point, the Federal Government abdicates its responsibilities in these mutual programs, I think it would be a great tragedy. This, to my way of thinking, is the best part of the accelerated public works program. I feel this way because I believe that we are getting $3 worth of value from every single dollar of Federal funds, which we are investing. I say this because not only must the local government sponsoring this program contribute half of the actual construction funds, but also the local government agency is encouraging employment through the performance of its engineering, financial, and other planning activities prior to the actual awarding of the contracts.

Much was said yesterday about the type of projects which are involved in the next round of the accelerated public works program. I would like to cite to you some of the projects on application in the Second Congressional District of California.

For instance, the East Quincy Services District in Plumas County has applied for assistance to construct a new domestic water system. This project is ready to go to bid. The district is bonded to its capacity and if this program is not approved by the Congress, there is little or no possibility that it can proceed. This is the only hope for this small mountain community.

The question may be raised, Is this a boondoggle, as some referred to the general pattern of accelerated public works projects, or is this a necessary project? I would like to quote the report to me by the county's health officer:

> The dangers inherent to a large group of private wells mixed in with septic tanks have become apparent. Water samples taken by us recently show that the largest motel in East Quincy, the dentist office and many private dwellings are beginning to show excessive contamination. We are on the verge of a very explosive situation from a health standpoint.

The greatest danger as I understand the situation in this community is infectious hepatitis. There is no question as to the urgency of this project.

Although the health threat in the city of Dorris, for instance, is not as great as in East Quincy, there is a desperate need for a new sewer and water system.

Plumas County must have a new public health center. Shasta County needs to expand two of its hospitals. These are the types of public works which I believe can and must be supported by this type of program in the seven counties which I represent that are eligible for assistance.

Mr. Chairman, I have heard estimates that if we are to maintain the status quo in unemployment and if we are to prevent the serious unemployment from becoming even more crucial, this Nation must create 80,000 new jobs every week for the next 10 years. We need to create 10 million jobs in the next decade just to provide employment for the young people who will be entering the labor market for the first time.

If we do not provide these jobs and these 10 million young people join the ranks of the unemployed, think then of the problems this Nation will face. We think we have trouble with unemployment today. We think we have trouble with delinquency and crime today. Add 10 million young people who are not able to get jobs in the first place to the rolls of the unemployed and think of the problems we will have in the future.

This question of employment of our Nation's labor force is the greatest problem this country has to solve today. We cannot be satisfied with holding the line at presently unacceptable levels of unemployment. We must reverse the trend. Congress enacted the Full Employment Act of 1946 and I think it is high time for this Congress to meet its responsibilities of implementing this act. Let us get on with the job. Let us get our people back to work. We can make a good start here today.

Mr. ASHLEY. Mr. Chairman, I arise in support of the amendment from the gentleman from Massachusetts [Mr. BOLAND] to restore $450 million to the bill under consideration to keep alive the accelerated public works program.

Opponents of this proposal scoff at the idea that the construction of needed public works can help to counter unemployment and they label the accelerated public works program a boondoggle, handout, and other derogatory terms.

Mr. Chairman, let me relate what this public works program did in the congressional district that I represent in Ohio. When the authorization bill was enacted last summer the Toledo area qualified because it had suffered unemployment above the 6-percent level for 9 of the previous 12 months. I arranged a conference with the mayors of six cities and villages in the district to explain the provisions of the bill and the procedures for application. These officials, let me say, were Republican and Democrat alike, and I urged that applications be filed with all possible promptness because they would be considered on a first come, first served basis.

Because these officials responded with alacrity, a number of applications were filed and were quickly considered. The result was approval of four projects totaling just over $2 million and providing approximately 750 man-months of employment. These projects, let me emphasize, would not have gone forward without the Federal contribution under the APW program because there simply were not sufficient local funds available to undertake them.

For those who deride this program, Mr. Chairman, I would like to point out that the employment picture in the Toledo area his improved sufficiently so that we are no longer eligible for continued assistance. To those who might say that this improvement would have taken place regardless of accelerated public works, I can only reply that unemployment was over the 6-percent level for a consistent period of time before the program and that our condition improved exactly at the time that the projects I have referred to went under construction.

As a final word I would like to mention the character of these projects and I do so for the benefit of those who seem to have it deeply ingrained in their minds that any public works project is unneeded and a waste of the taxpayer's money. The projects approved for Lucas County, Mr. Chairman, include an addition and remodeling of Mercy Hospital in Toledo, a water system for Oregon, Ohio, a firehouse and municipal building for Holland, Ohio, and a water facility for Maumee, Ohio. Although my district no longer qualifies under the program, I have complete confidence—based upon the superior administration of accelerated public works by Mr. Batt and his associates—that other worthy and badly needed projects will go forward in every part of the United States, projects which are needed but which in turn need Federal assistance. Finally and most important, the construction of these projects will provide badly needed employment opportunities for men and women who want to work but who find it so difficult to get jobs.

Mr. BENNETT of Michigan. Mr. Chairman, I favor the amendment to restore $450 million to this bill for the accelerated public works program. I supported the original accelerated public works legislation when it passed the Congress last year and I feel that the full amount therein authorized by Congress should now be approved.

I must say, Mr. Chairman, that the program, so far as it related to non-Federal projects, has not worked out satisfactorily in my district. There are many county, city, and other municipal projects in the 12th District of Michigan which I represent which fully meet all of the criteria provided for under the law, and I hope with the additional funds provided for in this amendment that these projects will receive the consideration and the priority they deserve. The 12th District of Michigan is one of the most seriously depressed areas in the country from an economic standpoint and the unemployment ratio is as high there and in some instances is higher than anywhere else in the country. I therefore trust that the administrators of this program will give full and fair consideration to all of these factors when the additional funds are made available to them for expenditure.

Mrs. HANSEN. Mr. Chairman, it is a pleasure to support the amendment for the restoration of $450 million in accelerated public works funds offered by the distinguished gentleman from Massachusetts, Congressman BOLAND.

Yesterday and today much was said about the need for this program's funds and on the other side of the coin, many remarks have been made about boondoggling. This is not a boondoggle in my district. I have three counties with serious problems of unemployment, and this problem of unemployment began, as you will note from the figures which I quote, not in 1961 but in 1958:

Rate of unemployment

	Percent
Grays Habor County:	
August 1957	8.6
February 1958	15.3
February 1959	8.1
1960 (average)	10.3
1961	9.2
Pacific County:	
November 1960	13.2
December 1961	10.2
Lewis County:	
March 1960	12.0
February 1961	17.3
December 1962	9.9
February 1963	9.9

Moneys which have been spent on accelerated public works and which will be spent through the addition of this appropriation are necessary to the lives of many families in Grays Harbor County, Pacific County, and Lewis County in my State of Washington.

As you are all well aware, the forests products industries have had major difficulties and employment has been steadily declining. Automation has reached into these areas and workers have been displaced by machines. Unemployment compensation has been used up in many instances. Therefore, the problem before us is either work, public assistance, or starve. My district prefers to work. I think it would be interesting to read from a letter which I received from the Oyster Workers Union which says among other things:

> Conditions are the same all over the State. Quite a few people are working only part-time, perhaps 4 to 5 days per month.

The point was raised yesterday that matching funds are unequal. May I point out two particular projects in my district which have been authorized:

First. In Toledo, Wash., a small community including a great many retired people and persons living entirely on social security and with a large area of unemployment among people formerly employed in the timber industry, $47,000 has been authorized for a sewer project. This small town used the limit of its bonding authority for matching funds of $49,000. The installation of this particular sewage project will provide that the last source of raw sewage on the Cowlitz River Basin ceases and this is important, not only to the people of Toledo, but to every person living on the Cowlitz and Columbia Rivers.

Second. In the city of Raymond in Pacific County, a sewage treatment plant intersector is scheduled to start on May 5 of this year, with the Federal Government contributing $220,000 and the local matching funds of $220,000 with an estimated onsite man-hours employment of 211. This same town of Raymond is located in the highest unemployment area in Washington and it also is a victim of the problems inherent in both fishing and lumber industries. We have tried repeatedly in this district to secure new industries and to provide jobs through private industry to the fullest and yet that challenge has not been met. Therefore, it is a question of work, relief, or starve. I know that I reflect the feeling of these people when I say that they prefer to work and to provide to their communities permanent improvements, valuable not only to themselves but to the entire area.

It is a privilege to support this bill and I only trust that we can steadily decrease the number of unemployed not only in my area but in every area throughout the United States, for Americans like to work.

Mr. LINDSAY. Mr. Chairman, I rise in opposition to the amendment to add $450 million in public works funds to the supplemental appropriation bill, H.R. 5517.

I oppose this amendment for the same reasons that I supported a motion to recommit the public works acceleration bill in 1962. I also oppose this amendment as a matter of priority. We are now over halfway through the session and this is the second matter of any importance we have had before us. There are other matters that should be ranked ahead of this one. This amendment adding $450 million to an already costly measure will do very, very little to reduce hardcore unemployment in the United States. The projects for which we are asked to appropriate the additional $450 million have not been justified with any specificity. We are given only a list of towns and a list of projects, some of which are swimming pools, ski slides, rodent control centers and the like. The failure to spell out in detail what these projects are can only indicate that this information is either unavailable or, if its true nature were known, would be extremely questionable. Further, the President has been given excessive discretion to select locations of his own choosing to favor with projects.

This is not a program which as a matter of priority of importance should commend itself to the American people. The amendment in its present form, favoring certain congressional districts as it does, will do little for large urban areas where the need for the creation of employment opportunities is the greatest and where individuals are most deeply affected by population and technological upheavals. Even worse, this program may be a shameful delusion. Once it becomes known how few jobs in relation to the cost are actually being provided, it may foster a climate of dissatisfaction and despair.

The amendment should be rejected.

Mr. OLSEN of Montana. Mr. Chairman, if there is one thing Americans are noted for it is finishing what they start. See a thing through. And that is what we are being called upon to do today. Finish the job.

This appropriation is authorized. Now let us vote it. It is greatly needed. Unemployment has decreased somewhat this last month. We all hope it continues. But it is not going to disappear overnight. We saw last year what needed to be done and we had the nerve then to vote a program to do it. Let us finish that program by voting the remaining funds authorized. Besides a stimulation for the economy and a help for the unemployed, it will help satisfy our national needs for construction of essential public facilities. Further, we owe it to the communities that have been led to expect the appropriation, and that have gone ahead in almost assured anticipation of our appropriation. Many, perhaps most, of the applicants were ready or almost so for participation in the first appropriation. But that money could go just so far, and some had to wait or give up their projects.

For example—just to take one instance—in the Hill-Burton hospital construction program administered by the U.S. Public Health Service—one of the grant-in-aid programs participating in this program—there is a reported backlog of 264 projects costing $259,262,300 and requesting $127,297,427 in accelerated public works assistance. We cannot help all these applicants, but we can help some. If we appropriate this money, as we should, some $56 million would be allocated to the Hill-Burton program for construction of these projects.

Beyond this, there is the permanent employment that follows from operation of every medical facility.

We expect others to honor their obligations to us; let us honor our obligations to the country. Vote the remainder of the accelerated public works authorization and stimulate the chain effect of increased employment and construction of needed public works. Do not let the communities look in vain to us for help. Do not let us slam the doors in their faces. Let us complete what we started and put people to work today.

Mr. SHELLEY. Mr. Chairman, I rise to support restoration to the supplemental appropriations bill for fiscal year 1963 of $450 million to finance public works projects pursuant to the Public Works Acceleration Act of 1962.

In 1962 the House of Representatives authorized $900 million and in that year we appropriated the first $400 million to get the public works projects underway in a great effort to meet the problem of unemployment in the United States. If we appropriate $450 million today we will but fulfill the expectation we created in 1962, namely, that we are concerned with unemployment and that we will do something about it. That is the issue facing us now. We have an opportunity to relieve the stress of unemployment in seriously depressed areas in the United States and to construct useful and meaningful public work projects throughout the country.

Mr. Chairman, I will support a restoration of $450 million to the supplemental appropriations bill and I urge each Member of the House of Representatives to support it as well.

The CHAIRMAN. All time has expired.

The question is on the substitute offered by the gentleman from Ohio [Mr. OLIVER P. BOLTON] for the amendment offered by the gentleman from Massachusetts [Mr. BOLAND].

The substitute amendment was rejected.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Massachusetts [Mr. BOLAND].

The question was taken, and the Chairman announced that the ayes appeared to have it.

Mr. BOW. Mr. Chairman, I demand tellers.

Tellers were ordered, and the Chairman appointed as tellers Mr. BOLAND and Mr. BOW.

The Committee divided and the tellers reported that there were—ayes 202, noes 172.

So the amendment was agreed to.

The Clerk read as follows:

OFFICE OF THE SECRETARY

Educational television facilities

For grants to assist in construction of educational television broadcasting facilities, as authorized by part IV of title III of the Communications Act of 1934 (76 Stat. 64), and for related salaries and expenses, to remain available until expended, $1,500,000, of which not to exceed $75,000 shall be available for such salaries and expenses during the current fiscal year.

Mr. GIBBONS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. GIBBONS: On page 10, line 14, strike out lines 14 through 22.

Mr. GIBBONS. Mr. Chairman, this amendment knocks out $1,500,000. I say to those of you who are for economy that this is a good place to vote yea. To those of you who favor trying to help the President balance the budget, that is a good place to vote yea.

I have examined the report of the committee and the testimony given before the committee, and I find that the delay of this appropriation will not hurt the national picture at all. This does not involve a program to provide more jobs to get America moving. This is to try to provide more educational facilities and stations.

We are already making fine progress in connection with educational television stations without Federal assistance. Most of the States of the Nation already have very fine programs in educational television. This new Federal program will eventually be a $32 million program.

I checked with the Department of Health, Education, and Welfare this morning as to whether or not they were able to spend this money right now, and I want to quote from the record of the committee hearing, on page 440, where the witness from the Department of Health, Education, and Welfare was testifying. He said: "We can put this money to use very quickly."

I called up this morning and talked to the people and asked them whether or not they had their regulations out, which you will find they need in connection with this proposal to spend $1,500,000. They advised us that they hoped to get the regulations out by June 15.

I submit to you that they cannot spend this money in any sensible manner during this fiscal year if they do not have any regulation out. This is just a good way to help balance the budget a little and to cut down on this useless spending.

Mr. THOMAS. Mr. Chairman, I rise in opposition to the amendment offered by the gentleman from Florida.

Mr. Chairman, I ask unanimous consent that all debate on the paragraph and all amendments thereto close in 7 minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. THOMAS. Mr. Chairman, I hope the pending amendment will be defeated. I share the gentleman's position that we want to save a little money. The budget estimate was for $2 million. Your committee, recognizing the facts of life, reduced it to $1,500,000.

Of all the popular programs in the field of communication and television, this is the most popular. These are nonprofit organizations. They include your schools, colleges, your educational and your nonprofit organizations which are interested. This requires a matching amount of 50–50 for new stations. Where you assist an established station the amount is 75 percent.

There are 324 channels available. There are 75 educational television stations now. Do you know how many applications are pending? There are 200 now pending, clamoring to get in this program.

Who are they? Little stations? No. Your colleges, your high schools, and your educational institutions. This is for the benefit of all of us. I sincerely hope the pending amendment will be defeated.

Mr. McCLORY. Mr. Chairman, will the gentleman yield?

Mr. THOMAS. I yield to the gentleman from Illinois.

Mr. McCLORY. I thank the gentleman for yielding.

I had intended to offer an amendment identical to the one that is pending.

I rise in support of the pending amendment. This is a new program, it is getting the Congress involved in something that will cost a lot more than is indicated by this bill and report.

Mr. THOMAS. Does the gentleman know of anything good on this earth that does not cost money?

Mr. McCLORY. I know everything costs money, but it has to be paid for in money, according to my theory. The only difference between that rule and the one which seems to prevail here is that here you are authorizing money to be spent without recognizing that the bills have to be paid eventually.

In addition we have State programs for educational TV which are in operation, and we should have faith in the States to assume their prerogatives and responsibilities.

The **CHAIRMAN**. The time of the gentleman from Texas has expired.

The Chair recognizes the gentleman from Illinois [Mr. McClory].

Mr. McCLORY. Mr. Chairman, I want to say this, that the program which is being initiated here today is not merely one involving the construction of TV stations and the improving of TV stations as was indicated by the report and by the legislation authorizing this program. But also the question was raised in the hearings in regard to the operation of these stations. The suggestion was made in the committee hearings that these stations were to be operated by the local communities and by private funds. Whenever the Federal Government gets into the operation of TV, the Federal Government will control its output and take over programing. I think those that say we do not want the Federal Government in the field of education recognize here and now that we are establishing a precedent in regard to this program. These stations are going to have to be operated, and if we are going to spend Federal money, we want to control them.

Mr. HARRIS. Mr. Chairman, will the gentleman yield?

Mr. McCLORY. I yield to the gentleman from Arkansas.

Mr. HARRIS. If the gentleman will permit, I would like to say, since this legislation was reported from our committee, under the provisions of the act, it does not permit the Federal Government to spend any funds at all in the operation of these facilities.

Mr. McCLORY. I recognize that.

Mr. HARRIS. These are construction funds only on a matching basis.

Mr. McCLORY. I recognize that, too, but these facilities cannot be operated without any funds to operate them, and it will compel us at a later time to assume huge expenditures for the operation of these programs. That seems to me to be a fundamental question.

Mr. GIBBONS. Mr. Chairman, will the gentleman yield?

Mr. McCLORY. I yield to the gentleman from Florida.

Mr. GIBBONS. The statement has been made here that there are 200 applications. I want to set the record straight. I checked with the Department of Health, Education, and Welfare this morning. They do not have the first single application, because they have not gotten any regulations out by which they can accept any applications.

Mr. THOMAS. Mr. Chairman, will the gentleman yield?

Mr. McCLORY. I yield to the gentleman from Texas.

Mr. THOMAS. The applications must go to the Federal Communications Commission. They are the ones that have the 200 applications.

Mr. GIBBONS. This appropriation is for the Department of Health, Education, and Welfare for $1.5 million for 2 months, and they do not have any way to spend it.

The **CHAIRMAN**. The time of the gentleman from Illinois has expired.

The Chair recognizes the gentleman from Massachusetts [Mr. Boland].

Mr. BOLAND. Mr. Chairman, I rise in opposition to the amendment. There are 76 educational television channels now in operation and there are 200 applications pending, not before the Department of Health, Education, and Welfare but before the Federal Communications Commission, the agency that licenses television stations. This program was passed in May of last year. It was passed overwhelmingly by this House. It came out of the committee chairmaned by the distinguished gentleman from Arkansas [Mr. Harris], and it clearly provides against any Federal interference with the operation of these stations. There is no question about it. As a matter of fact, the gentleman from Ohio [Mr. Bow], the ranking minority member of the Subcommittee on Deficiencies, went into this in the hearings. This is one of the best programs we have for television in America. This is one area where we can help education reach all of America, especially in areas where it is difficult to get programs. This is one of the best programs we have, and this House has gone overwhelmingly on record in favor of it.

Mr. Chairman, I hope we vote down the amendment offered by the gentleman from Florida.

Mr. PUCINSKI. Mr. Chairman, I ask unanimous consent that the gentleman from Ohio [Mr. Ashley] may extend his remarks at this point in the Record and include extraneous matter.

The **CHAIRMAN**. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. ASHLEY. Mr. Chairman, I wish to express my particular support for educational TV and for the assistance to educational TV contained in this bill. Yesterday my distinguished colleague from Ohio [Mr. Bow] indicated that he was fearful of appropriating funds to support the construction of educational television broadcasting facilities. Among the reasons he cited was the likelihood that local communities would be unable to find operating funds and would look to Washington for help, thus offering the opportunity of thought control.

I can think of no better way of answering these fears than to read a letter which I received only yesterday from Mr. Harry D. Lamb, Director and General Manager of TV education station WGTE–TV. I can certainly say that the contents of this letter and the unstinting and unselfish efforts of local citizens in the Toledo area are the very reason that I support the appropriation for educational TV contained in the bill:

Toledo Public Schools,
Toledo, Ohio, April 5, 1963.

Hon. Thomas Ludlow Ashley,
House of Representatives,
Washington, D.C.

Dear Sir: The University of Toledo and the Toledo public schools are currently defraying all costs of operating WGTE–TV (channel 30–UHF), the Greater Toledo Educational Television Foundation station. The Toledo public school system supplies all paid staff, and the university supplies housing, heat, light, power. In addition, Mildred Cowell, station manager, and a member of my department, trains university students in station operation and production and announcing. The engineering staff, both holders of first-class radio-television licenses, also in my department and paid by the board of education, gives further training to the university students enrolled for credit. From the enclosed program schedule you can see the type of thing done: daytime broadcasts to schools with the emphasis on French language and nighttime programs obtained from our affiliation with the National ETV and Radio Center, New York City. It is underwritten by the Ford Foundation, but we pay $600 a month for their program service. Affiliation also made us eligible for the grant of a videotape recorder and $10,000 worth of videotape—total value approximately $60,000.

Our problem is this: we are operating (with the permission of the Federal Communications Commission) at less than our full power of 1 kilowatt. Our effective radiated signal power is only 0.0296 kilowatt visual, and 0.150 kilowatt aural, with an antenna 190 feet above sea level. Our signal reaches all of Toledo satisfactorily, but it does not serve the 25-mile radius area that it should serve to satisfy FCC. Our original application promised an antenna height of 500 feet above average terrain and that is the height needed to cover the area. You can appreciate the reluctance of Toledo school people to expend money to serve southeastern Michigan and rural communities in a 25-mile radius that includes Fremont and Bowling Green, especially when Bowling Green State University itself is readying itself for broadcasts over WGBU–TV, channel 70–UHF. The convenient solution would be to receive Federal grants as provided in the act passed by the 87th Congress in the amount of $32 million to the States on a matching basis for construction and improvement of ETV facilities.

Sincerely,

Harry D. Lamb.

The **CHAIRMAN**. The question is on the amendment offered by the gentleman from Florida [Mr. Gibbons].

The amendment was rejected.

The **CHAIRMAN**. The Clerk will read.

The Clerk read as follows:

SALARIES AND EXPENSES

For an additional amount for "Salaries and expenses", $812,300.

Mr. GROSS. Mr. Chairman, I move to strike out the requisite number of words.

Mr. Chairman, I would like to ask the chairman of the subcommittee, the gentleman from Texas [Mr. Thomas], a question or two.

Is this $812,300 to the Civil Service Commission necessary—all of this amount—in view of the fact that the White House and the Democratic National Committee have taken over the screening of the summer employment of high school and college students? Can the gentleman from Texas help me out on this?

Mr. THOMAS. If the gentleman will yield, I shall be delighted to do so, but my experience has taught me that my able friend, the gentleman from Iowa [Mr. Gross], does not need too much help. This applies, may I say to my colleague, only to two items: one is the Pay Act, which was passed by the House. We reduced that by 5 percent.

They are now moving into a new building that they have been trying to obtain for the last 25 or 30 years. They are moving out of the old Pension Building in the District of Columbia.

The remaining part of the money is for furniture, and we cut the furniture request about in half.

Mr. GROSS. The gentleman has not helped me out on the question I asked.

Is the gentleman convinced now that the Civil Service Commission is going to screen the Civil Service applicants for summer employment in Washington, D.C., or are they going to be screened by the Democratic National Committee and the White House?

Mr. THOMAS. Mr. GROSS, let me give you my best judgment. It is my understanding that it will be handled just like it has been handled before, under Civil Service. You write over there and ask them to give this chap or this boy or young lady or young woman a job, and they give him or her the test to determine whether he or she can type or file. It is my understanding that it is going to be handled under Civil Service.

Mr. GROSS. It is the understanding of the gentleman that these applicants will be screened by the Civil Service Commission?

Mr. THOMAS. That is my understanding.

Mr. GROSS. We can depend on that from here on out?

Instead of sending those who write to us and apply for summer employment to the Democratic National Committee or the White House, we can, on the word of the gentleman from Texas, send them to the Civil Service Commission with assurance that their applications will be processed there?

Mr. THOMAS. That is my understanding, and if I can help my friend any, please call on me.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

HOUSING AND HOME FINANCE AGENCY

Housing for the elderly fund

For an additional amount for the revolving fund established pursuant to section 202 of the Housing Act of 1959, as amended (12 U.S.C. 1701q et seq.), $25,000,000.

Mr. SISK. Mr. Chairman, I move to strike out the requisite number of words.

Mr. Chairman, I take this few moments to direct a couple of questions to the chairman of the Subcommittee on Appropriations handling this particular bill having to do with the record of the HHFA and particularly of the CFA regarding elderly housing.

I would like to call his attention to page 713 of the hearings. In this particular bill apparently we are adding $25 million to the revolving fund which the Agency has for direct loans for housing for the elderly.

Mr. THOMAS. That is correct.

Mr. SISK. Is it further correct that this raises the total to $250 million in this fund?

Mr. THOMAS. No, sir. It raises total appropriations to the fund to $150 million. The authorization for appropriations was increased from $125 to $225 million last fall.

Mr. SISK. To $150 million?

Mr. THOMAS. Yes.

Mr. SISK. Permit me to ask the gentleman what kind of a case the department made in view of this table to which I call the gentleman's attention which appears on page 713 where over the life of section 202, which was a part of the 1960 Housing Act, they have apparently completed 12 projects for a total unit capacity of 657 units. In other words, apparently, they can house around 1,200 people, assuming these are, let us say, married people.

They have actually invested $6,163,000. I ask these questions not because I want to criticize this program; I was for this program. I think there is a definite need for this program. But I have some concern about the administration of this program in the department downtown and I am curious to know how they can justify an increase in the revolving fund in the face of the history of the activities so far.

Mr. THOMAS. Mr. Chairman, I appreciate my friend's statement, and he is making a good statement and asking some very intelligent questions which are for the good of the membership of the House. But you must remember that this is a limited program. The only subsidy invloved in this program is the difference between the conventional interest rate and the interest rate which, for practical purposes, is 3¾ percent under the statute.

Here is what we have done. I think the Office of the Administrator has done a very good job. We have cautioned them time and time and time again to go slowly and to make sure they know what they are doing. Here is the reason for that. In the first place these loans are for—how long? Up to 50 years. Think about that.

These are nonprofit. So this is a payback. It is perfectly easy to go back into your section or my section or somebody else's section and build a nice house, but we have to consider cost because these people who are going to live in these houses are not millionaires. They have to pay it back. So we have cautioned the Agency to go slowly and screen them. We have asked further, "Do you have anybody that even looks as though he is going to be in default on any of these projects that are already built?" They have a good many under construction. They said, "No, the loans are all being paid on time and everything looks 100 percent sound."

Mr. SISK. The point that I am making is how much of this is going into administration? I am going to call attention later on in this bill—I think it is page 37—to the fact that we are increasing the amount of money substantially for administrative expenses, and I am wondering if all we have down there is a group of people who are spending the money administratively, because believe you me, when we look at the record—and I spent several years on projects for the elderly and have some real concern on this program, I do not believe they are building houses for these aged people who need this type of housing.

Mr. THOMAS. May I say to my friend that your committee will watch these administrative costs and see that every nickel that should not be spent will not be spent.

Mr. SISK. Mr. Chairman, all of us who strongly support this direct loan for housing for the elderly program want to see it work and we want to see it administered and carried out by the responsible agency so that it will provide the benefits to the needy elderly they urgently need and it was the intent of Congress to provide when section 202 was added to the act in 1960.

I think the record of action revealed by this discussion is deplorable. The accomplishments have not scratched the surface of the need. This national record would not be creditable if it had been accomplished in only one major city, let alone 50 States. I think we must demand that this program proceed as authorized and that it be placed in the hands of people who will carry it out. I urgently request that the responsible committees, the Appropriations Committee which is recommending this increased appropriation, and the Banking and Currency Committee with jurisdiction over housing, find out what is wrong and see that it is corrected. This program can be soundly administered and I do not propose that we stand by and see it turned into a fiasco at the expense of the elderly who desperately need decent housing at a rental cost within their limited resources.

My comments are based not only on the picayunish record revealed by the committee hearings, but upon my personal experience in trying to help along some important projects in California.

I am referring to two housing for the elderly projects, one in my home city of Fresno, and the other in Los Angeles, both of which desperately need these direct loans to prevent enforced increases in rental charges which will price this housing out of the reach of the pensioners it is designed to serve.

In Fresno we have a major project which is better than 97 percent occupied and in which tenants are well housed, securely cared for, contented, and well served. It is housing approximately 1,000 elderly persons—almost as many as the entire direct loan program throughout the Nation has thus far housed. This project was economically built and is being economically administered. This housing was constructed at a cost of $8,200 per living unit, which is about $3,000 per unit less than the average commitment per unit under the direct loan program and is about $1,200 per unit less than the average of costs of projects in operation under the program as reported here today. On the basis of average costs under commitments, the sponsors of this project saved more than $1,600,000 in building this sound project. Yet with all this, this project has been unable to get a loan in an amount and under terms which would make it financially feasible or possible of acceptance. The endless terms and conditions and provisos, the additional guarantees and reserves, the limitless redtape which I have encountered and personally witnessed in endless months of negotiation are incredible and transcend my understanding of blind bureaucracy. In my opinion, the refusal of the agency to develop any feasible or workable loan for this project is completely contrary to the intent of Congress in providing a program of 100-percent financing for these projects and is driving to the wall this going, proven haven for senior citizens.

The same sponsor has completed a similar project in Los Angeles County, and there is every indication it can be immediately filled with elderly tenants at rental rates which would be possible under the favorable interest of a direct loan, but there is also every indication it never will get the chance to get such a loan unless the viewpoint and organization and activities of the agency administering this program are radically altered, by direct surgery if necessary.

I have tried to be patient and to withhold criticism and give the agency a chance to smooth out procedures and establish policy, but my patience is completely exhausted. I want this program to go forward and I urgently request the Congress to see that it does.

Mr. ROOSEVELT. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, may I ask my distinguished colleague from California if it is not true that there is at least one project in his district, very efficiently built, which has resulted in probably the lowest occupancy charge to any of the old people? This Agency seems through administrative expense to have given the project a great deal of trouble and concern; and if this is typical of what is going on in the administration of this part of the act, the whole matter should be looked at very carefully.

Mr. SISK. Mr. Chairman, will the gentleman yield?

Mr. ROOSEVELT. I yield to my colleague from California.

Mr. SISK. Of course, this is the whole point of the position I have taken. I am for the basic program which we enacted or which I thought Congress had in mind when we passed the 1960 Housing Act. The testimony of Mr. Woolner before Mr. THOMAS' subcommittee went into this matter in the hearings. They found that not including any land or other items that go into the cost, the structural cost was almost $8,500 per unit, which means, when you add a reasonable land value that it runs up to about $11,000 per unit. We have in California two projects at the present time which have been constructed, including land cost, for less than $8,500 per unit, and still, because of administrative problems and apparent confusion in the Agency they refuse to approve the projects. The fact is that I question whether they even know where they are going in the Agency. We have been unable to get any reasonable consideration on these particular projects.

I might say that the two projects we have in California will house almost twice as many people as the total number of people that will be taken care of by all these 12 completed projects throughout the United States, yet the unit cost of the California project is over $1,000 per unit lower than the unit cost of the 12 approved projects.

Mr. ROOSEVELT. I thank my friend. I should like to say to the distinguished chairman of the subcommittee that I hope he will look into this problem about which my friend from California has been talking because I think the actual purpose and intent of the legislation is not taking place in these projects and that we are actually hurting the elderly people we, in the Congress, are trying to help. I hope the gentleman will look into it.

Mr. THOMAS. I thank the gentleman. I can assure him your subcommittee will go into it from every angle. They are occupying 12 finished units now with some 21 under construction. We will set aside some time, and invite both of you to come before the committee.

The Clerk read as follows:

ACQUISITION AND CONSTRUCTION OF RADIO FACILITIES

For an additional amount for "Acquisition and construction of radio facilities", $5,800,000, to remain available until expended.

Mr. GROSS. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I would like to ask a question concerning this $5,800,000 for the acquisition and construction of radio facilities for the USIA. Do I correctly understand that this will result in a project of $20 million or more, and that, although you want to appropriate nearly $6 million, there is no signed agreement as of now for this project, the erection of these radio facilities in either the Philippines or the Ryukyus?

Mr. ROONEY. Mr. Chairman, will the distinguished gentleman yield?

Mr. GROSS. I yield to the gentleman from New York.

Mr. ROONEY. First I should say that up to this minute as far as I know there has been no signed agreement with the Philippine Government. There are three possible locations for this facility. The committee recommends the appropriation here of the amount of money necessary and needed to be obligated in the present fiscal year for the location which would be the lowest of these in total cost. If this short-wave transmitting facility were to be installed at Agoo in the Philippines it would cost $19,705,000. If it were installed at another location in the Philippines it would cost $24,500,000. And if it were to be installed in the Ryukyu Islands it might cost the highest amount, as much as $32 million. The committee feels we need this transmitter in that part of the world. We are not getting the broadcasts across as we should. We do not have as strong a signal as we should for China, central and eastern U.S.S.R., and south and southeast Asia.

Mr. GROSS. Do I understand that you now are appropriating money when you do not even have a selected site for the transmitter?

Mr. ROONEY. They have given us three possible sites, two in the Philippines and one in the Ryukyu Islands.

Mr. GROSS. But you really have not picked a site for that?

Mr. ROONEY. That is so, but there is also another angle. As I discuss this with my distinguished friend from Iowa, my memory becomes more refreshed in regard to it. If we appropriate this money as we propose in the pending bill it would help toward getting immediate agreement on the less costly site. That is one of the reasons it is here in this bill. The ten 250-kilowatt transmitters have to be built regardless of the location.

Mr. GROSS. In order to complete a deal with the Philippines after all we have given them we now have to show them the color of our money. Is that it?

Mr. ROONEY. That is always a good idea, to see the color of a man's money when you want to do business with him.

Mr. GROSS. Let me ask this question. Why in the world should it cost more money to erect a transmitter on Okinawa than in the Philippines?

Mr. ROONEY. There are a number of reasons for this, principally with regard to the amount of money which would have to be expended in connection with the land.

Mr. GROSS. What does this have to do with it?

Mr. ROONEY. The site preparation costs, in connection with the land, would be more expensive in the Ryukyu Islands than in the Philippines? Also, in the first location in the Philippines it would be an association with existing VOA facilities and would not require certain construction.

Mr. GROSS. In other words, what we are doing today is making a downpayment of $5 million or almost $6 million for a project as to which the agreement has not yet been signed and we do not know whether it will ever be signed.

Mr. ROONEY. I am sure the gentleman understands after reading the printed hearings, that a sufficient leadtime is needed to get the transmitting equipment, the electrical equipment, on the way. The Agency should be permitted to enter into contracts as soon as possible with the producers so as to have this transmitting equipment in time for it to be installed at the selected site.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

FISH AND WILDLIFE SERVICE

Bureau of Commercial Fisheries

Management and Investigations of Resources

For an additional amount for "Management and investigations of resources", $658,400.

Mr. GROSS. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, do I understand that $400,000 of this $658,000 is for research in development processes to produce a concentrated protein from fish?

Mr. KIRWAN. This sum of $400,000 is in the bill, for the benefit of the fishing industry, to find a process to make protein from billions of pounds of fish not presently used, and I do not mean any fish having to do with the aquarium. This has nothing to do with the aquarium.

Mr. GROSS. I think it has something to do with the aquarium and fish pond business.

Mr. KIRWAN. This is $400,000 to help the fishing industry find a new outlet for its product.

Mr. GROSS. The gentleman says it has nothing to do with his aquarium. I think it has everything to do with the Kirwan piscatorial palace. If we are going to spend $10 million for a fish research center in Washington, D.C., why not defer this $400,000 until that time? I remind the gentleman that he told the House the aquarium would be used as a research plant as well as an attraction.

Mr. KIRWAN. The money that is going to be spent to build this greatest aquarium in the world is not going to cost the taxpayers a dime. You have been misinformed. Why does the gentleman not state the true facts?

You read the law; why do you not tell them the truth? It is not going to cost the American taxpayer a dime.

Mr. GROSS. I read what law?

Mr. KIRWAN. The law creating this aquarium. It is not going to cost the taxpayer a dime. I proved that the other day.

Mr. GROSS. I have heard that old refrain around here so long that I can almost dance the tune without the music: "It won't cost a dime."

Mr. KIRWAN. It will not cost a dime. That is correct.

Mr. GROSS. We have heard some of that same refrain this afternoon.

Mr. KIRWAN. The experience with the aquarium in Philadelphia is that even with a $2 admission fee they cannot keep them out. This will pay for itself.

Mr. GROSS. Does the gentleman not think this could be put off until his fish palace is completed?

Mr. KIRWAN. No. This research is needed now by the fishing industry.

Mr. GROSS. I was told this was to be a research plant down on Hains Point.

Mr. KIRWAN. This appropriation is for the fishing industry.

Mr. GROSS. That is just fine. But it costs $400,000.

The Clerk read as follows:

BUREAU OF OUTDOOR RECREATION

Salaries and expenses

For necessary expenses of the Bureau of Outdoor Recreation, $200,000.

Mr. OLIVER P. BOLTON. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, it is my understanding that we will consider later this afternoon an authorizing bill, H.R. 1762, to promote, coordinate, and develop effective programs relating to outdoor recreation, which is to be under the Interior Department. Is this appropriation for that purpose?

Mr. KIRWAN. A Commission was appointed, headed by Laurence Rockefeller, to make a study of recreation and the Commission recommended this new Bureau to coordinate all the agencies dealing with recreation. This money is for the new Bureau and is for functions now authorized. The authority exists to do it.

Mr. OLIVER P. BOLTON. I would like to ask the gentleman another question. Is not that also the effect and direction of a bill that will be called up for consideration this afternoon?

Mr. KIRWAN. The chairman of that committee is here and can explain the new bill, the gentleman from Colorado, Mr. ASPINALL.

Mr. ASPINALL. Mr. Chairman, will the gentleman yield?

Mr. OLIVER P. BOLTON. I yield.

Mr. ASPINALL. This afternoon, or tomorrow, or whenever we bring up the Bureau of Recreation authorizing bill, we will have legislation before this body to authorize additional appropriations. What is being done at the present time in the Department of the Interior is this. They have a Bureau of Recreation at this time. This effort has been carried on for almost a year. What is requested in the bill before us now is a supplemental appropriation to take care of the additional activities of the Bureau for the rest of this fiscal year.

Mr. OLIVER P. BOLTON. Of course, this appropriation is to start the program. Is it another situation of the youth conservation proposition that was started in March before it was authorized?

Mr. ASPINALL. The gentleman is mistaken. We have general authority for setting up the present Bureau in the Department of the Interior. We have been carrying on the work of the Bureau all this fiscal year in the Bureau of Recreation with an appropriation diverted from the National Park Service over to the Bureau of Recreation in the amount of about a million dollars. In order to put this program into a constructive orderly approach we need this $200,000.

Mr. OLIVER P. BOLTON. Do I understand the gentleman to indicate that if this bill which is to come up later, either this afternoon or tomorrow, is defeated, this money would not then be necessary in the Department of the Interior?

Mr. ASPINALL. The gentleman is once again mistaken in his position. As I tried to explain to the gentleman, the Secretary has the right to establish this Bureau at the present time under general authority. What we are trying to do by the authorization bill to be considered later is going to the operation, authority, limitations, and so forth of the powers of the Secretary.

Mr. OLIVER P. BOLTON. I will discuss that further with the gentleman. I appreciate his response very much.

Mr. COLLIER. Mr. Chairman, I move to strike the requisite number of words, and I do so for the purpose of pursuing further for a moment, if I may, this particular appropriation.

May I ask the gentleman from Colorado [Mr. ASPINALL] how much has been spent by the Outdoor Resource and Recreation Commission since it was established 4 years ago in the preliminary studies?

Mr. ASPINALL. We authorized an expenditure of $2 million. As I presently recall it is the only Commission I know of since I have been in Congress that stayed within its original authorization.

Mr. COLLIER. Two million dollars have been spent for a study of recreation resource areas throughout the country?

Mr. ASPINALL. Resource areas of recreational value. The gentleman was a member of the committee when the authorizing legislation was passed.

Mr. COLLIER. That is correct. I am curious, however, to know whether the Commission spent the $2 million, because at the time it was established I had some very definite reservations as to whether $2 million was needed to make the study when, in fact, almost every State in the Union has information in their own conservation department that would have supplied practically all of the information and data necessary.

Mr. ASPINALL. I am not one who can properly say, perhaps, that such a study is worth $2 million, but it was carried on under the chairmanship of one of the best businessmen I know of, Mr. Rockefeller of New York City. I accepted it as being done in an efficient and businesslike manner.

Mr. SAYLOR. Mr. Chairman, will the gentleman yield?

Mr. COLLIER. I yield to the gentleman from Pennsylvania.

Mr. SAYLOR. The Outdoor Recreation Resources Review Commission was authorized by this Congress, and there was appropriated, over the objection of some of the people, $2 million. They did their work within the time designated in the bill and filed its final report. Approximately $50,000 has been turned back in unexpended funds. The Commission performed the functions imposed on it by law, made its report, and it is out of business.

I may say to the Congress that if the Appropriations Committee had had the foresight to give the Commission the money they asked for when they asked for it in the first supplemental appropriation bill after Congress created the Commission, we would have done the job for about $250,000 less.

Mr. COLLIER. My question was not intended to be critical of the Commission or anyone on the Commission. It was simply that I seriously doubt whether we had to go to the extent of spending $2 million on the study.

The Clerk read as follows:

TRAVEL AND MISCELLANEOUS EXPENSES

For an additional amount for "Travel and miscellaneous expenses", $130,000.

Mr. THOMAS (interrupting reading of the bill). Mr. Chairman, I ask unanimous consent that the bill in its entirety be considered as read and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

Mr. GROSS. Mr. Chairman, I object.

The Clerk read as follows:

DEPARTMENT OF JUSTICE

Legal activities and general administration

Salaries and Expenses, United States Attorneys and Marshals

For an additional amount for "Salaries and expenses, United States Attorneys and Marshals", $1,110,000.

Mr. WHITTEN. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. WHITTEN of Mississippi: On page 20, line 6, change the figure "$1,110,000" to "$581,000."

Mr. WHITTEN. Mr. Chairman, I ask unanimous consent to proceed for 5 additional minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Mississippi?

Mr. BOW. Mr. Chairman, I must object.

Mr. THOMAS. Mr. Chairman, will the gentleman yield?

Mr. WHITTEN. I yield to the gentleman from Texas.

Mr. THOMAS. Mr. Chairman, I ask unanimous consent that all debate on this amendment on this paragraph and all amendments thereto close in 10 minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. WHITTEN. Mr. Chairman, I offer this amendment on behalf of myself and my colleagues from Mississippi, Congressmen COLMER, WINSTEAD, ABERNETHY and WILLIAMS. What this amendment would do is to require several different agencies of the Government to absorb certain costs. These agencies and the amounts they would absorb are as follows: U.S. Immigration and Naturalization Service, $185,880; Bureau of Prisons, $31,389; U.S. Marshals appropriation, $294,362; U.S. Attorneys appropriation, $491,000; Civil Rights Division, $27,950; Civil Division, $12,337; and $6,591 for the Criminal Division of the Department of Justice.

These amounts represent what these agencies spent in the Federal action at Oxford. In addition to these amounts of course, the military department spent $5 million.

Mr. Chairman, all of you know how strongly we feel about the action of the Federal Government at the University of Mississippi, which is in my district. I attended "Ole Miss," a great university. Having practiced law before coming here, having been district attorney, I not only feel very deeply about the occurrences that have taken place at this fine institution but firmly believe it should never have happened. But, more than that, my friends, involved here is the destruction, in my opinion, of the very basis upon which our Nation was founded. This Nation was created with a clear division between the judiciary, the legislative, and the executive, a balance of power, each equal and independent of the other. This fact has stood us well through the years. Such provisions were initially provided because the people who framed the Constitution knew what had happened in foreign countries, where all-powerful federal governments were the order of the day. The actions at the University of Mississippi were the culmination of practices which have been growing for some years; that is, the executive department, through the Attorney General, has been going to the Federal courts, intervening in pending lawsuits, asking the courts to enter decrees in accordance with the desires of the executive department, and through the years the courts have yielded to the executive department in issuing such decrees. Then, when the decree as requested by the executive department was issued, the executive department provided U.S. marshals, even Federal troops, to carry out the order which the executive department had the courts of the land to issue in the first instance. Clearly the judiciary and the executive have been working hand in hand, through and through. This, in my opinion, was never intended.

Let me tell you some facts with which you perhaps are not familiar. There were 22,000 soldiers used in and around Oxford, Miss., at a time when we had only 6,000 in Berlin. The Supreme Court had not finally acted on the case at the time the Federal Government moved in, in force, at the University of Mississippi. I know that you have heard reference to the Governor of our State and this, that, and the other, but may I say to you that the Governor of the State of Mississippi has no general law enforcement group except the National Guard or the State militia, and prior to the Federal Government moving in, those troops had been taken away from the Governor and federalized. The State Highway Patrol of Mississippi has no authority except on matters on the highways or in the area immediately adjacent thereto. So here you find the Governor with his law enforcement group taken away from him and put in the Federal service. Yes, you find him placed in that position at a time when the Supreme Court had not even rendered a final decree.

These facts may not disturb some of you at this time; but believe me, when the Federal forces move in because it is said one Justice of the Supreme Court said that he had got on the telephone and checked with other Supreme Court Justices, and he said they said what they were going to do at some time in the future, it should disturb you. My friends, this Nation was not built on any such shaky foundation as that and certainly could never have lasted this long if it had been. May I say to you again, in this instance it happens to be my fair State, but when it reaches a point where the Executive and the Judiciary can join together and before the Supreme Court renders a final decree, using three time as many troops as they had in Berlin, take over in any State—first taking away the State militia, I say it is time to begin to look to see if involved is not a deeper principle than that of integration.

Mr. ABERNETHY. Mr. Chairman, will the gentleman yield?

Mr. WHITTEN. I yield to the gentleman from Mississippi.

Mr. ABERNETHY. Mr. Chairman, I would like to associate myself with the remarks of the gentleman from Mississippi [Mr. WHITTEN].

Mr. Chairman, the incident at the University of Mississippi last September is one of the most shameful tragedies ever inspired by men in high Federal office. And, it was so inspired, Mr. Chairman, purely for political purposes.

The premature and hasty action of the U.S. Department of Justice, under cover of the tremendous power which it called into action, was designed to impress the Negro minority and to incur their favor on the election days to follow. No consideration was given to the sacrifice that was to be forced upon this great old institution of learning, its student body of more than 5,000, and the people of a proud State. They were all written off, deliberately and designedly.

The basic law of our land provides that any litigant aggrieved by a decision of a lower court shall have the right of appeal to a higher court, and even later to the Supreme Court, the highest court in the land. Except in most extraordinary and extremely rare cases, the judgment of the lower court or courts are stayed pending a rule of the highest court. A stay of judgment was in effect in the case involving the University of Mississippi, pending action on a perfected and legitimate appeal to the Supreme Court.

Although this matter was pendente lite, and undecided by the Supreme Court, the youthful Attorney General of the United States, evidently having concluded that the end justifies the means, decided to and did take things into his own hands. The pending appeal to the contrary notwithstanding, the Attorney General decided to and did force the enrollment of the applicant in question before the Supreme Court had an opportunity to rule on the pending appeal.

The Attorney General forced this action in a highly dramatic and dangerous fashion, with a display of civil and military might and power never before utilized by the Federal Government except in war against a foreign enemy.

This action led to riot and bloodshed, even death; and to physical destruction of properties on the university campus. It left a proud old institution of learning sick, ailing, and deeply hurt. It aroused the animosity of thousands of Americans against the leadership of the Nation, conceding that their action met with the favor and satisfaction of some shortsighted citizens.

When later queried as to why he took this hasty, premature, and forceful action, the Attorney General justified same, or at least attempted to do so, on the ground that he was certain of what the Supreme Court would rule on the matter when it did get around to such a ruling. So, he contended there was no point in waiting for the litigation to run its legal and constitutional course.

Mr. Chairman, if this is to be the criterion upon which our Government is to act it would be just as sound to electrocute one convicted in a lower court of a capital offense, while his appeal was pending before the higher court, on the ground that the executioner was convinced that the higher court would affirm the conviction. This is a new concept of justice in the land of Washington, Jefferson and Lincoln.

It is obvious, Mr. Chairman, that the hasty action of the Attorney General was without authority of law. It was an illegal act. Being such, the taxpayers of this country should not be required to pick up the check for the mistakes of the Attorney General—and that is just what the pending item in this bill is designed to do.

Mr. BOW. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, may I say to my distinguished friend, the gentleman from

Mississippi [Mr. WHITTEN], that yesterday we had debate from one o'clock until five o'clock, and I served notice on the Members of the House then that I would object to any extensions of time. I have done that to a number of Members and I could make no exception on this request. But may I ask the gentleman from Mississippi to explain to me a little more fully the point he was making?

Mr. WHITTEN. I appreciate the kindness of my friend, the gentleman from Ohio [Mr. BOW].

Mr. Chairman, I repeat that the actions taken by the Federal Government were taken prior to a final decision by the Supreme Court of the United States. Point No. 2, that under the law of the State of Mississippi the Governor has only one law-enforcement group, and that is the National Guard, or the State militia, which was taken away from him by the Federal Government.

The courts were called on by the Justice Department to charge the Governor and Lieutenant Governor with the crime of criminal contempt and now the same Justice Department insists they are not even entitled to a jury trial.

Mr. Chairman, in my remarks of yesterday the Members will see a report by the mayor and other representatives of city and county governments describing the situation in Greenwood, Miss. You will note they have one police dog. They point out that there has not been a single person who has been prevented from going to the clerk's office to apply to register. What they have broken up is these large groups walking down the street, headed by a national figure who apparently wants to help his television program, who has said, according to the press, "I am going to stay here until the President sends Federal troops to Greenwood, Miss., like he did at Oxford."

I hope every Member of the House will read my remarks made yesterday in general debate. It is my district that happens to be in trouble today, but it is our Government which is breaking down. Have we reached the place where the executive department through the Attorney General can tell a court what decree to issue, use troops to enforce that decree, and not even wait for it to be a final decree by the Supreme Court and in the process take away the State militia, direct the courts to bring charges of criminal contempt, and then deny to the Governor and Lieutenant Governor of a sovereign State the right to a jury trial when charged with a crime.

Mr. Chairman, we have reached that point and if the President, whoever he may be and from whatever party, continues to rely upon a reported telephone call of one Justice to the other Supreme Court Justices as to what they said they were going to do in the future, sends armed troops in to take over with orders to use all force necessary, truly I say there is little left of the Constitution, of separation of powers, or of protection of rights of the States and of the people from an all-powerful Government.

Mr. BOW. I thank the gentleman from Mississippi for clarifying this situation.

Mr. PUCINSKI. Mr. Chairman, I ask unanimous consent that the gentleman from Mississippi [Mr. WINSTEAD] may extend his remarks at this point in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. WINSTEAD. Mr. Chairman, the amendment offered by the gentleman from Mississippi [Mr. WHITTEN] for the Mississippi delegation is only to prevent restoration of money already spent in the infamous Federal move on the State of Mississippi at Oxford. I regret that time has been limited and does not permit an adequate discussion of this tragic situation. However, it is a well-known fact that during and since the Oxford crisis, the FBI, Department of Justice lawyers, and other Government law-enforcement officials have swarmed over Mississippi like locusts. Every alleged incident involving a white person and a Negro in Mississippi or other Southern States causes more FBI agents to be sent out to make an investigation. All it takes for an investigation to be touched off is for a telegram to be sent to Attorney General Robert Kennedy, charging some white person with violation of so-called civil rights. Such telegrams are immediately made available to the press and publicity is given the charges by every communications medium, and the FBI is sent to investigate. When it is determined that these much-publicized charges are without foundation, neither the Attorney General nor the press makes any effort to furnish this information to the public and neither does the Department of Justice take steps to prosecute those who fabricated these charges.

The recent unfortunate incident in Washington when a white policeman shot a fleeing felon is well known to all of you. Charges were made by certain groups that the white officer who killed the Negro did so without sufficient justification and, in substance, acted in an irresponsible manner. I would like to point out here that some responsible Negroes in Washington, as well as other respected citizens, took the side of the law in this incident. Although no direct charges were made that the white officer was guilty of a so-called civil rights violation, when he shot the Negro, that is what these irresponsible charges amounted to.

Why did not the Attorney General launch a full-scale investigation of this incident? The answer appears to be that the incident occurred in the District of Columbia where no political mileage can be gotten from such an investigation. Had the same incident occurred in Mississippi or Alabama or any other southern State, General Kennedy would have immediately sent a small army of FBI agents and other of his representatives to investigate.

Mr. ROONEY. Mr. Chairman, I rise in opposition to the pending amendment offered by the distinguished gentleman from Mississippi [Mr. WHITTEN].

Mr. Chairman and Members of the Committee of the Whole, there is no one here who appreciates the sincerity of the distinguished gentleman from Mississippi [Mr. WHITTEN] more than I do. But I cannot agree with him in the slightest with reference to the Meredith case on what he is trying to do in this appropriation bill.

Mr. Chairman, if this amendment were adopted the gentleman would deny the Immigration and Naturalization Service, the Bureau of Prisons, the U.S. marshals, the U.S. attorneys, the Civil Rights Division, the Civil Division and the Criminal Division of the Department of Justice necessary funds for their regular activities for the reason that the gentleman's amendment would reduce the amount at line 6, page 20, from $1.11 million to $581,000, which is the full amount of the pay increase money and which this Committee recommended should be reduced by 5 percent, or $30,000. Accordingly, he would allow the full amount of the pay increase money, but he would cut out every nickel for the everyday necessary activities of the various bureaus and divisions that I have just recounted.

Mr. Chairman, as of December 31, 1962, $445,100 had already been spent in connection with the Mississippi incident, and it was estimated that an additional $113,900 would be obligated as a result of it through June 30, 1963. This money, the $1.11 million carried in the pending bill would reimburse the various activities of the Department of Justice and take care of their pay increases. After all, the Attorney General had no alternative but to do what he did in connection with the Oxford, Miss., incident.

The usual day-to-day activities of the Bureau of Prisons, the Immigration and Naturalization Service, the U.S. attorneys' offices, the U.S. marshals, et cetera, have to be carried out. As far as the Mississippi incident is concerned, the execution of Federal court orders is primarily the responsibility of the U.S. marshals service. At the beginning of the 1962 school term the fifth circuit court of appeals at New Orleans ordered the admission of the applicant—Meredith—to the University of Mississippi at University, Miss. Previously Mr. Meredith had requested admission to the university but school officials would not permit his enrollment.

In order to enforce the court order and protect the integrity of the court the Attorney General determined that a substantial force of U.S. marshals would be required. Actually 130 deputies or chief deputies were detailed from offices throughout the country and participated in the program. These men were also supported by 316 specially deputized enforcement officers from the Immigration and Naturalization Service and 98 custodial officers from 4 penal institutions. These enforcement officers were required to put in many man-hours of overtime work beginning on September 15, 1962, and ending October 8, 1962.

Obligations through December 31, 1962, amounted to $445,100 and it is estimated that $113,900 additional will be obligated through June 30, 1963. The funds already obligated cover mainly the cost of overtime, $194,807; travel, $135,439; communications, $24,329; reporting services and repairs to vehicles, $18,838; and $70,436 for supplies which consist for the most part of gasoline, tear gas, tear gas projectiles, and replacement cost of depleted stock.

Mr. Chairman, I respectfully urge that it would be foolhardy to adopt the pending amendment. It would destroy the day-to-day necessary services of the Department of Justice. I ask that this amendment be voted down.

The CHAIRMAN. The time of the gentleman from New York [Mr. Rooney] has expired. All time has expired.

The question is on the amendment offered by the gentleman from Mississippi [Mr. Whitten].

The amendment was rejected.

Mr. WILLIAMS. Mr. Chairman, I ask unanimous consent to extend my remarks at this point in the Record.

The CHAIRMAN. Is there objection to the request of the gentleman from Mississippi?

There was no objection.

Mr. WILLIAMS. Mr. Chairman, inasmuch as the House limited debate on the Whitten amendment, I was precluded from getting time to speak in support of it. I certainly associate myself with the views expressed by the gentleman from Mississippi [Mr. Whitten] on this amendment.

The deportment of Federal marshals during the Oxford incident was shameful. The truth about what happened at Oxford, including the fact that the marshals themselves precipitated the riot by firing tear gas shells into a group of unarmed students, has been censored out of most of the Nation's press.

I have no desire here to reargue the Oxford case, except to say in my opinion, the action taken by the Federal Government at Oxford presents itself as the most shameful misuse of Executive power ever experienced by the people of the United States.

The Clerk read as follows:

FEES AND EXPENSES OF WITNESSES

For an additional amount for "Fees and expenses of witnesses", including an additional amount of not to exceed $25,000 for compensation and expenses to witnesses (including expert witnesses) or informants, $600,000.

Mr. RYAN of New York. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I cannot remain silent in the face of the statements which have been made in connection with the last amendment. It seems to me that we should at this point commend the Attorney General and the President of the United States for the action which was taken in Oxford, Miss. Any State which seeks to deny to any citizen of these United States his equal rights should have the full power of the Department of Justice brought to bear upon it. For instance, I feel very strongly that the Department of Justice should have intervened with U.S. marshals to protect citizens seeking to register and those active in the registration drive in Greenwood, Miss. I urged that course of action.

For too long a time we have seen, under the color of States rights, the denial of equal opportunity, and the denial of full protection of the laws. We should encourage the Attorney General to use his office, use his powers and use the statutes which are on the books to see to it that American citizens are permitted to register and are permitted to attend any State college or university or any elementary school without discrimination because of race, creed or color.

Mr. WAGGONNER. Mr. Chairman, will the gentleman yield?

Mr. RYAN of New York. I yield to the gentleman.

Mr. WAGGONNER. Mr. Chairman, I would like to say that I am in complete disagreement with what he has just said.

Mr. RYAN of New York. I would expect the gentleman to say that.

Mr. WAGGONNER. By contrast the Department of Justice should not be commended but condemned for having done what they did, because they have exhibited that there is no such thing as equality on the face of this earth and the world knows this is not their real concern. Equality does not exist anywhere for anybody at any time and never has.

Mr. RYAN of New York. Mr. Chairman, I yielded for a question, not for a speech. But I might point out that I could not disagree more with the gentleman. The foundation principles of this Nation are under attack. The Congress must face this issue and enact meaningful civil rights legislation. The Department of Justice must be constantly vigilant to protect the rights of our citizens and to see to it that equal opportunity is provided to every American.

Mr. WAGGONNER. Mr. Chairman, I move to strike out the last word. I should like to ask the gentleman from New York [Mr. Ryan] if he is fully acquainted with the circumstances in Mississippi; has he been to Mississippi to investigate and does he know firsthand, or is he just peddling hearsay?

Mr. RYAN of New York. I think all of us have read the accounts concerning the situation in Mississippi.

Mr. WAGGONNER. Does the gentleman believe everything he reads in the newspapers? Outside agitation is at the root of all this trouble and is complicating the solution.

Mr. RYAN of New York. I think all of us are familiar with the statements of the President of the United States—his television address to the Nation last fall and the statements he has made in his press conferences. I have discussed the situation with the Attorney General and the Chief U.S. Marshal James McShane, who so ably supervised the marshals at Oxford, Miss. I have also had a firsthand report from one of the students who was enrolled at the University of Mississippi at the time. The facts are well established. I firmly believe it would be a good idea for a congressional committee to go to Mississippi and investigate the situation and report back.

Mr. WAGGONNER. Will the gentleman answer my question? Has he been there?

Mr. RYAN of New York. No, I have not been there.

Mr. COLMER. Mr. Chairman, will the gentleman yield?

Mr. WAGGONNER. I yield to the gentleman from Mississippi.

Mr. COLMER. I did not intend to get into this because I recognize the futility of it, but the gentleman from New York said he fully expected the gentleman from Louisiana to take the position he took. I am sure no one would be surprised at the position the gentleman from New York took. I might add, if the gentleman from Louisiana is interested, that while the gentleman from New York did not actually visit Mississippi, according to his statement he did come pretty close down there, to Georgia, and have his picture made with some these agitators down there from New York who are stirring up all this trouble.

The Clerk read as follows:

ARCHITECT OF THE CAPITOL

Extension of the Capitol

For an additional amount for "Extension of the Capitol," $300,000.

Acquisition of property, construction, and equipment, additional House Office Building

The appropriation "Acquisition of property, construction, and equipment, additional House Office Building" shall hereafter be available also for necessary furniture and furnishings for such project.

Mrs. FRANCES P. BOLTON. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, may I ask this question of the chairman of the subcommittee. What extensions to the Capitol are premeditated in this?

Mr. THOMAS. I will say to the gentlewoman from Ohio that there are none contemplated in this expenditure here.

Mrs. FRANCES P. BOLTON. What is the money for then? There certainly is $300,000.

Mr. THOMAS. This is for lighting. You have about a $1 million authorization, and this is for lighting fixtures and so forth.

Mrs. FRANCES P. BOLTON. In most instances the lighting is twice too strong. In many of the new rooms it is almost intolerable. Some of the other works of the Architect in the extensions of the Capitol are utterly shocking. To think what they have done to our nice little dining room, which was comfortable, and which did not have this terrible vibration it has now. All the comfort and the pleasant atmosphere is gone. It looks like nothing but a service dining room in a penitentiary. Blank walls, no sound conditioning, glaring light, crowded seating has transformed a room Members enjoyed to a place where they would rather not go. So far I have not been able to discover who conceived the change and who ordered it although the Speaker, poor man, takes the responsibility.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

INTERNATIONAL CONFERENCES AND CONTINGENCIES

For an additional amount for "International conferences and contingencies," $315,000, of which $250,000 shall be available for expenses of organizing and holding the World Food Congress in the United States, as authorized by the act of October 18, 1962 (Public Law 87-841), and $65,000 shall be available for the U.S. contribution to the International Secretariat on Middle Level Manpower.

Mr. LIPSCOMB. Mr. Chairman, I make a point of order against the language in the bill on page 23, lines 8 through 15, under the heading "International Conferences and Contingencies" on the ground that it is not authorized by law. The authorizations for appropriations for international conferences and contingencies under section 5 of Public Law 84–885 conveys authority for a general appropriation and not authority for a specific appropriation such as proposed under this section which provides that of the $315,000 for "International conferences and contingencies," $65,000 shall be available for the U.S. contributions to the International Secretariat on Middle Level Manpower.

The CHAIRMAN. Does the gentleman from New York desire to be heard on the point of order?

Mr. ROONEY. I do, Mr. Chairman.

Mr. Chairman, I respectfully submit that this appropriation is authorized by law. It is authorized by Public Law 885, 84th Congress, in section 5 of which we find the following:

> The Secretary of State is authorized to (a) provide for participation by the United States in international activities which arise from time to time in the conduct of foreign affairs for which provision has not been made by the terms of any treaty, convention or special act of Congress.

Mr. Chairman, I submit that the provision of funds carried in the pending bill for this International Secretariat is for a meeting in connection with international affairs and is, therefore, valid and authorized by law.

The CHAIRMAN. Does the gentleman from California desire to be heard further on his point of order?

Mr. LIPSCOMB. I do not, Mr. Chairman.

The CHAIRMAN (Mr. Bolling). The Chair is prepared to rule.

The language cited by the gentleman from New York is, indeed, very broad. The Chair believes that the point of order is not well taken.

The point of order is overruled.

Mr. LIPSCOMB. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

> Amendment offered by Mr. Lipscomb: On page 23, line 10, strike "$315,000 of which $250,000" and insert in lieu thereof "$250,000, which";
>
> Beginning on line 13, strike "and $65,000 shall be available for the United States Contribution to the International Secretariat on Middle Level Manpower".

Mr. LIPSCOMB. Mr. Chairman, this amendment reduces the amount for International Conferences and Contingencies by $65,000. The amendment only deletes the $65,000 of funds that have been proposed for the Secretariat on Middle Level Manpower which happens to be a fancy name for appropriation purposes for the International Peace Corps Secretariat. It does not delete the funds for the World Food Congress. This is a new international organization which has been set up. It is my understanding the Peace Corps proposes to offer legislation during this session of the Congress to give them authority to go under this program in future years. If we vote this money today, we are putting the stamp of approval on a new international organization of which we do not know how much it is going to cost or how much our contribution is going to be. The background of this particular organization is as follows:

In October of 1962 there was a 41-nation meeting in San Juan, P.R. At this meeting 41 of those nations decided they would propose a resolution which was adopted that set up the International Peace Corps Secretariat to be headquartered in Washington, D.C. Our State Department voted for this resolution, and at the same time our State Department agreed to furnish this Secretariat with its chief administrative officer and all other personnel and funds to meet the expenses of the Secretariat for the first year. The estimated expenditures they agreed to for this first year were $150,000. Of this amount $70,000 was to be in detail of personnel. The U.S. Government and its agencies will pick up the tab for all personnel costs including allowances and benefits.

The State Department at the present time is making the services available of former Deputy Assistant Secretary of State for Inter-American Affairs, Mr. Richard N. Goodwin, as the Secretary General of this International Peace Corps Secretariat. His salary is $19,656 annually. The position he left, to go with the International Secretariat, has been filled by another Deputy Assistant Secretary of State, and he is being paid out of the Bureau of Far Eastern Affairs appropriation.

The Peace Corps is also contributing personnel to the International Secretariat to the tune of about $50,000. The Agency for International Development is also contributing personnel.

The request before the subcommittee asked for $80,000 to supplement the $70,000 in personnel. The subcommittee wisely cut this to $65,000. This budget juggling act was performed by the State Department. They did not have the authority. There is no authority, there is no law. If they intend to start an International Peace Corp Secretariat this is the time to stop this expenditure until Congress has a chance to develop adequate information to see whether our Government should go into the program.

Mr. BOW. Mr. Chairman, will the gentleman yield?

Mr. LIPSCOMB. I yield to the gentleman from Ohio.

Mr. BOW. Is it not a fact that these funds which the gentleman is trying to strike out of the bill are being used not only for Americans, but these funds are going to be used to transport nationals of other countries? In other words, we are going to pay the expenses of bringing nationals of other countries to these international meetings. This is not just for our citizens going to these meetings, but we are going to pick up the tab for all these other nations, too. Is that correct?

Mr. LIPSCOMB. The gentleman from Ohio is exactly right. These finances are to be used to finance the participation of other nations in the International Peace Corps Secretariat which we are financing this fiscal year. We will pick up the tab.

Mr. THOMAS. Mr. Chairman, I ask unanimous consent that all debate on this paragraph and all amendments thereto close in 10 minutes, 5 minutes to be reserved to the committee.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. THOMAS. Mr. Chairman, I ask unanimous consent that the bill be considered as read and open to amendment.

Mr. GROSS. Mr. Chairman, will not the gentleman withhold that until we dispose of this matter? I have a point of order to the bill.

Mr. THOMAS. Mr. Chairman, I withdraw my request.

The CHAIRMAN. Does the gentleman from Iowa [Mr. Gross] desire recognition?

Mr. GROSS. Yes, I would like a little recognition, but I would like to hear what they have to say before I take my time.

The CHAIRMAN. The gentleman from Iowa is recognized.

Mr. GROSS. Mr. Chairman, in view of the fact that we have not heard from the gentleman from New York yet, I will ask him a question.

What is the definition, what is the meaning of "middle-level manpower"?

Mr. ROONEY. I do not know, but I have a suspicion. These sorts of designations do not trouble me too much. I take it this is just another bureaucratic phrase.

Mr. GROSS. It is worth $65,000 in this bill alone.

Mr. ROONEY. The gentleman from Iowa and I discussed this yesterday. This $65,000 appropriation is a contribution toward producing an International Peace Corps that will eventually save millions of our American citizens' dollars and help in keeping peace in this troubled world.

Mr. GROSS. Yes, an International Secretariat for the Peace Corps which has been spawned out of a "middle-level manpower" meeting. Now, what is "middle-level manpower"? I would like someone to describe this father of this latest child, the International Secretariat of the Peace Corps. Who sired this thing? What is "middle-level manpower"?

From whence came this illegitimate child? For those who were not here yesterday, may I say representatives of the Peace Corps and the State Department went down to San Juan, P.R., last October, to the Rockefeller Hotel, and I guess there is none plushier in those parts, with a rate of $56 a day in season. I understand they gave a reduced rate of $26 a day to the representatives of the State Department and the Peace Corps, that great down-to-earth, labor-of-love organization.

Amid these lush surroundings they set up a brandnew international organization for which we have picked up every dime of the expense so far, some $150,000 extracted from funds which Congress delegated power to the Executive to spend but with no authority, not one word of authority on the part of Congress for the establishment of an International Secretariat of the Peace Corps. Now they seek another $65,000, making a total of $215,000 to establish an organization, as the gentleman from California said a few moments ago, still another international organization, for which there is not one scintilla of authority on the part of Congress.

If you are interested in saving a few dollars, here is $65,000 that you can save and thereby put these people on notice that hereafter they must come to Congress for authority to establish these international organizations, rather than this backhanded, back-door deal.

Let me give another illustration of how these things go. Congress appropriated $10,000 for a preliminary study of the feasibility of establishing the Peace Corps. The contract went to the University of Colorado. But before the University of Colorado had reported on its study, the Peace Corps was on the way. If I recall correctly some $13 million had been spent to establish the Peace Corps before it was authorized by Congress.

I urge you to help the taxpayers out to the tune of $65,000 on this one, and I will appreciate it if you do.

Mr. ROONEY. Mr. Chairman, I rise in opposition to the pending amendment.

Mr. Chairman, you will find that pages 642 and 643 of the printed hearings on this bill show all the details with regard to the moneys involved here. And regardless of whether you call it the middle-level manpower commission or what not, this would be $65,000 appropriated to the State Department for the expenses of this group, the purpose of whom is the formation of an International Peace Corps.

The $80,000 requested of the committee was cut to $65,000. The printed hearings show that the money is for the transportation of documents, training equipment, training and orientation program sessions, communications and utilities, printing and reproduction of conference documents and Secretariat reports, supplies and materials, to include the purchase of train-aids, instructional materials, office supplies, travel and transportation costs.

This is for the expense of bringing together a group from nations all over the world to convince them that it would be to their advantage to settle the unsettled situation in the world today, to form an International Peace Corps to go into the undeveloped nations and do as the U.S. Peace Corps has been doing.

As I frankly said in the full committee meeting last Friday, I originally had my doubts about whether or not the Peace Corps would succeed, but I have since come to change my mind 1,000 percent. It has been one of the best ideas developed in the present administration's program, and it has been very, very well worthwhile.

Now, is it not good sense to get the burden off the backs of the U.S. taxpayers by having other nations form Peace Corps to go into undeveloped countries and use their funds instead of American funds?

At page 647 of the hearings you will find that already, since January 1, when this Secretariat began on a provisional basis—and it is a provisional basis and particularly authorized; there is no question about that. The overruling by the Chair of the point of order made by the gentleman from California should be sufficient proof of that—since January 1, when the Secretariat began on a provisional basis, more than $2 million have been appropriated by just two countries for Peace Corps activities on their own as the result of this Secretariat's work. This is the undisputed testimony; never mind the nonsense about middle-level manpower and what it means. I was frank enough to say I did not know what the phrase meant, and I do not think it is important enough for me to spend my time as a matter of curiosity to find out what it means. All I know is this is $65,000 to get other countries to spend their funds and start Peace Corps and that this is to the advantage of the American taxpayers.

Mr. Chairman, I urge defeat of the pending amendment.

Mr. GROSS. Mr. Chairman, I offer a preferential motion.

The Clerk read as follows:

> Mr. GROSS moves that the Committee do now rise and report the bill back to the House with the recommendation that the enacting clause be stricken out.

Mr. GROSS. The gentleman still does not know what "middle-level manpower" means. In the hearings on this bill he admits that the expenditure for this purpose should be scrutinized more carefully, and I refer the gentleman to the statement on page 646 of the hearings.

Mr. ROONEY. Mr. Chairman, if the gentleman will yield, of course——

Mr. GROSS. I am delighted to yield to my friend from New York.

Mr. ROONEY. Is not the gentleman familiar with the fact that I look at every appropriation request with suspicion?

Mr. GROSS. But you wound up your hearings—whatever little there was—by saying "We haven't looked at this carefully enough."

Mr. ROONEY. I made that statement; of course, I did. And now, after a real careful look, we recommend an appropriation of $65,000.

Mr. GROSS. Well, you apparently have not looked at it recently.

Mr. ROONEY. We made every effort to save the taxpayers' money in the overall appropriation. We cut this request to $65,000. We think it is worth $65,000. We think it will save the taxpayers' money in the long run, and that is why we recommend that it now be adopted.

Mr. GROSS. The gentleman knows that if there is established an international secretariat for the Peace Corps, U.S. taxpayers will pick up the tab from now until doomsday, and if there are Peace Corps organizations in any foreign countries we will pay the bill for them, too. If you do not know that, you have not been watching where our money has been going in these foreign giveaway programs for the last 16 or 17 years.

Mr. WATSON. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I yield to the gentleman from South Carolina.

Mr. WATSON. I rise in support of the amendment about which the gentleman spoke previously.

Frankly, I believe that we as Americans have been relying too much upon these international combines. Sooner or later we are going to have to get back to the basic proposition of putting America first.

Mr. Chairman, I believe this proposal here is an affront to the United Nations. If the United Nations is not designed to promote peace, then we ought to do away with it and we can try this other International Peace Corps, or whatever it is.

Mr. GROSS. Mr. Chairman, I want to reiterate that the gentleman from New York [Mr. ROONEY], by his own words in the hearings, says he has not looked at this carefully, and I would suggest that he do so before appropriating further funds.

Mr. ROONEY. Mr. Chairman, I rise in opposition to the preferential motion.

Mr. Chairman, I should like to read to the Committee of the Whole from the testimony at page 647 of the printed hearings:

> We hope that as a result of this activity the Peace Corps idea which began in the United States would be adopted by most of the industrialized countries of the world and they would begin to enter into large-scale programs to work overseas in underdeveloped countries. It is a part of our general policy to try to increase the contributions of other countries to foreign assistance. This is the seed money from which we hope to get a very substantial contribution to oversea proposals in what we are vitally interested. As I say, contributions up to now are over $2 million in the first 2 months of operation. And by next year, at projected rates of growth, the value of the contributions of other countries should exceed $5 million.

Now, I submit, Mr. Chairman, it is just plain good commonsense to spend $65,000 of the taxpayers' money to save millions.

Mr. Chairman, I ask that the gentleman's motion be voted down as well as the pending amendment of the gentleman from California.

The CHAIRMAN. The question is on the preferential motion offered by the gentleman from Iowa.

The preferential motion was not agreed to.

The CHAIRMAN. The question occurs on the amendment offered by the gentleman from California.

The question was taken; and on a division (demanded by Mr. LIPSCOMB) there were—ayes 114, noes 120.

Mr. LIPSCOMB. Mr. Chairman, I demand tellers.

Tellers were ordered, and the Chairman appointed as tellers Mr. LIPSCOMB and Mr. ROONEY.

The Committee again divided, and the tellers reported that there were—ayes 160, noes 137.

So the amendment was agreed to.

Mr. THOMPSON of New Jersey. Mr. Chairman, I want to strongly support the subcommittee's recommendation of $450 million for the accelerated public works program.

You will hear a great deal today, Mr. Chairman, about the jobs that will be created by this appropriation, if it is restored to the bill. This appropriation will create about 60,000 on-site jobs of a year's duration. Off-site jobs in supplying the building materials—cement and sand, sewer pipe, hospital equipment, bricks, and heating equipment—that will go into the useful public works to be created by this appropriation will be about an equal 60,000 jobs. The total is 120,000 jobs.

And, as the wages from these 120,000 jobs are spent, the wage earners will buy food and clothing and services and these new purchases will create additional employment—on the order of 150,000 or so jobs or a grand total of 270,000 new jobs.

What will happen if this appropriation is not voted? The labor of 270,000 men will be lost to the country for a year's time. "Labor is the most perishable of all commodities," it has been said. The hours that a man did not work yesterday can never be regained to the country.

Mr. Chairman, if we are to save the fruits of the labor of men willing to work then this appropriation must be voted.

Unemployment is a grinding disease. Those men affected by it lose hope after a while. After weeks and weeks of searching for work the unemployed coal miner of West Virginia or Kentucky or Pennsylvania or the unemployed iron ore miner of northern Minnesota begins to despair of earning his way again. This appropriation will bring not only jobs and wages, Mr. Chairman, it will bring hope to these unemployed. It will show them that their country has not forgotten that all Americans are not all prosperous. It will show them that their country is willing to invest in itself, willing to put its citizens to work on useful public-works projects to improve their own communities.

Let us make America a better place in which to live. Let us bring public water systems to communities that depend upon private wells. Let us clean up polluted streams by constructing sewage treatment plants. Let us bring hospital facilities to communities in need of them. And let us bring hope to the unemployed of this country.

This appropriation will help to do all these things, and I earnestly urge its restoration to the bill.

Mr. COHELAN. Mr. Chairman, I rise in opposition to the amendment which would strike the important and necessary funds for advancing civilian industrial technology.

The growth of our economy, the welfare of our citizens, and the insurance of our national security all depend to a great extent upon research and development, upon the effective use of new technology. As a matter of fact, it has been reliably estimated that nearly one-half of the annual increase in our gross national product is attributable to the use of new techniques and new knowledge.

In view of the enormous increase in the scientific and technical efforts of this country it is difficult to believe that there could be any serious problem with respect to the use of science and the spread of industrial technology, but such a problem does in fact exist.

In recent years, the rate of increase in our gross national product per worker and per capita has slowed, and is substantially less than that of almost all other industrialized nations. Although there are many causes for this development we have not, among other things, made the necessary changes in attitude and investment policies; we have not mobilized our civilian technology sufficiently to insure the continued growth of our standard of living and our wealth.

As we all know, there has been a substantial increase in this Nation's research and development efforts during the last 20 years. Our dollar input has risen from a half billion dollars to approximately $17 billion. The great majority of this effort, however, has gone for the national security and the exploration of space. No more than $30 million—about the cost of launching a single space vehicle—is being spent for the support of civilian technology.

Of particular importance is the fact that this program is designed to help small firms—those with less than 5,000 employees. And let me emphasize that because of the expense involved in research and development today, these firms have not been able to conduct any of this work which is so vital to progress and growth.

The military and space efforts tend to support, as would be expected, firms, industries, and geographic areas already competent in science and technology. This selection, however, tends to further unbalance the technical resources of the Nation. For example, 300 manufacturing firms perform 90 percent of the research and development done in manufacturing industries and 300 firms do 80 percent of the privately supported manufacturing research and development. If properly implemented, this civilian technology program will help to alleviate, in a small, but meaningful way, this situation.

Mr. Chairman, it seems to me that the urgent requirement for us to compete successfully on the world scene in defense and space is now matched by the need to compete successfully in the economic arena—to insure the maximum possible utilization of our resources, both human and material.

The item included in this bill is a small one, but it is an important one. I urge that it be supported and that when new justifications for advances in our civilian industrial technology program can be made, that they be supported as well.

Mr. Chairman, I hope that this amendment will be defeated.

Mr. WATSON. Mr. Chairman, I rise in strong support of the amendment to delete from the supplemental appropriations bill the funds for the International Secretariat on Middle Level Manpower, whatever that is, or the so-called International Peace Corps.

It is high time for America to rely more upon or own ingenuity, our own strength and resources instead of relying upon these international combines of every description. It is time for us to consider the best interests of America first.

Although the proponents of the measure say that this organization is being set up on a provisional basis, I have found in my limited experience that, in governmental parlance, a provisional bureau usually means a permanent bureau.

Furthermore, this proposal is an implied admission that the United Nations is failing, or has failed, as an effective international peace organization. If this be true, then let us withdraw our financial support of it before venturing into some new international peace scheme, which would ultimately end up as a factory for Communist propaganda with the overburdened American taxpayer footing most of the bill.

Mr. Chairman, I am glad to associate myself with the remarks of the author of this amendment and to urge its adoption by the House.

The Clerk read down to and including line 2 on page 26.

Mr. THOMAS. Mr. Chairman, I ask unanimous consent that the remainder of the bill be considered as read and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. GROSS. Mr. Chairman, a point of order.

The CHAIRMAN. The gentleman will state it.

Mr. GROSS. Mr. Chairman, I call attention to the language in lines 15 through 20 on page 49, which reads as follows:

> SEC. 203. The Administrator of Veterans' Affairs shall have the authority to transfer not to exceed $1,795,000 from the "Loan guaranty revolving fund" to any other appropriations of the Veterans' Administration to pay for increased pay costs authorized by or pursuant to law for fiscal year 1963 if in his discretion he finds it necessary.

Mr. Chairman, I make the point of order against the language of section 203 on the ground that it is legislation on an appropriation bill. I read from the report of the committee:

> The committee has included a provision which will enable the Administrator in his discretion to use not to exceed $1,795,000 from the loan guaranty revolving fund to cover the cost of such pay increases if he finds it necessary.

I submit this goes beyond the scope of the Appropriations Committee and that it imposes additional duties upon the Director of the Veterans' Administration.

The CHAIRMAN. Does the gentleman from Texas desire to be heard on the point of order?

Mr. THOMAS. I do, Mr. Chairman.

Mr. Chairman, the point of order made by the gentleman from Iowa is valid. But, may I respectfully request that the gentleman not press the point of order? For this reason: there are 159,000 employees in the Veterans' Administration. A good percentage of them—about 80,000 of them—are attendants and employees in about 170 hospitals and 18 domiciliaries. This will affect their pay. I have talked with the Administrator. He does not think he is going to use this authority, but the language will give him a little bit of a leeway. But, as I say, Mr. Chairman, the point of order is good if the gentleman wants to press it.

Mr. GROSS. The gentleman will agree that the money will come from the loan guarantee revolving fund and not from funds appropriated to the Veterans' Administration specifically for increased pay costs.

Mr. THOMAS. It is not from appropriated funds.

Mr. GROSS. And the war veterans could be penalized through such use of revolving funds.

Mr. THOMAS. No, the veterans will not be penalized. It will help them.

Mr. GROSS. Mr. Chairman, I insist on the point of order.

The CHAIRMAN. The gentleman concedes the point of order made by the gentleman from Iowa is well taken.

The Chair sustains the point of order.

Mr. THOMAS. Mr. Chairman, before the Clerk reads, may I state that if it should be necessary, we would have to come in and ask for funds to be appropriated. This does not involve appropriated funds and there are ample funds there. I assure my colleagues that the proposed language in the bill makes good sense and I wish our colleague, the gentleman from Iowa, could have seen fit to withdraw the point of order.

The CHAIRMAN. The Chair has already sustained the point of order.

Mr. THOMAS. Mr. Chairman, I move that the Committee do now rise and report the bill back to the House with sundry amendments, with the recommendation that the amendments be agreed to and that the bill, as amended, do pass.

The motion was agreed to.

Accordingly the Committee rose, and the Speaker having resumed the chair, Mr. BOLLING, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 5517) making supplemental appropriations for the fiscal year ending June 30, 1963, and for other purposes, had directed him to report the bill back to the House with sundry amendments, with the recommendation that the amendments be agreed to and that the bill, as amended, do pass.

Mr. THOMAS. Mr. Speaker, I move the previous question on the bill and all amendments thereto to final passage.

The previous question was ordered.

The SPEAKER. Is a separate vote demanded on any amendment?

Mr. BOW. Mr. Speaker, I demand a separate vote on the Boland amendment providing the $450 million for public works acceleration.

The SPEAKER. Is a separate vote demanded on any other amendment? If not, the Chair will put the question on the remaining amendments.

The question is on agreeing to the amendments.

The amendments were agreed to.

The SPEAKER. The Clerk will report the amendment on which a separate vote has been demanded.

The Clerk read as follows:

Page 7, after line 14 insert:

"PUBLIC WORKS ACCELERATION

"For an additional amount for 'Public Works Acceleration', $450,000,000: *Provided*, That no part of this appropriation shall be used for any project that has ever been rejected by the Senate or House of Representatives or by any Committee of the Congress: *Provided further*, That no part of this appropriation shall be used for any project that does not require a financial contribution from State or local sources except projects dealing with preservation of forests in the jurisdiction of the Department of Agriculture and the Department of the Interior."

The SPEAKER. The question is on the amendment.

Mr. BOW. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 228, nays 184, not voting 21, as follows:

[Roll No. 19]

NOT VOTING—21

Brademas
Bray
Burton
Corbett
Daddario
Farbstein
Fino

Fuqua
Gallagher
Grant
Healey
Hébert
Jones, Mo.
Kilburn

Lesinski
McMillan
Mailliard
Powell

Walter
Whitener

So the amendment was agreed to.

The Clerk announced the following pairs:

On this vote:

Mr. Walter for, with Mr. Hébert against.

Mr. Brademas for, with Mr. Kilburn against.

Mr. Bray for, with Mr. Sikes against.

Mr. Corbett for, with Mr. Fuqua against.

Mr. Farbstein for, with Mr. Mailliard against.

Until further notice:

Mr. Daddario with Mr. Burton.

Mr. Lesinski with Mr. Fino.

Mr. Powell with Mr. Gallagher.

Mr. BARRETT changed his vote from "nay" to "yea."

Mr. CANNON changed his vote from "yea" to "nay."

The result of the vote was announced as above recorded.

The SPEAKER. The question is on engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time and was read the third time.

Mr. BOW. Mr. Speaker, I offer a motion to recommit.

The SPEAKER. Is the gentleman opposed to the bill?

Mr. BOW. I am opposed to the bill, Mr. Speaker.

The SPEAKER. The gentleman qualifies. The Clerk will report the motion to recommit.

The Clerk read as follows:

Mr. Bow moves to recommit the bill, H.R. 5517, to the Committee on Appropriations.

Mr. THOMAS. Mr. Speaker, I move the previous question.

The previous question was ordered.

The SPEAKER. The question is on the motion to recommit.

The motion was rejected.

The SPEAKER. The question is on passage of the bill.

The bill was passed.

A motion to reconsider was laid on the table.

GENERAL LEAVE TO EXTEND

Mr. THOMAS. Mr. Speaker, I ask unanimous consent that all Members have 5 legislative days in which to extend their remarks on the bill just passed; and that those Members desiring to do so may extend their remarks in the RECORD on the Boland amendment.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. HARSHA. Mr. Speaker, I ask unanimous consent that the gentleman from California [Mr. CLAUSEN] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. CLAUSEN. Mr. Speaker, in view of the affirmative action by this honorable body in approving the appropriation included in the supplemental budget bill, H.R. 5517, for the Point Reyes National Seashore land acquisition, I once again should like to commend the Members for their bipartisan consideration and approval of this item. It truly recognizes the economy of early acquisition and fair treatment to the property owners affected. My primary reason for comment at this time is to request Members of this body to remember their action of today during the fiscal 1965 session. We must keep in mind the overwhelming need to continue this program of appropriation for early acquisition until all lands of this park have been purchased. This will truly be an economy effort and accrue to the benefit of all our citizenry.

COMMITTEE ON EDUCATION AND LABOR

Mr. SMITH of Virginia, from the Committee on Rules, reported the following privileged resolution (H. Res. 314, Report No. 205), which was referred to the House Calendar and ordered to be printed:

Resolved, That, notwithstanding the provisions of H. Res. 103, 88th Congress, the ad hoc Subcommittee on a Science Data-Processing Center of the Committee on Education and Labor consisting of not more than five persons, of whom at least two shall be scientists, may visit in Russia for not exceeding four days to inspect the All Union Institute of Scientific and Technical Information at Moscow.

Notwithstanding section 1754 of title 22, United States Code, or any other provision of law, local currencies owned by the United States shall be made available to the committee and employees engaged in carrying out their official duties under section 190(d) of title 2, United States Code: *Provided*, (1) That no member or employee of said committee shall receive or expend local currencies or appropriated funds for subsistence in an amount in excess of the maximum per diem rates approved for oversea travel as set forth in the standardized Government travel regulations, as revised and amended by the Bureau of the Budget; (2) that no member or employee of said committee shall receive or expand an amount for transportation in excess of actual transportation costs; (3) no appropriated funds shall be expended for the purpose of defraying expenses of members of said committee or its employees in any country where counterpart funds are available for this purpose.

That each member or employee of said committee shall make to the chairman of said committee an itemized report showing the number of days visited in each country whose local currencies were spent, the amount of per diem furnished and the cost of transportation if furnished by public carrier, or if such transportation is furnished by an agency of the United States Government, the identification of the agency. All such individual reports shall be filed by the chairman with the Committee on House Administration and shall be open to public inspection.

CHIEF MEDICAL DIRECTOR, VETERANS' ADMINISTRATION

Mr. TEAGUE of Texas. Mr. Speaker, I ask unanimous consent for the immediate consideration of the bill (H.R. 4549) to amend section 4103 of title 38, United States Code, with respect to the appointment of the Chief Medical Director of the Department of Medicine and Surgery of the Veterans' Administration.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

The Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 4103(b) of title 38, United States Code, is amended by inserting immediately before the last sentence thereof the following: "Section 62 of title 5 of the United States Code shall not apply to any individual appointed Chief Medical Director before January 1, 1964; however, section 59a of title 5 shall apply, in accordance with its terms, to any such individual."

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

AFRICAN FREEDOM DAY

Mr. O'HARA of Illinois. Mr. Speaker, by direction of the Committee on Foreign Affairs, I offer a resolution (H. Res. 315) and ask for its immediate consideration.

The Clerk read the resolution, as follows:

Resolved, That it is the sense of the House of Representatives that April 15, 1963, be recognized as African Freedom Day; and that we extend to the independent countries of Africa our congratulations and assure them of our continued good will.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

Mr. ADAIR. Reserving the right to object, Mr. Speaker, will the gentleman enlighten the House as to the legislative history of this resolution?

Mr. O'HARA of Illinois. I shall be very happy to do so. It is the usual resolution that we annually adopt, recognizing African independence and extending our good wishes. It was cleared by the minority leader and our good colleague, the gentlewoman from Ohio [Mrs. FRANCES P. BOLTON].

Mr. ADAIR. Is this resolution similar in every respect to those which we have passed in previous years?

Mr. O'HARA of Illinois. I can assure the gentleman this is an exact copy of the resolution we adopted a year ago. It is brought up today because of the time element. The House will not be in session on April 15, which is African Independence Day.

Mr. GROSS. Reserving the right to object, Mr. Speaker, may I ask the gentleman when this resolution was considered by the Foreign Affairs Committee?

Mr. O'HARA of Illinois. Every year we observe Pan American Day, and every year we observe African Independence Day. This is the 15th of April. Since we will not be in session on the 15th, it is hoped we may have proper observance tomorrow, both Pan American and African Independence Day. The House adopted the Pan American resolution several days ago in manner similar to that being followed in this instance.

Mr. GROSS. Does not the gentleman think that the committee ought to consider resolutions which come to the House floor in the name of the committee? This bill, to my certain knowledge, has never been considered by the committee.

Mr. O'HARA of Illinois. The committee has considered it in previous years. The gentleman from Iowa is a new and valued member on our committee. Our subcommittee last year gave long consideration to the phraseology, which has been followed exactly in the present resolution. It has been a custom, I can assure the gentleman, for a number of years. This is largely a routine matter.

Mr. GROSS. Let us not consider this as a precedent because from here on out, I assure the gentleman, I will object to any other resolutions that are not considered by the full committee. I will not object to this one today. From here on out, I will object to any resolutions not cleared by the Committee on Foreign Affairs of the House. I would like to add to that that I am not aware as to just what part of Africa is independent.

Mr. O'HARA of Illinois. I can assure the gentleman from Iowa, I know him so well, I know he will never object to anything that extends the spirit of amity.

Mr. DERWINSKI. Mr. Speaker, reserving the right to object, in view of the time limit involved and the dating of this resolution, I can see that a delay would be most upsetting to the gentleman from Illinois, but I would just like to inquire of the gentleman if he can assure us that support of this freedom-for-Africa resolution does not imply any congressional approval of those African governments that are moving away from what we would consider freedom?

Mr. O'HARA of Illinois. No, I can assure my friend from Illinois that there is no hidden motivation in this resolution. It is, as I have stated, a blanket recognition of the aspirations of the people of Africa for free, independent, and we hope democratic governments.

Mr. DERWINSKI. I thank the gentleman.

Mr. BRUCE. Mr. Speaker, further reserving the right to object, I would like to inquire of the gentleman from Illinois whether this carries with it in any form what would be considered a unanimous approval on the part of this body of our action in Katanga and the Congo.

Mr. O'HARA of Illinois. It does not refer to any specific country in Africa. This is merely a blanket expression of our support of their aspirations and efforts for independence. It is worded to avoid any possible political implication or interpretation as the Africans are the masters of their own destiny. The resolution does not apply to any one country or government.

Mr. BRUCE. In other words, if I may pursue this a little further, what the gentleman is trying to get across to me and what we are saying by this resolution is that we are endorsing the hopes and aspirations of people toward building a truly free society in Africa.

Mr. O'HARA of Illinois. The gentleman expresses it much more effectively and melodiously than I could myself.

Mr. BRUCE. Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

The resolution was agreed to.

A motion to reconsider was laid on the table.

BOARD OF VISITORS, U.S. COAST GUARD ACADEMY

The SPEAKER. The Chair lays before the House the following communication which the Clerk will read.

The Clerk read as follows:

COMMITTEE ON MERCHANT MARINE
AND FISHERIES,
Washington, D.C., March 7, 1963.

Hon. JOHN W. MCCORMACK,
The Speaker, House of Representatives,
Washington, D.C.

DEAR MR. SPEAKER: Pursuant to section 194 of title 14 of the United States Code, I have appointed the following members of the Committee on Merchant Marine and Fisheries to serve as members of the Board of Visitors to the U.S. Coast Guard Academy for the year 1963:

Hon. EDWARD A. GARMATZ, of Maryland; Hon. ALTON LENNON, of North Carolina, and Hon. WILLIAM S. MAILLIARD, of California.

As chairman of the Committee on Merchant Marine and Fisheries, I am authorized to serve as an ex officio member of the Board.

Sincerely,

HERBERT C. BONNER,
Chairman.

BOARD OF VISITORS, U.S. MERCHANT MARINE ACADEMY

The SPEAKER. The Chair lays before the House the following communication which the Clerk will read.

The Clerk read as follows:

COMMITTEE ON
MERCHANT MARINE AND FISHERIES,
Washington, D.C., March 21, 1963.

Hon. JOHN W. MCCORMACK,
The Speaker,
House of Representatives,
Washington, D.C.

DEAR MR. SPEAKER: Pursuant to Public Law 301 of the 78th Congress, I have appointed the following members of the Committee on Merchant Marine and Fisheries to serve as members of the Board of Visitors to the U.S. Merchant Marine Academy for the year 1963:

Hon. THOMAS N. DOWNING, of Virginia; Hon. JACOB H. GILBERT, of New York, and Hon. WILLIAM K. VAN PELT, of Wisconsin.

As chairman of the Committee on Merchant Marine and Fisheries, I am authorized to serve as an ex officio member of the Board.

Sincerely,

HERBERT C. BONNER,
Chairman.

SILVER LEGISLATION

Mr. THORNBERRY. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 313 and ask for its immediate consideration.

The Clerk read as follows:

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 5389) to repeal certain legislation relating to the purchase of silver, and for other purposes. After general debate, which shall be confined to the bill and shall continue not to exceed two hours, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Banking and Currency, the bill shall be read for amendment under the five-minute rule. No amendments shall be in order to title II of the bill except amendments offered by the direction of the Committee on Ways and Means which shall be in order notwithstanding any rule of the House to the contrary, but shall not be subject to amendment. At the conclusion of the consideration of the bill, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

The SPEAKER. The gentleman from Texas is recognized for 1 hour.

Mr. THORNBERRY. Mr. Speaker, I yield myself such time as I may consume, and at the conclusion of my remarks I shall yield to the gentleman from California, [Mr. SMITH] 30 minutes.

The SPEAKER. The gentleman from Texas is recognized.

Mr. THORNBERRY. Mr. Speaker, House Resolution 313 provides for the consideration of H.R. 5389, a bill to repeal certain legislation relating to the purchase of silver, and for other purposes. The resolution provides an open rule as to title I of the bill, a closed rule as to title II of the bill, with 2 hours of general debate.

Section I of title I of H.R. 5389 would repeal the Silver Purchase Act of 1934, section 4 of the act of July 6, 1939, and the act of July 31, 1946.

Section 2 would reenact with modifications certain provisions of the Silver Purchase Act of 1934 which are still considered necessary. These include the requirement that the Secretary of the Treasury keep within the United States an amount of silver of a monetary value equal to the face amount of all outstanding silver certificates and the provision that the silver certificates shall be exchangeable on demand for silver dollars, except that the latter provision would be revised to permit the redemption, at the option of the Secretary of the Treasury, of silver certificates in silver bullion, in addition to redemption in silver dollars. This section would also require that the Secretary of the Treasury not dispose of any free silver unless the market price of the silver exceeds its monetary value of $1.29-plus per ounce, except that any free silver could be sold to other departments and agencies of the Government or used for the coinage of standard silver dollars and subsidiary silver coins.

Section 3 would permit the Federal Reserve banks to issue $1 and $2 Federal Reserve notes.

The basic objectives of H.R. 5389 are:

First, to afford the Government a sure and substantial supply of silver for its coinage needs by making available for this purpose the stocks of silver bullion backing the presently outstanding $1 silver certificates. This amounts to approximately 1,300 million ounces of silver bullion.

Second, to eliminate the obsolete and largely inoperative provisions on the statute books requiring the acquisition and holding of silver in the monetary reserves of the United States, and putting a Government floor price of 90½ cents an ounce under newly mined domestic silver, which is far below the current market price.

The need for this legislation results from the facts that world consumption of silver for industrial uses and for coinage has grown to the point where it greatly exceeds world production of silver and U.S. stocks of free silver have been reduced to a point where new sources of supply for the metal must be found if we are to continue to maintain our present silver coinage.

Title II of the bill provides for the repeal of subchapter F of chapter 39 of the Internal Revenue Code of 1954. This subchapter imposes a tax on transfers of any interest in silver bullion where the price for which such interest is transferred exceeds the total of the cost thereof and allowed expenses. The tax is 50 percent of the amount of such excess.

This 50 percent tax on profits on transfers of interests in silver bullion was originally imposed by section 8 of the Silver Purchase Act of 1934. Since its enactment in 1934 it has produced about $5 million of revenue. In the last decade, the revenue derived from the tax has averaged less than $50,000 a year.

Because the need for this tax as a complement to and reinforcement of the Government's silver purchase program will cease when that silver purchase program is terminated, and because there will be little loss of revenue, the Committee on Ways and Means in agreement with the Committee on Banking and Currency that the tax be repealed, and that this repeal apply to all transfers in silver bullion after the date of the enactment of the bill.

Mr. Speaker, I urge the adoption of House Resolution 313.

Mr. Speaker, I yield to the gentleman from Texas [Mr. PATMAN] for a consent request.

Mr. PATMAN. Mr. Speaker, I ask unanimous consent that in the remarks I shall make in the Committee of the Whole this afternoon on this bill, I may insert the committee report and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. SMITH of California. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, as stated by the gentleman from Texas [Mr. THORNBERRY] House Resolution 313 provides for the consideration of the bill H.R. 5389, entitled "An act to repeal legislation relating to the purchase of silver, and for other purposes," for a period of 2 hours.

There are two titles to this bill. Title II, as I understand it, actually comes under the jurisdiction of the Committee on Ways and Means.

We were informed in the Rules Committee this had been cleared by the Committee on Ways and Means. The rule is an open one, so far as title I is concerned. It is closed so far as title II is concerned, due to the fact it amends the Internal Revenue Code that is in force with the long established procedure in the House.

The gentleman from Texas [Mr. PATMAN] gave us a very learned explanation of this bill before the Rules Committee. I think I understood what he was talking about, but on this particular legislation it may be a little bit more far-reaching than some of us think it may be. I would recommend the discussion in the Committee of the Whole to your consideration.

The gentleman from Missouri [Mr. CURTIS] spoke in opposition to the bill before the Rules Committee. Then subsequently thereto, all of us today have received a statement from the gentleman from New York [Mr. PILLION] in opposition, and also a statement from the gentleman from Idaho [Mr. WHITE] in opposition to the bill.

My understanding of the measure is as follows:

Mr. Speaker, the silver legislation (H.R. 5389) which is before the committee today would do four things, namely:

> (1) Repeal the Silver Purchase Act of 1934 and related provisions of the acts of July 6, 1939 and July 31, 1946; (2) retain unimpaired the right of a holder of a silver certificate to redeem the certificate in silver at its monetary value; (3) authorize the issuance of $1 and $2 Federal Reserve notes, and (4) repeal the 50-percent silver transactions tax.

As is explained in the committee report this legislation in repealing provisions of law which have now become obsolete and through authorizing the issuance of $1 and $2 Federal Reserve notes would enable the Treasury Department to meet anticipated silver coinage needs for many years to come from silver presently owned by the Treasury but unavailable for use for coinage purposes because it is held as security for outstanding silver certificates, most of which are in the form of $1 silver certificates. The gradual replacement of $1 silver certificates with $1 Federal Reserve notes will free Treasury owned silver for coinage purposes.

Title II of the bill would provide for outright repeal of the 50-percent transactions tax on bullion. This regulatory tax to discourage speculation in silver bullion was added to the Internal Revenue Code by section 8 of the original Silver Purchase Act of 1934. Since the Silver Purchase Acts are being repealed it is appropriate also to repeal the provisions of the Internal Revenue Code relating to this regulatory tax.

Mr. Speaker, it is my understanding the legislation by overwhelming vote was ordered reported favorably by the Banking and Currency Committee.

Mr. Speaker, I reserve the balance of my time, and at this time yield 5 minutes to the gentleman from Missouri [Mr. CURTIS].

Mr. CURTIS. Mr. Speaker, not only am I opposed to this bill, but I am opposed to the rule. At this point I am not going to discuss the merits of the bill. I am really going to try to dwell solely on whether or not a rule should have been granted. This matter has not just monetary implications, which is the basic part of the bill and therefore properly under the consideration of the Committee on Banking and Currency, but it also has, as has been pointed out, revenue or tax incidence, and that part of the bill was referred to the committee on which I serve, the Committee on Ways and Means. But, the third aspect of the bill has not been considered by either of those two committees, the fiscal aspect.

Now, this is a complicated matter because the monetary policy and the fiscal policy interweave, and it is a difficult thing to say where monetary policy leaves off and fiscal policy begins or, vice versa, where fiscal policy leaves off and monetary policy begins.

Perhaps one way to demonstrate it is that our present $30 billion of Federal Reserve notes have a backing of gold up to 25 percent, but also having a backing of Federal certificates, bonds. The issuance of bonds and debt management is under the jurisdiction of the Committee on Ways and Means, where you get into this business of certificates or evidences of indebtedness against the full faith and credit of the United States.

The point I tried to bring out before the Committee on Rules was that the fiscal aspects of this bill have not been studied, and this I can tell you, whatever the monetary problems are—and incidentally, I made an error in my supplemental views that I want to call attention to. I put them in the CONGRESSIONAL RECORD on Monday, April 8, and they appear on page 5850 where anyone can read them. I made an error in the monetary aspect when I said I thought this was a very immediate critical problem, because already the value of the silver in our vaults exceeded the paper money value, and therefore the incentive for people to actually cash in silver certificates to get the silver bullion and just sell it on the market was there and also the incentive to melt down silver coins. I was in error. The actual situation is that this does not reach that point until silver becomes worth $1.38. So we do not have this critical situation, but it is a situation that can occur and the Committee on Banking and Currency calls attention to, and it is a serious one, one of very great concern.

Mr. PATMAN. Mr. Speaker, will the gentleman yield?

Mr. CURTIS. I yield to the gentleman from Texas.

Mr. PATMAN. May I suggest to the gentleman that the price is $1.29 instead of $1.38. Also, the gentleman said that the fiscal policies were not considered. I suggest the gentleman is in error about that, because outstanding experts were heard. The Secretary of the Treasury was heard extensively, the top fiscal expert of the country, and so was the Chairman of the Federal Reserve Board heard.

Mr. CURTIS. The Chairman of the Federal Reserve Board, I suggest, is primarily concerned with monetary matters, and I again point out that the Committee on Ways and Means has jurisdiction, not the Committee on Banking and Currency, over fiscal management. We have the job of debt management. We have the problem of the balance of payments to a large degree, because we have within our jurisdiction the Reciprocal Trade Act, and this whole problem of balance of payments and gold flow moves right into our jurisdiction.

The point I made in the Committee on Rules was that the Committee on Ways and Means issued notice on March 27 that we were going to have an executive session the very next day, on March 28, on this particular measure. There was not time for anyone to get their facts together or know anything about it. And, we did not have public hearings. No testimony was even taken down in the executive session. It was very informal. I interrogated the Secretary of the Treasury, because here was my concern in the fiscal aspect.

Now, what is the fiscal aspect of this thing that bothers us? We have $2 billion of silver in our vaults owned by the United States. This is against the paper currency that we have issued. It is about $2 billion. Under this bill the executive can withdraw that silver and new Federal Reserve notes, not silver certificates but new notes, of $2 billion can be issued, and the security against them is whatever is in our gold stock.

Mr. Speaker, however we face the thing, we end up with $2 billion less of precious metal behind the same amount of currency, which is $32 billion.

Mr. OLIVER P. BOLTON. Mr. Speaker, will the gentleman yield at that point?

Mr. CURTIS. Yes, I yield to the gentleman from Ohio.

Mr. OLIVER P. BOLTON. In answer to a direct question on this point, both the head of the Federal Reserve and the Secretary of the Treasury made the statement that they would not retire any silver certificates until sufficient gold had been transferred to the account directly behind and backing up our Federal Reserve notes, which they anticipate they can do at the rate of $35 million a year. Therefore, it will take about 14 years for them to accomplish this purpose.

Mr. CURTIS. I thank the gentleman, and that is exactly what should be in the bill, if that is the answer, because you would then correct this fiscal problem about which I am concerned. But the point I am getting at is this: I am talking on the rule rather than the merits. The point is that no committee of the House, at least, the committee with jurisdiction of this matter, can give the House any information, because we did not discuss it, we did not consider it, and we did not call the experts before us. Perhaps that is a correct solution to the fiscal aspects, but believe me, when we take a step like this, we cannot rely on the word of who happens to be the Secretary of the Treasury today, fine as he may be and fine as the other present officials may be—we cannot do this. This is a matter that has to do with law, not with men, and it does relate directly to this point.

Mr. Speaker, one other matter is this: I asked the Secretary of the Treasury, "Is this the first step that is being taken toward devaluing the dollar," because there are some reputable people close to the administration who recommend devaluing the dollar. The Secretary of the Treasury said, "No, that was not the contemplation." I said:

> Well, let me turn the question around, then. If you were going to devalue the dollar would you not have to repeal the Silver Act in this fashion?

And his answer was "yes." He reiterated, though, that that was not their intention.

Mr. Speaker, I want to say that this is a serious matter, as serious as anything I know or I would not have taken the trouble to go before the Committee on Rules and to try to do a little bit of homework, as late as the date was, and as inadequate as has been the amount of work that has been done on this thing. I am telling the House now on the debate on the adoption of this rule, we, your committee to whom you look—the Ways and Means Committee—has not studied the fiscal aspects of this bill and we cannot give you any information. I was the only one on the Ways and Means Committee who even had read the committee reports and hearings in 1934 when the Ways and Means Committee had jurisdiction of the subject matter and had voted out the original act. So the reason why I have suggested to the Rules Committee that this matter be referred—this aspect of it—to the Ways and Means Committee was to get some information, call the experts on this and let us see how we can tighten up, if we can, on this one aspect of the thing the fiscal aspect, we may be depleting the Nation's capital assets to the extent of $2 billion.

Mr. Speaker, my concluding observations are these: I have been putting these materials in the RECORD over the past few months. This administration is pursuing a course of cashing in capital assets and converting them to general revenue. It is a typical example of someone who overspends his income, having inherited a lot, but he keeps overspending. Gradually he sells off his capital assets from which he derives his revenue. This is one further step in the Kennedy administration's selling off of capital assets to make the current deficit look a little bit less. But, gentlemen, if we pursue this course of cashing in the capital assets of the United States, we are simply deferring the day when we are going to have to face up to these matters. When that day comes the consequences are going to be that much worse.

Mr. Speaker, these are the reasons I suggest that the rule be voted down and this fiscal aspect be taken up by the Ways and Means Committee as soon as possible, and brought back on the floor of the House for action. I feel this is a measure that needs attention and something must be done.

Mr. THORNBERRY. Mr. Speaker, I yield 5 minutes to the gentleman from Texas [Mr. PATMAN].

Mr. PATMAN. Mr. Speaker, the distinguished gentleman from Missouri [Mr. CURTIS] complains about the Committee on Ways and Means not assuming jurisdiction of this and having full and complete hearings. It is my understanding that they did have hearings on the tax proposal.

Mr. CURTIS. No, no.

Mr. PATMAN. We submitted the tax feature to the Committee on Ways and Means with the understanding that we would do exactly what the Committee on Ways and Means recommended, because the Ways and Means Committee has jurisdiction. I understand that the gentleman presented his views and the other members of the committee did not agree with him.

Mr. CURTIS. Mr. Speaker, will the gentleman yield for purpose of clarification?

Mr. PATMAN. I yield.

Mr. CURTIS. Mr. Speaker, I want to say this. I was not registering and I want to make it quite clear I was not registering complaint with the Committee on Banking and Currency, or with that committee's having this matter referred to them. Indeed, I think the bulk of this is in the purview of the Committee on Banking and Currency because it concerns monetary policy. But the gentleman is in error in saying that we held hearings. We did not. As to the attendance in the Committee on Ways and Means there was just barely a quorum. No record was made. No one had studied the matter. I say to the gentleman that we are not in a position as a committee of being able to report with any intelligence on the fiscal aspects of this matter. The only matter considered was the tax aspect, and I do say this, that on the tax aspect we did agree that if in the wisdom of the Committee on Banking and Currency they felt this was necessary, then this 50 percent tax should be repealed and I happen to agree with that position.

Mr. PATMAN. It is my understanding that there was only one objection in the Committee on Ways and Means and there was only one objection in the Committee on Banking and Currency. The bill passed by a vote of 18 to 1.

Mr. CURTIS. There was no record vote. There was no vote of 18 to 1.

Mr. PATMAN. There was a record vote of 18 to 1. I happen to know about that.

Mr. CURTIS. Mr. Speaker, that is right; I apologize to the gentleman. I thought that he was referring to the vote in the Ways and Means Committee.

Mr. PATMAN. Let me comment on the gentleman's arguments.

FISCAL POLICIES

The Committee on Banking and Currency heard the Secretary of the Treasury who, by the nature of his job, is the top fiscal expert of the country.

The bill involves fiscal matters in three respects:

First, it costs $9 million a year to print the $1 bills and the cost will be precisely the same whether $1 silver certificates are printed or $1 Federal Reserve notes are printed.

Second, two-thirds of the silver used in the United States now comes from abroad. If the Treasury has to purchase silver, this would mean that the United States would have to increase purchases of silver from abroad and this would worsen our balance-of-payments position.

Third, over a period of 29 years, from 1934 through 1962, the special transfer tax on silver has produced revenues of only $6½ million; $6½ million in 29 years is hardly a fiscal problem which the Ways and Means Committee should want to spend much time in considering in connection with this legislation.

DEVALUATION

In the first place, the dollar cannot be devalued without the President's coming to Congress for legislation to change the gold content of the dollar. If he intended to ask for a devaluation of the dollar, he could ask for a change in silver at the same time.

In the second place, however, there is no necessary relationship between the quantity of silver and the quantity of gold in the dollar. This country devalued in 1934 without changing the amount of silver in the dollar.

There is no logic whatever to the argument that getting the silver certificates out of the way is necessary to devaluation or makes devaluation any easier.

More than that, in the conditions in which we find ourselves today, with the dollar being used as a reserve currency of all of the central banks of the free world, devaluation is absolutely impractical. The President has recognized this in many public statements and in messages to Congress, and he has made a solemn commitment on the part of this administration that there will not be a request for devaluation.

DEFICIT SPENDING

Contrary to the gentleman's statement, the legislation has nothing to do with trying to solve an economic problem resulting from a fiscal policy of deficit financing.

In the first place, the dollar is worth more than the silver for which it can be exchanged.

In the second place, there is no proposal to sell any "Government assets." The silver is not to be sold. It is to be used for coinage.

I asked the Secretary of the Treasury to answer that point for me, and he did in the following letter:

THE SECRETARY OF THE TREASURY,
Washington, April 10, 1963.

The Honorable WRIGHT PATMAN,
Chairman, House Banking and Currency Committee, House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: On April 8 Representative CURTIS submitted an extension of remarks for the CONGRESSIONAL RECORD (pp. 5850–5851) in which he made a very serious charge against the administration's proposed silver legislation. One statement which he submitted said: "The bald effect of the President's proposal to repeal the Silver Act is to permit him to sell off and to use as current revenue $2 billion of precious metals (silver bullion and vault silver dollars) which is maintained as security for $2 billion of our paper currency." This charge reflects a misunderstanding not only of the administration's proposal and its aims, but also of the fundamental procedures of Government accounting. To paraphrase Congressman CURTIS, "the bald fact" is that the proposed release of silver represents a transfer of assets and claims which, apart from relatively minor seigniorage calculations, has no budgetary effect whatever.

If H.R. 5389 should become law, the Secretary of the Treasury would be enabled to retire from circulation outstanding $1 silver certificates for the purpose of releasing the silver now held against those certificates. The released silver could be used only as coinage or, under certain conditions, for sale, to Government departments for public purposes. Apart from the Treasury's present holding of approximately 30 million ounces of "free silver," the Treasury's holdings of bullion against outstanding silver certificates now amount to approximately 1.6 billion ounces ($2.1 billion). All of this reserve impounded against outstanding silver certificates is presently held by the Treasury as an asset against an equal volume of outstanding liabilities (in the form of these silver certificates). In order to acquire these silver certificates from present holders as they are returned through banking channels to the Treasury, the Treasury must make an equal disbursement out of its existing cash balances.

What this means is that the Treasury will, in effect, draw on its present cash balances to buy outstanding silver certificates from the general public. The Treasury, having purchased the silver certificates, will be free to retire them. In this way the Treasury will have purchased the silver for its own use at the same price of $1.29 per ounce as that at which it has been carried as backing for the outstanding silver certificates. This silver, as gradually taken into the Treasury's possession over the years, may go into one of two channels.

The principal use contemplated for the released silver will be that of fulfilling coinage needs. By existing statute, the silver incorporated into subsidiary silver coins is valued at $1.38 per ounce. Consequently, as silver is transferred for this purpose, the Treasury will acquire a seigniorage of 9 cents per ounce, the difference between $1.38 and $1.29. This "profit" would be reflected as a specific item of revenue which is regularly reported to Congress and the public. This minor item of revenue is, in any event, subject to the appropriations process.

Another purpose would be to fulfill necessary uses by various agencies or departments of the Government, notably Defense. On such transactions, apart from any involving the 30 million ounces of free silver which are not relevant to the specific situation covered in Congressman CURTIS' criticism, a payment would be made to the Treasury by the particular Government department out of appropriated funds. If the purchase were made at a price below the $1.29 per ounce at which the Treasury carries the silver on its books, the Treasury would be required to obtain appropriated funds to cover the difference.

I trust this will serve to remove some of the misunderstanding arising from Mr. CURTIS' remarks.

Sincerely yours,

DOUGLAS DILLON.

So I submit that the gentleman from Missouri is in error in his statement in opposition to this bill. This bill has been very carefully gone into. We had extensive and exhaustive hearings. Every witness that any member suggested be brought before the committee was brought before the committee; and every member was permitted to interrogate him, including the Secretary of the Treasury, the Chairman of the Federal Reserve Board, and many other fiscal and monetary experts.

Mr. PILLION. Mr. Speaker, will the gentleman yield?

Mr. PATMAN. I yield to the gentleman from New York.

Mr. PILLION. Does the gentleman suggest that there will be, because of the passage of this bill, a change in the use of silver in this country? One-third is mined in this country and two-thirds abroad. Will there not be a change made in that situation?

Mr. PATMAN. The only point I was trying to make is that domestic consumption of silver is much in excess of domestic production of silver. Therefore, we have to buy two-thirds of our silver from abroad. If the Treasury has to enter the market, we will have to buy still more silver from abroad and this will further harm our balance of payments.

I respectfully suggest this is a good bill. It should be passed. It is in the public interest. I hope the rule is adopted.

Mr. THORNBERRY. Mr. Speaker, on behalf of the Committee on Rules, may I state that representatives of the Committee on Banking and Currency, both majority and minority members, came before the committee and stated that the bill was recommended 18 to 1, and asked for a rule. We were advised that the Committee on Ways and Means considered the bill insofar as title 2 was concerned and asked for a closed rule on title 2. There was a minority dissent from the Committee on Ways and Means. The point is that the House should adopt the rule and then go into the Committee of the Whole House on the State of the Union and debate this bill as the House does under ordinary procedure.

Mr. Speaker, I urge the adoption of the rule, and I move the previous question.

The previous question was ordered.

The **SPEAKER.** The question is on agreeing to the resolution.

The resolution was agreed to.

A motion to reconsider was laid on the table.

EASTER RECESS AND LEGISLATIVE PROGRAM FOLLOWING RECESS

Mr. ALBERT. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The **SPEAKER.** Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. ALBERT. Mr. Speaker, I take this time to advise the House that at the conclusion of my remarks, I will offer a concurrent resolution providing that when the House adjourns tomorrow, it shall stand in adjournment until noon, Monday, April 22, 1963.

I would like to advise Members that this action is taken in accordance with an announcement I made to the House last week. I would further like to advise the House that there will be business on Monday, April 22.

On Tuesday, April 23, it is planned to call up the medical education bill. There will be other important business during the first week following the Easter recess.

Mr. HALLECK. Mr. Speaker, will the gentleman yield?

Mr. ALBERT. I yield to the distinguished minority leader.

Mr. HALLECK. This year as in previous years there have been consultations between the majority and the minority as to the Easter recess. I think it is fair to say that the majority leadership on this occasion expressed quite some time ago their hope that we could have this Easter recess. As far as I am concerned, I have cooperated in trying to work out an arrangement for an Easter recess so that Members might have an opportunity to make their plans. I simply want to say to the gentleman as far as I am concerned, I expect to support this resolution. I am glad he is offering it. I am also glad he has indicated that when we come back after the recess there will be important matters before us. Having said that, Mr. Speaker, I am quite sure the majority leader will agree with me, we certainly all would hope that the various committees of the House having to do with matters of legislative importance including the appropriation bills would be bringing such legislation along as rapidly as possible in order that the business of the first session of this Congress may be expedited to the end that the sine die adjournment would not be too long delayed.

Mr. ALBERT. I thank the gentleman for his statement.

PROVIDING FOR EASTER RECESS

Mr. ALBERT. Mr. Speaker, I offer a concurrent resolution, House Concurrent Resolution 134, and ask for its immediate consideration.

The Clerk read the resolution, as follows:

H. CON. RES. 134

Resolved by the House of Representatives (the Senate concurring), That when the House adjourns on Thursday, April 11, 1963, it stand adjourned until 12 o'clock meridian, Monday, April 22, 1963.

The concurrent resolution was agreed to.

A motion to reconsider was laid on the table.

LEGISLATION RELATING TO PURCHASE OF SILVER

Mr. PATMAN. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 5389) to repeal certain legislation relating to the purchase of silver and for other purposes.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 5389, with the gentleman from California [Mr. SISK] in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN. Under the rule, the gentleman from Texas [Mr. PATMAN] is recognized for 1 hour and the gentleman from New Jersey [Mr. WIDNALL] will be recognized for 1 hour.

The Chair recognizes the gentleman from Texas [Mr. PATMAN].

Mr. PATMAN. Mr. Chairman, I yield myself 5 minutes.

Mr. Chairman, this bill carries out a request by the administration.

Secretary of the Treasury Dillon testified on behalf of the bill. It has been recommended by the Board of Governors of the Federal Reserve System and by Chairman Martin especially, who testified on behalf of the bill.

It was reported by the Committee on Banking and Currency by a vote of 18 to 1. The Banking and Currency Committee considered fully all matters under title I of the bill. Title II, of the bill, which repeals the special transfer tax on silver bullion, was handled by the Committee on Ways and Means. The Committee on Banking and Currency has acted on the recommendation of the Committee on Ways and Means as to title II.

NEED FOR THE LEGISLATION

The need for this legislation results from these facts. First, demand for silver for industrial uses and for coinage has grown to the point where world consumption greatly exceeds world production. Second, Treasury stocks of silver have been reduced to a point where new sources of supply for this metal must be found if we are to continue to maintain our present silver coinage.

Most recently, annual production of newly mined silver in the free world has amounted to about 200 million ounces, compared to a consumption of around 350 million ounces. Production in the United States has been running at around 35 million ounces, while U.S. industrial consumption amounts to over 100 million ounces—about three times current production. In addition, U.S. requirements for coinage last year amounted to about 75 million ounces.

Since two-thirds of our annual consumption of silver already comes from abroad, Treasury entry into the market to obtain silver for coinage would mainly benefit foreign producers, and it would aggravate our balance-of-payments problem.

PURPOSE OF THE LEGISLATION

There are two main purposes of the bill:

One. To protect the Treasury's stock of silver from withdrawal and use for industrial and other purposes and to enable the Treasury to reserve this silver to meet future needs for coinage, the demands for which are growing very rapidly because of coin-operated vending machines and other reasons. This purpose would be accomplished by authorizing the issuance of $1 Federal Reserve notes. The Federal Reserve is now authorized to issue, and does issue, notes of all denominations except $1 and $2 denominations.

The Secretary of the Treasury and the Chairman of the Federal Reserve have indicated that public demands for $1 bills is also expanding very rapidly, and, under this legislation, this expanded demand will be met by issuing Federal Reserve notes, rather than issuing new silver certificates. The Treasury must hold in reserve a certain quantity of silver for each silver certificate in circulation. As silver certificates now in circulation wear out, and are turned in for destruction, they may be replaced with Federal Reserve notes, thus freeing other Treasury silver for coinage purposes.

The second purpose of the bill is to get the Government out of all operations aimed at controlling the market price of silver. Such operations are now clearly impracticable; they are provided for in legislation which is obsolete, namely, the Silver Purchase Acts, which establish a floor price of 90½ cents for silver bullion whereas the market price is now between $1.26 and $1.27 per ounce.

As another necessary step to bring about a free market in silver, the bill would also repeal the special transfer tax on silver bullion, which tax was adopted as a part of the silver purchase and price stabilization program instituted with the Silver Purchase Act of 1934.

ONE- AND TWO-DOLLAR FEDERAL RESERVE NOTES

The most important feature of the bill from the Treasury's standpoint is the section which would permit the issuance of $1 Federal Reserve notes.

There are now several types of U.S. currency in circulation, but substantially all of this currency is of two types. The first and most important type is the Federal Reserve note which is, of course, issued by the Federal Reserve; and the second most important type is the silver certificate issued by the Treasury.

All types of currency in circulation amount to about $32 billion. Of this, $29 billion is in Federal Reserve notes and slightly under $2 billion is in silver certificates. Silver certificates may be issued in all denominations. Federal Reserve notes may also be issued in all denominations with the notable exception of $1 and $2 bills. The legislation would authorize Federal Reserve notes in $1 and $2 bills, although the total demand for $2 bills is so small that this denomination is not important to the purpose of the legislation one way or another.

Under present law, the Treasury is required to buy such newly mined domestic silver as may be offered at a price of 90½ cents an ounce. The market price of silver has long been above this floor price. Indeed, the market price has jumped about 40 percent since November 1961, when the Treasury stopped selling silver. The present price is between $1.26 and $1.27.

If the $1 Federal Reserve note is not authorized, the Treasury will soon be in a position of being forced into the market to buy silver for its coinage needs. Such purchases would drive the price of silver up to its monetary value of approximately $1.29. If the market price of silver should exceed $1.29, it would become profitable for the public to turn in silver certificates for the silver. This would lead to the withdrawal of all $1 bills from circulation, and business and consumers would be handicapped by the lack of $1 currency.

At a price of $1.38 per ounce for silver, furthermore, the public would find it profitable to melt down subsidiary coins—half dollars, quarters, and dimes—for their silver content.

EFFECT ON GOLD RESERVES

Gradually replacing silver certificates with Federal Reserve notes would, of course, create some increased requirements for gold reserves, This, however, would be small. Under present law, Federal Reserve notes must be backed 100 percent by collateral. In actual practice, this collateral is substantially all gold and U.S. Government securities. Under present law, which would not be amended by this bill, Federal Reserve notes must be backed by a minimum of 25 percent gold.

The Secretary of the Treasury has indicated that the replacement of $1 silver certificates will be done gradually, using only that amount necessary to meet the current needs for silver coinage. Under this procedure, the gold reserve needed to back the new issuance of Federal Reserve notes should not exceed about $35 million annually. However, even if all of the $1.8 billion of silver certificates were immediately replaced by Federal Reserve notes, the additional requirements for gold would amount to only approximately $450 million. This amount is well within the margin permitted by our present stock of monetary gold.

NO EFFECT ON VALUE OF THE DOLLAR

Replacing the silver certificates with Federal Reserve notes will in no way diminish the value of our currency nor diminish its acceptability. In our money system, dollars are good for the purchase of all of the many kinds of goods and services our economy produces; dollars are a claim to any and all kinds of assets, and they are in fact created against many kinds of assets, not just one of two metals.

The fact that the dollar stands on its own feet, and not upon its silver backing, has been proven by the fact that, in the almost 30 years since the passage of the Silver Purchase Act, the dollar has been worth more than its silver content. The recent sharp rise in the price of silver obviously does not reflect a diminishing value of the dollar because the average price of other commodities has not risen. On the contrary, increased industrial uses of silver, particularly in electronic equipment and space vehicles, have simply increased the price of silver.

THE VALUE OF THE DOLLAR RESTS ON ALL KINDS OF ASSETS

The custom of requiring money to be backed by a certain quantity of gold or silver or of some other scarce commodity is a carryover from ancient times when it was necessary to arbitrarily fix money in terms of some scarce commodity, as a way of preventing too much money from being created.

When William Jennings Bryan was making his crusade for the monetization of silver in the 1890's he was, I think, entirely right at that time. The supply of money was then limited by the supply of gold, and he recognized that the supply of money was inadequate. If he were alive today, I strongly suspect that he would now be crusading for a more adequate supply of money, but he would not be arguing for the monetization of silver. He would be arguing for a different kind of management of the money supply by the Federal Reserve officials.

In the 1890's we had, of course, no central bank, no Federal Reserve System. The Federal Reserve System was established in 1914.

Like all of the other industrial countries of the world today, we have a managed money system wherein the maximum money supply is consciously and deliberately determined by the central bank. And like the money systems of other economically developed nations, our money system makes only a small use of currency.

SILVER CERTIFICATES AMOUNT TO ONLY 1.2 PERCENT OF THE NATION'S MONEY SUPPLY

On January 28, for example, the total money supply of the United States, as the term "money supply" is most narrowly defined, was $148 billion; $117 billion of this was in the form of demand deposits in the commercial banks. Only $31 billion, or 20 percent was in the form of all kinds of currency in circulation outside of banks. Furthermore, only 1.2 percent of the money supply was in the form of silver certificates of all kinds, and only 1 percent in the form of $1 silver certificates.

In our money system the Federal Reserve determines at all times the maximum number of dollars that may be in existence. Under this system of managed money, our economy is not likely to be plagued with too much money. On the other hand, if our money supply were limited to the supply of any one of two commodities, we would most certainly be plagued with too little money.

This is a good bill and should be passed without serious opposition.

Mr. WIDNALL. Mr. Chairman, at this time I yield 10 minutes to the gentleman from New York [Mr. PILLION].

Mr. PILLION. Mr. Chairman, I consider this bill to be the most important bill that has reached the floor of this House up to date. The bill would make most drastic major and unnecessary changes in our fiscal monetary policy.

In order to save time, I would like to restate to the House a summarized criticism of this bill which was circulated in a letter to Members of the House this morning.

The major effect of the passage of the bill would be as follows:

First of all, it would repeal the present law requiring the Treasurer to redeem all $1 and $2 U.S. currency in silver dollars containing 0.77 ounces of silver at a monetary value of $1.29 per ounce.

The second effect of this bill would be it would grant new authority to the Federal Reserve Bank to issue $1 and $2 fiat, nonconvertible, nonredeemable Federal Reserve notes in substitution for all $1 and $2 U.S. silver certificate currency.

The bill would authorize the withdrawal from circulation of $1.6 billion of outstanding $1 U.S. silver certificate currency and $90 million of $2 U.S. silver certificate currency.

The next effect of this bill would be it would terminate the issuance of silver dollars of $1 denomination.

The next effect of the bill would be to authorize the Secretary of the Treasury, at his option, to redeem outstanding U.S. silver certificate currency in silver bullion in place of silver dollars as now required by law.

The next effect of this bill would be it would increase by $500 million the required 25-percent gold reserve for about $2 billion of substituted Federal Reserve notes, including $350 million of $5 and $10 silver notes being withdrawn under Presidential order.

Mr. PATMAN. Mr. Chairman, will the gentleman yield for a correction?

Mr. PILLION. I yield.

Mr. PATMAN. May I suggest that the gentleman is reading the wrong column about the issuing of silver certificates. I believe he said there were $90 million outstanding. I think the correct figure is $1,405,000.

Mr. PILLION. Yes; $90 million is correct, of $2 bills, U.S. currencies.

Mr. PATMAN. I know that is correct of U.S. notes but not as to silver certificates of $2.

Mr. PILLION. The next effect of this bill would be that it would reduce to $3.5 billion the free gold available to meet $25 billion of foreign-held dollars and short-term obligations.

Now, this bill is predicated upon the alleged and the erroneous assumption that a complete abandonment of silver convertibility is needed to free enough silver to meet our coinage and currency reserve requirements.

Secretary of the Treasury Dillon testified before the Committee on Banking and Currency that our coinage and reserve requirements for $1 silver certificates is about 113 million ounces of silver per year. He estimated that 300 million ounces would be freed by the withdrawal of $5 and $10 silver certificates; that that would be enough to meet our requirements for about 3 years.

Now, in addition to the 300 million ounces that would be freed by the withdrawal of $5 and $10 silver certificates, the Treasury has on stock as of now about 30 million ounces of silver. The Atomic Energy Commission has 64.7 million ounces for which it has no prospective use, and this 64.7 million ounces available was not disclosed to the committee during the hearings. So, as of now, our Government has on hand a free available stock of silver sufficient to meet all monetary requirements for the next 3½ or 4 years.

This bill is an abrupt, panicky repudiation of our basic monetary and fiscal policies. It threatens our gold reserve, which is at the lowest ratio on record. It will add additional pressures for an international devaluation or a repudiation of our dollar obligations to redeem foreign holdings and foreign obligations.

Now, Mr. Chairman, I ask the patience of this House. I know this is rather technical and everybody is impatient to get home, but I ask your indulgence to amplify and summarize the conclusions that I have just given to the House.

I regretfully have to state that this bill does not solve the basic causes of our fiscal and monetary problems. It is a "quickie," overly simplified attempt to postpone the inevitable reckoning caused by inflationary domestic deficit spending, an overexpansion of credit and money supply, and a chronic substantial deficit in our international balance of payments. That is the root of our evil. This bill does not attempt in any way to solve it.

This bill deals with the symptoms, not the causes, of our silver shortage. This bill will not mine, refine, or produce 1 ounce of silver to our stock. It merely reallocates silver by moving it from one stockpile to another.

Now, in thinking about this problem we must deal with both the price and the demand and supply factors worldwide and within this Nation itself. In 1961 the price of silver was 71 cents per ounce.

Since then the price of silver has jumped to $1.27 per ounce, almost doubled in the space of a year and a half.

Mr. Chairman, the cost of the production of silver has not risen appreciably in that year and a half. The cost of production does not account for this price jump. The coinage and the currency requirements of the United States come out of our stockpile and from our national silver production which amounts to about 35 million ounces annually. Our coinage silver is not purchased in the world market so that this is not a factor that created the increase in price from 71 cents to $1.27.

The industrial demand? We talked about that a great deal in the hearings. The industrial demand has been steadily increasing but not to the extent that would warrant this price increase. In fact, the largest users of silver industrially are the film manufacturers because of new processes that have just been developed and which are just going on the market for the manufacturer of film that will require substantially less silver than is now required. So the industrial silver demand will decrease and not increase in the future in that area of industry. Therefore, that is not a major cause for the artificial prices that prevail at the present time in the world silver market.

Mr. Chairman, the present consumption of silver is about 350 million ounces annually and the production is about 250 million ounces. I differ a little bit with the distinguished chairman on that figure, but the difference of that 100 million ounces is made up of our U.S. stockpiles and does not affect the world market or the prices in the world market. So that neither industrial users nor the consumption-production ratio account for the shortages or the price rises in silver.

The CHAIRMAN. The time of the gentleman from New York has expired.

Mr. PILLION. Will the gentleman yield to me 5 additional minutes?

Mr. WIDNALL. I yield the gentleman from New York 5 additional minutes.

Mr. PILLION. Mr. Chairman, the rise in the price of silver which today is considerably above the cost of production can be accounted for by two elements, and before we find the solution let us find what the causes are. Here are your causes. First there is a speculative manipulated drive by foreign interests to increase prices and corner the free world silver market. The London silver market—the dealers are involved—and the second largest producer, Mexico, has withheld its silver, held it off the market and contributed toward the manipulation which produced the present artificial prices of silver.

Mr. Chairman, at today's prices it was expected that large stocks of silver would go out of Red China into the open market. This did not materialize. One reason given was that the Russian technicians had left and there was a lack of Chinese technicians for the refinement of Chinese silver coins into marketable bullion. I suspect that that is not the true reason. The withholding of silver from the world market by both Mexico and Red China has nefarious political purposes behind it.

Mr. Chairman, Secretary of the Treasury Dillon testified that there has been a large foreign speculative interest driving up the price of silver since 1961. I agree with him.

Our problem is how to break up the world silver rigged artificial price level and bring the prices back down to a cost-of-production level.

We can most effectively do this by making our silver stocks freely available for normal demands around the world.

If we do not break the artificial price of silver when we have more than 100-percent silver backing for our currency, how can we defend ourselves against a similar attack upon our gold stocks where the ratio is $1 of gold for $7 of gold liabilities held by foreigners which they may demand at any moment, or at any time, and where our gold has a backing of only 25 percent?

We must remember that the mining, refining, and supply of silver will increase due to the higher prices. But production takes time. It takes time to reoutfit and reopen old mines and to put new mines into production. So I recommend a little patience on the part of the gentleman in that respect.

The second major cause for the increase in silver prices is that of hoarding and a lack of confidence in our fiscal and monetary policies.

The best measurement of the fear of currency inflation and the decreasing confidence in our fiscal and monetary policies can be found in the drain upon our silver dollars out of the Treasury. Let me cite some figures.

On October 1, 1961, 18 months ago, the Treasury had in stock $141 million in silver dollars.

On December 1, 1962, the Treasury had in stock $100 million in silver dollars.

On April 3, 1963, the Treasury had in stock $81 million in silver dollars.

In less than 18 months we lost $60 million of silver dollars and today we are losing silver dollars at the rate of $1 million a day. At this rate, our silver stock will be exhausted within the next 2 or 3 months.

This is a perfect example of the application and operation of the Gresham law, where good money—I am talking now about good silver certificates and silver coins, silver convertible money—is being driven out of circulation by bad money, that is, Federal Reserve notes, that we intend to substitute for good money.

You do not meet this psychological problem in human action by further degrading and devaluating the dollar as proposed in this bill.

The CHAIRMAN. The time of the gentleman from New York [Mr. PILLION] has expired.

Mr. PATMAN. Mr. Chairman, I yield 5 minutes to the gentleman from Rhode Island [Mr. ST GERMAIN].

Mr. ST GERMAIN. Mr. Chairman, this bill is of vital concern not only to thousands of people in my State, but also to silver users and consumers all over the country. In fact, it is important to every person in the country.

This bill will permit the operation of a free market for silver by repealing the acts which oblige the Treasury to support the price of silver. It repeals the special tax on transfers of interest in silver which is designed to prevent speculation while the Treasury is required to buy silver. In order to keep the Treasury out of the market this bill provides for the use of present silver stocks for making half dollars, quarters, and dimes. This is accomplished through the issuance of $1 Federal Reserve notes which will permit the retirement of silver certificates, thus releasing silver for coinage.

In the absence of a free commodity market today, we have a market in which the price has risen nearly 40 percent in 16 months. The market is unstable and unpredictable. Secretary Dillon has pointed out that the spectacular increase in the price of silver has benefited the producers, but has created difficulties for the users. He stated that the silverware, jewelry, and related industries have had to cope as best they could with these increased costs. This bill will give the users the much needed assurance of a relatively stable price level. We do not know what the price level will be.

The silver laws which this bill will repeal are not necessary to our monetary system. They were passed to help the mining industry. How much they have helped is shown by the fact that the Treasury has been required to take in approximately 3 billion ounces of silver since 1933. The absence of this silver in the market has forced up the price to its present level of $1.275 per ounce.

It has been said that the passage of this bill will adversely affect the balance of payments and gold flow. On the contrary, failure to pass this bill will have an adverse effect.

It is estimated that approximately 100 million ounces of silver annually will be needed in the next few years to meet the Treasury requirements for silver. At the $1.29 per ounce, this will require the retirement of $129 million in silver certificates. To replace this amount of certificates with Federal Reserve notes will require 25 percent backing in gold, or about $33 million. This gold is set aside as backing, it does not leave the country.

If H.R. 5389 does not pass, the Treasury cannot meet its requirements from its stock on hand which amount to approximately 1.6 billion ounces. It will have to go into the market. We already must import two-thirds of our industrial requirements—70 million ounces—for which payments can be demanded in gold. To this drain on our gold supply the Treasury must add the cost of its requirements of 100 million ounces of silver which it must obtain from foreign sources. This will result in a direct drain on our gold supply.

It has been said that this bill permits the administration to cash in $2 billion of capital assets in silver. It should be made clear that the $2 billion does not belong to the administration. It belongs to the holders of silver certificates—the public. Before anything can be done with this silver the certificates must be bought from the public.

In effect, the silver certificates will be purchased from the public with the half dollars, quarters, and dimes manufactured from the silver. This is the reason why the Treasury will gradually retire silver certificates equivalent to its coinage requirements.

This is not a fiscal problem. It is a monetary problem which the Banking and Currency Committee after 4 days of open hearings has properly resolved by a reported vote of 18 to 1. It was reported that the Ways and Means Committee voted unanimously on the tax provisions.

Typical of the confused thinking about silver is the statement that the value of silver bullion behind our silver certificates is 30 percent greater than the face value of the paper money it supports. The three-fourths of an ounce of silver backing each silver certificate is never worth more than the market price for silver. Today this amount of silver is worth 98 cents.

This bill is for the purpose of permitting the operation of a free market for silver with the Treasury out of the market. In order to keep the Treasury out of the market, provisions must be made for it to obtain silver, for subsidiary coins from silver stocks on hand, and to provide for an adequate supply of $1 bills.

The urgency for immediate action is indicated by the performance of the silver market.

Mr. WIDNALL. Mr. Chairman, I yield 5 minutes to the gentleman from Missouri [Mr. Curtis].

Mr. CURTIS. Mr. Chairman, I am going to take this time now to discuss the bill itself and its merits. However, for the convenience of the Members and for the Record I am including at this point my supplemental views on H.R. 5389, to repeal the Silver Purchasing Act of 1934, which I have heretofore put in the Record but which I insert now with two corrections. These supplemental views are as follows:

Supplemental Views of Hon. Thomas B. Curtis on H.R. 5389, To Repeal the Silver Purchasing Act of 1934, Including the Tax on Transfers of Silver Bullion

H.R. 5389 is divided into two parts. The first part, sections 1 through 3, is concerned with the repeal of the silver legislation and authorization of $1 Federal Reserve notes. This matter was referred to the Banking and Currency Committee which held hearings on these aspects on March 11–14, expressly reserving to the Committee on Ways and Means jurisdiction with respect to the second part of the measure, the repeal of tax on transfers of silver bullion. The Ways and Means Committee held no public hearings and devoted one morning session of informal executive session to the matter. No testimony was taken, and very short notice was given to the members of the committee that the matter was to be taken up.

Neither the hearings nor report of the Banking and Currency Committee were available during the Ways and Means Committee's consideration. Nor were the hearings and report of the Ways and Means Committee which had jurisdiction of the entire legislation in 1934 made available to the committee. The memorandum prepared by the Ways and Means Committee staff made no reference to the original 1934 hearings and committee report. Upon interrogation of the Secretary of the Treasury and other persons present at the informal executive session it was apparent that they were unfamiliar with these hearings and report.

I received copies from the Library of Congress just as the committee went into executive session.

From the 1934 hearings and report, it is apparent that the Silver Act of 1934 was presented "in developing an improved monetary system."

The committee in its report makes the following points:

The measure is a logical and necessary complement of the Gold Reserve Act passed by this House on January 20 and approved by the President on January 30, 1934. Silver is a valuable component of any monetary system designed to stabilize the money's worth of goods. * * * We may look toward a coordinated use of that silver to check changes in the purchasing power of the dollar.

Section 2 declares the policy of the United States to be to increase the proportion of silver to gold in its monetary stocks with the ultimate objective of having and maintaining in silver one-fourth of the monetary value of the stocks of gold and silver, and three-fourths of the monetary value of such stocks in gold.

The second sentence of the section (5) requires that there be maintained in the Treasury as security for all silver certificates heretofore or hereafter issued an amount of silver in bullion and standard silver dollars aggregating in monetary value the face value of such certificates outstanding at the time.

Section 10 states: "'Monetary value' is defined to mean a value calculated on the basis of $1 for an amount of silver or gold equal to the amount at the time contained in the standard silver dollar and the standard gold dollar respectively."

In respect to the tax being imposed, the committee report has this to say: "Holders of silver are thus allowed to make a profit which should at least equal any profits arising from investments in silver or the purchase and sale of silver for industrial use during times when the price is not being increased by governmental action. The tax being in the nature of a profits tax covers transactions taking place prior to enactment. Were this provision not included in the bill, the policy of equitably reimbursing the Government for the increase which its action may bring to the price of silver could easily be obstructed."

The first question asked Secretary of the Treasury, Hon. Henry Morgenthau, Jr., when he testified before the committee was in respect to the revenue aspects of the tax. I quote from page 9 of the hearings of the House Ways and Means Committee on H.R. 9745, the Silver Purchasing Act of 1934, in the 2d session of the 73d Congress, May 25 and 26, 1934:

"The Chairman (Mr. Doughton). Mr. Secretary, has there been any estimate made as to the probable amount of revenue that may be derived from this 50 percent tax?

"Secretary Morgenthau. It would have to be a very rough estimate, but I would say that it is perfectly possible the Government might get as much as $25 million.

"The Chairman. Per annum?

"Secretary Morgenthau. Well, I would not want to say that; but over the period of the purchase of silver.

Mr. Vinson. The Treasury is deriving no revenue from that source at this time?

"Secretary Morgenthau. No.

"Mr. Vinson. Then that will be additional revenue?

"Secretary Morgenthau. That is correct."

I make this reference to point up two things. The expressed basis for the passage of the act was to establish a monetary policy based upon two precious metals, silver and gold. The purpose of the tax was to collect revenue from the profits that speculators in silver stood to gain from the Government's actions.

The proposal of the Kennedy administration to repeal the act and the tax makes no reference to this historical basis.

The Congress is asked to abandon the monetary policy based upon two precious metals established in 1934 with no reference to its merits or demerits and with little reference to the monetary policy which will supplant it.

The administration presents its arguments in 1962 as if the reasons advanced by the administration in 1934 were specious and sham, that the real purpose of the Silver Act was not to establish a monetary policy, but to provide subsidization to the silver mining industry and that the real purpose of the tax was not to raise revenue, but rather to police the subsidization act.

The question for the Congress is not to determine why the Kennedy administration should treat the Roosevelt administration proposals as sham, but rather whether the 1962 presentation itself is a sham.

Perhaps the Silver Act of 1934 was not to establish a monetary system, but rather to provide a subsidy for the silver industry. Perhaps the tax was imposed not for revenue, but for policing the subsidy measure.

But the proposal of President Kennedy to repeal the act is certainly not designed to improve our monetary system. Rather it is designed to solve a serious economic condition resulting from the fiscal policy of deficit finance and economic circumstances wherein silver bullion may become worth considerably more than the silver certificate for which it may be exchanged.

Repeal of the act adds one other method to the many which have been utilized by the Kennedy administration to cash in capital assets of the Nation to temporarily ease the problems created by the continued high deficits we have experienced and that the administration is planning to continue for several years to come.

In other words, there are more fiscal issues than monetary issues involved in the proposal to repeal the Silver Act.

The bald effect of the President's proposal to repeal the Silver Act is to permit him to sell off and to use as current revenue $2 billion of precious metals (silver bullion and vault silver dollars) which is maintained as security for $2 billion of our paper currency. He may then issue $2 billion of new Federal Reserve notes in place of the $2 billion of silver certificates. This will leave us with an additional $2 billion of paper money backed by our present diminishing gold reserves.

Not only will this leave us minus $2 billion of precious metals to back up our $32 billion of paper currency but it withdraws precious metal which was required to be dollar for dollar of the paper money issued against it. Furthermore due to the rise in value of silver in relation to the paper dollar, the silver bullion behind our silver certificates may become greater than the face value of the paper money it supports. Contrast this to our gold reserves which must be only 25 percent of the outstanding paper money and we begin to see how much the outright repeal of the Silver Act cuts back on our precious metal reserves.

If the Kennedy administration was simply trying to repeal or amend the bimetallic monetary policy we have adopted instead of, as I suggested, cash in capital assets to pay for some of our current expenditures then it would propose one of two things: Readjust the silver reserve required to back up the silver certificates or replace the silver backing the paper currency with gold. Either proposal would correct the problem of silver cash-ins which is the professed concern of the administration.

Certainly it is true that as the policy of deficit financing continues the problems of marketing and managing the Federal debt (a part of fiscal policy within the purview of the Ways and Means Committee) becomes

> more acute. The precious metal standing behind our currency is not just a matter of monetary policy, in these critical times of balance of payment and limited supply of precious metals in our vaults. It deeply involves our basic fiscal policies.
>
> Neither the Banking and Currency Committee nor the Ways and Means Committee have studied or evaluated the implications of the repeal of the Silver Act upon the overall fiscal policy of the United States. This is a responsibility the Ways and Means Committee must meet.
>
> I suggested to Secretary Dillon in executive session that by proposing an outright repeal of the Silver Act the administration lends credence to the belief currently expressed that the administration contemplated devaluing the dollar. Secretary Dillon stated that this was in no sense the policy of the administration. I then asked him if it was true that repeal of the Silver Act was a necessity in order to devalue the dollar. With this he agreed, reaffirming, however, no intention on the part of the administration to do so.

The two corrections relate to the worth of silver now. Silver is not now worth more than the silver certificates.

The cash-in danger occurs if it becomes more.

Mr. Chairman, I want to direct attention to the remarks of the gentleman from Texas [Mr. Patman] when he stated there was no power to sell silver in the bill. As a matter of fact, there is power to sell silver and that can be done if it reaches a certain price. I would refer to the committee hearings on page 19. I will read part of this where the gentleman from Wisconsin [Mr. Reuss], who supports this bill, is interrogating the Secretary of the Treasury beginning in the middle after the first few paragraphs:

> Mr. Reuss. Congress has been concerned recently with stockpiling generally and feels that in many fields metals have been stockpiled out of all reasonable relationship with anticipated use.
>
> If this bill, as is, is passed, I note that it will put the Treasury in unrestricted possession of 1,300 million ounces of silver, available for coinage, which is in current value somewhere between $1½ and $2 billion. This would, as I figure it, take care of the coinage needs of the country at the present level for some 17 or 18 years.

And I interpolate—"using it for current use."

> Mr. Reuss (continuing). Would it not be worth considering whether this is not an unreasonable stockpile and, particularly in view of the very strong demand situation for silver, whether, perhaps with some reasonable floor, $1.265 at the present level or whatever is wise, to prevent harm to our domestic silver industry, the Treasury could be empowered to sell on the market silver in the years to come?
>
> If, for example, it reduced its supply from around $2 billion to around $1 billion it could pay off an equivalent amount of the national debt and save that 4-percent interest or $40 million a year.
>
> Over 20 years that would be close to $1 billion in savings for the taxpayers, and for the years immediately ahead, in view of the fact that we import for industrial purposes about three times the domestic production, it would be a very real help in our balance-of-payments situation, which I know worries you as much as it does me.
>
> What would be wrong with that, if anything?
>
> Secretary Dillon. Well, I do not think anything would be, but the present bill does, in effect, contain just that authority.

That is what I said, I say to the gentleman from Texas [Mr. Patman]. I said that the bald effect of the President's proposal to repeal the Silver Act is to permit him to sell off or to use as current revenue $2 billion of precious metal. Now whether he uses it and whether the other limitations are there, you are giving him the authority in this bill. It would have been possible to have restricted his ability to do this in the bill. If this had been done that would be one thing; but it was not.

Mr. REUSS. Mr. Chairman, will the gentleman yield?

Mr. CURTIS. I yield to the gentleman.

Mr. REUSS. I think the legislative history is clear on this as well as the language of the legislation. If the gentleman will look at section 2 of H.R. 5389, that section which relates to the power of the Secretary of the Treasury to dispose of any silver, I will quote the relevant sentence contained on line 3, page 2:

> Unless the market price of silver exceeds its monetary value, the Secretary of the Treasury shall not dispose of any silver held or owned by the United States in excess of that required to be held as reserves against outstanding silver certificates, but any such excess silver may be sold to other departments and agencies of the Government or used for the coinage of standard silver dollars and subsidiary silver coins.

The gentleman will see from that language that there is in fact, and in addition the power on the part of the Secretary of the Treasury to sell or dispose of silver at a price less than its monetary value which, I believe, is $1.29.

Mr. CURTIS. The gentleman has stated exactly what the whole reason for the repeal of the Silver Act is because the price of silver is getting beyond that value and, therefore, the Treasury could sell. Furthermore, the other end of the restriction is not a real restriction because the bill also says that the President can issue Federal Reserve notes in lieu of the silver certificates. I would like to get on, if I may, and I want to make this other point and then I will be glad to yield to my colleagues.

I want to make this point. If I have time I will yield.

On page 32 Mr. Martin of the Federal Reserve Board was testifying, and the committee report refers to that. I want to point out what Mr. Martin advised this committee to do, and the committee did not follow this advice. He said:

> If this bill is enacted, it is important that the resulting shift from silver certificates to Federal Reserve notes take place gradually. Roughly $2 billion in silver certificates are outstanding. A complete shift of this amount to Federal Reserve notes would reduce the Treasury's free gold stock by $500 million, because of the 25 percent gold certificate reserve requirement on Federal Reserve notes. I am pleased, therefore, to note Secretary Dillon's statement yesterday that the increase in the required gold certificate reserve resulting from the retirement of silver certificates and their subsequent replacement with Federal Reserve notes should not exceed $35 million a year.

There is no restriction in this bill at all as suggested by Mr. Martin, and this points to the fiscal aspects. This can be moved against our gold supply and it will knock down our gold supply by around $500 million if this program is completed.

Secretary Dillon says he does not plan to do this. But suppose the new Secretary of Treasury were the gentleman from Wisconsin, Mr. Reuss; Secretary Reuss I think would probably want to do this, and this is a perfectly proper thing because he believes that.

Mr. PILLION. Mr. Chairman, will the gentleman yield?

Mr. CURTIS. I yield.

Mr. PILLION. A very important point that we should keep in mind is that the Secretary of the Treasury has no control as to how fast people turn certificates in to the Treasury. These certificates are payable on demand, and when they are presented the Secretary of the Treasury cannot say he will redeem them at the rate of $140 million a year requiring a 25 percent, or $35 million addition to our gold reserves. It is not going to be done that way.

Mr. CURTIS. I thank the gentleman from New York.

Mr. REUSS. Mr. Chairman, will the gentleman yield?

Mr. CURTIS. I yield to the gentleman from Wisconsin.

Mr. REUSS. I thank the gentleman for yielding. I have not really faced up to the possibility of my conduct were I appointed Secretary of the Treasury, but I think the gentleman is probably right; I would probably try to save as many dollars of the taxpayers' money as I possibly could by seeing that they got the interest on this money, which as long as it is held in an excess supply as any commodity prevents their getting that. However, Mr. Dillon is Secretary of the Treasury, and he has said he is not going to do that.

Mr. CURTIS. I was not saying it unkindly, but in disagreement with the basic philosophy which I am trying to point out to the House.

Mr. PATMAN. Mr. Chairman, I yield 5 minutes to the distinguished gentleman from Idaho [Mr. White].

Mr. WHITE. Mr. Chairman, it is very difficult to approach a problem of the magnitude of this problem in 5 minutes. I think that the entire timing of this bill and its progress today is similar to what is happening to me. It has been improperly considered. It is brought to us without proper consideration by this Congress as a whole, and I know that the number of Members we have today is a minimum number on a subject of great concern to the men and women of the United States of America. I know as a champion of silver for our monetary base that I follow some very illustrious people of the past. I do not think I am as capable as many of them, but I am going to do as well as I can with the meager ability I possess.

Mr. Chairman, I feel first of all that several misstatements have been made here today: As to the retirement of silver certificates, the backing of the silver certificates, the drain on our gold reserves, the balance of payments; and I think it is my duty to attempt to inform the House as well as I can my views and hope they may see this as I see it.

First of all, since the inception of the Silver Purchasing Act there has been a benefit accruing to the American people through the issuance of silver certificates by virtue of two things.

One of these is a minor thing, seigniorage, which is the alloying of other metals and silver that go into a silver dollar, the other being the difference between the monetary value of silver and the price paid therefor.

I do not care how you approach it, it is a real profit. The dollar bill can be used to retire a debt, and the difference between 90.5 cents and $1.29 represents a profit.

I was listening to the gentleman from Wisconsin who said he would like to save the American taxpayers some money. I would like to save them some money too. In retiring $2 billion of silver certificates to be replaced by $2 billion of Federal Reserve notes there would be an increase in interest payments. I might say a note bears interest. I have never seen any that did not.

The statement by Mr. Martin, head of the Federal Reserve Board, made before the committee, was that the cost to keep a Federal Reserve note in circulation is about 5 percent per annum.

I have an old Federal Reserve note in my pocket. It is a $20 bill issued in 1914 after enactment of the Federal Reserve banking law or the Federal Reserve Act of 1913. This old boy at that rate has cost the American people $50 to keep it in circulation. I respectfully submit that the silver certificates issued in 1933, 1934, 1935, and since have not cost the American people any interest to keep in circulation but have in fact provided a saving for the American people.

With respect to the dilution of our gold reserves, as of January 31 the gold reserve requirement for Federal Reserve backing was $12,115 million. Our U.S. gold stocks on that date were $15,975 million. As of April 2, they were $15,877,538,823, a loss in that period of $100 million.

The foreign claims against our gold stocks today are $21,132 million; of this there is, for long-term obligations, $1,304 million; private claims $8,287 million; official claims $11,541 million.

The CHAIRMAN. The time of the gentleman from Idaho has expired.

Mr. PATMAN. Mr. Chairman, I yield the gentleman 5 additional minutes.

Mr. WHITE. Mr. Chairman, with our present stock of gold of $15 billion, we have obligations amounting to $21 billion. We do not have enough gold to pay our gold obligations that are in existence if they were called upon to be redeemed today.

I therefore feel this legislation should be given complete and serious consideration by this body. I feel all of its aspects should be considered. I would say to the gentlemen who say we are going to reduce our silver reserve over a period of 10 years, as was pointed out by the gentleman from New York, that I can see no reason for that length of time. Any person who accumulates silver certificates in any amount can take them to the Treasury of the United States and demand the bullion or silver dollars.

The present price of silver at $1.272, which is the latest quotation, approaches a monetary value of $1.29. The minute it goes above that, there will be a mad rush to the Treasury to redeem all of the silver certificates that they can redeem so that silver can be used for speculative purposes, and the amount left for currency will be a very meager amount indeed.

I believe that this Congress should take the time to actually analyze what will happen. We have been assured by Secretary Dillon that our present stock of silver will last until 1965 for coinage purposes. I believe we should vote this legislation down and come up with a realistic study and approach, with more than 4 days of hearings. I feel that it is more important to the American people than to have just 4 days of hearings.

Mr. HORAN. Mr. Chairman, will the gentleman yield?

Mr. WHITE. I yield to the gentleman from Washington.

Mr. HORAN. It was my pleasure to serve with the father of the gentleman now in the well of this House, and I know of Compton White, Sr.'s great interest in silver, and I want to commend my neighbor and colleague for his statement in connection with this matter. I think it is time that we go slow and know exactly what we are doing. There are implications in this measure which can be rather complicated, and I certainly want to associate myself with what the gentleman has said here.

Mr. WHITE. I thank the gentleman.

Mr. BARING. Mr. Chairman, will the gentleman yield?

Mr. WHITE. I yield to the gentleman from Nevada.

Mr. BARING. I want to congratulate my colleague on the speech he is making. I also served with your father, and I also worked in the Senate under the great silver leader, Key Pitman, the senior Senator from Nevada, who at that time dictated the Silver Purchase Act. I note you have said that you did not think we had enough gold to back up the Federal Reserve notes that this bill provides for. Does the gentleman know that there is a bill in the Congress right today to do away with gold, too? Do you think that this is the forerunner to take gold out from behind our banking system?

Mr. WHITE. I believe it is, and I do know of the bill. It is now before the Committee on Banking and Currency. It would remove the 25-percent requirement for gold backing of our Federal Reserve notes.

Mr. BARING. I thoroughly agree with the gentleman, and I think we should have another hard look at this bill. I think this is dangerous legislation and should be defeated.

Mr. ASPINALL. Mr. Chairman, will the gentleman yield?

Mr. WHITE. I yield to the gentleman from Colorado.

Mr. ASPINALL. I wish to commend the gentleman from Idaho for the presentation he has made, and I wish to assure the gentleman that I shall support him when he brings up his amendment under the 5-minute rule.

Mr. WHITE. I thank the gentleman.

There is an alternative solution to this problem. If we are going to bid for time, it is in the power of the President of the United States to raise the monetary value of silver. The present subsidiary value, the coinage value, of silver is $1.38 an ounce. If we would raise silver to this price, we would have an ample amount of silver for coinage purposes and at the same time would not dilute our gold reserve, which would be diluted, as has been said, by $500 million.

The CHAIRMAN. The time of the gentleman from Idaho has expired.

Mr. WIDNALL. Mr. Chairman, I yield 5 minutes to the gentleman from Texas [Mr. ALGER].

Mr. ALGER. Mr. Chairman, it is to try to pick up some loose ends here, that I take this time and I want to support what the gentleman from Missouri [Mr. CURTIS] said as to the committee's contention on the transfer tax. That was the only direct jurisdictional interest we had at the time in the bill. We did not have any hearing. It was informal. There was no record made. We were relating our views to the transfer tax, of course, connected with sale of silver, the tax which is a part of this bill, because of the tax recommendations that have been made to us by the President and the imbalance of payments in the trade bill which affect both the backing of our money and the gold outflow.

I want to call attention again to an exchange in our committee that has not been recorded except as found in the CONGRESSIONAL RECORD. As the gentleman from Missouri [Mr. CURTIS] pointed out, he asked Secretary Dillon if it was thought that repeal of the Silver Act was a necessity in order to devalue the dollar. The Secretary answered in the affirmative. I think it is important to remember that.

Mr. Chairman, then I want to read, too, what Chairman Martin said. He said this would affect our gold outflow by $500 million if the retirement was too quick.

Further, I think this can be said accurately. It is not too complicated. Take a dollar out of your pocket and look at it. It says "silver certificate."

That is worth the full amount 100 cents in precious metal; that is, silver. If we go through with this, the dollar will be worth only 25 cents in precious metal, gold, and it will not be redeemable.

Mr. Chairman, finally I would like to conclude my brief remarks by calling attention to that part of the RECORD of April 8, on page 5851, following the views of the gentleman from Missouri [Mr. CURTIS]. I put in the RECORD some views that came to me from the chief of staff of the Joint Committee on Internal Revenue Taxation, as to gold outflow and the increase of liquid liabilities, because I have been challenged in committee several times that my statements on gold outflow were not accurate. It is true they were not accurate because I was including the liquid liabilities which can be redeemed in gold.

Mr. Chairman, in the last 2 years liquid liabilities have increased about $4.6 billion, and if they come back through foreign banks they can be called in gold. Of course, this is in the jurisdiction of the Banking and Currency Committee.

Then, Mr. Chairman, I want to quote from Mr. Stam when he says this:

> As a result of five large successive deficits in our balance of payments we have transferred to foreigners some $7 billion from our monetary gold stock and added another $9 billion to our liquid liabilities.

Mr. Chairman, at page 5852 of the CONGRESSIONAL RECORD of April 8 there are tables given as to the gold outflow and the increase of liquid liabilities which must be considered together.

Inasmuch as the imbalance of payments and old outflow are a part of the hearings on tax recommendations and because of colloquies between the gentleman from Massachusetts [Mr. BURKE] and myself, I would like to supplement earlier statements with information bringing the gold situation up to date. At my request, Colin Stam, chief of staff of the Joint Committee on Internal Revenue Taxation, submitted the following information which I include at this point:

MARCH 25, 1963.

Hon. BRUCE ALGER,
House of Representatives,
Washington, D.C.

DEAR MR. ALGER: In response to your request for data on the relationship between the U.S. balance of international payments and declines in the U.S. gold stock, we are enclosing a table which shows the U.S. balance of international payments and the offsets thereto, including changes in U.S. gold stock, during the period 1954–62.

In this connection, you may be interested in the following succinct summary of the U.S. experience in the last 5 years by Hon. William McChesney Martin, Jr., Chairman, Board of Governors, Federal Reserve System. In his February 1, 1963, statement before the Joint Economic Committee. Mr. Martin stated: "Finally, let me comment briefly on our balance-of-payments problem. * * * As a result of five large successive deficits, we have transferred to foreigners some $7 billion from our monetary gold stock and added another $9 billion to our liquid liabilities."

Sincerely yours,

COLIN F. STAM,
Chief of Staff.

U.S. balance of international payments and resultant reductions in U.S. gold stock, 1954–62

[In millions of dollars]

Year	U.S. balance of payments	Year	Increase (−) in liquid liabilities to foreigners [1]	Increase (+) or decrease (−) in convertible currencies	Increase (+) or decrease (−) in U.S. gold stock
1954	−1,550	1954	−1,252	----------	−298
1955	−1,145	1955	−1,104	----------	−41
1956	−935	1956	−1,241	----------	+306
1957	+520	1957	−278	----------	+798
1958	−3,529	1958	−1,254	----------	−2,275
1959	−3,743	1959	−3,012	----------	[2] −731
1960	−3,925	1960	−2,223	----------	−1,702
1961	[3] −2,360	1961	−1,618	+116	−858
1962	[3] −2,181	1962	−1,274	−17	−890

[1] To International Monetary Fund, foreign central banks and governments, foreign commercial banks, and other international and regional institutions.

[2] Excludes payment of $344,000,000 as increase in U.S. gold subscription to the International Monetary Fund.

[3] The U.S. payments deficit in 1962 would have been $900,000,000 higher in the absence of certain special receipts: $660,000,000 of advance repayments by France, Italy, and Sweden of postwar debt to the U.S. Government, and $250,000,000 of receipts from sale by U.S. Treasury of 15- and 16-month nonmarketable securities denominated in foreign currency to Italy and Switzerland. Debt prepayments of over $660,000,000 had also been received in 1961. By the end of 1962 most countries experiencing reserve gains had repaid all or a substantial part of their 1946–49 borrowing in the United States.

This information was then more fully explained again in my request by Mr. Stam in the following letter:

MARCH 25, 1963.

Hon. BRUCE ALGER,
House of Representatives,
Washington, D.C.

DEAR MR. ALGER: This is in response to your request for data showing for the 5-year period 1958–62 the relationship between the U.S. balance of payments on the one hand and the resultant increase in liquid liabilities to foreigners and decrease in our gold stock on the other.

The requested data are as follows:

[In millions of dollars]

U.S. balance of payments	−15,738
Increase in liquid liabilities to foreigners	−9,381
Increase in convertible currencies	+99
Decrease in U.S. gold stock	−6,456
Total	−15,738

If the $344 million increase in U.S. gold subscription to the International Monetary Fund is included as a decrease in gold stock rather than as an increase in liquid liabilities, the figures would appear as follows:

[In millions of dollars]

U.S. balance of payments	−15,738
Increase in liquid liabilities to foreigners	−9,037
Increase in convertible currencies	+99
Decrease in U.S. gold stock	−6,800
Total	−15,738

Thus, as our letter of this morning indicated, the 5-year situation may be summarized as follows:

As a result of five large successive deficits in our balance of payments, we have transferred to foreigners some $7 billion from our monetary gold stock and added another $9 billion to our liquid liabilities.

The above figures were derived from those in the table submitted to you this morning.

Sincerely yours,

COLIN F. STAM,
Chief of Staff.

It is appropriate at this point that I include the memorandum of April 5 of the gentleman from Louisiana [Mr. PASSMAN] concerning gold holdings, U.S. dollars owned by foreign countries, U.S. balance-of-payments position, and gross public debts:

Gold holdings (free world countries):	
U.S. gold holdings on Dec. 31, 1952	$23,252,000,000
U.S. gold outflow to foreign countries, 1952 through 1962	−7,195,000,000
U.S. gold holdings on Dec. 31, 1962, reduced to	16,057,000,000
Gold holdings, other countries,[1] Dec. 31, 1952	13,028,000,000
Gold holdings, increase, other countries, 1952 through 1962	+11,630,000,000
Gold holdings, other countries, Dec. 31, 1962, increased to	24,648,000,000
U.S. dollars owned by foreign countries (free world):	
Foreign dollar holdings on Dec. 31, 1952	10,546,100,000
Increase in foreign dollar holdings, 1952 through 1962	+14,437,900,000
Foreign dollar holdings on Dec. 31, 1962, increased to	24,984,000,000
U.S. balance-of-payments position:	
1950 net deficit	−1,912,000,000
1951 net deficit	−578,000,000
1952 net deficit	−1,100,000,000
1953 net deficit	−2,100,000,000
1954 net deficit	−1,500,000,000
1955 net deficit	−1,100,000,000
1956 net deficit	−1,000,000,000
1957 (only credit in 13 years)	+500,000,000
1958 net deficit	−3,400,000,000
1959 net deficit	−3,700,000,000
1960 net deficit	−3,800,000,000
1961 net deficit	−2,400,000,000
1962 net deficit	−2,200,000,000
U.S. deficit, 1950 through 1962, inclusive	−24,290,000,000
Gross public debts:	
U.S. public debt on Dec. 31, 1962	303,470,080,489
Other free world countries (latest available figures)	201,500,000,000
U.S. debt exceeds debts of other free world countries by	101,970,080,489
U.S. debt exceeds all other countries of world by	24,000,500,000

[1] Does not include Sino-Soviet bloc.

The above indicates clearly what the foreign aid program is doing to our gold reserves and our balance-of-payments position (trade).

It is long overdue but let us hope not too late that the Congress immediately direct its attention to solving the imbalance of payments and the gold outflow. For my part, it is quite clear that restoring fiscal order will require reduced Federal spending, immediate balanced budget, a reduction of our debt and then with that background tax reform which primarily means a drastic cutback in the tax progression and a reduction of rates.

Finally, a further comparative chart from 1950 to 1962 on foreign holdings of Federal securities, balance-of-payments deficits, and gold outflow to which the gentleman from Missouri [Mr. CURTIS] referred:

	Foreign and international ownership of Federal securities [1]	As a percent of total Federal securities outstanding [2]	As a percent of total short-term liabilities to foreigners [3]	Balance of-payments deficit [4]	Change in total gold stock [5]
	Billions			*Billions*	*Millions*
End of December—					
1950	$4.3	1.7	50.0	−$3.6	--------
1951	4.3	1.7	46.2	.3	--------
1952	5.3	2.0	50.5	−1.0	$492
1953	5.9	2.1	50.9	−2.2	−1.168
1954	6.3	2.3	48.5	−1.6	−298
1955	7.5	2.7	55.1	−1.1	−40
1956	7.8	2.8	52.3	−.9	305

Mr. BURKE. Mr. Chairman, will the gentleman yield?

Mr. ALGER. I yield to the gentleman.

Mr. BURKE. Mr. Chairman, I would like to ask the distinguished gentleman from Texas if a person went into the Federal Reserve bank with one of these new dollar bills and asked the teller to change that bill for four quarters, what would he get in return?

Mr. ALGER. Well, he certainly would not get gold, if that is what the gentleman is talking about, but he could get silver. That makes my point. We go from 100-percent backing in silver down to 25 percent in gold. That is the problem.

Mr. PATMAN. Mr. Chairman, will the gentleman yield?

Mr. ALGER. I yield to the gentleman from Texas.

Mr. PATMAN. You would get four quarters back. There is no question about that.

Mr. ALGER. We are talking about confidence in our money, and it is a much more serious thing than change for a dollar.

Mr. PILLION. Mr. Chairman, will the gentleman yield?

Mr. ALGER. I yield to the gentleman from New York.

Mr. PILLION. Actually, he will not be able to get back a silver dollar containing 0.77 grains of silver, because four quarters contain 0.72 grains of silver. So you are devaluing the silver that a holder can get back from the Federal Reserve bank. That is what is being done here.

Mr. ALGER. I appreciate the contribution of both the gentlemen. Perhaps I have not phrased this well, and perhaps we have been missing the point as far as I am concerned. I am talking about the imminent devaluation of our money because of a run on the bank that we as the world banker might experience, because the world holds $24 billion worth of indebtedness against our $15.8 billion worth of gold. I realize that this is a great danger and the pressure is building.

Mr. PATMAN. Mr. Chairman, will the gentleman yield further?

Mr. ALGER. I yield to the gentleman from Texas.

Mr. PATMAN. The gentleman, I believe, is placing too much importance on the silver certificates.

The CHAIRMAN. The time of the gentleman from Texas has expired.

Mr. PATMAN. Mr. Chairman, I yield 4 minutes to the gentleman from Pennsylvania [Mr. MOORHEAD].

Mr. MOORHEAD. Mr. Chairman, I believe that this legislation can best be understood as an ordinary problem of good business management. For various reasons, including the tremendously expanding use of coin vending machines, the demand for U.S. coins has increased to a great extent over the past years. In order to meet this demand the United States needs a great deal of silver.

Mr. Chairman, this problem which faces the United States affords us two choices: First, we can go out into the open market and buy silver. However, because the production of silver in the free world amounts to only 200 million ounces per year compared to a consumption at the rate of 350 million ounces per year, the price of silver will obviously go up and up.

It may go up to the point where it is profitable to melt down your coins, and coins will disappear from our commerce and business difficulty will ensue.

Further, and directing myself particularly to the remarks of the distinguished gentleman from Texas, if we have to purchase silver in the open market, two-thirds of which comes from abroad, we will be worsening our balance-of-payment situation and we will have a greater drain on our gold supply.

What is the other solution? The other solution is a simple, businesslike one. The Treasury owns 1.6 billion ounces of silver. Why would any businessman buy at $1.275 an ounce what he already has in his inventory at an average price of 50 cents an ounce?

The United States is in this unbusinesslike position because of an antique law. This bill merely repeals the antique law so that the U.S. Treasury can act in a normal, businesslike manner.

Who are the wild-eyed radicals that are supporting this legislation? No. 1, a distinguished member of the Republican Party, the Secretary of the Treasury, Douglas Dillon. No. 2, William McChesney Martin, who has served as Chairman of the Federal Reserve System under three administrations of both parties. The American Bankers Association, and to my friend from Illinois, I say also the Chicago Tribune. The Chicago Tribune on March 14 had an editorial entitled "Repeal the Silver Purchase Act." The editorial reads:

> The country has enough problems without inviting new ones, and therefore we hope Congress will lose no time in repealing the Silver Purchase Act, as Mr. Kennedy and Mr. Dillon request, and as Republicans have been demanding for years.

The Wall Street Journal is another one of these radicals. An article of March 3 reads:

> If the United States were forced into the market, it might have to buy its silver abroad because of insufficient domestic silver supplies. The result, the administration fears, would be a worsening of U.S. balance-of-payments problems and pressure for increased market prices that would cause trouble for the monetary system.

Mention has been made, I believe, by the gentleman from Missouri, of concern over whether the Secretary of the Treasury, Mr. Dillon, or Secretaries of the Treasury in the future, might decide to sell this silver. Does the gentleman realize that under existing law the Treasury has the right to sell the silver at 90.5 cents and, as a matter of fact, continued to sell silver at 90.5 until November of 1961? Under this legislation, instead of the Secretary of the Treasury being permitted to sell silver at 90.5 cents, the legislation raises the price at which the Secretary of the Treasury may sell silver to $1.29 an ounce. Therefore, this legislation is really a restriction on the Secretary and, therefore, in accord with the views of the gentleman from Missouri.

Mr. CURTIS. Mr. Speaker, will the gentleman yield?

Mr. MOORHEAD. I yield to the gentleman from Missouri.

Mr. CURTIS. With that aspect, yes, but you couple with it in this bill also the power to use in lieu of silver certificates the Federal Reserve notes. The combination would result in the depletion of the capital of the United States.

Mr. MOORHEAD. The gentleman knows this silver would be needed in the future to supply our need for coins.

Mr. CURTIS. When the silver bullion goes out of the Treasury it will not be backing the silver certificates as paper money, you will have the Federal Reserve notes, that will have behind them only the gold.

Mr. MOORHEAD. If we do not take this action it is very likely the price of silver will go above the monetary value. Then our only choice would be to reduce the silver content of this quarter that you and I have.

Mr. CURTIS. I agree that action must be taken along this line but I am pointing to the fiscal aspect, that there should be some limitations in here, perhaps along the line that Mr. Martin of the Federal Reserve suggested, that the Secretary be limited in how much he can convert in a year.

So the very thing that the Secretary of the Treasury said that he would plan to do, I suggest must be put into law.

The CHAIRMAN. The time of the gentleman has expired.

Mr. WIDNALL. Mr. Chairman, I yield myself 5 minutes.

Mr. Chairman, I take the floor at this time in support of this bill and to report as the bill came out of the committee, there was only one vote against it and one member abstained from voting at that time. I think it would be well to read again the historical background of this silver legislation. Some of this has been put in the Record by the gentleman from Texas [Mr. Patman].

In 1934 when the Silver Purchase Act was passed and in subsequent years up to about 1959 it was necessary for the Government to support the price for newly mined domestic silver by taking nearly all of it off the market at an artificially high price. The Silver Purchase Act of 1934 had for its main purpose the purchase of silver until that metal would comprise one-fourth of the total gold and silver monetary stocks of the United States. While more than 2 billion ounces of foreign and secondary silver were purchased under the authority of this act at a cost of slightly over $1 billion, these purchases never brought the total silver holdings of the United States near the 25-percent figure. Purchases under the Silver Purchase Act were discretionary with the Secretary of the Treasury and since 1942 no Secretary of the Treasury has found it to be in the public interest to purchase foreign or secondary silver under that act.

Acts passed in 1939 and 1946 required the purchase of all newly mined domestic silver tendered at the mints at artificially established prices. The 1939 act established a floor price of about 71 cents per ounce. The 1946 act raised the floor price to 90½ cents. Since November 1961, when the Treasury stopped selling silver, market forces have caused the price to rise to its present level of $1.27. Thus, the purchase acts are inoperative, and indeed the silver-producing industry has no further need for Government assistance. Since late 1961 the producers have seen a spectacular increase in the price of this product, amounting to 40 percent, and the present price is within a cent or two of the monetary value of $1.29-plus, as compared with a price of about 45 cents when the 1934 law was enacted.

While this increase in price has benefited the producers, the recent rapid rise has created difficulties for the users. The silverware, jewelry, and related industries have had to cope as best they could with these increased costs. Other industrial and defense users have also been greatly affected. The legislation proposed will presumably result in stabilizing the market price at somewhere close to $1.29, a price that is favorable for the producers. At the same time it will benefit the user industries by giving them the much needed assurance of a relatively stable price level. Thus, today is the most opportune time for repealing the silver legislation and taking the Government out of the silver business except as a consumer in the manufacture of its coins.

Briefly the silver position is as follows: Last year U.S. production of silver was estimated at 32.5 million ounces, our consumption was 190 million ounces, of which 80 million was for coinage purposes and 110 million for industrial and arts usage. In the rest of the free world production exceeded consumption until 1959. In 1960 and 1961 and it is estimated in 1962 free world consumption exceeded production—by about 30 million ounces in 1961, the last year for which figures are available. Primarily the sharp increase in consumption of silver in arts and industry of the rest of the free world is the principal factor which has forced the price of silver up from 92 or 93 cents an ounce to $1.25 per ounce since late in 1961. Meanwhile Treasury stocks of free silver—stocks not required as currency backing—have declined to about 37 million ounces.

It is obvious in the above setting that the Treasury faces a real bind in obtaining silver for coinage purposes which as noted above was estimated in 1962 at 80 million ounces. One method of relieving the situation is for the Treasury to retire silver certificates and replace them with Federal Reserve notes. Through the substitution last year of Federal Reserve notes for $5 and $10 silver certificates approximately 107 million ounces of silver became available to the Treasury for coinage purposes. Treasury stocks of silver total approximately 1.7 billion ounces of which roughly 20 percent is "locked up" as collateral for $5 and $10 certificates. With it necessary for the Treasury to "retrieve" silver through substitution of Federal Reserve notes for $5 and $10 silver certificates it is obvious that $5 and $10 silver certificates are fast becoming collectors items, which, of course, will materially slow down and limit the extent to which this can be done.

Since most of the Treasury stocks of silver are "locked up" as collateral for $1 silver certificates it is apparent that the real heart of this bill is the provision allowing the issuance of $1 Federal Reserve notes. Once this is authorized the Treasury should be able to meet silver coinage requirements for many years through applying the same technique on $1 bills that has been used this past year on $5 and $10 bills.

If the $1 Federal Reserve note is not authorized as proposed in section 3 of the bill, the Treasury will soon be in the untenable position of being forced into the market to buy silver for its coinage needs. Such purchases would drive the price of silver up to its monetary value of $1.29-plus per ounce and beyond. At this point it would become profitable for the public to turn in $1 silver certificates to obtain the silver standing behind them.

I think this is in the best interests of our country. I believe it is going to be very, very helpful as far as our coinage is concerned, and we on the minority side of the committee have recommended this legislation to the House.

Mr. HARVEY of Michigan. Mr. Chairman, will the gentleman yield?

Mr. WIDNALL. I yield to the gentleman from Michigan.

Mr. HARVEY of Michigan. Mr. Chairman, I would like to associate myself with the remarks of the gentleman from New Jersey.

I have listened to the debate here this afternoon, and I have heard much discussion on this question, but I have heard no one say what is going to happen if this bill does not pass. I may say to the gentleman I think we ought to be concerned with that question, because if this bill does not pass we have only one alternative, as I see it, and that is our Government must go out into the open market, we must pay this high price for silver, and it seems to me if you want to be concerned about the outflow of gold there is the place where you should be concerned, because it is going to be necessary to go out into the market and pay the high prices that the producers realize. It seems to me that is something that all of us should be very much concerned with, indeed. So I compliment the gentleman and rise in support of the bill.

Mr. WIDNALL. I thank the gentleman for his contribution.

Mr. PATMAN. Mr. Chairman, I yield to the gentleman from Connecticut [Mr. Giaimo] such time as he may desire.

Mr. GIAIMO. Mr. Chairman, I rise in support of H.R. 5389. Silver is an essential material in the production of many commodities of great importance to the entire population of the United States, and high silver prices increase the cost of all of them. Among these are photographic film and paper, silverware, jewelry, electrical contacts and circuits, batteries, mirrors, brazing and soldering materials, dental supplies, and silver nitrates for various uses.

In the Third District of Connecticut, which I have the honor to represent, silver is particularly important, for there we manufacture much of the sterling silver and silver plated flatware and holloware that is distributed throughout the Nation. Already the fantastic increase in the price of silver from 90.5 cents in November 1961 to $1.275 today—about 40 percent in total—has meant that people today have to pay about 20 percent more for their sterling silver flatware than those in 1961 paid.

If the price of silver goes much higher, still further increases in the price of silverware products will be necessary. This will seriously threaten the welfare of the sterling industry—whose total sales amount to about $150 million annually at retail. The sales of the silver-plated flatware and holloware will likewise be adversely affected, and these amount to another $100 million. In my district alone, this could jeopardize the jobs of 3,000 or more workers. In the silver flatware and holloware industry as a whole, some 10,000 jobs could be in jeopardy, to say nothing of the jobs of thousands of others in the retail stores throughout the country who sell these products. In fact, gentlemen, each of you has a greater stake in this situation than you may realize, for every seller and every buyer of these products in your districts will be affected.

It is significant, I believe, that in spite of the fact industrial use of silver in the United States increased only 5 percent in 1962 over 1961, the price of silver increased 40 percent. There were 91 changes in the price of silver from November 29, 1961, to March 13, 1963. There have been more since that date. How can any manufacturer engaged in a business, in which silver is the principal cost of his product, operate successfully or profitably when faced with such conditions? The situation has been critical for manufacturers in the Third District of Connecticut, which alone consumes 6 to 7 million ounces of silver annually. There must be a free market in silver, which can only be accomplished by passage of H.R. 5389. This will not necessarily decrease the price of silver, but it will, in my judgment, stabilize the market at a point and in a manner which will permit users of large quantities of silver to properly plan their manufacturing and sales programs, so that jobs for their workers can be secure.

There are those who fear the effect on our gold supply by gradually withdrawing $1 and $2 silver certificates and replacing them with Federal Reserve notes. The fact is that unless H.R. 5389 is passed, our balance-of-payments deficit and claims on our gold supply will be greatly increased. For then the Treasury will be forced to buy silver in the open market for coinage purposes and for backing of additional silver certificates. The United States currently produces only about one-third of our industrial silver requirements. Today it is buying two-thirds of its needs from foreign sources. It is estimated that another 100 million ounces of silver will soon have to be bought from foreign sources unless H.R. 5389 is passed. At $1.29 an ounce, the figure at which Treasury stocks of silver are valued, this means another 129 million dollars will flow abroad, and obviously to be added to our balance-of-payments deficit. That is a possibility I hate to contemplate in view of the tremendous deficit in our balance of payments now existing.

I urge the passage of H.R. 5389 as being in the best interests of the United States and its people.

Mr. HARSHA. Mr. Chairman, I ask unanimous consent that the gentleman from Massachusetts [Mr. MARTIN] may extend his remarks at this point in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. MARTIN of Massachusetts. Mr. Chairman, I urge the House to act favorably upon H.R. 5389, which repeals certain legislation relating to the Government's purchase of silver and which will benefit the consumers of our country and the industries using silver.

Some of the finest jewelry made in this country, Mr. Speaker, is made in the factories and shops of my district. They are important users of silver. The success of their enterprise is endangered by the steadily mounting price of the raw material upon which they are dependent.

There have been 90 changes in the price of silver since November of 1961. The price has risen from 25 cents an ounce in 1933 to $1.277 an ounce today, and the price is still rising. A prime mover in the boosting of this price has been the Federal Government, which has purchased 3 billion ounces of silver in the last 30 years, depriving industry of this supply and increasing prices to both industry and the consumer.

Industry and the consumer have been twin victims of this monetary policy—this money madness. Industry is plagued with higher costs, and higher costs have always meant fewer jobs. And the consumer is faced with higher prices for quality merchandise, and must turn to shoddy materials and imported goods. This move hurts the domestic employment situation further.

I am advised that the price of silver has increased 40 percent in just the last 15 months. The price is still rising, and the industry can give no assurance of price stability at any level. Yet the industrial users of my district and the consumers need a relatively stable price level. This bill will probably stabilize the market price at about $1.29 an ounce, a price that is favorable to the producers.

We can give them this stability by passage of this bill today. We no longer need subsidize the silver mining industry. The industrial need for silver is now so great that our domestic mines can produce only one-third of our annual national requirements.

This bill is needed to restore some health and sanity to the silver industry, to give our domestic jewelry companies a fair chance to compete with foreign competition and to protect the jobs of the skilled jewelry workers of the United States.

I urge the prompt passage of H.R. 5389.

Mr. PATMAN. Mr. Chairman, I have no further requests for time.

Mr. WIDNALL. Mr. Chairman, I have no further requests for time.

The CHAIRMAN. There being no further requests for time, the bill will be read for amendment.

No amendments are in order to title II of the bill, except amendments offered by direction of the Committee on Ways and Means.

The Clerk will read the bill for amendment.

The Clerk read as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

TITLE I—SILVER BULLION, SILVER CERTIFICATES, AND FEDERAL RESERVE NOTES

SECTION 1. The Silver Purchase Act of 1934 (31 U.S.C. 311a, 316a, 316b, 405a, 448–448e, 734a, and 734b), section 4 of the Act of July 6, 1939 (31 U.S.C. 316c), and the Act of July 31, 1946 (31 U.S.C. 316d), are hereby repealed.

SEC. 2. The Secretary of the Treasury shall maintain the ownership and the possession or control within the United States of an amount of silver of a monetary value equal to the face amount of all outstanding silver certificates. Unless the market price of silver exceeds its monetary value, the Secretary of the Treasury shall not dispose of any silver held or owned by the United States in excess of that required to be held as reserves against outstanding silver certificates, but any such excess silver may be sold to other departments and agencies of the Government or used for the coinage of standard silver dollars and subsidiary silver coins. Silver certificates shall be exchangeable on demand at the Treasury of the United States for silver dollars or, at the option of the Secretary of the Treasury, at such places as he may designate, for silver bullion of a monetary value equal to the face amount of the certificates.

SEC. 3. The first sentence of the ninth paragraph of section 16 of the Federal Reserve Act (12 U.S.C. 418) is amended by inserting "$1, $2," immediately after "notes of the denominations of".

Mr. WHITE. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. WHITE: On page 2, strike out section 3, lines 15 through 18.

Mr. HARDING. Mr. Chairman, I make the point of order that a quorum is not present.

The CHAIRMAN. The Chair will count. [After counting.] One hundred and fourteen Members are present, a quorum.

The gentleman from Idaho is recognized.

Mr. WHITE. Mr. Chairman, I offer this amendment, as I have already stated, for the purpose of maintaining a good and adequate monetary system in the United States in line with the suggestion of the members of the Banking and Currency Committee. They feel that the first section of the Silver Purchase Act is outmoded. I agree. With the $1.272 market price of silver in excess of the $0.905 treasury buying price. It is. Section 2, the disposition of the silver for other agencies and the use of silver for coinage, is proper. But I feel that section 3, authorizing the issuance of Federal Reserve notes further dilutes our gold reserves, provides us with a fiat currency that historically has been the downfall of nation after nation when they continued to spiral into debt; and that is the case of the United States today.

A question was asked a moment ago as to what we would do if we did not pass this bill. In answer to that I have already suggested that the monetary price of silver should be increased, and I suggest to the committee that this will be the case ultimately. Ultimately you will have to face up to it. Perhaps you can defer this for a few months, or possibly a year or two, but ultimately you are going to have to provide legislation in this area. People well versed in silver, experts, have told me that we can expect a price of $3 an ounce for silver. So I ask you what will we do when the price exceeds $1.29? I ask you further what you will do when it exceeds $1.38? Will you issue shinplasters as was done once before when we did not have sufficient silver? Will you call in the coins and melt them down? Will you call in the silver dollars and change the silver content in the metallic dollar?

I say that this is a move to make available to speculators and others silver at a bargain price. We have already had an example of what has happened when silver was authorized to be sold at 90.5 cents by the Treasury. We had the speculators move in, and the suppliers and the fabricators bought all they could. And, the thinking of the Government was that they were stabilizing the price. It was an impossibility. There was a great deal sold, and the pressure was on the President of the United States to stop the selling of free silver, which he did. I think you will have the same problem again. I think it will face us much sooner than you think at present, because I feel that pretty soon you will have $1.29 silver and better. So, the silver certificate will be redeemable and the silver dollar will be possibly melted down, and I think the price will continue above $1.38, and you will have the problem of what to do about your subsidiary coins. I hope that the repeal of the transfer tax will satisfy this group. I hope that the provisions of title I, section 1 and section 2 will satisfy this group of people, and I hope that you will take an adequate length of time to consider the ultimate effect of the demonetization of silver and the replacing of it by Federal Reserve notes. I hope that this group will look objectively at this, and I hope you will favor my amendment and vote it up.

Mr. PATMAN. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I have a very high regard for the gentleman from Idaho. Like many other Members of Congress, I served with his father from the time he came here until he left. I know his interest in silver. His father was a great silver advocate. I am not at all sure that his father would be against this bill if he were here now. I do not believe anybody would know. The situation has changed. If William Jennings Bryan were here now, I believe he would be for this bill. Silver has served its purpose as a backing for currency. There is no occasion for the advocacy of it now, for the reason that the silver advocates advocated this back in the nineties and subsequent to that time, prior to Federal Reserve System.

This bill has been very carefully considered. The $2 bills that were mentioned here, which the gentleman said there were $90 million of, he is clearly mistaken about. There is only about $1.4 million of the $2 silver certificates. They are not very popular; they are not significant.

Now, as to the $1 bills, of course, the silver backing those will not be wasted. We are not dissipating our assets in making this transformation from silver certificates to Federal Reserve notes. Our assets remain the same, exactly the same. And, may I invite your attention to the fact that under existing law the silver could be sold for 90.5 cents per ounce. If this bill becomes law, it could only be sold only if the market price exceeds its monetary value, which is $1.29 cents per ounce, so we have more protection under this bill than we have under existing law.

Now, if we were to strike out this provision that the gentleman from Idaho wants to strike out, there would be no point to the bill; there would be no occasion for it. We need the silver for coinage. There is a great shortage of coins in America today. The vending machines take a lot of coins. The sales taxes in cities and States throughout the Nation use a lot of coins. We must have more coins, and this gives us a good reservoir of silver for the purpose of having coinage in the foreseeable future, as much as we will need. It is a great opportunity to use our silver for great advantage and not permit the speculators to use it.

If we wanted speculators to have it—if the administration did—as has been implied here, the present administration could let them have it for 90.5 cents per ounce when it is worth $1.275 on the market today.

There is no desire on the part of the administration, or any person to my knowledge, to take any advantage of the Government and to do something that will help the speculators in silver. I know that is not true. I know this bill is in the public interest.

Mr. Chairman, this bill is endorsed by Republican leaders. It is also endorsed by the Democratic leaders. Both great political parties and their leaders are for this legislation. We had exhaustive hearings and fully considered the merits of the bill. We had every witness that any member of our committee wanted heard. We heard all witnesses that wanted to be heard. There was no desire on the part of the committee to withhold any facts or to prevent any person from disclosing his views. Everyone was given a fair opportunity.

Mr. Chairman, I respectfully ask that this amendment be voted down. There would be no purpose for the bill if we were to pass this amendment. It takes the heart out of the bill. It would merely repeal the tax on the silver people, but that is all. This provision is very necessary. It is essential. I hope that the amendment is voted down

Mr. WHITE. Mr. Chairman, will the gentleman yield?

Mr. PATMAN. I yield to the gentleman from Idaho.

Mr. WHITE. With all due respect to the gentleman from Texas and his long experience here and, perhaps, for a new Member to offer the opposition that I have offered to this is not well received, I am afraid that the gentleman is wrong, and that the gentleman's statement is incorrect. I am afraid that my father has turned over already.

Mr. PATMAN. You do not know which way he turned.

Mr. WHITE. Well, I am sure it is in the direction that I suggested, sir.

Mr. PATMAN. Well, that is not the point.

The CHAIRMAN. The time of the gentleman from Texas has expired.

Mr. PILLION. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise in support of this amendment. I would like to submit to this House this statement of fact: The Secretary of the Treasury now has the right to buy and sell silver at roughly 90 cents an ounce. That authorization did not prevent the rise of silver beyond that price to its present price of $1.27 an ounce.

Mr. Chairman, the authority granted to the Secretary of the Treasury in this bill to buy and sell dollars at $1.29 will not guarantee that the price of silver will not rise beyond $1.29. In fact, it will tend to cause the price to rise to a point where it will threaten our subsidiary silver at $1.38 an ounce. Therefore, your subsidiary coins, 50-cent pieces, 25-cent pieces, and 10-cent pieces, will be jeopardized if this bill is passed.

Mr. Chairman, may I just say one word about our gold reserve. This is a prelude to a repeal of the 25-percent requirement of gold reserve for our currency in our Federal Bank deposits. It is said that we have $4 billion of free gold above the 25-percent requirement to meet our foreign obligations. Actually, that is not so, because there are $800 million of gold borrowed by the Treasury from the International Monetary Fund that is not taken into consideration. In other words, the free gold which we have to meet $25 billion worth of foreign holdings is only $3.2 billion, and if we pass this bill it will require another $500 million of gold reserve. Hence, your gold reserve will sink to $2.7 billion with which to meet $25 billion of foreign holdings.

Mr. ASPINALL. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I rise to support the amendment offered by the gentleman from Idaho [Mr. WHITE] because I believe that this is not the time to impose a further burden on our monetary system by removing the silver backing from our $1 and $2 bills.

As I think the members of the committee know, I represent a major silver producing area even though much of our operation is associated with lead and zinc production and therefore operating at a somewhat reduced level. According to the most recent Bureau of Mines figures, the State of Colorado produced 160,798 troy ounces of recoverable silver during January 1963; approximately 97,600 ounces during February 1963; and during the calendar year 1962 we produced 2,056,645 troy ounces. So you see, and I admit, we are not without a direct interest in what happens here today.

In addition, as chairman of the Interior and Insular Affairs Committee, I am concerned with any legislation that affects domestic metal-mining industries.

Western Representatives, generally, have accepted the proposal to repeal the Silver Purchase Acts. We are pleased that the Banking and Currency Committee has reported a bill, in which the Ways and Means Committee has concurred, that will also repeal the tax on transfers of silver bullion.

But section 3, by amending the Federal Reserve Act to permit Federal Reserve banks to issue $1 and $2 Federal Reserve notes, will permit the Treasury Department to withdraw silver certificates from circulation and use the silver back of these certificates for coinage. I realize that Secretary of the Treasury Dillon has said:

> The withdrawal of silver certificates and the use of silver back of them for coinage will be gradual. We estimate that not over $105 million of silver certificates a year will need to be redeemed in order to obtain the silver needed for coinage.

What the Secretary has said is that approximately $80.8 million in silver required each year for coinage will not be purchased from our domestic miners. Naturally, this disturbs the silver-producing areas such as my State of Colorado. However, if this could be shown to be for the national benefit we would readily accept the sacrifice.

I submit that there is no overriding national gain to be achieved by this action and that, quite the contrary, despite the fact that there are "only" $2 billion worth of silver certificates outstanding as compared with $29 billion of Federal Reserve notes. For one thing, as stated at page 8 of House Report No. 183 submitted by the Banking and Currency Committee on this legislation:

> Retirement of silver certificates and their subsequent replacement with Federal Reserve notes will require the use of gold as a reserve back of these notes * * * the 25-percent gold reserve needed to back the net new issuance of Federal Reserve notes should not exceed about $35 million annually.

I recognize that in talking of our gold reserves this is a comparatively small amount; but, I submit that any additional burden on our gold reserve should be very carefully considered. My own conclusion is that this is no time to impose an additional strain on our gold reserve, particularly when we have and can continue to have a silver backing for a portion of our currency.

For these reasons, I urge the adoption of the amendment offered by the gentleman from Idaho [Mr. WHITE].

Mr. CHENOWETH. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I rise in support of the amendment offered by the gentleman from Idaho and I commend him on offering the amendment. I also had the great pleasure of serving in this body with the gentleman's distinguished father. I think there would be no question as to which way his father would vote if he were voting on this legislation today. He was always a champion of sound money.

Mr. Chairman, I am a strong believer in hard-money policies, if we wish to call it that. I am also disturbed over the proposal in this bill to demonetize silver and to replace silver certificates with Federal Reserve notes, to be backed by 25 percent gold and 75 percent Government securities. I have been aware of the constant attacks that are being made upon our financial structure in this country and upon our sound-money policy. I am aware of the bill which is pending, H.R. 642, which would even remove the 25-percent gold backing on our Federal Reserve notes. I think if we pass this bill today in its present form, we are making a very grave mistake, which will be construed as an attack on sound money. I do not want to go to paper money or fiat money. I think this country wants a currency which is backed by silver and gold. I am concerned over our constantly dwindling gold reserves. I have introduced legislation to increase our production of gold and reopen our gold mines which are now closed. We must maintain our fiscal integrity, and this can only be done by backing our currency with silver and gold.

Mr. Chairman, these are the reasons I support this amendment and I urge the Members of the House today to vote for the same. Unless this amendment is adopted I shall be compelled to vote against this bill.

Mr. MOORHEAD. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, the effect of this amendment, if adopted, on our balance of payments would be adverse. Today, when we purchase silver in this country, two-thirds of it comes from abroad. If we restrict ourselves and if we hamper ourselves by isolating our stockpile or inventory of silver which we now own and require ourselves to purchase silver from abroad, the effect inevitably is adverse on our balance of payments. The best way to protect our gold supply is to improve our balance of payments situation. This legislation will do this. I urge my colleagues to vote against the amendment.

Mr. Chairman, I yield back the balance of my time.

Mr. ROOSEVELT. Mr. Chairman, I ask unanimous consent to extend my remarks at this point in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. ROOSEVELT. Mr. Chairman, since 1934, a body of law known as the silver purchase laws, has been on the books. Also, during this period the silver transfer tax, since incorporated into the Internal Revenue Code of 1954, has been the law of the land.

This legislation, originally intended to shore up a depressed silver industry and to protect the Treasury against speculation in a commodity in which it was a major purchaser, has long since ceased to have meaning in terms of the present realities of silver use and production.

In the first instance, the price of silver has currently risen very close to its monetary value; this, combined with a very substantial demand for silver in excess of United States and world production has made the position of the silver miner probably more secure than that of the miner of any other metal in the world. In the absence of the development or discovery of some new metal which would meet all the requirements of conductivity, weight, durability and beauty of silver, there seems not the remotest need for the Treasury to continue a floor under the price of this metal. Indeed, in view of the many new uses for silver in the aerospace industries, the likelihood points to continued shortages for eons to come.

As to the tax on transfers in silver bullion of 50 percent of profit, the authors and supporters of the legislation stated clearly they felt the tax was needed only as support for the silver purchase laws. The tax successfully obliterated the operation of a freely operated market in silver futures and substituted an administered price for the metal rather than permitting supply and demand to set the price in the marketplace. Again, since the Treasury has purchased no foreign silver since 1941, it needs no further protection against the speculation it feared in the early 1930's, and has so stated.

H.R. 5389, which repeals the Silver Purchase Act along with the silver transfer tax, reflects the considered judgment of the President, the Secretary of the Treasury, the Committee on Banking and Currency, and a host of witnesses from industry, from user groups and governmental experts. It meets a pressing problem the Treasury faces if it is forced to continue to back $1 and $2 bills with its diminishing supply of silver. It permits the reestablishment of a commodity marketplace for silver, and allows the silver fabricator and user to hedge his raw material purchases against price changes. H.R. 5389 is a much-needed and long overdue bill. I endorse its provisions unreservedly.

Mr. HARSHA. Mr. Chairman, I ask unanimous consent that the gentleman from Massachusetts [Mr. BATES] may extend his remarks at this point in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. BATES. Mr. Chairman, I have no hesitancy whatsoever in urging House Members to support H.R. 5389, the silver legislation submitted to Congress by the Treasury.

The increase in price has benefited the producers, but this rise has created difficulties for the users. The silverware, jewelry, and related industries have had to cope as best they could with these increased costs. Other industrial and defense users have also been greatly affected.

The legislation proposed will result in stabilizing the market price at somewhere close to $1.29, a price that is favorable for the producers. At the same time, it will benefit the user industries by giving them the much needed assurance of a relatively stable price level.

We have an opportunity today for repealing the silver legislation and thus taking the Government out of the silver business except as a consumer in the manufacture of its coins.

I speak particularly in behalf of the Towle Manufacturing Co., of Newburyport, Mass., one of the oldest firms of its kind in the Nation and which employs hundreds in that area. The No. 1 problem of this firm for years has been the silver bullion market and the legislative handicaps which affect it. Favorable action by the House today will provide a strong lift for this firm as well as others throughout the country. I urge the passage of H.R. 5389.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Idaho [Mr. WHITE].

The question was taken, and on a division (demanded by Mr. PATMAN) there were—ayes 60, noes 73.

Mr. WHITE. Mr. Chairman, I demand tellers.

Tellers were ordered and the Chair appointed as tellers Mr. WHITE and Mr. PATMAN.

The Committee again divided, and the tellers reported that there were—ayes 60, noes 87.

So the amendment was rejected.

The Clerk read as follows:

TITLE II—REPEAL OF TAX ON TRANSFERS OF SILVER BULLION

SEC. 201. (a) Subchapter F of chapter 39 of the Internal Revenue Code of 1954 (relating to silver bullion) is hereby repealed.

(b) The table of subchapters for such chapter 39 is amended by striking out the last line thereof.

(c) Section 6422 of such Code (relating to cross references) is amended by striking out paragraph (7) and by renumbering paragraphs (8), (9), (10), (11), (12), (13), and (14) as paragraphs (7), (8), (9), (10), (11), (12), and (13), respectively.

(d) Section 6808 of such Code (relating to special provisions relating to stamps) is amended by striking out paragraph (11) and by renumbering paragraphs (12) and (13) as paragraphs (11) and (12), respectively.

Sec. 202. Section 201 shall apply only with respect to transfers after the date of the enactment of this title.

The CHAIRMAN. Under the rule, the Committee rises.

Accordingly, the Committee rose; and the Speaker having resumed the chair, Mr. Sisk, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 5389) to repeal certain legislation relating to the purchase of silver, and for other purposes, pursuant to House Resolution 313, he reported the bill back to the House.

The SPEAKER. Under the rule, the previous question is ordered.

The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the bill.

The question was taken; and on a division (demanded by Mr. White) there were—yeas 107, nays 59.

Mr. WHITE. Mr. Speaker, I object to the vote on the ground that a quorum is not present, and I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Doorkeeper will close the doors, the Sergeant at Arms will notify absent Members, and the Clerk will call the roll.

The question was taken; and there were—yeas 252, nays 122, not voting 59, as follows:

So the bill was passed.

The Clerk announced the following pairs:

On this vote:

Mr. Berry for, with Mr. Bell against.

Until further notice:

Mr. Walter with Mrs. Frances P. Bolton.
Mr. Hébert with Mr. Mailliard.
Mr. Keogh with Mr. Auchincloss.
Mr. Brademus with Mr. Teague of California.
Mr. Powell with Mr. Bennett of Michigan.
Mr. Lesinski with Mr. Thomson of Wisconsin.
Mr. Gallagher with Mr. Gavin.
Mr. Daddario with Mr. Burton.
Mr. Farbstein with Mr. Rich.
Mr. Sikes with Mr. Kilburn.
Mr. Corman with Mr. Van Pelt.
Mr. Kirwan with Mr. Bray.
Mr. Buckley with Mr. Fino.
Mr. Celler with Mr. Corbett.
Mr. O'Brien of Illinois with Mr. Tollefson.
Mr. Roosevelt with Mr. Randall.
Mr. Rogers of Colorado with Mr. Diggs.
Mr. Charles H. Wilson with Mr. Whitten.
Mr. Davis of Tennessee with Mr. Colmer.
Mr. Kluczynski with Mrs. Kee.
Mrs. Green of Oregon with Mrs. Kelly.
Mr. Davis of Georgia with Mr. Henderson.

Messrs. MILLIKEN, BRUCE, and COLLIER changed their vote from "yea" to "nay."

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

COMMITTEE ON RULES

Mr. SMITH of Virginia. Mr. Speaker, I ask unanimous consent that the Rules Committee may have until midnight tomorrow to file certain reports.

The SPEAKER. Is there objection to the request of the gentleman from Virginia?

There was no objection.

NATIONAL LIBRARY WEEK

Mr. RIVERS of South Carolina. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the Record.

The SPEAKER. Is there objection to the request of the gentleman from South Carolina?

There was no objection.

Mr. RIVERS of South Carolina. Mr. Speaker, this Sunday, April 21, is the first day of National Library Week. It is a time when, throughout the land, each citizen should acknowledge the unpayable debt—contracted in childhood—for the knowledge and guidance he received from the books and the people of his community library. It is a time, also, when this House should recognize a debt of principle to a community library looted of its books by the U.S. Army and the Department of the Treasury 102 years ago.

Not too long ago, in a television dramatic series about World War II, Nazi troops looted the library of a small French town. Troopers of the SS boxed up the books and trucked them off before the tearful eyes of the pretty and helpless librarian. This was hobnailed tyranny at its worst and viewing it on their TV sets the citizens of Beaufort, S.C., nodded in knowing sympathy—they, too, had had their library picked clean by a conquering army.

That was in 1861. Troops of the Union Army, who had invaded South Carolina from the sea, appropriated the several thousand volumes of the Beaufort Library as enemy property. It was probably one of the most valuable confiscations by the North in the entire War Between the States. Among the several thousand books was a copy of the original edition of the King James Bible. Another item was the Elephant Folio of Audubon. Either of these would be worth a fortune today. In the minds of Beaufort people who made up one of the most cultured of 19th century American citizenries, they were worth a fortune then.

As in the television play, the books were boxed up and sent to the homeland of the conquerors—New York City. There they were put up for public auction. Before the sale, however, a Mr. William Fry wrote a protest to President Lincoln. What happened next was reported in the edition of Leslie's Illustrated Weekly for November 29, 1862. Leslie wrote:

> A dirty deed prevented—among the property abandoned by the rebels at Beaufort, S.C., was a considerable public library which was very properly taken charge of by the conquerors. A few days ago the public was astonished to hear that it had been sent on to this city for sale at auction. Thanks to Mr. William H. Fry and to the daily press, which raised an unanimous voice of reprobation, the sale was stopped and the library will be returned whenever the cessation of the war will permit it to be done in safety. We are not ambitious of putting ourselves on a footing with the English who burnt the Archives of the Government at Washington.

Tragically, this was not the end of the story. The books were withdrawn from sale and stored in the Smithsonian Institution, but in January 1865, the Smithsonian had a disastrous fire. The books were destroyed.

In the years—and generations—that followed, attempts were made for restitution but it was not until 1940 that the Congress took concrete action. An act provided that:

> The Librarian of Congress is authorized and directed to transfer to the Beaufort Library of Beaufort, S.C., books of the same value as those which were so taken and destroyed. The books transferred under the provisions of this act shall be from duplicates owned by the Library of Congress and shall not exceed in value, in the aggregate, the value of the books so taken and destroyed.

By "duplicate books" was meant extra copies of books on the shelves of the Library of Congress, not duplicates of the volumes in the Beaufort collection.

It was arranged within the latitude of the act that the duplicate books be sold and the money yielded given to the library. This amounted to some $4,300. All parties concerned—then and now—expressed themselves as satisfied. Nevertheless, Mr. Speaker, it should be acknowledged that a mere $4,300 could never be a fair and adequate compensation for a priceless collection of volumes such as this was. The library was famed throughout the Nation for the excellence of its books. I am informed reliably that the "Elephant Folio of Audubon" alone would today bring $60,000. The debt still owed can never be repaid but it is a debt, as I have said, of principle. Mr. Salmon P. Chase, later Chief Justice of the United States but then Secretary of the Treasury, declared, "The Union does not make war on books or libraries." Apparently it did.

I am happy to state, however, that some further measure of justice is about to be done in this tragic matter. On April 21, the beginning of National Library Week, there will be a ceremony at the Beaufort Library in which Mr. Harry Scherman, founder of the Book-of-the-Month Club, will present to the library a $5,000 cash award as the outstanding smalltown library of the Nation. This annual program of recognition is carried out in the name of the late Dorothy Canfield Fisher, noted author and a member of the original editorial board of the Book-of-the-Month Club. Libraries in every State of the Union are selected each year for these honors, but it was the library in Beaufort which exceeded them all for the highest form of the award.

Thus, Mr. Speaker, after 102 years the Beaufort Library has at least reestablished itself as an outstanding American library.

POLITICS IN SUMMER EMPLOYMENT

Mr. REIFEL. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from South Dakota?

There was no objection.

Mr. REIFEL. Mr. Speaker, in the last couple of days we have seen an example of responsible Government at its best.

As a former longtime civil servant, I want to extend my warmest congratulations and personal admiration to Chairman John Macy and his U.S. Civil Service Commission for the courage and principle demonstrated in their stand barring political clearance for summer jobs in Government.

It is highly reassuring to see the Commission under its capable leadership carrying out the function for which it was created; that is, to establish in the Federal Government a merit system whereby selection for appointment should be made upon the basis of demonstrated relative fitness without regard to religious or political considerations, aside from membership in subversive organizations.

The manner in which a few thousand summer jobs are filled may not seem too important to some, but the principle involved is of utmost importance. If civil service regulations could be bypassed in this case, they could be ignored in others with the eventual result that there would be a complete breakdown of the system and a return to the discredited spoils system of Government employment.

By his courageous action, Chairman Macy has demonstrated to the White House, to the American people, and to the career civil servant that loyal service and individual attainments remain as the basis of Federal hiring and promotion, rather than political servitude or favoritism.

I have been a firm believer in the merit system ever since my first Government job as a part-time employee of the Department of Agriculture while attending South Dakota State College.

It was with full confidence in that system that I took my first civil service examination in September 1932 and gained my first Federal appointment with the Bureau of Indian Affairs in 1933. And it was that system that made it possible for me to enjoy a satisfying and rewarding career in the Federal service covering over 26 years with some time out for military service.

I hope Members of both sides of the aisle and in both Houses of Congress will uphold the hand of Chairman Macy and give him full support for this courageous action.

OTTO A. HARBACH—ARTIST AND BENEFACTOR

Mr. PHILBIN. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. PHILBIN. Mr. Speaker, I was greatly saddened and deeply grieved by the recent passing of my friend, Mr. Otto A. Harbach, great lyric composer of some of the most memorable songs of American history.

The distinguished, fabulous career of this incredibly talented man is a success story of impressive and most inspiring proportions.

Known as the dean of our librettists and lyricists, he was a charter member, director, and past vice president and president of the American Society of Composers, Authors, and Publishers. His life and works stand out in gleaming lucidity as permanent monuments to one of the most gifted men who ever graced American letters and the American theater.

Otto Harbach worked his way to the top of his challenging field in a comparatively short time. Extraordinarily gifted and exceptionally well trained and educated, scholar, savant and teacher, he brought a polish and urbane approach to popular music that gave it new respect and luster. Like his great protege, Oscar Hammerstein, he adhered to highest standards of composition and good taste. His songs were lively, sophisticated, and often romantic.

He was a man who knew what he wanted to do, how to do it. He was endowed with the will and purpose to work tirelessly to accomplish his lofty aims.

Kindly, friendly, sympathetic, and humble by nature, he early won the respect of his colleagues, not only for his ability to achieve great things in his field, but also for his unflagging determination to work indefatigably at his tasks until they were accomplished.

He was ever ready to lend a helping hand to his fellow composers and was most generous in his response to every call that was made upon him by his professional associates, the theater, and the Nation.

He was perhaps unrivaled in the large number of successful songs that he wrote, and this alone is one of the greatest tributes that can be paid to his ability, his earnestness, and his unceasing devotion to his work.

His intellectual stature, eager search for perfection, mature philosophy, the universality of his knowledge and the flexibility of his keen, discerning mind, his power of swift adaptation to a wide spectrum of human values, emotions, and reactions enabled him to appeal very strongly to people of every age, rank, and station. He was a romantic poet who won his way into the hearts of the people.

Notwithstanding the great honors and great success which he received during his lifetime, he always remained, essentially and basically a profoundly sincere and humble man. While he never hesitated to stand firmly and articulately for the things he believed in, he had an inner piety and modesty about him that made him a legion of friends and a breadth of vision and understanding, depth of perception, steadfastness of purpose, and undeviating loyalty to his friends and many great causes to which he was attached. These were all traits and characteristics of a noble spirit and a very great American.

Otto was exceptionally proud of his contributions to ASCAP and his colleagues of the creative world whom he loved. He was a vigorous advocate of the rights of all the members of this great American society and did much for the cause of many aspiring writers.

As the gifted John Redmond, my warm friend, said of him—

> In the passing of Otto Harbach, the artistic world has lost one of its greatest creative geniuses; American Society of Composers, Authors, and Publishers, one of its most illustrious members; and the writers of popular songs, one of their dearest friends and most loyal champions. I am so deeply touched that I cannot find words to express my deep grief, let alone portray the wonderful qualities and unforgettable creative contributions of this great man. May the Good Lord keep him close to Him always.

Our friend, President Stanley Adams, of American Society of Composers, Authors, and Publishers in his very impressive memorial eulogy also spoke feelingly of Otto's personal qualities and his acknowledged mastery in his field.

At an earlier time, the great and beloved Oscar Hammerstein referred to him as the wisest, most tolerant, and kindest man he had ever met.

His life and works comprise a brilliant chapter in the long, glorious history of American songwriting.

Author of the words of more than 1,000 songs, writer of at least 50 shows and movie scenarios, lyricist of such all-time song hits as "Smoke Gets in Your Eyes," "Indian Love Call," "Who," "One Alone," and "The Desert Song," he passed away at his New York City residence on January 24, 1963, at the age of 89. He was born in Salt Lake City, Utah, on August 18, 1873.

Otto Harbach's long and successful career included close association and collaboration with many of the great names of the American musical theater: composers Jerome Kern, Rudolf Friml, Vincent Youmans, George Gershwin, Victor Herbert, and Sigmund Romberg, lyricist Oscar Hammerstein II, and producers Oscar and Arthur Hammerstein.

He was active throughout his long career in fostering musical creativity, and in protecting the rights of the individual composer and author. Shortly after the American Society of Composers, Authors, and Publishers was founded, he became a charter member; in 1920 he was elected director, he served three terms as vice president, and from 1950 to 1953 he was the society's president.

Son of a Danish immigrant who drove an ox team to Salt Lake City, Utah, Otto Harbach had an educational background that laid the foundation for a career as a professional writer. He majored in English at Knox College in Illinois where he received his B.A. and M.A. degrees. William Jennings Bryan, in 1895, presented him with a gold medal as winner of the annual interstate prize for oratory.

After a brief career as teacher of English and public speaking at Whitman College in Walla Walla, Wash., he came east in 1901 to study toward a doctorate on a scholarship at Columbia University. That same year he took a job as a reporter for the New York Daily News, and in 1903 he became a copywriter for the George Patten Advertising Agency. Almost immediately he also began writing for the theater. An early play led to a rewriting assignment, and next he met composer Karl Hoschna. They decided to try their hand at a musical show—and a fabulous career was launched.

Their very first show, "The Three Twins," was a smash hit in 1907, and gave us the song "Cuddle up a Little Closer, Lovey Mine."

The staging of this song, incidentally, reveals something of Harbach's ideas concerning the integration of the songs in a musical with the plot, or story. Alice Yorke sang "Cuddle up a Little Closer" against a background setting representing the seven stages of lovers—from infancy to old age.

Harbach was a pioneer from the beginning of his career. He believed, as did Wagner in grand opera, that dramatic action and musical action should closely complement one another, and that musical numbers should come at logical places in a meaningful plot, and not merely be inserted haphazardly. As he himself put it in the December 1955, issue of Etude:

> Work out something that will allow music to find a place as logically as the characters find their places. The old, stereotyped musical hung its numbers on the plot the way you hang balls on a Christmas tree. And the Christmas tree is usually dead. * * * Good musical comedy results when the music grows out of the plot, as the living blossoms grow on the branches of a living tree.

Following "The Three Twins," a virtual stream of shows flowed from Harbach's pen—stretching across a span of 50 years: "The Firefly," "Mollie Darling," "No, No, Nanette," "Rose Marie," "Sunny," "The Cat and the Fiddle," "Roberta"—these are but a few. For over 30 years he was represented on Broadway season after season by a new hit show. In one season, 1926, a record was established, with five new Harbach shows appearing. Among them was the unforgettable "The Desert Song" with its ever popular song of the same title.

He collaborated with the late Oscar Hammerstein II on the lyrics of this show, and in Hammerstein's recollection, the events surrounding the composition of the title song came to a conclusion as follows: The two were sitting in the garden of Harbach's estate in Mamaroneck, and had reached a silent impasse, after rejecting many bits, snatches and fragmentary ideas. Finally Harbach broke the silence.

He said—

> Oscar—we are not going to create this song. This song exists right now. It's somewhere in the world. Our job is to find it.

They did. "The Desert Song" was "found" in 1926, and sent out into the world, where it remains popular to this day. The words show another aspect of Harbach's creativity—a striving to make a song text more significant, more important, and, at the same time, a striving for compact, poetic beauty:

> Blue heaven and you and I,
> And sand kissing a moonlit sky,
> The desert breeze whisp'ring a lullaby,
> Only stars above you to see I love you.

Another example of his concise lyric style is this short excerpt from the words for "Roberta" written for composer Jerome Kern:

> Tears I cannot hide,
> So I smile and say,
> "When a lovely flame dies,
> Smoke gets in your eyes."

"Smoke Gets in Your Eyes" has been referred to as one of America's most popular romantic love ballads.

In his meteoric rise to fame across the decades, Harbach's path crossed that of many of this country's great stage personalities: Fay Templeton sang in "Roberta," Bessie McCoy sang in "The Three Twins"—she sang a song which gave her the nickname "Yama Yama Girl," Marie Ellis starred in "Rose Marie," Edith Day starred in "Wildflower," "Sunny" was written as a vehicle for the gorgeous Marilyn Miller, and Arthur Hammerstein commissioned Harbach to write a new musical for the highly volatile operatic star Emma Trentini. Therein lies a story.

Trentini, at the time, was starring in "Naughty Marietta," with a musical score by Victor Herbert. Hammerstein wished to keep his star constantly before the public's eye, and wanted the groundwork started on a new show while "Naughty Marietta" was still playing. The plan was for Harbach to do the book, and Herbert the music, for Trentini's next show; an announcement to this effect was even made in the press. With this in mind, Harbach traveled with "Naughty Marietta" to observe Trentini in action and create a new musical tailored to fit her personal style. In the meantime, however, Trentini played the role of the traditional prima donna and grossly insulted composer-conductor Victor Herbert by refusing to sing an encore during a gala performance—in fact, she walked off the stage. Herbert was outraged, and refused to have anything further to do with her, to say nothing of writing the score for her next show. Rudolf Friml, however, was approached, and he agreed to write the musical score. Harbach finished the book, and the story has a happy ending: "The Firefly," starring Emma Trentini, book and lyrics by Harbach, music by Friml, was an outstanding success.

Another side of Harbach which is of interest is his outgoing nature, his willingness to give advice and to share his years of experience with newcomers in show business. A frequent collaborator, coauthor, and colyricist, Harbach freely gave from his vast storehouse of knowledge and thereby contributed materially to the successes of many other authors and composers. He was the author of several articles analyzing the history and technique of musical comedy writing, thereby aiding others beginning in this field. Here are some of his ideas, taken from two of these articles. This is what he said in Etude, December 1955 issue:

> I call musical comedy the history of a battle. Rehearsals were often a tug-of-war between book and music, in which music won. When I began writing plays, back in 1906, I had three goals: to put more sense into the book of a musical play; to use no vocal numbers without logical motivation; and to make the introduction of music a natural part of the action. I hoped to free the musical stage from its battle aspects.
>
> "The Cat and the Fiddle" was one of the few (musicals) that began with an original play. Music and production came later. I planned a story for which music would be an integral and necessary part. My hero and heroine were both composers, one serious and the other popular; the plot let the hit writer save the serious writer from failure, and worked out a happy ending in romance as well as in business. That's the kind of plot I like for a musical; the people can make music logically.

In the January 4, 1956, issue of Variety, he wrote:

> Ballet has come into its own as a pure art form. So has pantomime, grand opera, and drama before it.
>
> It is when these are blended in various proportions that classifications becomes difficult. Some day some one will write the perfect musical play. That will be when all forms of expression, song, dance, and drama, are blended in such a way that each moment is motivated and developed with logic and regard for reality.

The late Oscar Hammerstein II, in deep gratitude, described his relationship with Otto Harbach in the following words:

> I was born with two gold spoons—one was my uncle Arthur Hammerstein who took me into his producing organization. The second gold spoon was Otto Harbach * * *.
>
> His generosity in dividing credits and royalties with me was the least of his favors. Much more important were the things he taught me about writing for the theater. He was the best play analyst I have ever known. He was also a patient man and a fine teacher * * * he is the kindest—most tolerant and wisest man I have ever known.

This is indeed no small tribute, coming from one who was later to achieve a great reputation in his own right—in particular as lyricist and partner of Richard Rodgers; the words for the great songs in "Oklahoma," "Carousel," and "South Pacific" came from his pen. In a letter to Harbach on the occasion of the latter's 83d birthday, Hammerstein stated the following:

> It is impossible to estimate the extent of your effect upon our theater. Impossible to measure in applause, or laughs, or dollars, but we who have worked beside you know that you have left a mark that will never be erased.

Jerome Kern, his collaborator for "Roberta" and "The Cat and the Fiddle," considered Harbach "second to no American dramatic author in his understanding of musical values."

Carl Sandburg contributed the following anecdote, on the occasion of Harbach's 80th birthday. It concisely sums up a magnificent career:

> I cannot forget the first and only time I crossed Broadway with him, and I heard him murmur with dreaminess within his voice "This street has been good to me," almost as though, if the street had rejected him, he could have let it pass with no rankling.

The following are some of Harbach's memorable shows and songs:

Year 1908. "Three Twins" (Harbach: lyricist); leading song: "Cuddle Up a Little Closer, Lovey Mine."

Year 1910. "Madame Sherry" (Harbach: librettist and lyricist); leading song: "Every Little Movement."

Year 1912. "The Firefly" (Harbach: librettist and lyricist); leading songs: "Giannina Mia," "Sympathy."

Year 1919. "Up in Mabel's Room" (Harbach: coauthor; nonmusical).

Year 1920. "Mary" (Harbach: colibrettist and lyricist); leading songs: "Love Nest," "Mary."

Year 1923. "Wildflower" (Harbach: colibrettist and lyricist); leading songs: "Bambalina," "Wildflower."

Year 1924. "Rose Marie" (Harbach: colibrettist and colyricist); leading songs: "Indian Love Call," "Rose Marie."

Year 1925. "No, No, Nanette" (Harbach: colibrettist and colyricist); leading song: "No, No, Nanette."

"Sunny" (Harbach: colibrettist and colyricist); leading song: "Who."

Year 1926. "The Desert Song" (Harbach: colibrettist and colyricist); leading songs: "The Desert Song," "One Alone."

Year 1931. "The Cat and the Fiddle" (Harbach: librettist and lyricist); leading songs: "She Didn't Say Yes," "The Night Was Made for Love."

Year 1933. "Roberta" (Harbach: librettist and lyricist); leading songs: "Smoke Gets In Your Eyes," "The Touch of Your Hand."

For assistance in the preparation of biographical data and for the comprehensive listing of the works of the late Otto Harbach, I am very thankful to Darius Thieme of the Library of Congress Music Division and William Lichtenwanger, head of the Reference Section of the Library's Music Division.

The following is an account of the death of Otto Harbach which appeared in the January 30 issue of Variety:

OTTO HARBACH, DEAN OF U.S. LIBRETTISTS, DIES AT 89; TUNE CREDITS TOPPED 1,000

> Otto A. Harbach, one of the most prolific librettist-lyricists of the American musical theater, died in New York last Thursday (24). He was 89. A charter member of the American Society of Composers, Authors, and Publishers and a director since 1920, he served three terms as vice president and from 1950 to 1953 as president.
>
> Stanley Adams, current American Society of Composers, Authors, and Publishers president, said upon learning of Harbach's death, "All of us in the world of music and entertainment are deeply saddened by the death of Otto A. Harbach, dean of American librettists. But, just as important as his great talent and fame, was his gentle, thoughtful kindness to everyone. It can be truly said of Otto Harbach that he was a great man, and he will be missed by all those who knew and loved him."
>
> A graduate of Knox College in Galesburg, Ill., and an ex-teacher of English at Whitman College, Walla Walla, Wash., Harbach, who was once titled "The Learned Lyricist" in a New Yorker profile, was the author or coauthor of close to 50 plays since he started his theater career early in the century and is credited with more than 1,000 songs.
>
> As a lyricist working with such composers as Jerome Kern, Sigmund Romberg, Rudolf Friml, George Gershwin and Vincent Youmans, Harbach wrote such standards as "Smoke Gets in Your Eyes," "Indian Love Call," "Gianinna Mia," "Cuddle Up a Little Closer," "One Alone," "Rose Marie" and "Love Nest" among a host of others that make up an important part of musical Americana.
>
> Harbach was born in Salt Lake City on August 18, 1873, the son of Adolph Julius Hauerbach, a native of Denmark, a watchmaker and jeweler who emigrated to the United States and drove an ox team to Utah. (The name was changed to Harbach by the librettist just after World War I because the original sounded too German.)
>
> Harbach's show biz itch began when he played violin in a Salt Lake City orchestra and performed in college dramatics at Whitman College. He came to New York in 1901, after teaching English at Whitman, to take courses at Columbia University. He became a newspaper reporter on the original Daily News and in 1933 joined the George Batten Advertising Agency as a copywriter, remaining with the firm until 1910.
>
> Some of his ad slogans became memorable. Among them were "Hammer The Hammer," for Iver Johnson revolvers, and "Built, Not Stuffed," for Ostermoor mattresses. In 1908, Joseph Gaites, a producer, decided to present a musical version of a German farce called "Three Twins" and hired Harbach to do the adaptation and Karl Hoschna to write the music at $100 flat.
>
> The show had a good run and brought recognition to the team of Harbach and Hoschna. Harbach quit his $50-a-week job at Batten's and after a year, wrote "Madame Sherry," which made him a financial success.

BECAME SUCCESSFUL PLAYWRIGHT

> As a successful playwright, Harbach moved into the Hotel Albermarle on West 54th Street, where he shared an apartment with Harold Orlob, who also came from Salt Lake City and who got involved with musical comedies and later composed the music for shows like "Hitchy Koo" and "Listen Lester." (Several years ago Orlob was finally credited for the composition of the music for the song, "I Wonder Who's Kissing Her Now.") When Orlob's show, "Listen Lester," was having book trouble in Syracuse, the composer sug-

gested to producer John Cort to bring in Harbach to rewrite the book. The show came into New York a hit.

In the 1920's, Harbach, who was now affluent as well as industrious, began his collaboration with Oscar Hammerstein II. Their work together on "Wildflower," "Rose Marie," and "The Desert Song," started a great friendship and a fine writing partnership. In the following decade, Harbach continued the pace, collaborating with Jerome Kern on such memorable musicals as "The Cat and the Fiddle" and "Roberta."

Despite his success, Harbach once admitted that he remained in awe of the critics. He said, "I've somehow been frightened to death of them. Perhaps my fear of critics started with Alec Woollcott a long time ago. I went to him and asked his reasons for his cruel criticism of an operetta of mine called 'Suzi.' I don't think he ever forgave me. But perhaps he was entirely right, after all, in his review of 'Suzi.' It ran for only 55 performances."

Harbach was an impressive figure on the New York show biz scene. Slightly above medium height, he walked with his head well back, staring straight in front of him. He was an exceptionally friendly man but would often walk past acquaintances without noticing them. This was probably due to his poor vision, but more often it was because he was preoccupied with a lyric. During this preoccupation he hummed and waved his index finger as he walked along because he believed he had to keep the melody in mind and think of the rhyme simultaneously.

He told A. J. Liebling, who wrote the Harbach profile in the New Yorker, that the sorrow of his life was the small number of monosyllables that will rhyme with "love." Of the rhyme "Rose Marie, I love you—I'm always dreaming of you," he said, "That may not be grade A poetry but it is better than 'by all the stars above you.' "

He is survived by his wife, Ella, whom he married in 1918, two sons, William, a TV producer, and Robert, and three grandchildren. Private services were held at the Campbell Funeral Church in New York on Saturday (26) and the burial takes place today (Wednesday) in Salt Lake City.

The Saturday services at Campbell's were opened by Dick Liebert, Radio City Music Hall organist, who played selections of Harbach songs. Dr. Frank Grebe, minister of the Madison Avenue Presbyterian Church, recited the Lord's Prayer. Stanley Adams, American Society of Composers, Authors, Publishers' president, delivered the eulogy.

Anita Gillette, currently on Broadway in "Mr. President," sang "Yesterdays." Arthur Schwartz read a letter from the late Oscar Hammerstein II to Harbach which was written on the latter's 83d birthday and then recited the lyrics to "Smoke Gets in Your Eyes."

ACCELERATED PUBLIC WORKS APPROPRIATION BILL

Mr. HECHLER. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the Record and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from West Virginia?

There was no objection.

Mr. HECHLER. Mr. Speaker, the tumult and the shouting have died down. The great debate over the accelerated public works appropriation is now a matter of history. The vote restoring the $450 million appropriation is a great victory for President Kennedy, for Speaker John W. McCormack, for Majority Leader Carl Albert, for Majority Whip Hale Boggs, for great stalwarts like the gentleman from Minnesota, Mr. Blatnik; the gentleman from Massachusetts, Mr. Boland; the gentleman from Texas, Mr. Thomas; the gentleman from Oklahoma, Mr. Edmondson—to name only a few of the individual heroes, backed up by the Democratic Congress. Above all, this was a victory for the American people, and for those who through no fault of their own are out of work. It was also a victory for local, grassroots initiative in communities across the length and breadth of this great land of ours, for it will enable thousands of communities to take steps to make better places to live.

Passage of this bill means more jobs, more community improvements, and a spur to the economies of many areas. I believe that the vote also makes crystal clear which political party believes more deeply in providing jobs for the critically depressed areas of the Nation. The final rollcall revealed 208 Democrats and only 20 Republicans in favor of the accelerated public works appropriation, while 151 Republicans and 33 Democrats lined up against the $450 million item. This is another way of stating that 87 percent of the Democrats voted for accelerated public works, while 88 percent of the Republicans voted against this program which means so much to people faced with unemployment.

Mr. Speaker, faced with a clear-cut opportunity to act on behalf of those out of work, the National Republican leadership made it a matter of party policy to oppose the accelerated public works bill, they ridiculed it and called it a "boondoggle," and when the chips were down they voted 88 percent against the bill on final passage. This ought to settle conclusively which party is doing the most for the unemployed.

URBAN RENEWAL

The SPEAKER. Under previous order of the House, the gentleman from Texas [Mr. Alger] is recognized for 60 minutes.

WHAT IS URBAN RENEWAL?

Mr. ALGER. Mr. Speaker, urban renewal is the replanning and rebuilding of our Nation's cities by the Federal Government at the expense of the taxpayer. It is the condemnation of one man's property for resale to another—in violation of our traditional concepts of property rights. It is the demolition of whole areas of our cities. It is the rebuilding of cities in conformity to the schemes of Federal planners, through Federal finance and Federal control. It threatens to end local self-government.

Urban renewal is a political weapon. It is an attempt by liberals using the taxpayers' money, to reduce their opposition to ineffectiveness by buying off large sections of the business community. If an individual accepts his slice of the New Frontier, how can he legitimately deny others their portion? Urban renewal is a planned alliance between local political leaders and the Kennedy administration, aimed at keeping both in power.

Urban renewal is a pretext for introducing public housing into a community. Frequently, public housing—unpopular on its own merits—is tied to urban renewal as a condition for receiving Federal funds, and in this way socialized housing gets a foothold in the local community.

Now a new trend in urban renewal and public housing is developing. If the social planners in Washington get their way, the Government will be able to nationalize your home or choose your neighbors for you.

I would like to call attention to the following articles in Human Events:

"Uncle Sam Will Choose Your Neighbors for You"; "Corruption Unlimited: Urban Renewal"; "A Congressman Unmasks Urban Renewal"; " 'Renewal' In, Prosperity Out"; "Senators Warn on Urban Affairs Department"; "34 States Pay More Than They Receive"; 'Average Man Doesn't Dream of Renewal Dangers"; "Public Housing: An Expensive Failure"; "Moral Cost of Public Housing"; "Renewal Ills Plague Indiana"; "Hoosiers Seek Legal Remedy"; "Planners, Politicians and People"; " 'No Federal Control' a Myth"; "Negro Civic Leader Lashes 'Renewal' "; "Tale of Two California Cities"; and "Voters Say 'No' to Renewal."

BULLDOZERS AND BOONDOGGLES

In urban renewal, the liberal philosophy has completed one full cycle. The seed was planted more than 25 years ago. The tree flowered during the fifties. Now the fruit is being harvested. The crop is a failure.

Disillusionment with urban renewal is raising doubts in believers about other liberal programs shaped by the New Deal—Fair Deal—New Frontier philosophy. That philosophy is built around three simple and appealing propositions, as follows:

First, many people are in need.

Second, the Nation has the resources with which to meet the need.

Third, the Federal Government should use the resources to satisfy the need.

Political opponents of this philosophy can attack only part of it. They must concede, in some cases, that need exists. They certainly must concede that the Nation has great resources. These opponents then are left with the difficult task of proving that the Federal Government cannot and therefore should not try to use the resources to meet the end.

Political opponents of the liberal philosophy might never be successful were it not for the help given them by the liberals. The liberals have had plenty of rope and are now beginning to hang themselves with it. This has become particularly evident in urban renewal.

On urban renewal, the liberals have written their own ticket. They have set the patterns which the Federal Government is following. Now they are being discredited by the results.

A capsule history of urban renewal must begin with the Housing Act of 1937. In that legislation, Congress authorized the first federally financed public housing.

The public housing program has never accomplished its objectives. But it did help establish a Federal financial practice which continues to plague the Nation. It helped confirm "backdoor spending" as a part of national policy.

The Constitution of the United States, article I, section 9, states:

> No money shall be withdrawn from the Treasury except in consequence of appropriations made by law.

Specific advance authorizations for public housing subsidies could not be secured from Congress, because the exact extent of the obligation was not known when the commitments were made. Nevertheless, the executive branch was given authority to pledge the full faith and credit of the United States for these subsidies. This authorization was attacked on the grounds that it was unconstitutional and that it opened a "back door" to the Treasury through which funds could be withdrawn without the required appropriations. The liberals brushed aside the objection and proceeded with the program which has now saddled the people of the United States with billions of dollars in public housing commitments for which no specific appropriations were ever made by their elected representatives.

When the public housing program failed to achieve its objective of slum clearance, the liberals were not disheartened. They insisted that what was needed was an expansion of the program and an increase in Federal expenditures. They secured passage of the 1949 Housing Act which created a new authority for slum clearance and urban renewal, raising another constitutional question of even greater importance.

The mechanics under the Federal law are:

First. The Federal Urban Renewal Administration, bypassing the appropriations process of Congress, lends money—currently at 3½ percent interest—to a local authority authorized to accept Federal aid to make preliminary studies—section 102d, Federal law.

Second. The URA similarly lends additional money for detailed planning of a project.

Third. The URA lends large sums, to acquire by condemnation under power of eminent domain, and otherwise, land and buildings now belonging to private citizens and used for their homes and businesses.

Fourth. The local authority generally demolishes and clears all the structures from the project area.

Fifth. The cleared land is then offered for sale, generally at tremendous loss, for reuse by other private citizens for sites for their businesses and homes.

Sixth. The loss—the difference between what the cleared land will bring when resold, and the cost of acquisition, demolition, preparation for reuse, plus all project overhead—is made up by the taxpayers. One-third of the loss is paid by taxpayers in their local taxes, as a so-called local grant-in-aid—section 104, Federal law. The other two-thirds is paid by taxpayers in their Federal taxes.

As to State law I shall only mention Texas as an example, because each State has its own implementing laws. The Texas urban renewal law is an act which will enable Texas communities to participate under the Federal urban renewal law, and in our case it became effective in 1957.

The Constitution provides:

> No person shall be * * * deprived of * * * property * * * without due process of law, nor shall private property be taken for public use, without just compensation.

In accordance with this provision of the fifth amendment, the power of eminent domain had been used to take land from private persons. But the land was always bought for a public purpose and devoted to a public use. The Government could not seize one man's property and make it available for use by another private individual.

In order to put urban renewal in effect, the liberals had to change this all-important provision. How completely successful they were in changing the fifth amendment is evidenced by the 1954 decision of the Supreme Court in the case of Berman versus Parker.

SUPREME COURT BOON TO RENEWAL SEIZURE

In this case, which swept aside 175 years of tradition, the owner of a department store in Washington, D.C., challenged the validity of the Federal act which gives the local redevelopment authority the right to condemn property which is not substandard or blighted, merely because the property is unfortunately in the midst of a run-down area slated for urban renewal.

The Supreme Court upheld the right of Government to seize such property if it promotes the "public welfare" as defined by a legislative majority. The Supreme Court said:

> We do not sit to determine whether a particular housing project is or is not desirable. The concept of the public welfare is broad and inclusive. * * * The values it represents are spiritual as well as physical, esthetic as well as monetary. It is within the power of the legislature to determine that the community should be beautiful as well as healthy, spacious as well as clean, well balanced as well as carefully patroled. In the present case, the Congress and its authorized agencies have made determinations that take into account a wide variety of values. It is not for us to reappraise them.

This important decision, affecting the property rights of every American, was accomplished by redefining a key term in the fifth amendment, "public use."

Prior to 1954, the Government could use the power of eminent domain to acquire property when necessary for public streets, buildings, schools, parks, sewers, freeways—provided it was for use by the public.

But in 1954, the Supreme Court decided that it could not let this limitation on the use of eminent domain stand in the way of what it considered social progress. So the Court declared that, in effect, "public use" shall mean whatever a legislative body conceives to be in the "public benefit."

> The concept of public welfare is broad and inclusive—

Said Mr. Justice Douglas. He agreed that the department store had violated no laws of public health or safety, but added:

> If those who govern the District of Columbia decide that it should be beautiful as well as sanitary, there is nothing in the fifth amendment that stands in the way.

So they ran bulldozers through Frank's Department Store at 712 Fourth Street SW., Washington, D.C.

The same travesty on the Constitution has been repeated now in dozens of cities across the country. Whole blocks are swept bare by the bulldozer state. And if in the middle of it all, there stands a clean, decent home or business, proudly maintained, and the owner does not want to sell? Then away with him. Who says a man's home is his castle? There is nothing in the fifth amendment that stands in the way.

With "public use" redefined, the liberals had the way cleared for anything they choose to do. As fast as they have been forced to admit that one set of Federal procedures was not winning the battle of the slums they have secured the enactment of new procedures—always more complicated, always more costly, and always extending the control of the Federal Government over local affairs.

FEDERAL REGULATIONS A TIGHT STRAITJACKET

Some liberals will insist that this is an unfair indictment of their activities. They claim, for example, that they are not trying to extend Federal control. One of the best explanations of their position on this point has been given by the General Counsel of the Housing and Home Finance Agency, speaking at the Practicing Law Institute on Urban Renewal and Public Housing in New York City on June 18, 1962:

> I digress to note that under existing law the principal protections accorded to the sovereignty of a local governing body stem directly from Federal statute. Thus, the local governing body must authorize an application for public housing or for urban renewal and related forms of Federal financial assistance. Land sought to be taken for an urban renewal project can be acquired only after notice and public hearing, and the uses to which that land may subsequently be put must conform to the provisions of an urban renewal plan to which only the local governing body can give final approval. That body must also determine that the urban renewal plan itself conforms to the general plan for the development of the community as a whole. All of these and other protections to the integrity of the local governmental process are embodied in title I of the 1949 Federal Housing Act itself.

The validity of such claims was examined at length by my colleague from Illinois, Congressman JOHN ANDERSON, in an analysis which appeared in the CONGRESSIONAL RECORD of September 12, 1961:

> Put yourself in the position of a member of the local committee considering urban renewal. The contract for loans and grants issued by the HHFA is in two parts. The first part is the signed contract. The second

part incorporates the terms and conditions which apply. The second part is 47 pages long. The detail is great, and the straitjacket is tight.

You want to find out how to go about becoming eligible to participate. Where do you go? To this three-volume set, the "Urban Renewal Manual." You must conform closely to the procedures if you want any of the money which the Congress has appropriated. If your local plans do not conform to what the HHFA office thinks would be appropriate, your plan may be labeled "not feasible" and permanently filed. But just having the set does not mean you have all the regulations. Monthly supplements are sent out to replace various sections—a strictly unilateral procedure on the part of HHFA. The locality has no choice. The price of participation is unquestionable acceptance and having to conform to the unilateral changes.

Now you begin filling out forms. First, there is the form to be used by the applicant in filing an application for the Federal aid. This occurs in book I, part 4, chapter I, section 1. The applicant must certify that "it is cognizant of the conditions that are imposed in the undertaking and carrying out of the urban renewal projects with Federal assistance." A similar provision is contained in other application forms.

Among the conditions imposed by the Administrator is the requirement for special documentation to be submitted by the local authority as its final project report on part I of the "Application for the Loan and Grant." This is described in book I, part 4, chapter 2, section 1. I quote from these requirements:

"The final project report shall be submitted in five binders. Documents shall be arranged in order of their checklist code number."

That checklist is 2½ pages long. An amendatory application is required for changing project boundaries, revising the amount of the loan, or changing any other provisions of the contract.

Let me cite just one other illustration from the manual of the many evidences of control which come with the program. In part 3, chapter 3 of the manual, which deals with the reporting of litigation, there is a requirement that the local public agency shall obtain HHFA concurrence before entering into a contract for furnishing litigation services to defend itself against legal attack.

Space does not permit a full exploration of what the liberals have done with the urban renewal program. A few examples, however, show the expansion of their program.

PUBLIC HOUSING JOYS FOR ALL BUT TAXPAYER

One example has to do with the transformation of the program from a venture in public housing into the entire area of community development. Originally, the program was exclusively public housing. In 1949 it became urban redevelopment with the provision that every project area must be preponderantly housing either before clearance or after redevelopment. The present administration felt the program ought to be weaned farther away from housing objectives and succeeded in obtaining congressional approval of an amendment which earmarks 30 percent of the total $3 billion authorization for commercial and industrial redevelopment, which has little if any relation to housing.

HERE'S HOW

Now if an industry is unsuccessful in purchasing a desirable piece of property for plant expansion, it shifts its efforts to the political arena, using its political influence to have the land designated as an urban renewal area. The power of eminent domain is invoked, and the Federal Government, at the expense of the taxpayer, acquires the property, clears it, and then sells it to the private industry at a price substantially below market value.

WAY OF LIFE

Another example involves the evolution of public housing away from its original objectives. By original intent, public housing was a place to house the needy until they could get on their own feet. The 1961 Housing Act, however, permits tenants to remain in public housing when their incomes increase. In effect, and intentionally, this provides Government-subsidized housing for middle-income families. The 1961 act demonstrates that public housing has become a way of life rather than a temporary relief measure. Big cars, boats, and other obvious signs of affluence are quite typical of public housing areas.

But that is only the beginning if Public Housing Commissioner Marie McGuire gets her way. In a recent interview, she told reporters she wants public housing turned into "happiness housing." Roof gardens, swimming pools, bowling alleys, coke bars, nursery schools, and welfare services are just a few of the items she would like to see built into future public housing projects.

Use of these taxpayer-built facilities would be restricted to public housing tenants and not open to the public. This means that a taxpayer buying or renting a house near such a project could stand by and watch people, subsidized by his taxes, cavorting in swimming pools and enjoying a more luxurious living than he can afford.

Some of the public housers' rhetoric and intentions are hard to decipher, such as Mrs. McGuire's "in family housing, perhaps the highest priority to be given in the application of sociological disciplines to designs is in the treatment of high densities" or "for independent living of the elderly, we know that our focus must be on permitting self-mastery as long as possible even in view of anticipated physical prowess reduction."

Both of these statements can be translated, but one is left wondering why it had to be said the long way around. Interpreted, it means apparently that the Government can and should analyze, orient, and even order our lives. That is quite a new concept for the proud, independent people I think we still are and intend to remain.

Mrs. McGuire still does not get the message from the hardworking taxpayer who foots the bill. Even though public housing has been turned down by the voters in her home city of San Antonio, Tex., she said in a September 1962 speech:

> I find unquestionable confirmation of my own experience of many years as the local administrator of public housing in San Antonio. That experience proved to me that public housing can do the job efficiently, economically, and humanely with not a trace of damage to the psyche of the individual tenants * * *.

Obviously, at all costs, we must avoid injuring the public housing tenants psyche. It does not matter what happens to the hardworking taxpayer's psyche.

That public housing is conceived by Government planners not as a mere relief measure but as a model for future community living is shown in this remarkable statement by Mrs. McGuire:

> Public housing should be designed not just to blend in with the neighborhood as it is. It should be designed for what the neighborhood hopes to be in the foreseeable future.

There may be no other Federal program in which the liberals have had their way as fully as in urban renewal. But none of the other programs have matured as rapidly and have revealed the complete inadequacy of the procedures upon which they have been built.

The record of failure is too long for a complete reproduction. A considerable part of it was printed in a 38-page indictment which I entered into the CONGRESSIONAL RECORD on October 5, 1962. Here I will present a brief summary in the form of answers to these three simple questions:

First, how is need determined?

Second, where does the money come from?

Third, who gets the money?

How is need determined? Much as liberals support Mrs. McGuire's concepts of social progress, I have never heard a liberal Member of Congress suggest that Federal subsidies should be made available unless a need for them can be demonstrated. Differences of opinion on this subject center entirely on the question of what constitutes need.

I have tried to find out how the Housing and Home Finance Agency satisfies itself about need before it makes any financial commitment on behalf of the Federal Government. This is not easy to do.

One point is certain. HHFA has not promulgated any criteria or standards to which all communities must conform. Instead, it seems to be relying almost entirely on the provision of law which requires that, before Federal urban renewal aid is made available to any community the local governing body must make a finding that aid is needed.

The law has been so administered by the Housing and Home Finance Agency that many communities which did not require aid have been receiving it. One flagrant case, in Richmond, Calif., has been reported by the HHFA itself. The following account of Richmond's Harbor Gate project is told in the July–August, 1961, issue of Urban Renewal Notes, published by HHFA:

> In 1954, when Harbor Gate project was conceived, the assessed valuation of land and improvements in the area was $260,000, bringing in annual tax revenues of $24,000. The area has been redeveloped for industrial use, and part of the land is already occupied by new structures housing food distribution

> facilities. Although only a portion of the contemplated redevelopment is completed, the current assessed value is $2.5 million, yielding tax revenues 10 times those of 1954. When the additional facilities are completed it is expected that the assessed value will rise to $6.5 million, with revenues 25 times that received in 1954.
>
> Richmond will be the first city in California to liquidate the cost of an urban renewal project financed under the terms of a 1952 amendment to the California Constitution. The amendment is based on the assumption that an area will bring in more taxes after it has been renewed or redeveloped than it has yielded in its rundown state. Any increased revenues are earmarked to pay off the local cost of the project.
>
> This involved the setting up of a revolving fund to pay for the local share of the city's urban renewal activities. The revolving fund advances the money which, after it is repaid to the fund, can be used for the financing of other projects or activities, thus providing a constant source of funds for defraying local costs. As increased taxes from a renewed area are collected, they are paid into the revolving fund until the amount advanced to the particular area has been repaid. Once the advance has been liquidated, the earmarking of the increased revenues ceases; they no longer need be paid into the fund and can be used by the city or other local governmental unit for any purpose it wishes.
>
> In most cases, the money to finance the local share of urban renewal activities is raised through the sale of bonds. These bonds are variously called "tax increment" or "tax anticipation" bonds. Under this type of financing, the amount of real estate taxes collected at the time the renewal is undertaken is established as the base, and any excess revenue from real estate taxes above this amount, i.e., the "tax increment" is "allocated" and used for the repayment of the bonds. During the period of repayment the city continues to collect the amount it collected prior to the renewal. In addition, it receives all revenues from other nonproperty taxes, such as taxes on sales and business licenses.
>
> Normally, these bonds are issued on the assumption that they will be repaid over a period of 30 to 40 years. Richmond's ability to pay off its $600,000 debt in the short space of 4 years underscores the potentialities of the increased tax income which redevelopment makes possible. Furthermore, Richmond was particularly fortunate that its fiscal position made it possible to avoid levying an additional tax rate to support the financing of urban renewal. Unlike most other California cities, the costs were advanced from general government sources.

Please note that the city did not borrow a dime. It advanced all of its share of cost of the project from general funds.

Please note again that, under California law, it could have issued tax increment or tax anticipation bonds with which to have financed the project. The California State Constitution has been amended—article VIII, section 33951—to provide that such bonds can be used, in whole or in part, to finance or refinance such projects. These bonds are outside the debt limit of the city. They are self-liquidating. They have nothing to do with the need or capacity of a city to finance its local government.

When the city of Richmond passed a resolution saying that Federal financial help was necessary to complete that project the members of its city council were passing a false certification. When the Federal Government accepted that certification without question and when later it boasted about the success of the project on which hundreds of thousands of Federal taxpayers' money was spent unnecessarily, the Federal Government was making itself a party to the fraud and was encouraging other communities to make further false certifications.

In Bloomington, Ind., after a public hearing on the first urban renewal project at which more than 90 percent of those in attendance were opposed, the city council passed and sent to Washington a resolution indicating that the project had wide public support. That resolution was accepted without question by Federal officials even after the facts had been made known to them. In Erie, Pa., certain residents displaced from the first urban renewal project were housed in temporary dwellings. The local redevelopment agency passed a resolution declaring that all displaced persons had been relocated in accordance with Federal requirements. HHFA accepted the resolution without question.

However unconscionable may be the excesses permitted by lack of Federal procedures, they pale when compared to the excesses which are permitted and encouraged by actual procedures required by the manual. What they do in many instances is to encourage a community to relieve itself almost entirely of any project cost and to place upon the Federal Government financial burdens which are not necessary for the success of project operations.

SKY'S THE LIMIT WHEN UNCLE SAM IS PAYING

One very interesting example of this kind of excess is to be found in the accounting procedures which have been prescribed in the Urban Renewal Manual. These procedures use technical terms such as "gross project cost" and "net project cost"—terms which are well known to accountants. But the manual suggests items for inclusion in these costs which are completely foreign to sound economics.

By definition, gross project cost includes all the costs which are charged against a project. With respect to Federal urban renewal projects, the manual either permits or requires that expenses be included in gross project cost which no private enterprise project could afford.

A proportionate share of all the expenses of a local public agency can be charged to gross project cost. In most communities the legally established local public agency has no funds with which to undertake projects. It can borrow from the Federal Government 100 percent of the money it needs to put itself in business. It can also borrow additional money from the Federal Government, without security, for preliminary studies and for the formulation of an urban renewal plan. A proportionate share of all that is borrowed becomes part of the gross project cost for each project.

Again without security, the local public agency, after its urban renewal plan has been approved, can borrow the money required to purchase, clear the property, install site improvements, and make arrangements for the resale of the land. While these terms sound similar to those used by private enterprise, the costs involved are frequently far in excess of what any private enterprise project could afford.

The item of land acquisition offers some excellent illustrations of the amount of some of the excesses. In New York City on the first 10 urban renewal projects for which statistics became available, properties bought by condemnation averaged 155 percent of fair market price.

Perhaps the most scandalous acquisition took place in Wink, Tex., a town with a population of 1,863 for which a capital grant reservation of $795,605 was made and about which the following transaction has been reported:

> Druggist Clyde Godfrey points to a precariously sagging store damaged by fire that he owned. "On the open market that building wouldn't have brought a penny." He values three other properties he owned at $2,800. Yet Godfrey pocketed $11,700 from the renewal agency.

These and other excesses constitute the justification for the following quotation taken from House and Home magazine for August 1960:

> The hundreds of millions these writedowns cost were supposed to be subsidies to give slum dwellers better homes, but they have been used as subsidies to make slumowners richer.

In States where vast amounts of Federal urban renewal funds are flowing, slight changes in State laws could eliminate the need for Federal funds and could remove the justification for local claims of the necessity for Federal assistance. A case in point is New York City. My evidence is a report prepared by a special committee on tax policies organized by the Citizens Housing and Planning Council of New York, Inc. The report says:

> These data show that under the present real property tax system, after making full allowance for some $75 million in exempt properties, these projects will produce a net tax gain of $5 million a year, sufficient to repay the city's costs in 6 years and all public costs in 18 years. If the net taxes could be dedicated to a special land-acquisition fund, the title I program could be made self-liquidating.

Let me make the point that instead of sending out agents of the Federal Government, trying to get cities to take Federal funds, we should be passing legislation that no project which is capable of self-liquidation should receive Federal aid. This will put pressure on the States to enact their own laws to make such projects self-liquidating.

The Housing and Home Finance Agency has failed not only to make certain that Federal aid was needed, but also to determine the extent of need.

Proof of this is to be found in the answer to a single question. How many projects can any one community undertake?

There is no limit on the number of projects for which any locality can get aid.

Likewise, there is no limit on the amount of money a city can spend on a single project.

Up to the present the record for the most extravagant project appears to be held in Philadelphia. The Eastwick project in that city cost $880,000 just for the planning. A temporary loan of $78 million was approved by the HHFA with which to carry out the project. A grant reservation of $36 million has been approved to cover two-thirds of the estimated loss on that project.

POOR STATES PAY, RICH STATES GAIN

Where does the money come from? My second question becomes particularly embarrassing to liberals. Their philosophy on this point is well set and widely publicized. They are in favor of using the power of taxation to take away from those who have in order to help those in need. They become terribly embarrassed when in urban renewal they discover that the officially established policy of the Federal Government is to do exactly the opposite. The liberals, who have had their way without limit in the establishment of this program, are taking money away from the poor States and pouring it into the great centers of population and wealth.

Of the 50 States, 34 pay more than they receive for urban renewal. Among these States are Mississippi, Montana, New Mexico, South Carolina, South Dakota, Vermont, West Virginia, and Wyoming—all small States with less than average wealth. Among the States which receive more than they contribute are New York, Connecticut, Massachusetts, New Jersey, and Pennsylvania—the centers of population and wealth.

My contention that urban renewal is being financed by taking from the poor to benefit the rich is supported also by figures based on family incomes. The facts are that reservations of urban renewal funds totaling $1.85 billion were made for 254 cities where the average household income was above the U.S. average, while $400 million was committed for 172 cities where average household income was below the U.S. average. In other words, for each $1 reserved for cities with above-average incomes per household, less than 22 cents was reserved for low-income cities.

TABLE 1.—*Percent of U.S. total of Federal taxes paid and urban renewal grant reservations—50 States and the District of Columbia*

State	Allocations to States	
	Payments—Percent of U.S. total taxes	Receipts—Percent of U.S. total of urban renewal grant reservations

Sources: Col. (2): Allocation formula computed by Chamber of Commerce of the United States jointly with other organizations. Col. (3): Computed from data in "Urban Renewal Directory," Sept. 30, 1961, U.S. Housing and Home Finance Agency, Washington, D.C.

The second table which I present in support of my contention that urban renewal is being financed by taking from the poor to benefit the rich has to do with family incomes. It lists by States the dollar amount of urban renewal grant reservations for cities above and below the U.S. average family income. The facts are that reservations totaling $1,855,123,755 were made for 254 cities with income per household higher than the U.S. average: $400,116,944 in grant allocations were reserved for 172 cities where income per household was below the U.S. average. In other words, for each $1 in grant reservations for cities with above average incomes per household, less than 22 cents in grant reservations were made for cities with below average income per household.

The table follows:

TABLE 2.—*Federal urban renewal grant reservations for cities with above U.S. average income per household, and with below U.S. average income per household, by State, for the 50 States and the District of Columbia*

State	Federal urban renewal grant reservations for cities where income per household is—			
	Above U.S. average		Below U.S. average	
	Dollar amount of grant reservations	Number of cities	Dollar amount of grant reservations	Number of cities

NOTES

1. Definitions:

"Income" is disposable personal income—that is, wages, salaries, and pensions of individuals, proprietors, and rental income, and payments of interest and dividends less all Federal, State, and local income taxes.

"Household" is a broader term than "family" and includes all persons occupying a house, apartment, or group of rooms, or a room regarded as a dwelling unit—in short, any occupied dwelling. This term does not include students, soldiers, and residents of hotels, boarding houses, and institutions who earn income.

U.S. average income per household, in 1960, was $6,723.

2. Cities for which no income data were available.

	Dollar amount of grants	Number of cities
In 50 States	$42,868,793	76
In Puerto Rico and Virgin Islands	29,409,962	37
Total	72,278,755	113

If it is assumed that all these would be below U.S. average income, the grand totals for those categories would be: Dollar amount, $472,395,699; number of cities, 285.

3. No urban renewal grants in the States of Idaho, Montana, Nebraska, New Mexico, South Dakota, Utah, and Wyoming.

Sources: Urban renewal grants: From Urban Renewal Directory, Sept. 30, 1961, U.S. Housing and Home Finance Agency. Income per household: From Sales Management, vol. 86, No. 10 (May 10, 1961), Bill Bros. Publications, Philadelphia, Pa.

Who gets the money? My third question is equally embarrassing to devotees of the liberal philosophy, since their record of performance is incompatible with their views.

The liberal philosophy is reflected in the National Housing Policy which was established by the Congress in the Housing Act of 1949, whereby the money is to be used to provide a decent home and a suitable living environment for every American family. Almost everyone joins the liberal in his concern for human need.

The performance of the Federal Government in trying to meet this need is a totally different thing. Billions of dollars have been spent and more billions are committed to activities that have little or no relation to stated Government policy.

Do the American families who are not now living in decent, safe, and sanitary housing get the money?

Not so that you can notice it. Many families in project areas get forced out of their homes and neighborhoods without even enough money to pay their relocation expenses.

Homeowners in project areas are paid fair value for their homes. But how is fair value determined? On appraisal techniques designed for Federal use and not for the special circumstances frequently found in slums, some homeowners in slum areas who have had to purchase their homes at inflated prices in order to get a place to live, have received from the Government less than the actual price they paid for the property.

Let me recall for your consideration the famous case of Mayme Riley, of Washington, D.C. Her property was located almost in the shadow of this Capitol. She had been employed at a steady job with a good salary for years. But she had never bothered to establish a credit rating for herself. When she decided to buy a home, she had to go into a slum area and pay a premium price of $9,950 for a deteriorated house. Not only that, but she had to sign a purchase agreement pledging not only the property, but also her personal earnings as security for the loan which she was forced to secure. The area was subsequently selected for urban renewal treatment and her property was taken by eminent domain. The court determined that fair value for her home was much less than the price she had contracted to pay. She was left with no home, with the necessity to find a new place in which to live, and with a debt of almost $2,000 which she must satisfy from future earnings.

Contrast the predicament of Mayme Riley with that of the slum landlord. His property is appraised on a basis different from that used for the homeowner. His appraisal takes into account the revenues he has been deriving from the property. In some cases these revenues are swollen by profits made possibly by illegal uses of the property, by failure properly to maintain the property, and by violation of reasonable building code requirements. These can help increase the price he receives for his property.

Income tax laws also help create windfall profits for the owners of slum properties. Depreciation allowances are so calculated that slum landlords can take capital gains on their profits.

But that is not the full story of where the money goes. Let me illustrate by returning to the Eastwick project in Philadelphia. I have already said that close to a million dollars was spent on planning that project. This money went to the planners, engineers, appraisers, architects, economists, and other experts who made studies and developed plans for the project. Then a Federal loan of $78,593,273 was approved with which to undertake the project. This money was spent to acquire the property in the area, provide fill and utility improvements which were needed and to put the project in shape for its intended new uses. This money went largely to contractors. They are very happy with this kind of urban renewal.

THE RICH GET RICHER AT TAXPAYERS' EXPENSE

That the rich get richer under urban renewal is not in doubt. A few examples will serve. Remember the 1961 law permits 30 percent of the grant authorization for commercial projects. The November 13 Barron's cites some specific instances:

> In Norfolk, Futterman became a joint venturer in a $6.5 million commercial project, the Golden Triangle Motor Hotel, the city's first large convention facility and, in effect, the keystone for its renewal activities, encompassing almost all the downtown area. The other partner, who had purchased the land for $200,000, contributed in all about $1.3 million to the venture (for an equity, including unrealized profit on the land, of $1.5 million); Futterman, for its part, committed some $1.5 million of its funds, and acquired a conventional mortgage of $3.7 million to cover the rest. Based on an average 70-percent year-round occupancy rate, Futterman hopes to earn before depreciation, up to 18 percent of its equity, or at least $250,000 a year, tax free.
>
> More often, the title I development is residential and thus qualifies for Federal financing. Under section 220 of the Housing Act, FHA is authorized to insure a first mortgage on the property of up to 90 percent of replacement value (and, under section 213, 97 percent of replacement value if the project is cooperatively owned). By comparison, nontitle I FHA mortgages are based on 90 percent of appraised value (which, in a slum area undoubtedly would be less than the actual cost of the building), and conventional mortgages seldom exceed two-thirds

of that value. What's more, if the owner also is the builder, the FHA is required to add a 10 percent builder's profit to the actual construction costs before computing the value.

Hence, a property might cost $20 million to build on land acquired for $1 million. By FHA's title I reckoning, its value would become $23 million, and a mortgage would be approved covering 90 percent of that figure, or $20.7 million. (The agency, of course, must be satisfied with the validity of the costs and the adequacy of the construction.) Obviously, in this typical example, the builder borrows almost the full cost of the project, in construction and land; his own cash outlay is only $300,000.

SPONSOR CAN GAMBLE

Variations of this rule of thumb affect all title I residential developments. The upshot is that the sponsor, in exchange for the risk he takes, is able to gamble on a small cash equity. FHA permits him to project his development's earning power in such a way as to permit a maximum override of only one-half of 1 percent in net—his return, based on the principal amount of the mortgage (90 percent of the cost of the project), must be computed at 7¾ percent (on current rates), with 5¼ percent going to interest and 1½ percent amortization of the principal, on standard methods of accounting. However, because he then can take accelerated depreciation on his costs, and his own cash investment is so small, the sponsor's actual earnings, on a cash-flow basis, eventually should work out to a return of anywhere from 10 to 33 percent a year.

This is true of two large Webb & Knapp projects, costing some $54 million, now virtually completed and rented in New York and Chicago. For the sponsor's $6 million estimated cash outlay, these initial operating properties by yearend should begin yielding some $1.5 million of tax sheltered net income. In another Webb & Knapp title I project, the Kips Bay Plaza now going up on Manhattan's East Side, prospects are even brighter. One of the two planned apartment towers has been built and rented. Total costs of the development, subject to the vicissitudes of material and labor price tags, are being projected at roughly $22 million. The sponsor anticipates encumbrances, including a possible second mortgage on top of the larger loan insured by FHA, of some $20.5 million, leaving Webb & Knapp's own cash in the project at only $1.5 million. The sponsor estimates its potential equity in the completed project—the cash investment, plus builder's profit and expected gain in any resale—at roughly $6 million, a 400-percent profit.

Like the other two, however, Kips Bay will be operated for current income for some time before the developer sells out. Based on expected rentals at full occupancy, the project is scaled to produce a 3-percent return on overall costs, in actual cash flow, or some $600,000 a year. This represents a 44-percent return on Webb & Knapp's cash outlay. As an operating property, in short Kips Bay should allow the Zeckendorf concern to get its money out in less than 3 years. As a demonstration of title I's potential profitability, moreover, Kips Bay thus promises to be as lush a big-city realty holding as any in the country.

SMALL TOWN PROJECTS

The demand for industry's services in developing and building title I projects obviously has mushroomed. Indeed, hundreds of suburbs, small towns and whistlestops all over America have begun wiping out previously unsuspected blight. One reason for this phenomenon, which traces to the recent liberalization of title I laws, is that 61 million Americans live in urban areas of less than 50,000 population. By recent count, $292 million in Federal grants have been made to 310 cities of under 50,000 population, and another $9.3 million to 1,700 more as aid for their "comprehensive planning."

For example, Uniontown, Pa. (population, 17,492), a depressed coal town, has received $977,000 in subsidies for three title I projects—Hollow Area, King's Feed Store Site, and Old Feed Store Site, and Old West School House. Mercedes, Tex. (population, 10,943), a cattle town still suffering from the long drought of the 1930's, has just completed a title I job called "Queen City No. 1," which cost the United States $1 million. Even Waverly, Tenn. (population, 2,891), one of the countless remote creek towns in the Cumberland hills, has completed one title I project and started another. The first, involving a Federal grant of $36,000, produced 38 units of new low-rent public housing; the second got a $119,000 U.S. grant to eliminate a "central business district slum" and convert the 5 acres to "much needed commercial use."

Projects like these, invariably sponsored locally, have a considerable impact on today's urban redevelopment. Since towns of less than 50,000 already account for 10 percent of the $2.5 billion committed to title I, they reduce by that amount the funds available for bigger projects—and their share of the total is growing. What's more, they tend to distract attention from perhaps graver slum ills elsewhere, drawing considerably on the Federal and State resources of technically trained urban-renewal specialists, who are still in short supply. Yet they seldom involve high-rise housing, the forte of the big builder.

BIG-CITY VENTURES

To the big-city developer, title I and slum clearance still mean big projects in big towns. At the end of 1960, one-sixth of all authorized projects were in the handful of cities with populations of over half a million, and their grants of $820 million represented 44 percent of the total. Five cities of over a million accounted for $1 of every $4 committed by the United States; New York's share alone was $1 of every $9.

What's more, while nearly 20 percent of the projects represented land areas of 10 acres or less (the smallest was a York, Pa., development consisting of four-tenths of an acre, or about a city block), the top 11 percent, which attracted the lion's share of the funds, were projects of 100 acres or more. (The biggest, Philadelphia's 2,506-acre Eastwick, sponsored by Reynolds and others.) One project in every 10 was scheduled to become exclusively residential, and nearly 70 percent will contain at least some new housing, with the remaining commercial structures mostly of the high-rise type. The 70 percent accounts for over 80 percent of all the project money involved. That, of course, is where the big developers, who think of new or renewed land in terms of its usable vertical space, prefer to take their risks.

Big-city housing projects, then, have attracted most of the burgeoning title I activity. Among the developments devoted entirely to residential needs, the leading ones are in New York City—where, despite the postwar building boom in offices and luxury apartments, low-rent and middle-income housing are still in urgent demand. Urban renewal projects completed, under construction or planned in the five boroughs are adding nearly 50,000 apartments and trebling city realty taxes on those sites. They involve expenditures of nearly $1 billion. The most ambitious program, the so-called West Side project (actually, one of several on the West Side), encompasses a 20-block area that will be completely renovated through rehabilitation and, mainly, new construction split up among some 46 sponsors.

Just to the north is the Park West Village of Webb & Knapp. When completed by yearend, this will be one of New York's largest title I projects. On a 6-block site formerly occupied by a dismal slum containing over 4,000 tenement families, Park West will comprise 2,600 apartments in 7 high-rise buildings. The land cost the city $20.8 million to acquire and improve, and was sold to the sponsor for $3 million. The new construction adds up to nearly $45 million.

PROJECT IN CHICAGO

Outside Gotham, too, some noteworthy title I developments are underway. Webb & Knapp, for example, will complete this year Chicago's Hyde Park project, adjoining the University of Chicago campus. On a 42-acre site, 2 towering buildings, with 540 apartments, are surrounded by 250 townhouses in a revitalized residential area for the university's faculty and married students—who can rent a flat or buy one of the homes. The land, acquired and razed by the city for $10.9 million, was sold to the sponsor for $1.3 million. Costs of construction to Webb & Knapp will total another $20 million.

In Cincinnati, where Reynolds is the sponsor, the Parktown cooperative houses will be completed this year. These buildings are being sold as soon as they are finished. So pleased are the city fathers with the progress of the colorful development that they erected signs downtown in tribute. Some 57 acres of blighted land, containing nearly 2,000 dwelling units, were razed, and all but replaced by 131 townhouses and 192 apartments costing $4 million. Land and planning cost the city $9.6 million; in a joint venture with a Columbus builder, Reynolds acquired the site for $0.5 million.

WASHINGTON VENTURE

One of the most massive title I housing developments anywhere is the Southwest group of projects in Washington, D.C. Here Reynolds, for example, is the sponsor of the River Park cooperative homes, over 518 units in both high-rise apartments and townhouses costing some $9 million, which will be sold upon completion. Going up nearby are the projects of several other sponsors.

The keystone for Southwest is Webb & Knapp's huge part of the development. In return for drawing up the architectural and engineering plan for the whole 450-acre affair, an overall land parcel costing the Government $111 million, the company was designated the sponsor for a 200-acre tract. Altogether Webb & Knapp will spend upward of $100 million for its development. Already occupied is the first phase, 512 units in 2 high-rise apartment buildings costing $10 million, and soon to be completed will be 2 more identical structures. A continuing program which probably will take almost a decade to finish, Southwest, it is hoped, ultimately will serve as a national showcase for urban renewal.

So much, then, for housing projects as such. Of potentially even greater impact are the commercial-institutional-residential complexes, typified by Santa Monica, which now are springing, from drawing boards all across the land. The most venturesome of these, inevitably, is in the Big Town: New York's Lincoln Square. This huge concentration of residential and cultural buildings—a new opera house, concert hall, and other parts of "Lincoln Center" together with apartment houses, commercial structures, and a branch of Fordham University—encompasses 70 acres of formerly blighted land on the West Side. Some 4,600 families have been relocated, all but 200 from substandard tenements. The land and planning alone cost $47.5 million, plus another $7 million to improve it; the Federal grant of $27.3 million is one of the largest for a single project in title I. Construction contemplated for the entire project will run well over $250 million.

While sponsorship for a large part of Lincoln Square has come from nonprofit civic organizations, particularly Rockefeller interests, the residential segment known as Lincoln Towers belongs to Webb & Knapp. Here, on an 18-acre site adjoining the center, is rising a $92 million collection of high-rise apartment buildings. Two of the towers (with 1,400 units) will be ready for occupancy next spring; the 4 others scheduled for completion by 1964, will provide some 2,600 apartments more. Unless the New York market for middle-income housing collapses—and it now seems one of the strongest segments of the city's realty market—Webb & Knapp's Lincoln Towers venture should pay off handsomely.

PHILADELPHIA'S PLANS

Around the Nation, many another ambitious project has come out of comprehensive planning. In Philadelphia for one, is the aforementioned Eastwick development. Covering more than 2,500 acres, it has been authorized $35.9 million in Federal grants, against a total project cost to the city of some $115 million, and a net loss of $70.3 million. It also is the largest project involving Reynolds Metals as a sponsor.

Reynolds' part of Eastwick—which will be 50 percent taken up with industrial and commercial buildings—is, in turn, a half-interest in the sponsorship of a predominantly residential section. The aluminum company will be responsible for 5,000 dwelling units, as well as industrial-commercial structures, costing an estimated $130 million. The community plan under which the entire development has been laid out will constitute the most striking set of buildings in Philadelphia. Since this is a 5-year program, barely underway, Reynolds does not expect its payoff (on sales of the buildings) to begin for at least 2 years.

In Baltimore, the biggest of several projects afoot is the downtown Charles Civic Center. A skyscraper of 23 stories combining glass and aluminum in a Ludwig Mies van der Rohe design, will serve as the focal point of a large central-city area of 32 acres devoted entirely to commercial renewal. So far, the development has attracted several companion structures, such as a massive $24 million Federal building. The center itself, on which an estimated $12 million will be invested, is well underway as the largest of the private facets of the project. The sponsor, selected after spirited competition between six title I developers, is Manhattan Structures, the Chicago firm.

PROJECT IN NORFOLK

In Norfolk, too, the midtown area is being literally transformed by title I projects which may affect the whole city's future growth. Three developments, on Federal grants totaling $20 million, are wiping out some 400 acres of blight, including nearly 5,000 substandard dwelling units. Of these, the biggest is the downtown project, accounting for half the acreage, on which is projected a complex of office buildings, another of retail stores, a major civic center, middle-income and public housing, and a striking motor hotel.

The feature of the plan is the motor hotel, just completed on an imposing 5-acre site at the head of the downtown area known as the Golden Triangle (Norfolk's former skid row). Here, as noted, Futterman Corp. is cosponsor in a joint venture, and will be the operating company. Already, the 400-room (including 15 public rooms) house has attracted $3 million in convention business to Norfolk and is expected to bring in an annual $10 million from such visitors. For its size, Norfolk's urban renewal is perhaps the most ambitious to date in the Nation.

GLIMPSE OF THE FUTURE

Countless other big-city plans are in the works. In Detroit, Miami, Seattle, Dallas, and Santa Monica, for example, comprehensive planning has given birth to a large project, or is about to. Louisville has awarded tentative sponsorship of another communitywide project to Reynolds. Its plan is for a riverfront development with 1,000 high-rise apartments, a motel, restaurants, and other commercial and recreational facilities. Proposed cost of the entire project is $20 million. Louisville has applied to the URA for approval and a starting grant. Newark, as noted, is about to launch a $95 million program under cosponsorship of Major Realty, the firm now merging with Food Fair Properties. On 27 acres west of Pennsylvania Station, construction soon will be begun on a $2 million motel and restaurant, a 20-story office building and 17 multistory luxury apartment buildings.

On the other coast, Perini, which offered $17.3 million of common stock publicly last June, has landed the equally massive San Francisco project called Golden Gateway. On a 20-acre site adjoining both the waterfront and the financial center, the sponsoring partnership, 60 percent held by Perini, hopes to begin building next year a complex of eight 22-story apartment houses, a 25-story office building, a 1,300-car public garage, some 100 townhouses and a block-square park. Perini bid against eight other redeveloper groups, offering the architectural plan with a proposal of $8.5 million for the land.

In nearby Los Angeles, finally, the hottest item on the current national title I list is up for bidding—the 135-acre Bunker Hill slum-clearance project, which already has set the city back by some $65 million in land-and-planning costs (on which it figures to lose $22.3 million) and has been awarded $15 million in Federal grants. As a commercial-residential complex, Bunker Hill will rival the highly publicized, nonsubsidized Century City—assuming the latter gets off the ground. From all appearances, every major title I builder in the country is competing for sponsorship.

Obviously, urban renewal is only getting started. The increasingly impressive financial credentials of those on the ground floor are matched by the widespread demand for their services, stimulated by recent Federal housing policy. One certainty is that the firms specializing in title I today will become more deeply involved in the years ahead. Many in the industry, indeed, predict that perhaps a dozen strong development firms soon will emerge, to do almost nothing but urban renewal. Reynolds subsidiary already approaches that status; Webb & Knapp gives indications of putting its own title activities in a separate division or subsidiary operation. What reward they, or others, will reap in this spanking-new field only the future will show. For the moment, it's clear that many of the Nation's key builders think they see a bonanza in blight. More significantly, important long-term money is backing them up.

Obviously, the rich get richer, the big get bigger; only big firms need apply for such mammoth jobs; contracts are negotiated, not bid. What is wrong with it? First and foremost, it is at the taxpayers' expense.

INVESTIGATION MAY BRING NATIONWIDE SCANDAL

When all the work was done and the land was offered for sale, the principal redeveloper was a large corporation interested in promoting use of its construction materials more than promoting housing for people. It has been responsible for constructing and placing on the market houses not much different in price from other houses which were built without any Federal subsidy.

Eastwick has been no bonanza for families who have bought homes in the project area. But it has been a fine thing for the redeveloper. That company has received the following specific financial benefits from its participation in the project:

First. A write down on the land which it purchased in the project area.

Second. An opportunity to make a market for its building materials and to demonstrate their use.

Third. A special form of mortgage insurance from the Federal Housing Administration designed to permit minimum equity investment in the project.

Fourth. A guarantee from the Federal National Mortgage Association to purchase the mortgages already insured by FHA on such a basis that the redeveloper is almost completely protected against financial loss on the project.

Do they suggest how far from its stated purpose the urban renewal program has been allowed to drift? Do they indicate the extent of the deceit which is being practiced on the poor people who have been told that the program is for them?

This entire urban renewal mess should be investigated. When it is, I predict that it will prove to be one of the greatest scandals in the history of the Nation.

In suggesting that the Federal Government has not and will not be able to develop sound and efficient procedures for solving local problems, I have sound technical support. It comes from the efforts of scientists to develop criteria and standards by which to measure the effectiveness of local public services.

The most highly regarded technology in this field has been developed over a period of more than 30 years by Dr. Clarence E. Ridley, executive secretary of the International City Managers' Association. Dr. Ridley concerned himself primarily with the core functions of municipal government—police and fire protection, public health and public works. However, his conclusions have great significance for all who are concerned with measuring the effectiveness of Federal aid programs.

Dr. Ridley had decided by 1930 that while municipal activities lent themselves to some measurement, that measurement must be stated in terms of results achieved rather than procedures or techniques applied. His subsequent studies have served to confirm that conclusion.

It is in the field of social service and welfare programs that Dr. Ridley's research has its most devastating effect. National standards cannot be developed for these programs, because concepts like social welfare are subject to individual definition in accordance with value preferences. In the absence of such standards, results are unpredictable. When the seed of such a national program is planted, no assurances can be given about the fruit it will bear. When Congress authorizes such programs, it is writing a blank check. When people accept and use such programs, they are buying a pig in a poke.

The liberals have chosen to ignore this program not only in urban renewal but also in many other Federal aid programs for which appropriations are included in the budget which the President submitted to the first session of the 88th Congress. These programs offer a field for substantial cuts in the budget to bring Federal spending in line with Federal revenues and to justify the tax cuts in which all Americans are interested.

In all fairness to those in need of better housing, I am not justified in indicting Federal urban renewal unless I am prepared to offer a postive alternative. That is what I propose to do.

TWO REDEVELOPMENT PLANS REQUIRING NO FEDERAL AID

The answer lies simply in the use of the police powers of the community to enforce local codes of public safety and health. In communities throughout the country, such action has served as a spur to community development through private enterprise.

How does a city get started on its own? In my opinion one excellent answer already exists in the community development program now being promoted by the Chamber of Commerce of the United States. That program is now being demonstrated successfully in a number of communities. It allows faster, lower cost and more efficient community development than is possible with federally subsidized urban renewal. Most important, it involves neither the use of eminent domain nor Federal subsidy with its inevitable controls.

Another program of local self-help is outlined in an interesting little booklet, "Blueprint for Neighborhood Conservation" published by the National Association of Real Estate Boards.

Here are the steps it outlines for community improvement without Federal aid:

First. Establish realistic ordinances specifying health, safety, and sanitary standards for housing. Rehabilitate the substandard housing, at the expense of the property owners, through firm enforcement of these ordinances.

Second. Demolish those slum structures which are unfit for rehabilitation, at the expense of property owners, again through firm enforcement of city ordinances.

Third. Establish systematic public improvements to schools, streets, parks, sewers and to such municipal services as refuse collection, traffic and other facilities.

Fourth. Establish more livable, attractive and convenient neighborhood environment by replanning, rezoning and replanting cleared and long vacant sites and by closing or widening streets.

Fifth. Acquire and remove structures and uses of land which might delay, obstruct or hinder carrying out the program.

Sixth. Attract investment in new construction as well as in rehabilitation and modernization by the application of specific Federal income tax incentives.

Seventh. Elicit the cooperation of local financing institutions to secure credit facilities for property owners' participation in the conservation program. Most banks and lending institutions can offer loans or monthly payment plans or credit may be secured under the FHA section 220 mortgage insurance program and the FHA title I program for insurance of home repair loans.

Eighth. Improve credit facilities for your city through Federal insurance of municipal neighborhood conservation bonds on the basis of an insurance premium, so that these bonds will be readily marketable at favorable interest rates.

In Gadsen, Ala., it is my understanding that no right of eminent domain was used in redeveloping a rundown area. Neither did this city have a proper housing code or proper enforcement. City teams talked to owners about rehabilitation. When the owners refused to clean up the slumlike property, the city teams went directly to the property tenants. Each tenant was asked if he wanted a new home in a nearby residential development to be built with FHA financing under section 221. When most tenants signed up, the realtors, builders, mortgage men, and bankers went to work. A lovely new development was completed. The tenants moved into the new homes. The old shacks were left vacant. The owners then agreed to cooperate.

Take Charlotte, N.C., for example. As of today 12,000 residences have been rehabilitated—10,000 bathrooms were added. Two thousand buildings could not be saved and were demolished, at the owner's expense. Meanwhile the city did its part by paving 65 miles of streets, adding street lights, and providing playgrounds, parks, and other needed improvements. Two thousand families were relocated in privately owned homes, rehabilitated or new. Two thousand new private housing units were built—all of this without Federal aid. Note also the financial impact with increased revenue to the city. There are expenses but urban renewal also generates revenue.

The New Orleans story is much the same, so is the Los Angeles story and the others—each without Federal aid. In fact, the cases where there was no Federal aid involved suggest that the other areas getting Federal aid could have done it on their own.

In all these cases there is no politics as such, as far as whether it was Republican or Democrat. These people decided they would do the job locally, and they did the job. There is the same story in each of them.

To conclude, urban renewal and housing can be solved in one sentence. Local problems can be solved locally with each locality solving the problem in its own way, without any Federal participation whatsoever.

Following is an article by Howard E. Kershner, editor, Christian Economics. Also, Mr. Speaker, articles which I have previously mentioned follow:

RENEWAL IN, PROSPERITY OUT

(By Howard E. Kershner, editor, Christian Economics)

Highway construction and urban renewal are forcing the relocation of many thousands of small businesses every year. Many of them never reopen their doors because they cannot find a satisfactory location at a rental they can afford to pay. Such proprietors are forced to work for others, if they can find jobs, to go on relief, or retire prematurely. The number of small businesses forced to relocate is to be vastly increased, for the last appropriation to the urban renewal agency was $2 billion, or about six times the average amount which the agency has been spending for the last 12 years.

In the long run our cities will not benefit from this type of subsidized, forced-construction program. As the burden of taxation becomes heavier and heavier, urban blight will spread. New substandard areas will be created faster than urban renewal can reconstruct them.

This program is very similar to the practice of a doctor who would take blood from a patient's left arm while giving him a transfusion in the right arm. In the process, of course, he spills or wastes a portion of the blood and the patient grows weaker and weaker.

Financing local operations from Washington is the most expensive way to accomplish them. Not only is there a substantial bureaucratic loss but there is great wastefulness on the part of the municipalities because the local fathers, intrigued by the idea of something for nothing—that the money does not cost anything—are overtempted to splurge. Most people recognize these facts but accept the situation without much resistance because the other fellow is getting benefits and they might as well get theirs. That attitude will destroy us.

Urban renewal, like other forms of Government intervention in the business activities of the people, is Marxism. Its object is redistribution of wealth. Its result is wider impoverishment along with the destruction of freedom. It is one of the tools by which Marxists deceive good people and induce them to speed up the process of their own communization.

FAILURE OF PUBLIC HOUSING EXPOSED IN NATION'S CAPITAL

In the words of the Federal Government, it entered the field of public housing to provide "decent, safe, and sanitary housing" for families of low income.

Laudable as these objectives may be, it has been proved repeatedly in investigations around the country that these goals are not being met. The Nation's Capital, which should be a showcase for all Federal welfare programs and usually isn't, provides excellent documentation of the assertion that Government cannot provide "decent, safe, and sanitary" housing.

Reprinted below are excerpts from a report to the U.S. Congress by the General Accounting Office. The report is based upon an audit of the Washington, D.C., National Capital Housing Authority for fiscal years 1959 and 1960.

"Some projects are so poorly maintained that we question whether the purpose of the U.S. Housing Act of 1937 of providing decent, safe, and sanitary housing for families of low income is being fulfilled. During our visits to certain NCHA projects, we observed such conditions as:

"(1) Bare and eroded lawns.

"(2) Trash-littered grounds.

"(3) Broken windows and shutters.

"(4) Torn door and window screens.

"(5) Roach infestation.

"(6) Interiors and exteriors of projects badly in need of cleaning and painting.

"(7) Sagging and leaking roofs.

"(8) Buckling floors.

"(9) Broken plaster.

"(10) Deteriorated and broken asbestos siding."

The GAO selected four separate projects for individual comment, noting in part.

"Kenilworth Courts, DC-1-19 (constructed in 1959).

"We observed many broken doors and windows. The project's laundry rooms were out of operation, and many basement windows were boarded up. We were informed that these conditions resulted from vandalism and that window guards for the basement and laundry room windows had been requested."

"Parkside dwellings, DC-1-11 (constructed in 1943).

"The tenant-maintained lawns were in poor condition, and many of the buildings were termite infested. In addition, we observed broken windows, sagging roofs and floors, broken screens and doors, broken shingles, and a building with bulging wall * * * all of the dwelling units that we inspected were roach infested, badly in need of painting and generally in an unclean condition.

"The concrete floors in 301 of the projects' 373 dwelling units have never been covered with tile * * * numerous applicants have refused to lease the dwelling units because of the uncovered floors."

"Ellen Wilson dwellings, DC-1-2 (constructed in 1941).

"Two units had been vacant since January 1958 because of a leaking roof caused by a rotted roof structure. These units remained unrepaired and vacant until March 1960. Another unit, vacated because of a leaking roof, remained vacant for about 6½ months * * * eight additional dwelling units * * * had been vacant for extended periods.

"Many prospective tenants, including those displaced under the District of Columbia urban renewal program, have refused to accept the dwelling units to which they were assigned because the units they were shown were dirty, needed painting and generally were considered unfit for occupancy. Some of the prospective tenants commented that they were shown units with (1) debris scattered throughout, (2) walls splattered with what appeared to be food, (3) stoves covered with grease, (4) broken plaster on the walls and ceilings and (5) roach infestation.

"We inspected several units and observed a fallen ceiling, broken plaster, trash and debris inside the dwelling units and evidence of rat and roach infestation.

"Twenty-first Street houses, DC-1-28 (constructed in 1943).

"Many of the window shutters were either missing or broken and * * * the paint on the outside of many of the units was peeling. We observed trash and debris in the yards and cracked baseboards on some of the foundations. We inspected the inside of a vacant unit and observed that it was in a filthy condition. There were roaches crawling on the floor and in the refrigerator. In a memorandum to the Public Housing Administration Commissioner * * * the Public Housing Administration Washington Regional Director stated that 'The project is an eyesore and is in poor condition.'

"Study indicated that the cost of rehabilitation could be as high as $10,600 per unit. NCHA concluded that the project should be demolished."

Beverly Hills Blighted?

(By Representative Charles S. Gubser, Republican of California)

Now Washington is approaching a new summit of tomfoolery. Now the happy plotters are about to feed sugar-coated arsenic to "blighted" Beverly Hills. The city which is famous as a home of the stars will soon receive $100,000 to assist in planning its future development.

I asked the Census Bureau for the latest figures regarding the "poor" people of Beverly Hills. Apparently they are not as well off as some of the $10,000-per-week movie stars who reside there. The median family income in Beverly Hills is just under $1,000 per month, as compared to the national average of about $471. So it seems that Beverly Hills is only twice as well off as the rest of the Nation, despite its well-publicized heart-shaped swimming pools, ermine rugs, poodle dogs and sport cars.

But somebody has made the mistake of calling in the Federal doctors. Now the citizens of Beverly Hills must take Federal medicine—even if it kills them.

The Moral Cost of Public Housing

(By Representative A. Sydney Herlong, Jr., Democrat, of Florida)

I believe in charity and I want to help those people who can't help themselves, but there are many, many people living in public housing units throughout the United States who are making more money than thousands of you are, and yet you are having to pay $35 a month on their rent. That's not charity, that's a shakedown, and I don't think you and the next generation of taxpayers ought to have to continue to bear this heavy burden.

We have a liberal, low downpayment, regular housing program insured through the Federal Housing Administration. If the people who don't belong in public housing and yet who live in it would show enough initiative to go out and make arrangements to get themselves homes they could call their own, they could buy them for just about what they are paying in rent on a public housing unit, but many of them who can afford to get out and do this for themselves prefer to stay in these units and be pampered by the Government.

You know, you can pamper a part of your body, such as your arm, by not using it or exercising it for a period of time and it will atrophy, or wither and become useless. I wonder if the Government, through these pampering projects, isn't doing that to the character of a lot of our people. In their desire to help those who can't help themselves, and believe me I want to do that too, they get over into the field of helping those who will vote for them in the next election whether they are in real need or not.

I am more concerned with what this type of program is doing to the moral fiber of many of our people than I am with the dollars these programs cost.

Senators Warn on Urban Department

Opposition to a new Department of Urban Affairs was based primarily on the argument that it was an effort to achieve, through bigger Federal subsidies, Federal domination of local affairs. The following quotations are from the minority views expressed by Senators[1] who opposed the urban affairs proposal during the Government Operations Committee hearings on June 21 and 22, 1961:

"Every pressure group in the Nation, looking for Federal funds, wants to have its representative crowding to the President's Cabinet table, not to advise and guide him on the problems of Government, but to push for special favors for special interests.

"We are, more and more, moving toward a directed economy in this country. The theory of those who support more Federal intervention is that Washington knows best, works best, pays best; and all lesser segments of government must change—they must reshape their concepts of self-determination, and accept the blueprint of the planners.

"More than hopscotching over the State and county governments, this new Department can eventually nullify local city government.

"We will, in one sweeping gesture create a Goliath which will drain our Treasury and which will keep a watchful, police eye on every urban community and its citizens, planning, spending, directing, until citizens will not call city hall when streets need repair, or a water main needs replacing, but will notify their Congressman to contact the Cabinet member handling such problems, seeking repairs and services."

Average Man Doesn't Dream of Dangers in Urban Renewal: Jail, Graft, Votes

Bruce Alger is one of the few Members of Congress willing to criticize the urban renewal program.

He says: "There are inherent dangers * * * undreamed of by the average citizen. A number of former executive directors of public housing authorities are now in prison, including the former directors of Houston, Galveston, Los Angeles, Contra Costa County, Calif., and others."

Alger quotes from "The Challenge of Housing," a book by Langdon W. Post, former chairman of the New York City Housing Authority, and an advocate of public housing:

"Another danger signal flashes from the political implications and opportunities inherent in a vast public housing program.

"In a housing program, there are sites to be bought, houses to be built, and tenants to be selected. Each step holds great possibilities for the politician and the businessman. The real estate operator has land to sell. The banks have mortgages which they are anxious to have rescued. The architect has plans for sale. There are building contracts to be awarded. The inhabitants of the slums are tumbling over themselves to get into the developments, which means that there will not only be the usual jobs for those in control to give out, but apartments as well.

"This last plum is a new brand of political fruit which has enormous possibilities for exploitation."

Alger calls attention to a letter dated May 1, 1956, from the Urban Renewal Administration showing the shrinkage in land acquired for urban renewal projects in four cities. The letter says:

"The figures * * * show the comparison between actual costs of acquiring land and the final sale price to the redeveloper. No overhead costs or other expense has been included.

"The figures:

"Baltimore, Md.: $1,444,155; $300,000; shrinkage 79.23 percent.

"Jersey City, N.J.: Two projects—$3,966,785; $850,000; shrinkage 78.57 percent.

"New York City: 10 projects—$82,199,479; $25,652,107; shrinkage 68.79 percent.

"Philadelphia, Pa.: Two projects—$1,514,994; $276,074; shrinkage 81.78 percent."

Congressman **Alger** said:

"Why the excessive drop in value when raw land, strategically located, is cleared and ready for use? Generally, the availability for a higher use should enhance the land values sufficiently to offset the cost."

Renewal in Washington, D.C.—Transit Company Buys Back Own Land at 22 Cents on Dollar

The constitutional case against urban renewal rests upon the argument that the Government has no right to use its powers of condemnation to take property from one private individual and turn it over to another private individual.

This process—unconstitutional despite a decision by the Warren Court to the contrary—has now been carried to its logical conclusion.

O. Roy Chalk, a genius at converting "shoestrings" into multimillion-dollar fortunes, sold a piece of property to the urban renewal agency in Washington for $3.5 million. A factor in establishing this high valuation was that the location is only a stone's throw from the Capitol. Chalk then turned around and bought back the site from the urban renewal agency for $767,000. The property was still only a stone's throw from the Capitol, but it shrank 78 percent in value when the difference could be unloaded upon the taxpayer.

---

[1] Senators John L. McClellan, Democrat, of Arkansas, committee chairman; Sam J. Ervin, Democrat, of North Carolina; Karl E. Mundt, Republican, of South Dakota; and Carl T. Curtis, Republican, of Nebraska.

Losses of 78 percent of the original cost are so typical of urban renewal that a Washington daily newspaper gave the item only a limited amount of space at bottom of page 5.

Ethical consideration, in the days of the Neanderthals, demanded, as protection against graft, collusion, and favoritism, that sales of Government property be made to the highest bidder.

Urban renewal agencies are exempt from that antiquated requirement. They may arbitrarily set the price at which urban renewal land shall be sold; offers of higher sums are disregarded as immaterial, irrelevant and contemptuous of the dignity of political planning. The winning bidder is chosen by criteria which may be almost anything the planners conclude to be in the national interest.

The wishes of the local community carry no weight whatever if they conflict with those of the Washington bureaucracy.

Chalk's payment of 22 percent of the Government's acquisition cost is par for the course. On a high percentage of urban renewal sales, the agencies sell property for 20 to 25 percent of what was paid. Why should the bureaucrats try to get more? The money being given away comes from the taxpayer, and he—think the planners—doesn't seem to care enough to cause trouble.

In the case we are discussing, the $767,000 price was fixed in advance. The bidding was confined to the presentation of development plans.

To quote one observer of the Washington transaction: "The winner obviously was to be the one who would submit the prettiest picture of what would fit the whim of the centralized planners."

Chalk's D.C. Transit System, Inc., was one of 18 firms submitting architectural designs. His proposal was for a combined apartment and rowhouse development to cost $5 million. He submitted "the purtiest pitchures."

Now he will build and own a property which should add several millions to the Chalk fortune.

The significance of this tale is that tomorrow's Horatio Algers will be those who understand, "How To Make a Million Without Half Trying." The secret is to ferret out the get-rich-quick possibilities of the welfare state. Four rules must be followed:

Rule No. 1: Play ball with the powers that be.

Rule No. 2: Know who are who and what they want.

Rules Nos. 3 and 4: If you can't figure these two rules out for yourself, put on a dunce cap and go stand in the corner.

AN ODIOUS COMPARISON

Osborn T. Boyd, Housing Division Chief of the U.S. Agency for International Development, commenting on Russia's poor housing conditions at a realtors' convention, said:

"I take great pleasure in pointing out to Communist delegates at international meetings * * * that in the United States our public housing is far more consistent with the principles of Marxism than theirs in Russia."

A COP'S-EYE VIEW OF NEW YORK CITY

(By Jack Morano)

As one policeman to another, a New York City Housing Authority officer once told me of a standing joke in his circle. "Soon," said he, "all New York will be one big housing project, and the regular police department will become just another branch of the Housing Authority."

A joke, then, but tour New York City with me if you wish to see the inevitable results of compulsory collectivism in the United States. Here may be found, as in East Germany, proof that collectivism does not work.

Two years ago when the Tactical Patrol Force was first instituted by Police Commissioner Kennedy, its purpose was to send into the "rougher" areas a group of 6-foot, judo-trained cops to suppress crime. Today, as a member of "Kennedy's Commandos," I can attest that there are few neighborhoods that haven't required our services. In other words, there are few "decent" residential areas left in New York.

FORMER COP

The transformation of attractive neighborhoods into crime-ridden jungles is largely the result of political actions along socialistic lines. Nor can it be said that this leaning toward socialism comes unconsciously or from forgivable mistakes.

For example, during the recent New York mayoralty campaign a spokesman for Robert Wagner boasted, "There are more people in New York City living in public housing than the entire population of New Haven, Conn." What a thing to boast about when it can be demonstrated that public housing—apart from being morally wrong—is economically unsound. Stated simply, it just doesn't work.

The humanitarian planners can see the housing projects they have built with taxpayers' money, and imagine how noble they are to have provided apartments for people who could not afford them. But what they do not see in their blindness is the unbought milk and children's shoes and clothing and better apartments that could otherwise have been afforded by the people from whom the taxes were taken. For every dollar's worth of "good" political planners do, there is at least a dollar's worth of harm.

The only way in which politicians can raise the level of living of those who occupy these projects is to lower the level of living of the families who are struggling to stay out of them. Any new tax burdens on such families reduce their chances of staying independent, and may thus force them into a project.

Is that what the planners want? Well, bear in mind the political power that is inherent in building projects, and remember that the numbers of people thus "aided" are now the source of arrogant boasts by politicians. Who could dare vote himself out of his own home or apartment? There are so many New Yorkers living in public housing that no New York politician dares oppose it—and hope to get elected.

If there is a salvage value in the New York situation, perhaps it is for others to observe and learn that political "gifts" are a club with which voters may be beaten into line.

THIRTY-FOUR STATES PAY MORE THAN THEY RECEIVE FOR URBAN RENEWAL

States paying more than they receive are as follows: Washington, Oregon, California, Idaho, Nevada, Montana, Utah, Arizona, Wyoming, Colorado, New Mexico, North Dakota, South Dakota, Nebraska, Kansas, Oklahoma, Minnesota, Iowa, Louisiana, Wisconsin, Illinois, Mississippi, Indiana, Michigan, Ohio, West Virginia, Maine, New Hampshire, Vermont, North Carolina, South Carolina, and Florida.

States paying less than they receive are as follows: New York, Pennsylvania, Missouri, Arkansas, Kentucky, Virginia, Tennessee, Alabama, and Georgia.

These States are compiled from the October 5, 1962, issue of the CONGRESSIONAL RECORD.

Mr. Speaker, I commend this study on urban renewal to the attention of my colleagues and hope that they will take the time to look into it. I shall be back on the floor of the House at a later date to answer any questions or criticism that might be leveled in this area.

Mr. CURTIS. Mr. Speaker, will the gentleman yield?

Mr. ALGER. I yield to the gentleman from Missouri.

Mr. CURTIS. Mr. Speaker, I want to commend the gentleman first and also commend to my colleagues the study that our colleague, Mr. ALGER, has conducted in this area, and point out the fact that before he came to the Congress he was engaged in the real estate business.

The gentleman has on other occasions taken the floor of the House to expound upon and give us the benefit of the very careful studies that he has made into this important field. This represents a great deal of effort and a great deal of work has gone into this study.

Mr. Speaker, this need not be a partisan matter. In fact, I think it is serious enough and to the extent that it can be kept on a bipartisan basis, and it should be.

We have a subcommittee of the Committee on Banking and Currency, headed by the gentleman from Alabama [Mr. RAINS], and it is my recollection that the ranking Republican is the gentleman from New Jersey [Mr. WIDNALL], which is now going into this question of the urban renewal aspects and public housing as well as other points that the gentleman from Texas has made here today.

I think the subcommittee would do well to take this study that our colleague, the gentleman from Texas, has presented, and the previous studies, and look this over and have their staffs go over them in detail.

Again, Mr. Speaker, I commend the gentleman for this fine work on a very important subject facing the people of this country today.

Mr. ALGER. I want to thank the gentleman and I want to make it very plain that I will stand ready to provide any of the material I have collected on this subject over a number of years, including four major presentations on the floor of the House.

Mr. Speaker, I would like to close by saying what the gentleman from Missouri [Mr. CURTIS] has said so well at other times on this subject, and others, and that is this: that just because I am against Federal money going into this program does not mean I am against urban renewal. As a matter of fact, in the city of Dallas we have some skyscrapers and other buildings going up that represent the finest type of urban renewal effort I have seen anywhere. I think we are the second city in the Nation in that regard. Every bit of it is urban renewal with private funds.

Mr. Speaker, additional cities can do this which are now taking Federal money. It will be my hope that as a result of the investigation and other efforts which will go into this matter that many of the cities will see fit to clean up their own back yard and not ask anyone else to pay part of that expense, and at the same time not have to clean up other cities.

THE ADVANTAGES OF A NUCLEAR TEST BAN TREATY

The SPEAKER pro tempore (Mr. LIBONATI). Under previous order of the House, the gentleman from Wisconsin [Mr. REUSS] is recognized for 60 minutes.

Mr. REUSS. Mr. Speaker, the very principle of disarmament is under attack. The administration's proposals at Geneva are criticized as "inadequate and dangerous." It is suggested that the representatives of our Arms Control and Disarmament Agency are about to be hoodwinked by the Soviets.

I rise to reaffirm my belief that disarmament negotiations must be continued. This House, in September 1961, voted 253 to 50 to set up an Arms Control and Disarmament Agency. The dedicated officials who have been assigned to this Agency are faithfully carrying out the will of Congress. I cannot believe that the sentiment of the American people of September 1961 has changed, and that we now oppose the work of disarmament.

This is not a partisan issue. Members on the Democratic side supported President Eisenhower's efforts toward controlled disarmament. Republican Members supported President Kennedy's Arms Control and Disarmament Agency. Concern over the threat of world destruction is certainly not the monopoly of either party.

Last week a small but optimistic step forward was taken. Our disarmament negotiators at Geneva many months ago proposed setting up a "hot line" of communication between Washington and Moscow, that both sides might know what was in the other's mind as the brink was approached. Last week the Russians at Geneva accepted our proposal, and the details are now being worked out for a Pentagon-Kremlin line of communication. It will no doubt be said against the proposal that we "gave something." But I would point out that we also "got something"—a chance to avoid blowing up the world. In my opinion, that is a chance worth taking.

Meanwhile, the test ban negotiations at Geneva continue. The United States has asked for seven inspections on Soviet soil each year, while the Russians refuse to allow more than three. The chances of reaching an accord do not appear at all good. But the question is whether we should hamstring our own negotiators by violent and unreasonable criticism of our own bargaining position.

President Kennedy, at his news conference on March 21, said:

> I am haunted by the feeling that by 1970, unless we are successful, there may be 10 nuclear powers instead of 4 and by 1975, 15 or 20.

The President was referring to the success or failure of our nuclear test ban negotiations.

Every thinking person in the United States today should share this feeling with the President. Unless we are successful in placing some restraints on the nuclear arms race, the spiral will not only continue upward, but it will spread outward to embrace more and more areas of the world. Each additional country that enters the race in earnest, and seeks to acquire its own nuclear weapons, subtracts from our own national security. President Kennedy spoke for all of us when he expressed concern for our future security should the development and spread of nuclear weapons and weapons technology continue.

We have heard voices raised in warning about the risks to our national security that an agreement with the Soviet Union to stop further nuclear testing would entail. It cannot be denied that there are risks in any nuclear test ban treaty. But before we permit ourselves to be cowed into inaction by talk of the risks involved in a treaty with the Soviet Union, we must face squarely the risks inherent in a future without a treaty.

On the basis of man's previous experience, we can more confidently predict what will happen with continued unlimited nuclear testing than without. With continued testing and the spread of nuclear weapons across the face of the earth, we can confidently predict a nuclear disaster at some point in the future. The exact dimensions of the disaster and the precise time at which it will occur are impossible to predict. But the fact that a nuclear holocaust would consume a large portion of the world, and certainly what we like to call Western civilization, should be clear to anyone with even a vague notion of the destructive forces that are contained in our nuclear stockpiles.

If we assume the risks of a nuclear test ban, and are successful in taking this small step toward leveling off the arms race the future would still be uncertain. We cannot precisely envisage a future in which nations finally learn to exercise self-restraint on their predatory instincts. We have had no experience in such an international environment. But I would infinitely prefer some of the uncertainties involved in a nuclear test ban to the certainty of the spread of nuclear weapons and weapons technology without a test ban.

Not only would a nuclear test ban have advantages for us in slowing the spread of nuclear weapons around the world. Such a step would also have advantages in our bilateral relations with the Soviet Union. In the first place, according to the President's key national security advisers, we are at present confident in our nuclear capabilities. According to Director William Foster of the Arms Control and Disarmament Agency, and responsible officials of the Department of Defense, a nuclear test ban would preserve our present nuclear advantages for longer than if testing continues. Therefore, the administration believes that a nuclear test ban at this time would be to our own military advantage.

But a nuclear test ban would have more significance than a purely military one. Indeed, a nuclear test ban may have more value as a symbolic first step toward two important and interrelated goals—control over the arms race, and convincing the Soviets that the road to productive rather than destructive coexistence must be an open one. Secretary of State Rusk has repeatedly emphasized to the world that disarmament and secrecy are incompatible. One of a test ban's most important advantages to us, therefore, would be the opportunities it would create for us to show the Soviets that effective inspection and espionage are not equivalent, and for them to convince us that their interest in disarmament runs deeper than mere propaganda sloganeering.

Today's great papal encyclical, "Pacem in Terris" rightly says that disarmament depends upon mutual trust. This a test ban can help to generate. The encyclical says:

> It is with deep sorrow that we note the enormous stocks of armaments that have been and still are being made in more economically developed countries, with a vast outlay of intellectual and economic resources. * * *
>
> Justice, then, right, reason and humanity urgently demand that the arms race should cease; that the stockpile which exists in various countries should be reduced equally and simultaneously by the parties concerned: That nuclear weapons should be banned; and that a general agreement should eventually be reached about progressive disarmament and an effective method of control.
>
> All must realize that there is no hope of putting an end to the building up of armaments, nor of reducing the present stocks, nor, still less, of abolishing them altogether, unless the process is complete and thorough and unless it proceeds from inner conviction: Unless, that is, everyone sincerely cooperates to banish the fear and anxious expectation of war with which men are oppressed.
>
> Not only can it happen but it actually does happen that the advantages and conveniences which nations strive to acquire for themselves become objects of contention; nevertheless, the resulting disagreements must be settled, not by force, nor by deceit or trickery, but rather in the only manner which is worthy of the dignity of man, that is, by a mutual assessment of the reasons on both sides of the dispute, by a mature and objective investigation of the situation, and by an equitable reconciliation of differences of opinion.

Finally, a nuclear test ban would stop the further pollution of the atmosphere with radioactive debris by the nuclear powers. We should remember that this atmosphere is shared by nuclear and nonnuclear powers alike. Although the dangers to ourselves and future generations from radioactive fallout cannot be accurately assessed, there is agreement in the scientific community that any increase in the level of background radiation is harmful.

We should not overemphasize the importance of these advantages, however. A nuclear test ban will not restrict the production of nuclear weapons or of nuclear delivery vehicles. It will not inhibit countries which refuse to become parties to the treaty from achieving nuclear weapons of their own. But a nuclear test ban would be a step in the right direction. It would constitute a mutual restrait on the part of all the parties to the treaty. Having taken this first step, other more substantial steps might follow more easily. In balancing the advantages to be derived from a nuclear test ban treaty against the risks of possible Soviet gains from undetected testing or a sudden abrogation of the treaty, the scales tip decisively in favor of the administration's test ban proposals. These proposals provide a sound and safeguarded basis for continuing negotiations toward an agreement which would be in the interest of all humanity.

The President, and his Arms Control and Disarmament Agency, deserve every effort of our American people and of their representatives here.

Mr. REUSS. Mr. Speaker, I ask unanimous consent that following my remarks, the remarks of the gentleman from Illinois [Mr. PRICE] and the gentleman from New Jersey [Mr. THOMPSON] be included in the RECORD.

The SPEAKER pro tempore (Mr. LIBONATI). Without objection, it is so ordered.

There was no objection.

Mr. PRICE. Mr. Speaker, on February 4, 1963, the President of the United States transmitted to the President of the Senate and the Speaker of the House the Second Annual Report of the U.S. Arms Control and Disarmament Agency. This report describes the activities of the Agency during the calendar year 1962.

As this report sets forth in its introduction:

> The Agency and its role remains unique as an instrumentality of government which is devoted solely to the problems of arms control and disarmament. It is an organization dedicated to the ultimate goal of a world at peace—a world in which the use of force has been subordinated to the rule of law and international adjustments are peaceably achieved.

This, indeed, is a unique organization. As the report further points out:

> It was brought into existence by the Congress in the belief that arms control and disarmament measures can be acceptable alternatives to a continued arms buildup. Its efforts are directed toward promoting the relaxation of tensions and furthering peace. Yet, it seeks these alternatives without in any way jeopardizing the Nation's security interests.

For nearly 5 years and under two administrations, the United States has been attempting to reach agreement with the Soviet Union on an effective and adequate nuclear test ban treaty. The 5 years of almost uninterrupted negotiations with the Soviet Union on this question is ample demonstration of our country's desire to reach an agreement on halting nuclear weapon tests. However, we have not yet reached agreement and one of the major obstacles has been our inability to reach agreement with the Soviet Union on effective means of verifying the fact that both sides will honor their obligations. Soviet intransigence on this issue is one of the major stumbling blocks in the way of agreement. Based upon their prior conduct, it would be foolhardy for us to depend upon trust in assuring that the Soviet Government is complying with the terms of any treaty we may sign. Where issues of national security are involved, as they would be in a nuclear test ban, we must insist upon an effective means of verifying the fact that the other parties to a treaty are living up to their obligations.

When the Congress passed legislation creating the U.S. Arms Control and Disarmament Agency, it did so in recognition of the extreme importance arms control and disarmament must play in the modern world. It did so in recognition that these subjects were too important to be left in the hands of part-time individuals or persons encumbered by other responsibilities and duties.

We in the Congress established this unique Agency in order that the President might draw upon the advice of full-time professional experts. Accordingly, the Director of the Arms Control and Disarmament Agency is designated the principal adviser to the Secretary of State and the President on arms control and disarmament matters. The Director of the Agency has primary responsibility within the Government and is required to coordinate U.S. arms control and disarmament policy.

We are indeed fortunate that we have individuals in this country dedicated to the service of their Government and who serve in an agency such as this, whose responsibilities are so great. At times their motives may be questioned; their work criticized. At times their objectives may seem utopian and doomed to failure. Nevertheless, these dedicated men and women, strong in their belief in American principles, continue to apply themselves to their dedicated work.

I join with the many informed Americans who know the true value of their work, in saluting the men and women in doing what they can to assist the President in carrying the very, very heavy burdens of his office in the important area of arms control and disarmament.

Mr. THOMPSON of New Jersey. Mr. Speaker, no nuclear test ban treaty will be absolutely foolproof. No matter how perfect our means of detection and identification become there will always remain an element of uncertainty in the inspection system. But conceding this to be the case, it would be foolish to jump to the conclusion that any nuclear test ban treaty would place our national security in jeopardy. The crucial issues are, first, the likelihood that the Soviet Union would try to cheat, and second, the significance of the gains which the Soviets might achieve by clandestine testing which might escape detection.

Based on its previous conduct, we would be foolhardy to rely on the fact that the Soviet Union would honor its treaty obligations. The Soviet offensive missile buildup in Cuba at the very time the Soviet Foreign Minister was at the White House giving assurances to the contrary to President Kennedy is but one recent example of a long history of Soviet perfidy. However, under our nuclear test ban proposals we would not be taking the Soviet word on faith. The verification system, which is an essential part of our test ban position, would not only provide us with assurance that the Soviets were adhering to the treaty, but the very fact that the Soviets were willing to accept the verification measures which we propose would be evidence of an intent on their part, at least at the outset, to live up to the treaty. This is the probable situation because, while we would never be absolutely sure of detecting all clandestine tests of low yield, the Soviets could never be absolutely sure that any clandestine test would escape detection by seismic or other means. Therefore, in agreeing to our proposals in the first place, the Soviets would probably intend to adhere to the agreement.

However, we still should not assume that this would be the case. This is especially true of Soviet conduct after the treaty would have been in force for some period of time. Therefore, we must carefully weigh the significance of possible gains the Soviets might achieve assuming clandestine tests were carried out. In this connection, critics of the test ban have been quick to exaggerate.

Clandestine testing of large-yield strategic weapons would clearly not be possible. It is agreed by proponents and opponents of the test ban that the potential violator would be confined to relatively low yields. Three kilotons was a figure used recently in technical hearings before the Joint Committee on Atomic Energy on developments in the means of detection and identification of nuclear explosions—Project Vela.

Three kilotons is not an absolute threshold of detectability below which testing could be carried on with impunity. It is a relatively uncertain and ragged threshold of detection by seismic means alone.

However, assuming that the Soviet Union were to conduct a series of low-yield nuclear tests underground, what would be the military consequences?

The gains that can be achieved through testing of low-yield nuclear weapons would be largely confined to tactical nuclear weapons. Test ban critics have claimed that tremendous advances can be made by clandestine testing in the field of tactical nuclear weapons. However, we already have a rather extensive and well-developed arsenal of tactical nuclear weapons. In fact, it is on the lower end of the weapons spectrum that we believe we are ahead of the Soviet Union.

If one side has tactical nuclear weapons and the other side does not, the advantage obviously lies with the side having these weapons. However, if both sides have tactical nuclear weapons, differences in quality should make very much less difference in terms of military advantage, particularly when either side could so easily use tactical nuclear weapons of its own having a larger yield to counter those of lesser more efficient yield developed clandestinely by the other side. Therefore, it has been concluded by high officials of the Defense Department that there appears to be no single tactical nuclear weapons development in sight, nor any combination of developments, which would tilt the balance in a limited war in favor of the side possessing it.

Critics of our nuclear test ban position have also made unsupported claims about the effects a nuclear test ban treaty would have on the development of an antiballistic missile defense. The development of an effective missile defense by one side alone would, in the opinion of responsible officials within the Department of Defense, substantially alter the present strategic balance in favor of the side achieving it. Many believe, however, that in the missile, antimissile race the offense will continue to remain far ahead of the defense for the foreseeable future. A nuclear test ban would deny to both sides the opportunity to gain much of the information about weapons effects which would be an important contribution to the development of an antimissile capability.

However, the development of such a capability is not primarily dependent on further testing of nuclear weapons. Therefore, the critics of our test ban proposals who have injected this issue into the discussion would seem to be interested in creating more smoke than fire. It is clear that the type of low-yield underground nuclear testing which might possibly escape detection would be unsuitable for the development of an antimissile defense capability by either side.

Having thus examined the possible gains which might be achieved by low-yield underground testing which might escape detection, it must be concluded that this possibility would not be worth the substantial risks of detection that violation of the treaty would entail.

Much of what test ban critics have claimed can be done "below the threshold" must therefore be discounted as little more than puffing.

Mrs. GREEN of Oregon. Mr. Speaker, will the gentleman yield?

Mr. REUSS. I yield to the gentlewoman from Oregon.

Mrs. GREEN of Oregon. Mr. Speaker, I am most pleased to join with my distinguished colleague, the gentleman from Wisconsin, Representative HENRY REUSS, and others on this day to express our concern over the arms race and our support for the Arms Control and Disarmament Agency. The gentleman from Wisconsin has so often given voice to the hopes of many millions of Americans.

Many of us here today joined in sponsoring legislation to create the Agency in 1961. Many of us have followed its activities with interest. Last August 3, 18 House Members, including myself, wrote to President John F. Kennedy to again renew our support for the Agency.

In our joint letter, we wrote the President:

> We intend to support your request for the Arms Control and Disarmament Agency, made to Congress this year. But we suspect the task of ending the most dangerous and costly arms race in human history will require even more in terms of dollars and human energy, imagination, and talent. We, therefore, hope that the Disarmament Agency will request additional funds for its program next year with specific emphasis on an expanded research program and a larger public affairs program to acquaint citizens with basic information on disarmament.
>
> Concerning the research program, we recommend that there be much greater emphasis on the economic, political, legal, social, psychological * * * factors related to the prevention of war, as provided in section 31(1) of the act.
>
> We also hope that the Disarmament Agency will assert more active leadership within the executive branch on disarmament, and will view its mandate as one of exploring creative and imaginative new approaches. The Agency should take the lead in developing alternatives to the present spiraling arms race in which you said at the United Nations, "a nation's security may well be shrinking even as its arms increase."

As I said—that letter was written almost 9 months ago.

Just recently I and others introduced legislation to lift the ceiling of the $10 million appropriation placed upon the Agency whose funds to date have neared that mark. We did this in order to assist the Agency in its valuable work.

It is particularly appropriate that the gentleman from Wisconsin asked for special time to discuss this today because the afternoon newspapers carry generous excerpts from an inspiring encyclical titled "Pacem in Terris"—"Peace on Earth"—issued by Pope John 23d. The encyclical, Mr. Speaker, is a magnificent document that I am certain will win wide acceptance throughout this strife-torn world among peoples no matter what their religious faith, although I am proud of my Protestant affiliation, the encyclical is the great tradition of the Roman Catholic Church with its concern for the material and spiritual circumstances of man.

In the English translations issued by the Vatican press office the Pope calls for "progressive disarmament and an effective method of control." Pope John justly warns that the "conflagration" of war "may be set off by some uncontrollable and unexpected chance." In keeping with this view, the Pope said:

> Even though the monstrous power of modern weapons acts as a deterrent, it is to be feared that the mere continuance of nuclear tests, undertaken with war in mind, will have fatal consequences for life on the earth.

Mr. Speaker, I ask unanimous consent that excerpts from the papal encyclical be placed in the RECORD at this point as well as an excellent and thought-provoking speech entitled "Myths About Disarmament" by Joseph O. Hanson, Jr., national security affairs adviser with the U.S. Information Agency.

ENCYCLICAL OF POPE JOHN 23D

ARMS BURDEN NOTICED

It is with deep sorrow that we note the enormous stock of armaments that have been and still are being made in more economically developed countries, with a vast outlay of intellectual and economic resources. And so it happens that, while the people of these countries are loaded with heavy burdens, other countries as a result are deprived of the collaboration they need in order to make economic and social progress.

The production of arms is allegedly justified on the grounds that in present-day conditions peace cannot be preserved without an equal balance of armaments. And so, if one country increases its armaments, others feel the need to do the same, and if one country is equipped with nuclear weapons, other countries must produce their own equally destructive.

Consequently people live in constant fear lest the storm that every moment threatens should break upon them with dreadful violence. And with good reason, for the arms of war are ready at hand. Even though it is difficult to believe that anyone would deliberately take the responsibility for the appalling destruction and sorrow that war would bring in its train, it cannot be denied that the conflagration may be set off by some incontrollable and unexpected change. And one must bear in mind that, even though the monstrous power of modern weapons acts as a deterrent, it is to be feared that the mere continuance of nuclear tests, undertaken with war in mind, will have fatal consequences for life on the earth.

CALLS FOR END TO RACE

Justice, then, right reason and humanity urgently demand that the arms race should cease: That the stockpiles which exist in various countries should be reduced equally and simultaneously by the parties concerned; that nuclear weapons should be banned; and that a general agreement should eventually be reached about progressive disarmament and an effective method of control. * * * All must realize that there is no hope of putting an end to the building up of armaments, nor of reducing the present stocks, nor, still less, of abolishing them altogether, unless the process is complete and thorough and unless it proceeds from inner conviction: Unless, that is, everyone sincerely cooperates to banish the fear and anxious expectation of war with which men are oppressed. If this is to come about, the fundamental principle on which our present peace depends must be replaced by another which declares that the true and solid peace of nations consists not in equality of arms but in mutual trust alone. We believe that this can be brought to pass, and we consider that it is something which reason requires, that it is eminently desirable in itself and that it will prove to be the source of many benefits.

In the highest and most authoritative assemblies, let me give serious thought to the problem of a peaceful adjustment of relations between political communities on a world level: An adjustment founded on mutual trust, on sincerity in negotiations, on faithful fulfillment of obligations assumed. Let them study the problem until they find that point of agreement from which it will be possible to commence to go forward toward accords that will be sincere, lasting and fruitful.

RESPECT FOR LIBERTIES

But it is never sufficiently repeated that the cooperation, to which reference has been made, should be affected with the greatest respect for the liberty of the countries being developed, for these must realize that they are primarily responsible and that they are the principal artisans in the promotion of their own economic development and social progress.

It is vitally important therefore, that the wealthier states in providing varied forms of assistance to the poorer, should respect the moral values and ethnic characteristics peculiar to each, and also that they should avoid any intention of political domination.

Men are becoming more and more convinced that disputes which arise between states should not be resolved by resource to arms, but rather by negotiation.

Nevertheless, unfortunately, the law of fear still reigns among peoples and it forces them to spend fabulous sums for armaments: Not for aggression, they affirm—and there is no reason for not believing them—but to dissuade others from aggression.

There is reason to hope, however, that by meeting and negotiating men may come to discover better the bonds that unite them together, deriving from the human nature which they have in common: And that they may also come to discover that one of the most profound requirements of their common nature is this: That between them and their respective peoples it is not fear which should reign but love, a love which tends to express itself in a collaboration that is loyal, manifold in form and productive of many benefits.

WORLD MORE COMPLEX

As a result of the far-reaching changes which have taken place in the relations between the human family, the universal common good gives rise to problems which are complex, very grave and extremely urgent, especially as regards security and world peace. On the other hand the public authorities of the individual political communities—placed as they are on a footing of equality one with the other—no matter how much they multiply their meetings or sharpen their wits in efforts to draw up new juridical instruments, they are no longer capable of facing the task of finding an adequate solution to the problems mentioned above. And this is not due to a lack of good will or of a spirit of enterprise, but because of a structural defect which hinders them.

It can be said, therefore, that at this historical moment the present system of organization and the way its principle of authority operates on a world basis no longer correspond to the objective requirements of universal common good.

Public authority having worldwide power and endowed with the proper means for the efficacious pursuit of its objective, which is the universal common good in concrete form, must be set up by common accord and not imposed by force.

Even though there may be pronounced differences between political communities as regards the degree of their economic development and their military power, they are all very sensitive as regards their juridical equality and their moral dignity. For that reason, they are right in not easily yielding in obedience to an authority imposed by force, or to an authority in whose creation they had no part, or to which they themselves did not decide to submit by conscious and free choice.

NOT IN POSITION TO HANDLE

The public authority of the world community must tackle and solve problems of an economic, social, political, or cultural character which are posed by the universal common good. For, because of the vastness, complexity, and urgency of those problems, the public authorities of the individual states are not in a position to tackle them with any hope of a positive solution.

The public authority of the world community is not intended to limit the sphere of action of the public authority of the individual political community, much less to take its place. On the contrary, its purpose is to create on a world basis, an environment in which the public authorities of each political community, its citizens, and intermediate associations can carry out their talks, fulfill their duties and exercise their rights with greater security.

As is known, the United Nations Organization was established on June 26, 1945, and to it there were subsequently added intergovernmental agencies with extensive international tasks in the economic-social, cultural-educational, and health fields. The United Nations Organization has as its essential purpose the maintenance and consolidation of peace between peoples, fostering between them friendly relations, based on the principles of equality, mutual respect, and varied forms of cooperation in every sector of human society.

It is our earnest wish that the United Nations Organization—in its structure and in its means—may become ever more equal to the magnitude and nobility of its tasks, and that the day may come when every human being will find therein an effective safeguard for the rights which derive directly from his dignity as a person, and which are therefore universal, inviolable, and inalienable rights.

THE MYTHS ABOUT DISARMAMENT

(By Joseph O. Hanson, Jr.)

What is the role of public opinion in the world's tortuous efforts toward disarmament? Is it the least important part, a waste of the time of experts? Or is it—as some of us believe—potentially the most important of all? Is it possible that this just might be the factor that would tip the scale toward real progress?

Just a comment on the word "public." Although I suspect that some people define the word "public" as meaning "everybody else but me," I think the truth is that "the public" really means all of us.

I used to have an impression that people everywhere are passionately interested in disarmament as the No. 1 subject on the world's agenda. But the evidence indicates that such awareness and enthusiasm are restricted to a minority in each country. Most people do not know what to think about disarmament. They feel it is remote—not their business. They do not follow it day by day. There is not much understanding or interest.

This should not really surprise us. When we look at the problem, we realize that this is one of the hardest subjects in the world to pass clearly from one mind to another: (1) It is complex; (2) it has a strong wishful element of escape from fear; (3) it is frustrating because the protracted talk has not yet led to action.

One expectable result is that this field is pervaded by a set of persistent stereotypes. But the general result is confusion, more perhaps than on any other subject receiving frequent public attention. Our experience indicates that unremitting effort at straightforward explanation is the only way to make headway; resort to oversimplified slogans is not only useless but counterproductive because it carries the inevitable impression of a light-minded approach. Another lesson is that the effort should be oriented toward general understanding of the global problem, rather than narrowly limited to exposition of one's own proposals and criticizing those of others. Nothing endangers communication more quickly than a foray into cold war polemics.

What can be done to generate better public understanding of disarmament?

First of all, who will do it?

The public media do a conscientious and creditable job of communicating what is available to them. But this is a new field, and the amount of material in communicable form is not yet very significant.

The Government can do its share, but not the whole job. There are now many more Americans knowledgeable about disarmament outside the Government than in it. Much has been said about the need for scientists and scholars to speak in terms laymen can understand, so that the vital messages can be widely communicated. In what field is this more important than disarmament? Not in physics, or economics, or even medicine. It is not an overstatement to say that clarity is here a duty.

It may be helpful to distinguish between two types of material: The advanced research * * *, and the basic truths of the problem which you take for granted. The advanced research is on the frontier of the unknown and is often, and properly, controversial. But it is the area of supposedly basic truths—which should be known and noncontroversial—that the difficulties appear.

Now for a very important matter: what to talk about.

First and basic is the need to kindle interest and a sense of purpose—a feeling that disarmament belongs in the human scheme of things. The fact that a scholar is devoting his training and talent * * * is of itself significant.

A major obstacle to be overcome is the set of stereotyped beliefs which have become rooted in the field of disarmament and arms control. Most of these attitudes used to be valid; now they have become, in varying degrees, obsolete and unrealistic. The neutralization of these stereotypes—or myths, if you will—should be a big task of any systematic endeavor to increase understanding.

I would now like to set down some of the more important stereotypes, and to suggest some ideas which offer ammunition for a counterattack against them.

First and basic is the "Utopia" stereotype: "Disarmament will never come to pass because it never has; it is simply a Utopian dream."

Here our essential task is to demonstrate that disarmament is real—to rescue it from the long habit of pale utopianism. We need to show that it is an achievable, though difficult, goal. The place to start is to recognize that the skeptical attitude is a perfectly natural reaction arising from the years of stalemate. The next step is the proposition that there has been a quantum jump between the past and the present, so that the dismal history signifies little. The key point, it seems to me, is that all negotiation and intensive study since World War II have been discouraging in a sense, but emphatically not useless: these were actually tremendously valuable years because the accumulation of realistic expert knowledge is now at an all-time high. Also, of course, the incentive for all nations to disarm constantly increases, in the form of the nuclear arms race with its risk of war and economic burdens. But the best persuasion potential is in showing that disarmament is a practical possibility: that we know many of the answers and are well started on the road to the rest. Overemphasis on the mysteries and unknowns fast leads to hopelessness.

This basic "Utopia" stereotype has collected a family of sub-myths around it. For example, people say that disarmament cannot happen because it requires trust between nations, which obviously does not exist. The answer here is easy; any sound disarmament agreement is based not on trust but on self-enforcing verification measures which both replace trust and begin to build trust through nations working together.

A second variant is that nothing can be done until the cold war stops, outstanding political problems are settled, and tension relaxes. It is not too hard to explain that, in the early stage, disarmament and political settlements should go hand in hand, each helping the other. There is no logical or practical reason why one should stop to let the other catch up. In the later stages of disarming, international settlement of disputes would be a regular function of the peacekeeping machinery.

A troublesome relative of the Utopia family is the cliche: "Governments don't want disarmament: they are insincere." Although the word "sincerity" has been used and overused, it is worth noting that sincerity is not susceptible to proof by words; it is, rather, a quality demonstrated only by actions. Thus the most compelling evidence of sincere belief in a future event is not to claim one is sincere but to act as though one really expected the event to happen. Here it seems to me that any impartial observer could not help but be struck with the spectrum of activity which is taking place in the United States—a confident building toward the expected coming of disarmament. For example, the amount and zeal of intellectual probing of the subject * * * is a striking case in point. These burgeoning studies are not hypothetical but practical; they ask not if, but how.

The creation last year of the U.S. Arms Control and Disarmament Agency, the only Government body of its kind in the world, speaks volumes on long-term serious intent. The emergence of a growing group of disarmament experts in the Congress, pioneered by Senator HUMPHREY * * * is a deeply significant political phenomenon. Perhaps most striking is the establishment in the Department of Defense of a permanent office devoted to arms control, accompanied by a doctrine weaving disarmament and arms control factors into the fabric of U.S. military policy. In a recent speech entitled "Disarmament and Defense," Deputy Secretary of Defense Roswell L. Gilpatric intimately linked the two:

"The point is * * * that the responsible defense officials * * * must come to know the special problems of disarmament and arms control. The factors of stability and of the dynamic effect on the arms race should be considered in every decision we make, whether in the area of strategic doctrine, force structure or research and development."

This doctrinal marriage of defense and disarmament may, I think, fairly be called historic.

A final version of the "it can't happen" school appears, happily, to be at last on the road to extinction. This is the myth that disarmament would cause depressions and economic chaos. The key step in laying this to rest was a pioneer United Nations report issued last March, in which an expert panel from 10 countries, including economists of socialist as well as capitalist persuasion, unanimously agreed that disarmament will not cause depressions or large increases in unemployment if proper preventive planning is done by governments. It was further agreed that the resources released by disarmament will make possible a vast range of new human benefits—"so many competing claims * * * that the real problem is to establish a scale of priorities." The most comprehensive contribution to the United Nations report, submitted by the United States, largely consists of a detailed case study of the positive economic and social benefits in the United States which would flow from funds released by disarmament. These studies have illuminated a difficult problem area and supplied the texts for new and clearer perspectives.

I pass now from Utopia to what I call the "weakness" areas. This centers around the mistaken belief that disarmament results in national weakness, rather than strength. A twin misconception is to view disarmament in isolation, as concerned only with arms reductions—i.e., omitting arms control entirely and forgetting the basic purposes: to reduce the risk of war.

Terminology may be part of the trouble. I am often dissatisfied with the term "disarmament," which is too narrow, and with "arms control" which is broad but vague. Clearly the purpose of all this is to reduce war: first by making it less likely, then by eliminating it entirely. So what we are really talking about is not "arms reduction" but "war reduction."

Taking an approach as broad as this, one can fit the parts into a larger, more meaningful whole. Anything which makes war less likely increases national security. * * * When arms reductions or classic "disarmament" is put in the broader context, the fact that there is a net increase in national security can be clearly demonstrated. There is usually little difficulty with the proposition that the spiraling arms race represents a real hazard to national security.

This is enough, I think, to give an idea of the kind of stereotypes frequently encountered, and a sampling of what can be done to erode them. Myths generally die hard, but where survival is at stake, we have no choice but to cultivate understanding.

Mr. REUSS. I thank the gentlewoman for her fine statement.

Mr. FULTON of Pennsylvania. Mr. Speaker, will the gentleman yield?

Mr. REUSS. I yield to the gentleman from Pennsylvania.

Mr. FULTON of Pennsylvania. Mr. Speaker, I would like to compliment the gentleman on his statement and say that disarmament must be a never-ending quest because we in the United States and the free world and all peoples of the world must see that it succeeds.

I like the gentleman's approach and feel that he has a very scholarly and practical comment on the disarmament program, and I hope that we can succeed with a fine disarmament agency under the leadership of our good friend William Foster.

Mr. REUSS. I thank the gentleman from Pennsylvania for his comments and join in his tribute to the dedicated men and women who are now conducting a difficult assignment in the Disarmament and Arms Control Agency.

Mr. Speaker, I yield back the balance of my time.

ONE HUNDRED PERCENT WASTE IN PROPOSED NAVY DEPARTMENT PURCHASE OF DRONE AIRCRAFT RADIO

Mr. WILSON of Indiana. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Indiana?

There was no objection.

Mr. WILSON of Indiana. Mr. Speaker, the Navy is at it again. In the latest case that I have uncovered in my military procurement study, I shall prove today that the Navy is readying to throw another fistful of tax money down the drain in order to channel a contract to a favored producer.

For this, we cannot blame the producer. Winning a development contract put the industry in line for future business. If the Navy asks for a sole-source bid on the equipment again and again, you cannot blame industry. It is in business to make money.

But, Mr. Speaker, we can and should blame those in Navy who—

First, secretly and improperly mailed a bid set on February 15, 1963, which had a closing date of March 4, 1963, leaving but 7 days for the procurement to be studied by any other interested bidder.

Second, purposely failed to sign the usually required "determination and findings" that a sole-source requirement existed before starting purchasing machinery rolling.

Third, deliberately planned a sole-source purchase that will cost at least 100 percent more than necessary.

Fourth, plan to buy a radio to replace another radio that works efficiently.

Mr. Speaker, the equipment of which I speak is known as the AN/DRW 29 radio. It is a small, 9-pound radio set that is mounted in a drone or target practice aircraft. It was last purchased in early 1962 at an average price of about $3,000. The procurement document—2861–63—issued February 15 was to again buy this radio sole-source from Babcock Radios, Costa Mesa, Calif., with a March 4 bid opening. This allowed just 7 working days between mailing of bid set and closing of bids, in itself enough to prevent even accidental discovery of the procurement.

From sources inside Navy, I was told that something was rotten in Denmark. It was to be justified, my informant said, on the basis that no drawings were available when, indeed, drawings were paid for on an earlier contract and exist in Navy files. Although negotiation document 2861–63 went out February 15, no "D&F" was yet signed, my Navy contact told me. This is highly unusual since such a document is usually one of the first steps in such a procurement by sole source.

On February 26, 1963, Capt. John Scott, assistant to the chief of Office of Naval Material was asked for a copy of 2861–63 together with drawings, and technical material on the AN/DRW 29.

I wish to digress for a moment at this point, Mr. Speaker, to pay particular compliment to Captain Scott, a capable, conscientious, and effective naval officer. It is a pleasure to work with him, I wish there were more in Navy like him.

Captain Scott reported later that day that no "D&F" had been signed for the AN/DRW 29 and so there could be no procurement document for the purchase. When I persisted, he assured me he would look into the matter. He also said there were no drawings or plans available, but said he would look into that, too.

Still later, I reported to Captain Scott that on page 3, section B, paragraph 4 of contract No. 62–0619–r, drawings were ordered and had been paid for by the Government.

On February 27, Captain Scott phoned my office to say that his information from people in Navy on the 26th had been "dead wrong." His people, he said, had checked further and found drawings and technical material available. This was being sent, he said. He also said no "D&F" had been signed, although he substantiated that a negotiation document had been sent to Babcock.

After receiving the drawings for the equipment, I set out on the next step in my study—to see if the equipment was specialized to a degree that only Babcock could make it and deliver it as quickly as the Navy desires. I sent the plans to qualified technical people in industry. To shorten my presentation, they said the radio is not highly specialized. All technical people I contacted said they could build the radio and deliver it in any time frame set up by the Navy.

Therefore, any valid technical reason for this radio being purchased sole-source evaporated. Any responsible company, furnished with drawings that were in Government possession, could make it and deliver it on time.

This, then, obviated the second possible "sole source" route of "highly specialized" equipment. The first was "no drawings available."

The third usual justification for a sole-source buy is urgency of delivery. The equipment is needed so sorely that the Navy must buy it from the fastest manufacturer. We have seen in the past how unreliable this avenue is, but I checked it out, anyway.

The radio equipments in the drones are operating satisfactorily at present. My sources inside Navy tell me the ARW

56 is the radio now being used. It was last bought in February 1961 for about $1,143 each. In no way, therefore, can it be considered obsolete.

Since this equipment exists and works properly, how can it possibly be shown that the AN/DRW 29 is needed so urgently that only the sole source developer and producer can build it on time? The answer is simple. It cannot be shown and the third sole-source justification is as full of holes as the first two.

Now, Mr. Speaker, I have a fourth conclusion and it is that the taxpayer will get it in the neck if this radio is purchased via sole source. The engineering people I contacted in my study said their factories could—and would like to—build the radio. They estimated an average cost of $1,500. Under terms of its 1962 contract, via sole source, Babcock was paid an average cost of $3,100—almost twice as much.

It is easy to see that the taxpayer is going to get soaked if this sole source purchase is allowed to go through.

What is the status of this procurement now? I can best describe it as panic. The Navy sent out one bid set, got back its bid and the stage is set for a sole source contract. There is only one drawback. The sole source "D. & F." still has not been signed. No contract can be issued until this is done—until the proper Navy official puts his name on the dotted line.

Once this is done—once Mr. Kenneth M. BeLieu, Under Secretary of the Navy for Installations and Logistics, puts pen to paper—the taxpayer will get it in the neck. Not until.

Mr. Speaker and colleagues, I submit that here is another before-the-fact disclosure that proves the fallacy of sole source purchasing, a tactic by which 87 percent of defense purchases were made last year. I submit to my colleagues, to the Secretary of Defense and to the Secretary of the Navy and his Undersecretary Mr. LeBieu that here is a sole source paper that must not be signed.

In just a few short days—and without the beforehand knowledge of the procurement that I was able to get in the early days of my study—I have been able to document that this radio can be built by American industry after competitive bidding and at a terrific saving to the taxpayer.

If the Under Secretary of the Navy will distribute bid sets to American industry and allow it a short time in which to bid, the Navy will get its radios on time and the taxpayers will save at least 50 percent on every single radio. Any other action will be a criminal waste of American tax dollars in the name of defense.

Mr. Speaker, I have also asked Mr. BeLieu, Secretary McNamara and the Comptroller General to supply me with the statutory authority which permits a sole source procurement to roll right up to contract signing time before the document justifying the whole transaction is approved. If they can "justify" such sleight-of-hand tactics, there will be another amendment to the United States Code tossed into the hopper by me on the same day I receive the answer.

In closing, Mr. Speaker, I wish to thank my colleagues for their warm support. I have appreciated their comments in scores of letters received since my presentation on the floor April 1. I want to assure you and them that I will continue to fight to save the taxpayers' money on defense purchasing.

LEGISLATIVE CONFLICTS OF INTEREST

Mrs. GREEN of Oregon. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER pro tempore. Is there objection to the request of the gentlewoman from Oregon?

There was no objection.

Mrs. GREEN of Oregon. Mr. Speaker, on March 11 I discussed at some length on the floor of the House my concern at the problem of legislative conflicts of interest.

At that time, I said that—

> I believe that this situation threatens to blunt the effectiveness of our message of democracy and to turn upon the Congress both the derision of the very people we seek to influence overseas and the American people themselves.

Since then I have introduced a number of bills aimed at this problem. One would require that incomes of Members of Congress from all sources be filed annually.

Several of us are today filing statements of our financial interests. I know that it might be said that those who have no outside income are the ones most willing to file the public statement. And yet this is not true of the Senators who have made public record of their financial holdings and neither can this be said for some of the Members of the House. As far as my own are concerned they are limited.

I own no stocks or bonds. I own my home in Portland and have an equity in an undeveloped 47 acres in Multnomah County, Oreg. My salary as a Member of the House of Representatives constitutes more than two-thirds of my annual income from all sources.

Mr. Speaker, I ask unanimous consent that the gentleman from Wisconsin [Mr. REUSS], the gentleman from California [Mr. EDWARDS], the gentleman from Oregon [Mr. DUNCAN], the gentleman from Arizona [Mr. UDALL], the gentleman from New York [Mr. RYAN], and the gentleman from Wisconsin [Mr. KASTENMEIER], may extend their remarks immediately following mine, and that all Members may have 5 legislative days in which to extend their remarks on this subject.

The SPEAKER pro tempore (Mr. LIBONATI). Is there objection to the request of the gentlewoman from Oregon?

There was no objection.

Mr. REUSS. Mr. Speaker, my holdings, apart from my homes in Washington and Wisconsin and life insurance, consist of stock in the following companies:

American Electric Power Co., American Sugar Refining Co., Central Illinois Public Service Co., Central and Southwest Corp., Johnson Service Co., Madison Fund, Majestic Mines, Marshall & Ilsley Bank, Niagara Shares Corp., Northwestern National Insurance Co., One William Street Fund, Public Service Co. of Indiana, Puget Sound Power & Light Co., Tri-Continental Corp., United Corp., and United States & Foreign Securities Corp.

Mr. EDWARDS. Mr. Speaker, I am joining a number of Members of the House and Senate in filing, for the public record, a statement of my financial holdings. We require such a full disclosure of the executive branch, and I feel that the American people are entitled to the same information where their legislators are concerned.

I, therefore, print in the RECORD the fact that my financial holdings consist of 3,890 shares of common stock, Valley Title Co. of Santa Clara County, a corporation, and ownership of a house and lot in Atherton, Calif. The title company in its normal course of competitive business handles a limited number of transactions where Federal interests are involved.

My principal sources of income outside my legislative salary are compensation and dividends from the above company and rentals from the house and lot. My governmental salary constitutes less than half of my annual income from all sources.

Mr. DUNCAN. Mr. Speaker, the following is a statement of my income and holdings:

First. Stocks and bonds: 100 shares ICOA Life Insurance Co.; 19 shares, class B, Southern Oregon Production Credit; Keystone Mutual Fund, B-4, 3.972 shares, and S-1, 2.85 shares.

Second. Financial interests subject to Federal regulatory agencies: None.

Third. Real estate: Residence in Medford, Oreg.; undivided one-half interest in undeveloped 155 acres in Jackson County, Oreg.

Fourth. Member advisory board of ICOA Life Insurance Co., Salem, Oreg.

Own contract interest against Brophy, Wilson & Duhaime, attorneys, Medford, Oreg., as a result of agreement on my retirement from the firm immediately prior to taking office as a Congressman.

Fifth. Annual salary as a Member of Congress will approximate two-thirds of annual income from all sources.

Mr. UDALL. Mr. Speaker, I wish to commend my colleagues for taking the initiative in making a full disclosure of their financial holdings. If all the Members of Congress would do likewise, I think we would do much to maintain public confidence in the legislative branch of the Federal Government. There seems to be a widespread belief that many Members in both chambers often vote on legislation when there is a possible conflict of interest unknown to their constituents.

Congress imposes on officers of the executive branch the most stringent standards against conflict of interest between their public office and private holdings. I would not want to see Members of Congress barred from participation in the commercial and business life of the country, but I do believe a voluntary disclosure of this kind by all Members would help to increase public confidence in the decisions of the Congress.

For these reasons, I am happy to join this voluntary effort and publish herewith in the Congressional Record the following list of my securities, assets and sources of income.

Stocks: Bank of Tucson, 156 shares; Catalina Savings & Loan Association, 3,400 shares; Modern Pioneers Insurance Co., 200 shares.

Real estate: Equity in residences, Washington, D.C., and Tucson, Ariz.; part ownership or equity in seven tracts of unimproved, vacant acreage in vicinity of Tucson, Ariz.; part ownership of two commercial lots in business section of Tucson, Ariz. One is small building used for law offices and the other is occupied by gasoline station. Both are rented.

Real estate—mortgages and contracts held: Equity in four miscellaneous real estate mortgages and contracts covering various properties in vicinity of Tucson, Ariz.

Sources of income: Congressional salary; rentals of business properties described above; annual royalties on mining claims in Pima County, Ariz.

I am not affiliated with any law firm but have received legal fees for past services to former law firm at Tucson, Ariz.

Annual salary as Member of Congress constitutes more than two-thirds annual income from all sources.

I am a director of the Bank of Tucson and Catalina Savings & Loan Association, both of Tucson, Ariz. I am not a director or officer of any other commercial or trade company or firm.

Mr. RYAN of New York. Mr. Speaker, I believe that Congress should enact a code of ethics for its Members and employees. Such a code of ethics should provide for a full public disclosure of any financial interest or holding which might give rise to a potential conflict of interest situation. I am glad to join my colleagues in urging a meaningful code of ethics and in expressing my concern with this problem. I think it is no secret that I have no corporate or real estate holdings and that, as a full-time working Congressman, my principal source of income is my congressional salary.

Mr. KASTENMEIER. Mr. Speaker, the following is a statement of financial holdings: Stocks, none; bonds, none; other securities, none; real estate—equity in personal home; financial interests in any business, firm, or other organization, none; income—congressional salary constitutes more than two-thirds of annual income.

Mr. BLATNIK. Mr. Speaker, I am pleased to join my dear friend and able colleague the gentlewoman from Oregon [Mrs. Green] and our other colleagues, in making this voluntary disclosure of financial income, holdings, and other interests.

Income: My major source of income is my congressional salary, which is over 90 percent of my annual income; stocks, Standard Packaging Corp., 90 shares; mutual funds, investments in four mutual funds; savings account, interest from savings account in a bank and a savings and loan account; real estate, equity in residence, Arlington, Va.

Mr. BOW. Mr. Speaker, I wish to join my colleagues in stating for the Record my personal financial situation.

Upon election to Congress, I withdrew from my law firm and from the practice of law and I receive no legal fees.

I own no stocks or bonds and I am not a member, officer, or director of any business enterprise. My assets consist of a small savings account, life insurance, my contributions to the Civil Service retirement system and an equity in my home in Ohio. My salary as a Member of Congress constitutes more than 90 percent of my annual income.

THE BALTIC STATES QUESTION

Mr. PUCINSKI. Mr. Speaker, I ask unanimous consent that the gentleman from New York [Mr. Dulski] may extend his remarks at this point in the Record and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. DULSKI. Mr. Speaker, today I am introducing a concurrent resolution calling for a discussion of the Baltic States question before the United Nations, and for the United Nations to request the Soviet Union to, first, withdraw all Soviet troops, agents, colonists and controls from Lithuania, Latvia, and Estonia; and second, return all Baltic exiles from Siberia, prisons, and slave labor camps in the Soviet Union.

My resolution would also provide that the United Nations conduct free elections under its supervision in the countries of Lithuania, Latvia, and Estonia, and confer punishment upon the Soviet Communists who are guilty of grievous crimes against the peoples of these countries.

Even though we do not like to admit it, the facts clearly show that within the past few years Soviet communism has made great gains in its efforts to dominate the world with very little sacrifice on its part. Nations have been taken over, one by one, right from underneath the noses of the Western Powers.

The time has come for us to recognize and admit the fact that Soviet communism has but one essential goal—the complete and total domination of all nations. It is time for us to take some decisive and positive steps to stop this creeping menace that threatens to engulf the free world.

While my resolution pertains only to the Baltic nations, it is my conviction that any concrete action taken with respect to these three nations will do much to thwart the Soviets from making further gains in their ceaseless efforts to make the world safe not for democracy but for Soviet communism.

I urge my colleagues to take affirmative action on this resolution.

VETERANS' BENEFITS

Mr. PUCINSKI. Mr. Speaker, I ask unanimous consent that the gentleman from Rhode Island [Mr. St Germain] may extend his remarks at this point in the Record and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. ST GERMAIN. Mr. Speaker, I present herewith the following resolution adopted in the General Assembly of the State of Rhode Island:

Resolution of Rhode Island General Assembly

House resolution memorializing Congress, asking that favorable consideration to legislation providing benefits to the aged, ill, and disabled veterans of World War I in the form of pensions or any other means which provide relief so vitally needed

Whereas many hundreds of thousands of our Nation's finest citizens served the cause of democracy during the period of World War I; and

Whereas a large number of these veterans have now reached the age and circumstances in which they are no longer self-supporting, as well as suffering illnesses and infirmities aggravated by this honorable service to their country; and

Whereas through no fault of their own, they have largely become a class of forgotten men, many of whom are close to the grave: Now, therefore, be it

Resolved, That the Members of the House of Representatives of the State of Rhode Island recognize the predicament of these veterans of World War I and petition the Congress of the United States to give favorable consideration to H.R. 2332 (World War I Pension Act) providing benefits to the aged, ill, and disabled veterans of World War I in the form of pensions or any other means which will provide relief so vitally needed; and be it further

Resolved, That the recording clerk of this house of representatives is hereby authorized and directed to transmit duly certified copies of this resolution to the President of the United States, to the Director of the U.S. Veterans' Administration, to the Director of the U.S. Bureau of the Budget, to the chairman of the House Committee on Veterans' Affairs, and to the Senators and Representatives from Rhode Island in the Congress of the United States.

HON. LYNDON B. JOHNSON

Mr. PUCINSKI. Mr. Speaker, I ask unanimous consent that the gentleman from Texas [Mr. Gonzalez] may extend his remarks at this point in the Record and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. GONZALEZ. Mr. Speaker, last year on this date I called the attention of the House to the fact that it was the silver anniversary of Vice President Lyndon B. Johnson's long service in the Congress of the United States. Today should not pass without our taking notice that it marks the completion of 26 years of his labors as an official of our Government.

There are men now and others in times past who may have marked longer tenure in the service of our Government. But I doubt if there are any who can have rendered the wide variety of essential services to the Government, the Congress and to his party, as has the Vice President in these years.

These 26 years embrace his service in the House, in the Senate, in the position of Democratic Whip and Democratic Leader. They have seen him serve as Vice President of the United States, as Chairman of the President's Committee on Equal Employment Opportunity, and as Chairman of the Advisory Council of the Peace Corps. They have found him performing all manner of different and challenging assignments.

I know no better illustration of how our country has profited from LYNDON JOHNSON's zeal for work and his tireless devotion than to recall one of the many extra services he rendered a short time prior to the Cuban crisis last fall. Last year I commented on my impressions of the Vice President from my having observed him in his home, on his ranch in Texas. It was this ranch, this home of LYNDON JOHNSON, to which all the Ambassadors of the Organization of American States were invited last year at the time the OAS officials were visiting in San Antonio.

The Ambassadors from the Central and South American countries surely must have gained from this visit a meaningful insight into the life of their host and in doing so they had opportunity to look closer into the heart of America. I think the country owes appreciation to the Vice President for his never-ending efforts to search for ways in which the people of the world can see the human qualities of our country and our Government. The L. B. J. ranch in Texas does not belong to this Government, but it has served this Government well when the Vice President uses it to advance our interests as he has.

Many in this Congress expressed surprise when in the tense days last fall the Ambassadors of the American States voted with much unanimity to support the program and purposes of the United States when confronted by the dangers in Cuba. I like to think, and I do think, that the Vice President of the United States deserves much credit for this signal diplomatic achievement.

In his 26 years of service, LYNDON JOHNSON has also been a diplomat for America, and I know we can all join in hoping that these 26 years will stretch on and on into the future as far as we can see.

THE WOOL TEXTILE INDUSTRY

Mr. PUCINSKI. Mr. Speaker, I ask unanimous consent that the gentleman from Massachusetts [Mr. BURKE] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. BURKE. Mr. Speaker, on March 14 of this year I introduced a bill (H.R. 4877) designed to correct an unconscionable situation which has been having a serious adverse effect on the wool textile industry of the United States and particularly on that part of the industry situated in the Commonwealth of Massachusetts. My bill would close the loophole through which wool cloth of foreign manufacture is entering the United States free of duty after having been subjected to a so-called "showerproofing" process in the Virgin Islands. This denies to the U.S. Government the substantial revenue which would accrue were the identical wool cloth to enter here directly from the foreign country of origin.

A companion bill (S. 941) has been introduced in the Senate by Senators TALMADGE, PASTORE, SALTONSTALL, and MUSKIE.

The wool textile industry of the United States has a most serious import problem. The productive capacity of the industry has declined 50 percent since 1947, while during the same period imports have increased approximately 1,400 percent. Pursuant to the President's seven-point textile program, the administration is now actively pursuing efforts to resolve the import problem of the industry.

Within the framework of this overall wool textile import problem, section 301 of the Tariff Act of 1930, as amended, has emerged as a loophole which adds fuel to the fire of this burning issue.

Section 301, I understand, was originally enacted to stimulate employment in the Virgin Islands and other insular possessions of the United States.

If section 301 must be administered as it is being administered in the "showerproofed" wool cloth area, I favor an overall revision of the section. Such an overall revision would in any event, however, require careful and prolonged consideration, and whether it could be accomplished in this session of Congress is problematical. The wool problem, however, cannot wait for action. Last year the imports of "showerproofed" wool cloth amounted to over 10 million square yards, or about 15 percent of the total importation of wool cloth into the United States. Information reaching industry sources here indicates that, if not remedied immediately, the loophole provided by section 301 of the Tariff Act will permit substantially greater quantities of "showerproofed" wool cloth to be entered duty free in 1963.

The gravity of the import problem of the wool textile industry has been recognized by the President of the United States and his administration, and by leaders of both parties in the Congress of the United States. This problem grew to the stage where its seriousness and the need for remedial action were accorded recognition by the President and the Congress long before the section 301 loophole was discovered. If, as we know is the case, this industry is vulnerable to imports when they bear the applicable tariffs, it is assuredly even more vulnerable to imports which bear no tariff.

I urge every member of the House of Representatives to join me in attempting to secure prompt enactment of my bill, H.R. 4877.

HIGH POINT, N.C.

Mr. PUCINSKI. Mr. Speaker, I ask unanimous consent that the gentleman from North Carolina [Mr. KORNEGAY] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. KORNEGAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following statement, which was delivered in Washington on November 18, 1962, by the Reverend Tom Haggai, pastor of the Emerywood Baptist Church and chaplain of the High Point, N.C., Junior Chamber of Commerce.

Mr. Haggai's statement was made to the judges in the All America City competition, annually sponsored by Look magazine and the National Municipal League, which are cosponsors of the annual awards competition. Mr. Haggai's standby in making this statement was Mr. J. V. Morgan, attorney-at-law, of High Point.

This presentation by Mr. Haggai of the validity of High Point's claim to be named the All America City in the annual contest is, in my opinion, a masterful presentation of a city on the march and I feel will be of interest to the Members of this body. I am happy and proud to announce that High Point was one of the 11 All America Cities selected for award in 1963, which is a signal honor, not only to High Point but to our State of North Carolina. I am, of course, very much gratified that this distinction has come to one of the fine cities in my congressional district, and I am looking forward with pleasure to participating in the ceremonies in observation of this award which have been scheduled for April 15, 1963, when the Honorable Luther Hodges, Secretary of Commerce, will be the featured speaker.

It is with pardonable pride, then, that I submit the statement of the Reverend Mr. Haggai, who appropriately points out to the judges that the citizens of High Point, alone and collectively, have by their interest, efforts, and combined determination made it possible for this city to receive this outstanding recognition as one of the 11 All America Cities in the United States in 1963:

HIGH POINT, N.C.: POWERHOUSE OF THE PIEDMONT

It has been said that in the restless voice of dissent lies the key to a city's vitality and greatness. In the city of High Point, for which I speak, this voice was once inaudible.

But in recent years many men found they could no longer pretend all was right and good in our community and their voices began to be heard.

They came from all walks of life and from all stations of society. Over a decade their voices began to blend, and as they found each other, their efforts merged into a clamor for progress and the improvement of our city.

Today, as we enter the final phase of the All America City competition, the voice of dissent in High Point has been transplanted into vigorous action. It has resulted in wide civic accomplishment and expanding community progress.

Before I go any further let me introduce myself. I am Tom Haggai, pastor of Emerywood Baptist Church and chaplain of the High Point Junior Chamber of Commerce.

In a recent issue of the National Geographic magazine North Carolina was labeled the "Dixie Dynamo." If this is true, then I submit High Point is the "Powerhouse of the Piedmont," the projection of North Carolina's most progressive area.

It is located near the center of the State, in the golden triangle section of Piedmont, North Carolina. It is an industrial city of some 64,000 people.

To those who are not familiar with our town, the name may sound peculiar; High Point got its name in a rather inauspicious but logical way.

It was given by a team of surveyors mapping the roadbed for the North Carolina Railroad which ran from Goldsboro in the east to Charlotte in the southwest. They found that what is now High Point was the highest point on the railroad. They drove a stake in the ground and we were on our way. Incorporation came in 1859.

The stake was driven at the point where the railroad intersected the Plank Road which was a highway built of boards from Fayetteville to Winston-Salem. The fortunate fact that the Plank Road had a 100-foot right-of-way has given the city a Main Street of that width through its downtown section.

High Point is the home of a 4-year accredited college of over 1,000 students and is within 25 miles of 9 other colleges and universities.

It has one of the finest heart centers in this area, built in 1957 at a cost of $350,000 by civic donations.

It has an excellent public school system and a council-manager form of municipal government.

The year 1952 could well be considered the turning point for High Point. It was during that year that the forces for change and progress began to make themselves felt on the face of the city.

Since that time, High Pointers, alone and collectively and often against massive opposition, have initiated, and completed a host of civic, community, economic and industrial improvements.

Among them are the following: An approving vote for $24 million to build new school buildings. A hike in the local school tax to supplement the pay of High Point teachers. A new, modern YWCA with indoor swimming pool. A combination YWCA-YMCA for Negroes. Sweeping approval of a $15 million city bond issue for new water and sewer facilities. The annexation—against heavy and entrenched opposition—of 19.6 square miles of outlying areas. The complete rebuilding of our primary park facilities. Renovation of all city parks and addition of new ones. Built a new gymnasium for High Point College. Created a city planning department to guide the orderly growth of the city. Constructed four new elementary schools and two junior high schools, and as a topper, exhibited an astonishing amount of industrial growth—38 percent in 10 years. Last year alone 21 new industries settled in High Point.

Also in this decade of growth—which could almost be compared to a chain reaction—bank clearings in High Point increased by 110 percent and total employment rose 171 percent until we now have one of the lowest unemployment rates in the Nation.

High Pointers have always contributed generously to our charitable organizations and efforts. The united fund supports 26 agencies. Each year more than 1,000 High Pointers give hundreds of man-hours to this campaign and in 1961 our goal of $289,000 was exceeded by $10,000.

On the entry submitted to you by the junior chamber of commerce, 11 major points have been outlined.

In the summer of 1955, the Southern Railway announced its intention to terminate the vital reciprocal switching agreement. This agreement was between local industrialists, a small railroad, and the Southern Railway. It was recognized that cancellation of the agreement threatened access to national markets and that it could mean an increase in freight costs. The chamber of commerce and 16 industrialists initiated legal action to retain the agreement. It is significant that High Point citizens involved in the struggle presented a sustained and constant effort to prevent loss of the agreement which would affect approximately 22,000 employees. Through this cooperative citizen effort, actions were started before the Interstate Commerce Commission and the North Carolina Utilities Commission. Decisions favorable to High Point were obtained from both commissions and later from the North Carolina Supreme Court.

High Point's urban renewal project is distinctive in that it stresses conservation and rehabilitation rather than clearance and that it is the second largest in the southeast and the largest in North Carolina. It involves 606 acres of city business and residential property. We feel that the magnitude of this project indicates our willingness to enter large undertakings in order to reap great things for our city.

Equally significant is the fact that High Point citizens have been willing to support a substantial public housing project along with urban renewal.

Our present public housing plan was adopted after a fight the likes of which has not been seen in High Point in many a year. Forces on either side employed every means available to accomplish this particular end.

Finally, after the battle was done, and the dust had settled, the proposal passed. Under it 200 units for lower income families and 200 more for low-income aging persons will be constructed.

I submit that the very existence of urban renewal and public housing in High Point is strong evidence of the intent of our citizens to make our city a better place for people of every class and distinction.

In the summer of 1959 a number of merchants, property owners, and interested citizens became aware that business was drifting away from our traditional and rather rundown downtown area.

Parking was an acute problem. Store fronts were old and drab. People were going out of town to shop. As a consequence the Downtown Development Corp. was formed, and in the summer of this year a 20-year improvement plan was adopted.

Immediately, parking lots for downtown shoppers began to spring from vacant lots, as stores combined their efforts to solve their mutual parking problems.

Currently the face of downtown High Point is undergoing a startling change. Under the Downtown Development program whole blocks of stores and businesses are remodeling and adding new fronts and stationary canopies are going up over the sidewalks.

As a matter of fact, three new banks and one savings and loan association are being built.

You will rightfully ask us about racial conditions in High Point. We make no pretense that all is as it should be in this area. We have, however, accomplished positive results, and for this we are proud.

Negroes serve on many governmental bodies including our school board, recreation commission and the community planning council. They hold positions of responsibility in business, the police department and the urban redevelopment commission. City recreation facilities are open to all citizens and integration of our public schools has begun with barely a ripple of dissent.

We are aware of the human factor which plays a significant role whenever old traditions are replaced by those of a new and different age. We know that some will resist, that some will tolerate, but others will seek to implement the ideal of brotherhood. In High Point we believe these latter ones are succeeding.

The remaining six items in High Point's application are—

1. The promotion of North Carolina Jaycee President Fred Swartzberg as one of the Nation's five outstanding State Jaycee presidents; the promotion of Louis Fisher as president of the Amateur Athletic Union of the United States and the successful efforts to obtain the national headquarters of the American Business Clubs.

2. The completion of a 7-million-gallon sewage disposal plant to implement our annexation.

3. The efforts to widen North and South Main Streets. The widening of South Main Street is virtually finished, and the visit of some 60 citizens to the State capital resulted in the assurance that North Main Street will be widened soon. This was important, because, although Main Street was 100 feet wide in the downtown area, it had a bottleneck at each end. We will now have a six-lane boulevard through the entire city except for an attractive mall in the downtown shopping area.

4. Three industrial parks have been established in High Point encompassing an area of 352 acres. Ten new industries have come to High Point, locating in the parks.

5. Efforts to obtain a television station in High Point were pressed last year. The citizen effort brought the assignment of channel 8 to the city. It will be operated by a semilocal concern.

6. A campaign culminated last year in the construction of a new, modern city-county building. In 1959, the High Point Bar Association and others launched a drive to get better courtroom facilities. The project expanded with increased citizen interest, newspaper backing, and countywide support. This year a $1 million structure housing city and county governmental offices was dedicated.

From the beginning, High Point has been a furniture center. First it was an area market, then a State market, and now it is recognized as the international capital of the furniture industry. Four times each year High Pointers open their homes to more than 25,000 buyers and salesmen from all over the world. The furniture market is perhaps the keystone of High Point's economic structure. In recent years no effort has been spared to spur the growth of the furniture industry and the High Point market.

All the items we have listed here show a dedicated thrust to the future, a search for better things, progress for our city and its people.

There was a time when many regarded the situation in High Point with quiet desperation. It was a southern mill town, stark, drab, and without vitality, shifting aimlessly with the whims of a one-industry economy.

Gradually, in the early fifties, a new life—symbolic of the modern South—began to take hold in High Point. The chain reaction was begun which has brought High Point to its highest point. Today we are in the forefront, the powerhouse of the Piedmont.

UNITED STATES NEEDS STRONG DOSE OF OLD-FASHIONED FISCAL INTEGRITY

Mr. HARSHA. Mr. Speaker, I ask unanimous consent that the gentleman from New York [Mr. RIEHLMAN] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. RIEHLMAN. Mr. Speaker, the Easter recess is almost upon us, along with the prospect that the flow of major legislation to the floor will increase appreciably following the recess. We will soon be passing judgment on the bulk of the largest peacetime national budget in our history and the largest peacetime request for new obligational authority in our history. We will be asked to go along with the largest planned deficit in our history. We will be asked to push our national debt ceiling, as well as our actual debt, to an alltime high.

All this in the midst of a massive and skillful job of salesmanship by the social and economic theorists of the New Frontier, who do not seem to number old-fashioned fiscal integrity among their virtues.

Administration planners have launched a full-scale effort to pave the way for this deficit spending orgy by attempting to discredit conventional ideas on fiscal integrity. We are told time and again by administration theorists that massive Federal spending and massive borrowing are the only hopes for economic strength and sound development.

We are given a new definition of fiscal responsibility when we begin to protest. We are told by the President himself that, in our fuzzy-thinking way, we are subscribing to economic myths and that we must discard them. It is outmoded to believe that Government, like the individual, must live within income.

The President's chief economist tells us that we must control the untimely emergence of the "Puritan ethic" or else we will never be able to understand that deficit spending is good for the country.

The heart of this effort is the belief that the great majority of the American people have no conception of what is good for them. The ultimate goal is the destruction of any effective countering force to unlimited executive control of the public purse and full-speed pursuit of the welfare state.

This is what we are faced with as we head into this holiday breathing spell, this calm before the storm, and I am quite concerned about the path the House will follow in the months ahead.

This body stands as the last remaining hope for preservation of fiscal integrity—old fashioned, that is—and for leading the American people through the morass of fiscal legerdemain that clutters the way. This is a propitious time to pause and carefully consider whether this body is to roll over and play dead as the administration hustles the country on down the road to fiscal chaos or whether we are going to renew faith with the American people and resist this free spending, collectivist palaver that we are inundated with at every turn.

In making this consideration I think it would be wise to take stock of our financial situation and to see what a fairly consistent record of deficit financing and of no-priority budgeting has brought us over the last three decades.

In all fairness, I should say that the idea of deficit financing is not original with this administration nor was it so with the 87th Congress. The plain and simple truth is that this country has indulged in deficit spending and red-ink financing for 27 out of the last 33 fiscal years. That is an 82-percent batting average that no one should be proud of. Since the balanced budget of fiscal year 1930, the annual accounts of the National Government have shown a surplus on only six occasions. Three of those surpluses, incidentally, occurred under the Eisenhower administration and, although I do not claim clairvoyance, I suspect that will be three more surpluses than the present administration will ever have to its credit. It is also interesting to note that two more of those six surpluses occurred with Republicans in control of the Congress.

The national debt stood at $16,185,309,831 on June 30, 1930, and as of March 29, 1963, the debt stood at $303,171,874,612. A goodly portion of this increase was unavoidable, of course, occurring during the years of serious depression, and during World War II and the Korean conflict. Regardless of the various justifications given for this 1,790 percent increase in the Federal debt, the fact remains that we have engaged in deficit financing to the tune of an average of $10.6 billion a year for the last 33 years.

So we have had ample opportunity to test the validity of the New Frontier contention that deficit spending is good for the country. This idea is not new, although it is certainly being advanced with greater vigor than ever before, and there need be no conjecture on our part as to its merit as a permanent, conscious instrument of Federal fiscal policy.

Interest alone on the national debt will siphon off over $10 billion in fiscal year 1964. This is nearly one-tenth of the anticipated Federal expenditures for the fiscal year and constitutes the second largest single item in the budget. The cost of servicing the national debt—not retiring it, but just paying the interest—has jumped roughly 12.2 percent since 1961. There is every prospect that the cost of debt management will continue to increase as the general cost of living increases and as the size of the debt itself increases. More and more of today's tax revenues will be diverted from meeting today's needs and will be siphoned off to pay the carrying charges on the needs of yesteryear.

It can easily be seen that the cost of deficit financing is far heavier than the simple repayment of borrowed funds. Without repayment of a single dollar of principal, the national debt will have cost us, if present projections hold, nearly $100 billion for the 12-year period from fiscal 1953 through fiscal 1964.

But this direct cost of financing the debt is far from being the only measure of the adverse effect of deficit spending.

It should be clear that not even the strongest nation in the world can continue to accumulate huge spending deficits without risking inflation, a loss of the integrity of its money, and a loss of international confidence in the soundness of its fiscal policies.

Beyond a shadow of a doubt the fairly consistent red-ink performance of the Government has been a major factor in causing the inflationary spiral that has given us the 47-cent dollar. Since 1939 over 53 percent of the purchasing power of the American dollar has eroded away, and the cost-of-living index continues to creep higher and higher.

Inflation eats away at the vitals of our economy. It is a thief that steals from those who can least afford it. Retired people living on fixed pensions, insurance or savings that were accumulated by a lifetime of hard labor—these are the people who must sit by while their subtle enemy, inflation, whom they can never quite see or grasp, gnaws away at the buying power of their few precious dollars. The middle-aged man who slaved extra hours to accumulate some insurance to provide for his family, only to become painfully aware that it would no longer provide one-half or one-third of their needs—this is a man who has been robbed just as surely as if by an armed bandit.

The losers are the people who sometime ago looked into the future and determined that they would need a certain amount of money for a certain purpose at a certain time. In most cases they scrimped and saved and sacrificed to meet this goal—whether it was retirement, a new home, a college education for the children, or what have you—then came the magic day when they found the money they had put away was worth only half its former value and was totally inadequate to do the job.

The average workingman who does not have the economic leverage to keep up with the spiraling cost of living—it is this man and his wife and his children who are the victims of inflation. These are the people who suffer when Uncle Sam year after year after year spends more than he takes in.

Inflation and its running-mates hardship and deprivation for those least equipped to fight it—this is the major crop we have harvested from the seeds of fiscal irresponsibility.

We cannot talk about our deficit-spending record of the last three decades without considering its effect on international confidence in the dollar. We are in a precarious position in this regard.

The figures do not lie. Our total gold holdings have dropped from $23 billion to just under $16 billion in a little more than a decade. Of this amount, roughly $12 billion is required as statutory backing for our currency and another $3 billion is required to meet other U.S. gold obligations. As a result we find nearly all our gold reserve obligated. So far, so good.

But we also find that foreign dollar holdings, that is, foreign claims against the dollar, total the astronomical sum of $25 billions. Each of these dollar holdings is a potential claim on the gold that allegedly stands behind the dollar. As I pointed out a moment ago, over $7 billion of these claims have been honored in the last decade.

If foreign confidence in the stability of U.S. currency should ever be shaken to the extent that any significant portion of the holders of these dollar credits should deem it prudent to turn them in to Uncle Sam and take the gold which they represent, the effect would be disastrous.

It is plain to all that we cannot use $16 billion in gold stocks to honor $15 billion in gold obligations and an additional $25 billion in dollar credits. In the final analysis it would be necessary for the United States to repudiate her obligations to the world, and our currency as a medium of international exchange would become valueless.

It becomes clear at once that it is of the utmost importance to maintain a high level of confidence abroad in the stability of the dollar. It is also clear that we have failed to maintain this level of confidence and are thus confronted with this problem of serious potential.

We are still faced with a serious international payments deficit and the corresponding likelihood that foreign claims against the dollar will continue to grow.

We are also faced with the awful truth that the world is aware that we have resorted to deficit financing 82 percent of the time since 1930, that deficit spending has become a political way of life in America, and that it is highly probable we will continue debasing our currency—there being little likelihood that the immediate future will bring any mending of the ways.

We know that untold billions of our wealth were expended to keep ourselves and our foreign creditors free and to help many of them rebuild war-ravaged societies, but we must also realize that this is a cold world, that memories can oftentimes be short and that, unless our fiscal house is put in order, there may come a day sometime soon when those holding dollar credits will stop slapping us on the wrist and sending us mild warnings and start taking more drastic action.

I know of no more appropriate quote at this point than this one attributed to Franklin D. Roosevelt during the 1932 campaign:

> If the Nation is living within its income, its credit is good. If in some crises it lives beyond its income for a year or two it can usually borrow temporarily on reasonable terms. But if, like the spendthrift, it throws discretion to the winds, is willing to make no sacrifice at all in spending, extends its taxing up to the limit of the people's power to pay, and continues to pile up deficits, it is on the road to bankruptcy.

Never a truer word was spoken, and it is unfortunate that this prophetic statement did not serve to set the tone for the fiscal policies of this Nation much beyond the time of its utterance.

What has this 32-year record of living beyond our income brought us besides spiraling inflation, a precarious situation for our gold reserves, and an almost incomprehensible national debt that exceeds the debts of all other countries of the world combined by over $24 billion?

Has it brought an end to unemployment? Unemployment has remained one of the most serious problems confronting this Nation during every administration over the last three decades. Henry Wallace has said that the problem of unemployment represented the major failure of the New Deal.

Chester Bowles said this in 1959:

> Let us face the fact that the New Deal failed in its second major objective, which was to restore full employment and prosperity to our country. In 1940, more than 8 million Americans were still unemployed; 14½ percent of the working force.

Unemployment is still with us today as one of the major economic problems of the country and one of the major political problems of the present administration. There still remain over 4 million unemployed across this land. Unemployment levels have all too recently been in excess of 6 percent and, unless our fiscal house is placed in order and unless the shackles are taken off free private enterprise the specter of 7 and 8 percent unemployment looms large.

The Government can spend and borrow until the cows come home and it will not have any appreciable effect on the unemployment situation.

If there has been one lesson to be drawn from 30 years of deficit financing it is that Government spending will not produce prosperity. The private sector of our economy has been responsible for the attainment of our record high gross national product. The public sector, if anything, has served to keep our growth from attaining even higher levels. Continued deficit financing and high levels of taxation have served, if anything, to discourage investment and confidence in the economy.

To quote the American Institute for Economic Research:

> Application of the Keynesian panacea for two decades has fostered numerous serious economic distortions in the United States, distortions reflected today in unnecessary unemployment, stagnation of major industries, extensive depreciation of the dollar, loss of world markets, and fully justified loss of confidence in the dollar. An economy that could be the wonder of the world now falters, not even in second place but nearly the most backward, judged by rates of growth for the world's industrial economies. Such are the consequences of applying the Keynesian notions over a prolonged period. The Council of Economic Advisers not only fails to see the obvious facts but recommends more of the same erroneous prescription. Far from fostering prosperity and sustained economic growth, this prescription has discouraged them.

I would certainly have to agree wholeheartedly with this observation.

The Government cannot spend the country rich. The impetus for sustained economic growth, full employment, and fuller utilization of an expanded productive capacity must come from the private sector of the economy, a vigorous free private enterprise system, aided by a Government which seeks to protect the value and the stability of the dollar.

Quite clearly, 30 years of unbridled public spending, mounting and consistent deficits and incentive-stifling taxation have, on the whole, been a great deal more harmful than beneficial to the economic well-being of this Nation.

Yet are we being asked to come back here after Easter recess to pitch in and restore some order and sanity to the conduct of fiscal affairs? Are we being asked to place the Nation's finances on an even keel?

Quite the contrary. It is true the administration has taken up the cause of tax reduction which so many of us have espoused consistently over the last decade, but nevertheless it continues to plod blindly along the path of its New Deal and Fair Deal predecessors. It proposes a much-needed tax cut, but it more than offsets the beneficial effect of a cut, in fact it even jeopardizes the possibility of obtaining a cut, by urging Congress to vote the largest peacetime budget in history, the largest peacetime request for new obligational authority in history, the largest planned deficit in all our history, and to boost the national debt to an alltime high level.

The New Frontier, spewing its rehashed fiscal ideology in every direction, continues to lead the Nation along that path which its kindred spirit, F. D. R., 31 years ago labeled the "road to bankruptcy." Nothing short of economic disaster will turn it back.

If it continues to march on unhindered, it will have asked for and received by June 30 of next year—a period of a little over 3 years—nearly $285 billion in appropriations, and roughly $305 billion in new obligational authority. It will have led the way in adding over $31 billion to the national debt.

Mr. Speaker, if a return to fiscal sanity is anywhere in sight it will be in spite of, and not because of, the present administration.

Only if the Congress recaptures the initiative will any semblance of order be returned to the conduct of our fiscal affairs. We must renew faith with the American people by seeking resolutely to place national finances on an even keel. We could do no greater disservice to the people whose interests we are here to serve than by ignoring the lessons of the last 30 years and traveling on hand in hand with the most proficient disciples of fiscal irresponsibility the country has yet known.

The Congress will have to go it alone. It is quite obvious that we can expect no significant help from the administration, given its past performance and its desperate reaction to constructive budget-cutting efforts this year.

We are all witnessing the great hue and cry that has arisen over the efforts of the Republican leadership and of some Democrats to carve the fat off the fiscal 1964 budget.

A case in point as to the invalidity of the administration's protests that it had submitted a "barebones" budget was the Clay report, which will surely go down as one of the greatest political boomerangs in modern history. The Clay report, apparently conceived as a blue ribbon whitewash of the foreign aid program, pointed out to the administration a few of the program's faults that responsible elements in the House of Representatives have been telling administrations about for years. This was a bare minimum request for foreign aid, we had been told, and if we cut it we were inviting Communist advances throughout the world. Then, when the President's own committee put the facts on the table, the administration, in a bit of a corner, managed to find some $420 million in the budget that it could somehow cut without advancing the cause of world communism. Is this the kind of tight planning and scrupulous concern for the taxpayers' dollar that goes into the rest of the budget? I suspect it is.

I also suspect that we have seen the last of the Clay Committee and that we shall never see any counterparts in other areas of public spending. There is simply no room along the New Frontier for that kind of honest self-appraisal.

Mr. Speaker, this Nation simply cannot continue indefinitely along its present course for the end of the road is financial oblivion.

We must start now to follow a different path if we are to make the effort at all, because the fiscal program proposed for the coming year is one that certainly contains the seeds of a new inflationary spiral and the promise of higher budgets and greater deficits in the years beyond.

We in the Congress must begin the painful, but necessary, process of establishing spending priorities. We have followed too long the policy of open-end budgeting and we must begin to differentiate between needs and wants.

We must take positive steps to learn our income limitations. All too frequently we return to our respective districts at the end of a session, having voted funds to run the Government for the coming fiscal year, with little or no conception of what revenues will actually be available to meet the expenses. This disorderly method of doing business cannot help but lead to like results.

We must make pursuit of the balanced budget a consistent legislative goal. All too often it has been the practice of the Congress to start from a budget precariously balanced on paper and proceed as rapidly as possible to pay it no more attention.

The American people have a right to expect, and they do expect, that their elected representatives take steps to restore responsibility and integrity to the conduct of fiscal affairs.

I serve notice here and now that I intend to live up to this expectation and that I will not be party to the unbridled spending program proposed for the coming fiscal year.

I say we in this body have to cut our way through the haze and fog of all this fiscal legerdermain and put an end to the irresponsible handling of this Nation's fiscal affairs. I certainly intend to do my part.

SOYBEAN PROCESSING PLANT AT VIENNA, MD.

Mr. HARSHA. Mr. Speaker, I ask unanimous consent that the gentleman from Minnesota [Mr. MacGregor] may extend his remarks at this point in the Record and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. MacGREGOR. Mr. Speaker, it has come to my attention that Delmarva Soya Processors, Inc., has made application to the Area Redevelopment Administration for a loan of $1.6 million to build a soybean processing plant at Vienna, Md. The proposed plant, with a storage capacity of 300 tons per day, will require a 25-year, 4-percent interest loan amounting to about 65 percent of the total cost.

The applicants claim the plant will require 35 employees year around, and as many as 76 during the harvest season. The latter figure was used by the ARA in computing a per job loan cost of $21,000.

According to Mr. Herbert Fenster, Washington counsel for Franklin Perdue of A. W. Perdue & Son, Inc., the application was first reviewed by Mr. Dan McVey, Chief, Grain Branch, Farmer Cooperative Service, Department of Agriculture, who concluded that the plant could not be operated profitably and therefore recommended against approval.

The Economic Research Service of the USDA as well as the Farmer Cooperative Service has reported unfavorably on the proposed plant. Both divisions reported that the applicant's figures on procurement cost of beans and anticipated price of oil and meal were, in the judgment of the USDA economists, inaccurate and could easily turn their anticipated $600,000 profit into a $200,000 loss.

Mr. McVey, of the Farmer Cooperative Service, and Mr. Donovan McPherson, of the Economic Research Service, are highly qualified in their field, and their recommendations should not be taken lightly. In fact, Mr. McVey is the foremost authority in USDA on the feasibility of projected soybean plants. He investigates feasibility of about one proposed plant per month for the entire Nation.

However, at least McVey's report, if not McPherson's, was edited by REA, which receives and coordinates the work for the USDA on agriculture-related ARA projects such as this. According to my information, REA eliminated the adverse comments on the Delmarva plant sent down by Mr. McVey.

Mr. Speaker, I am opposed to the granting of this loan by the ARA. It appears from all available evidence that the loan would not, as indicated by ARA, result in a net increase in employment.

ARA claims that the proposed plant would, as I have indicated, employ 36 full-time employees, and an additional 38 to 40 during the harvesting season. This claim has no basis in fact. The proposed plant would have the capacity to produce around 300 tons of soybean operation per day. Yet, all available evidence from current soybean millers around the country indicates that plants operating in the neighborhood of 300 tons per day have an average work crew of 22½ men. This total operating crew average includes bean unloading, storage, and handling of bulk products. Furthermore, the larger a plant gets, the more efficient use it gets from its manpower.

One established plant is now running at about 400 tons daily capacity, and employs 29 full-time men, adding only 3 or 4 men during the harvest season. Archer-Daniels-Midland Co., which has plants in my own congressional district as well as others around the country, has indicated to me that if they were to build a new plant the size of the proposed Delmarva project, they would employ 19 to 23 full-time people, with no more than 10 to 15 seasonal employees. If employment projections from existing industry are correct—and there is more basis to assume their accuracy than those of ARA—the per job cost of the loan would be $70,000 to $84,000 per job instead of the $21,000 ARA indicates. Furthermore, if this plant begins operation, it is likely that a net loss of at least 45 employees will be incurred by neighboring elevators, grain dealers, and producers already in operation in the area. This loss would be the natural result of increased competition and production in an already flooded market.

While both production and consumption of soybeans have increased remarkably in recent years, soybean processing capacity has increased at an even faster rate. This fact has reduced crushing margins to an extent that some processors have had to close down facilities—for example, General Mills and Archer-Daniels-Midland—and others have withdrawn from the business completely—for example, Spencer Kellogg.

The Delmarva area is no exception. It consumes about 200,000 tons of soybean meal each year. Plants now serving the area have a combined capacity in excess of 450,000 tons, or more than twice the present consumption rate. Present capacity includes a Cargill plant at Norfolk built in 1957 with private capital at a cost of $3.5 million. If the Vienna plant is built, it will either be forced to find export markets for its products, or close down.

In view of the fact that there already is a surplus of soybean plants in the immediate area, it will almost certainly mean that not only the new plant, but existing ones as well will have to operate at a loss to keep going.

With the prospect of a net loss instead of a creation of new jobs, the bleak chances for success faced by the applicants, and the above average investment per man in the proposed facility, it appears that this application certainly does not square with section 2501 of the Area Redevelopment Act, which states in part:

> Under the provisions of this chapter new employment opportunities should be created by developing and expanding new and existing facilities and resources rather than by merely transferring jobs from one area of the United States to another.

On February 18, 1963, my colleague the gentleman from Illinois, William L. Springer, said in a letter to Secretary of Agriculture Freeman:

> From all the facts which I have been able to get, it appears to me that private enterprise is able to crush all of the beans that can be supplied in the Maryland-Delaware area what assurance is there that our taxpayers' money can be repaid by this plant?

In a February 5 letter to ARA Administrator William L. Batt, Senators Byrd and Robertson and the gentleman from Virginia, Congressman Thomas Downing said:

> We have serious doubts concerning the propriety of granting a loan on the basis of the subject application since it appears that the product sought to be financed thereby does not comport with the intent of the Area Redevelopment Act to increase permanent employment; provide funds for worthwhile business projects where private funds are unavailable; and aid in redevelopment of depressed areas by assisting promising and necessary business enterprises. The

> facts which have been presented to us thus far strongly indicate that none of the aforementioned purposes of the act will be accomplished by the granting of the subject application.
>
> It appears that the venture proposed in the application will not increase employment in the depressed area in which it is proposed to be located and may, to the contrary, cause substantial additional unemployment both in the specifically defined depressed area itself and also in surrounding areas of Maryland, Virginia, and Delaware. The members of the applicant group are known to be among the most financially substantial members of their communities and it is difficult therefore to understand why they should not be able to obtain private loans on sound business terms. Finally, the loan would finance an additional soybean processing plant in an area where existing plants present a sound, well-balanced, competitive atmosphere. The result of the operation of such an additional plant may well be to render all plants in the area unprofitable. Under such circumstances, the proposed plant does not appear to be either promising or necessary as a business enterprise in the redevelopment area.

Mr. Speaker, I support the objectives of the Area Redevelopment Act, but it is not my understanding that its purpose is to provide federally financed competition to an industry which is already fully and efficiently serving the needs of consumers in the area involved.

NEED FOR FIRMNESS AND LEADERSHIP

Mr. HARSHA. Mr. Speaker, I ask unanimous consent that the gentleman from Indiana [Mr. ADAIR] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. ADAIR. Mr. Speaker, in light of our continuing concern over the situation in Cuba, I think the following editorial from the Steuben Republican, Angola, Ind., is enlightening and helpful. It expresses a point of view widely held by many Americans:

> NEED FOR FIRMNESS AND LEADERSHIP
>
> In most ways the United States is a great country. But when it comes to our handling of foreign affairs, we rate among the lowest.
>
> The Cuban fiasco is just one evidence of our ineffectual policies. Through stupid handling, we now have a full-blown Communist neighbor just 90 miles from our shores. By calling the Monroe Doctrine, which was recognized by international law, an obsolete policy, we have opened the doors for every would-be dictator in this hemisphere to request Communist help to promote his personal ends.
>
> Our administration has tried to pass off the Cuban situation as unimportant. But already State Department emissaries and even the President himself have had to get busily at work to try and stop the rapid growth in antagonistic feeling toward the United States in Latin America.
>
> We do not recommend warmongering, but we do feel that this lax, ineffectual foreign policy is giving financial and material blood transfusions to our potential enemies and that a continuation of this policy will eventually see our boys receiving this foreign aid back in bullets. This soft policy is encouraging communism.
>
> We need a firm foreign policy. There should be no foreign aid gifts without reasonable controls to see it is used, as intended, for the general betterment of the peoples of the receiving country. We must form a fair, firm policy and then through leadership, see this policy is carried out.
>
> Look at the record. This soft policy which has been tried for 15 years has only fed communism and created enemies out of our onetime friends. We have continued to lose ground. That should be evidence enough that the way we have been going is wrong.
>
> Time is running out. Our Government leaders must start this firm foreign policy at once. There is no other honorable course.

LEGISLATION TO CURB EXCESSIVE IMPORTS OF BEEF

Mr. HARSHA. Mr. Speaker, I ask unanimous consent that the gentleman from North Dakota [Mr. SHORT] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. SHORT. Mr. Speaker, I introduced yesterday proposed legislation to amend the Tariff Act of 1930, to impose additional duties on cattle, beef, and veal imported each year in excess of established annual quotas.

I am doing this partially because of the recent sharp decline in fat-cattle prices, and also because of the increasing volume of imports of beef and veal.

My bill would not upset the normal pattern of imports from foreign countries. Instead it would provide a means of discouraging increased imports now—or at any future time—when our domestic cattle market might experience some adversity.

Last year we imported beef and veal in an amount equivalent to about 9 percent of our domestic production, and this is the largest percentage volume on record. The United States imported 1,445 million pounds in 1962—in comparison to 1,037 million pounds in 1961.

We imported live cattle from Mexico in 1961, 540,197 head, and this increased substantially in 1962 to 772,915 head.

While our imports from Canada were down slightly in 1962, it still amounted to 498,782 animals as compared to 506,301 in 1961. A reduction of only 7,519 animals.

There is a definite indication of continuing heavy imports this year. In its reports on sailings from Australia between January 1 and February 4, the Australian Meat Board stated that 15 ships carrying a total of about 50 million pounds of beef and 13.6 million pounds of mutton—which incidentally also competes with our domestic "manufacturing beef"—was sent to various points in the United States.

The New Zealand Meat Producers Board, in its sailings reports, revealed that during January, February, March, and April, the New Zealanders will have delivered almost 50 million pounds of meat to the United States.

The American Cattleman's Association has pointed out—and I agree with their statements fully—that—

> This is strong competition, and particularly so when you consider the condition of the present domestic cattle market which is under pressure from an increased domestic cattle inventory, and is experiencing a weakening in fat-cattle prices due to heavy supplies.

I feel my bill should be given prompt consideration and should be enacted into law. It is important in our import and export agreements to give protection to our own domestic industries; and this is a good place to do so because it involves our food supplies as well as the economic welfare of our domestic livestock economy.

RESTRICT EXCESSIVE BEEF IMPORTS

Mr. HARSHA. Mr. Speaker, I ask unanimous consent that the gentleman from California [Mr. CLAUSEN] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. CLAUSEN. Mr. Speaker, today it is my privilege to join other Members of this body in giving recognition to a problem that affects a very important segment of my district; namely, the beef and cattle industry.

It is my intent to introduce legislation to bring into line the excessive imports of beef to this country—an amendment to the Tariff Act of 1930, to impose additional duties on cattle, beef, and veal imported each year that exceed the established annual quotas.

The recent decline in cattle prices which appears to be caused by the dramatic increase in volume of imports of beef and veal from Australia, Mexico, and New Zealand. Present and future cattle inventories indicate the domestic cattle market is threatened with a weakening in prices at a time when cattlemen can least afford it. The problem is not created by the established import quotas but rather by the excess inventories literally flooding the market. The smaller, marginal operator is particularly effected and rightfully deserves our consideration before more of our cattle producers are forced out of their present state of self-sufficiency and literally driven to a position of dependency or subservience to our Government. Let us give some semblance of recognition to this problem before it is too late.

FOUR-PARTY DEADLOCK?

Mr. HARSHA. Mr. Speaker, I ask unanimous consent that the gentleman from Missouri [Mr. CURTIS] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. CURTIS. Mr. Speaker, I am moved to call to the attention of my colleagues an editorial appearing in the St. Louis Post-Dispatch entitled "Four-Party Deadlock." I have found in the past that the editorial page of the St. Louis Post-Dispatch serves as one of the soundingboards for new themes, dogmas, and arguments of the neo-

Federalists, those who seek to increase the power of the Federal Government vis-a-vis local and State government, and the private sector and who within the Federal Government seek to increase the power of the executive branch at the expense of the Congress.

Prof. James McGregor Burns, of Williams College, has given the neo-Federalists a new takeoff point in his recent book, "The Deadlock of Democracy," which oversimplifies the political history of the United States by speaking of a four-party system, the familiar two-party system split into two each, a congressional and an executive party. There is a modicum of truth to be found for this thesis in the give and take which has always existed between the legislative and the executive branches of the Government, but to take this interesting phenomena and reinterpret our basic political history in light of it is sensationalism. This important factor needs evaluation all right but this overevaluation hurts rather than helps the cause.

This new theme has encouraged the editors of the Post-Dispatch to strike a blow for our incumbent neo-Federalist President, Mr. Kennedy, who admittedly is having a hard time getting his own party in the Congress to support his programs. I think nearer the mark is the fact that the Democratic Party in the Congress is a composition of three elements of basically divergent political views joined together in a political coalition for power. These three elements are the northern city machine Democrat, the southern Democrat, and the ADA or neo-Federalist Democrat who gives the Democratic Party its main propulsion and public image with which it fights Republicans.

The Republican Party in the Congress is not so split in spite of all the efforts of the neo-Federalists to make it appear that it is. Nor was it split in the 83d Congress when Eisenhower was President, the one time in the past 30 years the Republicans did control both the Executive and the Congress. Of course, the neo-Federalists were hard at work trying to implement their programs through their leaders in the Congress and through the entries they had in the Eisenhower Administration. Any time one of their concepts ran into difficulty, the neo-Federalist sought to cast blame on anything and everything except the possibility that the concept itself might be in error.

In keeping with this tone the editorial blames everything except the programs which President Kennedy has been offering the Congress. The merits of the Kennedy proposals are resolved without discussion or debate as follows: "a program which on the whole, in our belief, represents a reasonable consensus of the national electorate." The fact that the national electorate when broken down into the constituencies of the individual Congressmen responds "more to personal, local, and State concerns than to the great and dominating issues of an increasingly urban and homogenous national society" suggests no incongruity to the Post-Dispatch editorialist.

In other words, people are only people when they forget about personal, local, and State concerns and concentrate on great and dominating issues. It is rather that the neo-Federalists are interested in humanity, not in human beings.

Our society is based upon the importance of the individual human being. The American dream is not to make men common but rather to permit common men to become uncommon. This means that humanity thrives as human beings thrive, not that human beings thrive as some abstract concept thrives.

Totalitarian states are based upon the concept of the organization we find among the social insects, the ants and the bees. This concept treats the individual as the servant of the state. It holds each person important only in respect to the whole. The converse concept upon which our society is based is that the state is the servant of the people, the creature of the people. It serves to assist the individual person to pursue what he may deem to be happiness, not what the leaders of the state may decree is happiness, but in this collective pursuit by individuals the entire society is moved forward.

The Post-Dispatch editorial points out that "Mr. Kennedy qualifies as an activist President, anxious and willing to use the full resources of his political power" for his program. The power he has used from time to time, however, has included many powers which freedom dictates no President should either have or use. It follows the philosophy of government by men as opposed to government by law. In the name of abstract humanity it strikes down human beings. The one power which the President has not used to any great extent in dealing with the Congress is the one power which our best Presidents have used, the power of appealing to facts and to reason, to logic and proper persuasion.

Not discussed in the Post-Dispatch editorial is the past and continuing efforts of the President in using untruths and distortions, in making unfair appeals to emotions and in blanking out opposing views and arguments, through his unprecedented use of the device of managing the news as it is politely phrased.

There are many of us who have been anxious to engage the President and his neo-Federalist supporters in straightforward debate on issues of health, education, welfare, foreign affairs, fiscal policy or whatever only to be met by arrogant ad hominem arguments claiming in effect that we, by daring to disagree, are either ignorant or lacking in humanity.

This arrogance is proving to be unproductive. If the President's program is right for our country, let the President and those who advocate it advance their facts and reasons straightforwardly, let them desist in deviously attacking the institutions upon which our freedoms are based, not the least of which is the institution of the Congress of the United States.

The editorial follows:

Four-Party Deadlock

Despite President Kennedy's effort to put a brave face on his reverses in Congress, he and the Nation are facing a grave constitutional problem which only the strongest political leadership can solve. It is no less than the problem of how to forge a truly national party system and to make effective a truly national will.

Mr. Kennedy qualifies as an activist President, anxious and willing to use the full resources of his political power for a program which on the whole, in our belief, represents a reasonable consensus of the national electorate. The trouble is that a national electorate exists only once every 4 years. In the meantime, Presidential power is diluted and offset by a massive power in Congress which derives from local constituencies, many of the critical ones being one-party constituencies, and all of them responding more to personal, local, and State concerns than to the great and dominating issues of an increasingly urban and homogenous national society.

It is easy to say that this is simply the fruit of a noble constitutional system at work, that the Founding Fathers wrought wisely and well and not a single one of their checks and balances should be touched lest democracy itself be damaged. Constitutional safeguards against a dangerous concentration of political power are indeed a vital ingredient of our system which must be preserved. But a surfeit of checks and balances is no more desirable than an excess of power in any branch of our Government. When the process of restraints and countervailing authority reaches the point of near-paralysis of government, the time has come to ask how well the system serves a modern society facing problems not always soluble by infinite delay.

A brilliant analysis of the crisis and some proposals for tackling it have been offered in a recent book, "The Deadlock of Democracy" (Prentice-Hall, Inc.), by James McGregor Burns of Williams College, President Kennedy's biographer. Professor Burns points out that we operate under what is essentially a four-party system, rooted in history. Both Democrats and Republicans are split into a presidential and a congressional party, and except in times of national emergency the overwhelming preponderance of power rests with the congressional parties, which are by nature more conservative, parochial, isolationist, and quiescent than the presidential wings of both parties, based upon a national electorate.

The problem is not new but our society of the 1960's is, and the question is whether four-party deadlock serves that society well. Nobody wants to repeal the Constitution, but the genius of our organic law has been its capacity for adaptation to changing times. The four-party system requires coalition government which tinkers with the fringes of national problems rather than attacking them boldly. We need to make national leadership by two responsible national parties effective.

It is easier to diagnose the disease than to project a remedy. Professor Burns suggests such relatively modest reforms as national control of national elections, expansion of the electorate to include all now disfranchised, the development of grassroots party membership, elimination of the seniority system, the filibuster and other devices of obstruction in Congress. But above all, he calls for strong Presidential leadership—"responsible, committed, effective and, exuberant leadership—in establishing a majority party able to govern and a minority party able to oppose."

It is interesting that Professor Burns concluded his preelection biography of John F. Kennedy by posing the question whether his subject possessed a deep commitment to the ideals and principles he embraced intellectually. The question has still not been answered. Whether the President chooses to grapple with the basic political problem of our time will go far to give the answer.

INTERNAL REVENUE'S UNFAIR LABOR PRACTICES

Mr. HARSHA. Mr. Speaker, I ask unanimous consent that the gentleman from Illinois [Mr. Findley] may extend his remarks at this point in the Record and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. FINDLEY. Mr. Speaker, the Bureau of Internal Revenue is guilty of unfair labor practices—truly slave-labor tactics. We are all part of a vast army of involuntary workers on an unpaid payroll.

The claim by Internal Revenue Commissioner Mortimer Caplin that the cost of collecting Federal income taxes is less than one-half cent for each dollar collected is misleading. Mr. Caplin made the statement in a message to taxpayers printed on the front page of Federal income tax forms.

The one-half cent cost for each dollar collected does not take into account the vast unpaid payroll of the Bureau of Internal Revenue. All individuals and business firms pay tax collection costs and thus the Bureau gets free employees and free record service.

Every taxpayer is an involuntary employee of the Bureau, forced to keep records and make reports—often at great cost. For this he gets no pay. He cannot even deduct this out-of-the-pocket cost in computing taxes. To add insult to injury, the taxpayer does not even get credit from Commissioner Caplin for his servitude.

Unpaid, involuntary employment is an unfair labor practice. Certainly no business can force people to work and not pay them. Yet the Bureau of Internal Revenue can and does. Threat of fines and jail sentences intimidates taxpayers and keeps them working for the Bureau.

I own a country weekly newspaper, and I estimate the cost of keeping records and making reports—solely for tax purposes—exceeds 6 cents for each tax dollar remitted. The half-cent about which Mr. Caplin speaks is only a fraction of the total cost of tax collection.

The time required to keep records, compute taxes, and complete forms represents an unmentioned but substantial hidden cost to each taxpaying business firm and individual. To the cautious and prudent taxpayer the direct out-of-the-pocket cost of tax counseling or attorney fees is not even a hidden expense.

IS CONGRESS ON LAST LEGS?

Mr. HARSHA. Mr. Speaker, I ask unanimous consent that the gentleman from New Hampshire [Mr. Wyman] may extend his remarks at this point in the Record and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. WYMAN. Mr. Speaker, Congress must retrieve its lost mandate. An article by the noted columnist, Holmes Alexander, given nationwide distribution in the press yesterday, suggests that the process of yielding to the Executive is resulting in congressional abdication of its responsibilities to the people.

I believe that Congress is composed of serious and dedicated Members who, particularly in the present session, recognize that the current crises in foreign affairs and in domestic fiscal policy are at long last the result of too much crying wolf in the past. I am convinced that this Congress will meet this crisis by acting in the best interests of the country and that in this objective gentlemen on both sides of the aisle will join to save America.

So far as Mr. Alexander's message serves to alert us to our responsibilities in this regard, it is a valuable public contribution. This Congress under the Constitution quite properly will refuse to be a rubberstamp for the Executive.

This is what Mr. Alexander had to say:

Is Congress on Last Legs?

(By Holmes Alexander)

> Several of President Kennedy's henchmen—among them McNamara, Sylvester, and Roosevelt—have recently taken a few licks from congressional committees, but the situation should not be misunderstood. It isn't the executive branch which is on the defensive. It's Congress, which is pinned to the ropes, although fighting back with uneven spurts of ferocity.
>
> Secretary McNamara's ordeal shows how far we have moved into an age where decision at the executive level far outreaches debate at the legislative level. I do not think this is a desirable state of affairs, but it has to be reported nonetheless. The heyday of the lawmaker seems on the wane. The voice of the technician is heard in the land. Whether it is arming the Nation, conquering space or mastering the Budget, the expert from the executive branch not only states the problems, but brings in the solutions.
>
> Some year ago, Candidate Kennedy, speaking of the White House, told a reporter in much-quoted words, "That's where the power is." The President today could add a corollary by nodding toward Capitol Hill and saying: "That's where the power isn't."
>
> Although McNamara has been roughed up in the McClellan committee's probe of the TFX aircraft contracts, there never has been much doubt as to the outcome of the hassle. The aerodynamic complexities, as well as the economic extrapolations, are just too overwhelming for congressional comprehension.
>
> The dogged McClellan may get his teeth into the facts. Some of the airminded Senators like Symington, Jackson, and Goldwater may have informed opinions as to whether General Dynamics or Boeing should build the TFX. Other Senators may even feel qualified to act as referees in the continuous tug of war for the multibillion-dollar contracts.
>
> But Congress as a whole is not competent to make decisions of this magnitude—and Congress knows it. It will pommel the Secretary out of resentment and frustration. But there is not the slightest prospect that Congress would dare substitute its own judgment for that of McNamara's.
>
> Then there's Arthur Sylvester, McNamara's chief of information, who has been catching it on both ends of Capitol Hill. He stands charged with manipulating the flow of information to suit the purposes of his bosses. Sylvester is a man of strong will and sensitive feelings. He has offended Congressmen and Senators from the very beginning of this tenure, and they have dealt him stinging punishment—which he feels. Ten years ago there were congressional committees which could, and did, lash presidential subordinates into submission or out of office.
>
> This may happen to Sylvester, but it's doubtful. Not so much because he is tougher than his predecessors, but because the arm which wields the lash is noticeably weaker. Sylvester's ability to survive this long is a manifestation of where the power lies.
>
> Franklin Roosevelt, Jr.'s, nomination to be Under Secretary of Commerce can only be described as an abomination. It affronted public opinion, the press and political morality. He did not, for many reasons, deserve confirmation, and everybody knew it. But the Senate Commerce Committee, which a few years ago broke the career of a far better man, Lewis Strauss, simply sputtered—and caved in, as did the Senate.
>
> Congress isn't what it used to be. The big, and perhaps the impossible, problems seem to soften its will to the point where even small and manageable problems are muffed. Here in the springtime of everlasting renaissance, one must never abandon hope. But it's hard to look upon these performances and believe that there's much life left in the old lion of Capitol Hill.

MOTOR VEHICLE TRANSPORTATION TAX

Mr. HARSHA. Mr. Speaker, I ask unanimous consent that the gentleman from New Hampshire [Mr. Cleveland] may extend his remarks at this point in the Record and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. CLEVELAND. Mr. Speaker, more than a quarter of a century ago—in June 1934—the Congress enacted the Hayden-Cartwright Act which, among other things, declared that "it is unfair to tax motor vehicle transportation unless the proceeds of such taxation are applied to the construction, improvement, or maintenance of highways." In 1958 this declaration was codified as section 126(a) of title 23, United States Code.

Twenty-eight States have adopted constitutional amendments dedicating highway user revenues to highway purposes. All but two of the existing constitutional amendments were adopted subsequent to the enactment—and presumably at least partially as a result—of the Federal Hayden-Cartwright Act. The history of the adoption of these constitutional amendments demonstrates conclusively that when the public is afforded the opportunity to vote on the subject, it overwhelmingly votes in favor of dedicating special highway user taxes to highway purposes. According to statistics published by the Highway Users Conference, Inc., such "good roads amendments" have been adopted by an average vote of about 2⅓ to 1. In my own State of New Hampshire, the amendment was adopted in 1938 by a vote of 4 to 1.

Despite the policy expressed in the Hayden-Cartwright Act and its effect on State policies, the Federal Government now devotes only about two-thirds of the proceeds of Federal highway user taxes to highway purposes—and about one-third of the proceeds of such taxes to general governmental purposes. As the Speaker and my colleagues know, the Federal aid highway program is financed out of the highway trust fund, which was established by the Highway Revenue Act of 1956. The present distribution of revenues derived from Federal highway user taxes is as follows:

Taxes on gasoline, diesel and special fuels: 100 percent to trust fund.

Taxes on tires, tubes and tread rubber: 100 percent to trust fund.

Taxes on new trucks, buses and trailers: 100 percent to trust fund.

Taxes on certain motor vehicle use: 100 percent to trust fund.

Taxes on new automobiles and motorcycles; None to trust fund.

Taxes on motor vehicle parts and accessories: None to trust fund.

Tax on lubricating oil: None to trust fund.

Mr. Speaker, during calendar year 1962 the Federal Government collected more than $4.7 billion in automotive taxes from the highway users of the Nation. However, more than $1.6 billion—or more than one-third—of this amount was diverted to general governmental purposes rather than the construction, improvement or maintenance of highways.

This reminds me of the traditional and somewhat cynical parental admonition, "Do what I tell you, not what I do."

Today I have introduced a bill to provide for the transfer to the highway trust fund the proceeds of those Federal highway user taxes now being deposited in the general fund. Enactment of this bill will provide tangible evidence to the owners of the Nation's nearly 80 million motor vehicles that their Federal Government intends to accord them fair and equitable treatment. More than that, however, it will provide financial assurance that the Federal-aid highway program will continue on an orderly, scheduled basis, and that the National System of Interstate and Defense Highways will be completed as originally planned.

I am fully aware of the fact that the receipts of the highway trust fund are now expected to be adequate to finance the Federal-aid highway program, including completion of the Interstate System, on the basis of the latest cost estimates. But let me emphasize that qualifying phrase, "on the basis of the latest cost estimates." Historically, cost estimates have proved to be very unreliable.

The current accelerated highway program was launched by the Federal-Aid Highway Act of 1956. The Highway Revenue Act of 1956 established the Highway Trust Fund and provided for the deposit therein of revenues then estimated to be sufficient to finance the program, including completion of the Interstate System, on the basis of the latest cost estimates available at that time.

By 1959, it had become apparent that the financial arrangements for the Federal-aid highway program were not adequate, because of increased costs and other factors. The 86th Congress provided for interim relief by enactment of the Federal-Aid Highway Act of 1959, but deferred so-called permanent action until later. The Federal-Aid Highway Act of 1961 provided so-called permanent solutions to the financial problems, on the basis of cost estimates prepared in 1960, and submitted to the Congress in 1961.

Despite enactment of the Federal-Aid Highway Act of 1961, it is still not certain that the financial problems of the Federal-aid highway program are solved. The rate of expenditure of Federal funds must still be controlled by reimbursement planning—a device which slows the rate of highway construction in many States. Because of the precarious balance of the trust fund it will be necessary to continue reimbursement planning for several years—unless additional funds are made available to the trust fund.

Also, as I mentioned earlier, the present financial arrangements for the highway program were based on cost estimates prepared in 1960. An index of bid prices on federally aided highway construction prepared by the Bureau of Public Roads showed that costs were falling until 1960. Immediately thereafter, however, costs began to rise, and this trend is still continuing.

Under existing law, the next estimate of the cost of completing the Interstate System is not to be submitted to the Congress until 1966. It seems very probable that this estimate will exceed the last estimate by a considerable amount. If so, the Congress again will be faced with a financial crisis, as it was in 1959 and 1961.

Transferring all highway user taxes to the Highway Trust Fund would guard against this, and would also carry out the principle stated in the Hayden-Cartwright Act that "it is unfair and unjust to tax motor vehicle transportation unless the proceeds of such taxation are applied to the construction, improvement, or maintenance of highways." It is for these reasons that I have introduced a bill to accomplish this. I hope that the Congress will give early and favorable consideration to the bill.

EIGHTH ENCYCLICAL OF POPE JOHN

Mr. HARSHA. Mr. Speaker, I ask unanimous consent that the gentleman from Connecticut [Mr. Sibal] may extend his remarks at this point in the Record and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. SIBAL. Mr. Speaker, Pope John XXIII has just issued the eighth encyclical of his reign. It is devoted to the overriding problem of peace. With the Pope, all of us feel the weight and tensions of these times when we live under the sword of nuclear holocaust. Pope John's message is an optimistic one filled with faith in the future of mankind. It should cheer us as we, who are also charged with public responsibilities, seek the road to lasting peace.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to Mr. Healey (at the request of Mr. Murphy of New York) for Wednesday, April 10, 1963, on account of illness.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the Congressional Record, or to revise and extend remarks, was granted to:

Mr. Cohelan.

Mr. Laird and to include charts and other extraneous matter in his remarks made today.

(The following Members (at the request of Mr. Harsha) and to include extraneous matter:)

Mr. Berry.

Mr. Short.

SENATE BILLS REFERRED

Bills of the Senate of the following titles were taken from the Speaker's table and, under the rule, referred as follows:

S. 4. An act to establish a National Wilderness Preservation System for the permanent good of the whole people, and for other purposes; to the Committee on Interior and Insular Affairs.

S. 18. An act to change the name of Harpers Ferry National Mounnment to Harpers Ferry National Historical Park; to the Committee on Interior and Insular Affairs.

S. 138. An act to redesignate the Big Hole Battlefield National Monument, to revise the boundaries thereof, and for other purposes; to the Committee on Interior and Insular Affairs.

S. 932. An act relating to age limits in connection with appointments to the U.S. Park Police; to the Committee on Interior and Insular Affairs.

ENROLLED BILL SIGNED

Mr. BURLESON, from the Committee on House Administration, reported that that committee had examined and found truly enrolled a bill of the House of the following title, which was thereupon signed by the Speaker:

H.R. 4423. An act permitting the Secretary of the Interior to continue to deliver water to lands in the third division, Riverton reclamation project, Wyoming.

ADJOURNMENT

Mr. PUCINSKI. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 6 o'clock and 44 minutes p.m.) the House adjourned until tomorrow, Thursday, April 11, 1963, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

670. A communication from the President of the United States, transmitting an amendment to the budget for the fiscal year 1964 in the amount of $200,000 for the Department of Justice (H. Doc. No. 99); to the Committee on Appropriations and ordered to be printed.

671. A letter from the Director, Administrative Office, U.S. Courts, transmitting a draft of a proposed bill entitled "A bill to extend to 30 days the time for filing petitions for removal of civil actions from State to Federal courts"; to the Committee on the Judiciary.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. SMITH of Virginia: Committee on Rules. House Resolution 314. Resolution to grant additional authority to the Committee on Education and Labor; without amendment (Rept. No. 205). Referred to the House Calendar.

Mr. DAWSON: Committee on Government Operations. First report of the Committee on Government Operations (Rept. No. 206). Referred to the Committee of the Whole House on the State of the Union.

Mr. DAWSON: Committee on Government Operations. Second report of the Committee on Government Operations (Rept. No. 207). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. BARRETT:

H.R. 5585. A bill to amend title I of the Housing Act of 1949 to provide a special definition of "fair value" in certain cases; to the Committee on Banking and Currency.

By Mr. BARRY:

H.R. 5586. A bill to establish a program to recruit the ablest of our citizens qualified to become leaders in their fields, and to increase their usefulness by preparatory education and training for service to American Government, science, education, commerce, and culture; to the Committee on Education and Labor.

H.R. 5587. A bill to amend title II of the Social Security Act to provide that the waiting period for disability insurance benefits may be waived in cases where the severity of the disability is immediately determinable; to the Committee on Ways and Means.

By Mr. CONTE:

H.R. 5588. A bill to amend the act of August 1, 1958, in order to prevent or minimize injury to fish and wildlife from the use of insecticides, herbicides, fungicides, and pesticides; to the Committee on Merchant Marine and Fisheries.

H.R. 5589. A bill to provide for advance consultation with the Fish and Wildlife Service and with State wildlife agencies before the beginning of any Federal program involving the use of pesticides or other chemicals designed for mass biological controls; to the Committee on Merchant Marine and Fisheries.

By Mr. FALLON:

H.R. 5590. A bill to amend title 23, United States Code, to prohibit participation of Federal-aid funds in certain State or local taxes; to the Committee on Public Works.

By Mr. FOGARTY:

H.R. 5591. A bill to provide for the establishment of a National Council on Architecture and Urban Design, and for other purposes; to the Committee on Banking and Currency.

By Mr. HARRISON:

H.R. 5592. A bill to amend the Tariff Act of 1930 to impose additional duties on cattle, beef, and veal imported each year in excess of annual quotas; to the Committee on Ways and Means.

By Mr. McMILLAN:

H.R. 5593. A bill to provide for the conveyance of certain real property of the United States to the city of Myrtle Beach, S.C.; to the Committee on Armed Services.

By Mr. McMILLAN (by request):

H.R. 5594. A bill to prescribe administrative procedure for the government of the District of Columbia; to the Committee on the District of Columbia.

By Mr. MONTOYA:

H.R. 5595. A bill to amend title 38, United States Code, to provide additional pension and medical assistance to veterans suffering from seriously disabling non-service-connected disabilities; to provide for expansion of health facilities for such veterans; to authorize 5,000 beds for nursing care for veterans, of which not less than 200 shall be in New Mexico, and for other purposes; to the Committee on Veterans' Affairs.

By Mr. ROSENTHAL:

H.R. 5596. A bill to amend title 38, United States Code, to provide education and training for veterans of service after January 31, 1955, and for other purposes; to the Committee on Veterans' Affairs.

By Mr. ROYBAL:

H.R. 5597. A bill to establish the Channel Islands National Seashore, in the State of California, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. BENNETT of Michigan:

H.R. 5598. A bill to amend the Railroad Retirement Act of 1937, the Railroad Retirement Tax Act, the Railroad Unemployment Insurance Act, and the Temporary Extended Railroad Unemployment Insurance Benefits Act of 1961 to increase the creditable and taxable compensation, and for other purposes; to the Committee on Interstate and Foreign Commerce.

H.R. 5599. A bill to amend chapter 15 of title 38, United States Code, to provide for the payment of pensions to veterans of World War I and their widows; to the Committee on Veterans' Affairs.

By Mr. BROOMFIELD:

H.R. 5600. A bill to provide for a program whereby the Federal Government may guarantee bonds issued by States and municipalities in carrying out construction programs for certain public sanitary facilities; to the Committee on Banking and Currency.

By Mr. CLEVELAND:

H.R. 5601. A bill to provide that the proceeds of certain taxes shall be used to finance the Federal-aid highway program; to the Committee on Ways and Means.

By Mr. DENT:

H.R. 5602. A bill to amend the Labor-Management Reporting and Disclosure Act of 1959 and the Welfare and Pension Plans Disclosure Act with respect to the filing of reports by surety companies with the Department of Labor; to the Committee on Education and Labor.

By Mr. GILBERT:

H.R. 5603. A bill to enforce constitutional rights and for other purposes; to the Committee on the Judiciary.

H.R. 5604. A bill to extend for 4 years the Commission on Civil Rights as an agency in the executive branch of the Government, to broaden the scope of the duties of the Commission, and for other purposes; to the Committee on the Judiciary.

By Mr. GOODELL:

H.R. 5605. A bill to amend the Fair Labor Standards Act of 1938, as amended, to prevent discrimination because of sex in payment of wages by employers engaged in commerce, and for other purposes; to the Committee on Education and Labor.

By Mr. JOHNSON of California:

H.R. 5606. A bill to provide for the disposition of community areas established for reclamation purposes on withdrawn or acquired lands of the United States, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. MONAGAN:

H.R. 5607. A bill granting the consent and approval of Congress to the Northeastern Water and Related Land Resources Compact; to the Committee on Public Works.

By Mr. MULTER:

H.R. 5608. A bill to amend the act of July 8, 1932, relating to the control of possession in the District of Columbia of dangerous weapons, and for other purposes; to the Committee on the District of Columbia.

By Mr. PIRNIE:

H.R. 5609. A bill to extend service pension benefits to certain persons who served honorably as commissioned officers in the Philippine constabulary; to the Committee on Veterans' Affairs.

By Mr. SAYLOR:

H.R. 5610. A bill to amend part 1 of the Interstate Commerce Act to permit certain common carriers to give free transportation to their agents, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. TRIMBLE:

H.R. 5611. A bill to prohibit the exclusion of dog guides for the blind from certain public carriers, transport terminals, and other places of business which operate in interstate commerce; to the Committee on Interstate and Foreign Commerce.

By Mr. UDALL:

H.R. 5612. A bill to incorporate the Young Engineers and Scientists of America, for the purposes indicated by Public Law 85-875; to the Committee on the Judiciary.

By Mr. WIDNALL:

H.R. 5613. A bill to enable the Board of Commissioners of the District of Columbia to aid the arts in ways similar to those in which the arts are aided by other cities of the United States, to provide competitions to encourage young Americans in the pursuit of excellence in the fine arts and to acquaint them with the best of our national cultural heritage, and for other purposes; to the Committee on the District of Columbia.

By Mr. ADDABBO:

H.J. Res. 378. Joint resolution proposing an amendment to the Constitution of the United States relative to equal rights for men and women; to the Committee on the Judiciary.

By Mr. WRIGHT:

H.J. Res. 379. Joint resolution to provide stricter controls over expenditures by Members of Congress traveling outside the United States, to require employees of Members to serve at specific places, to provide for the reporting of annual financial statements by the Members of Congress, to establish a uniform code of ethics for Members of Congress and employees of the Congress, and for other purposes; to the Committee on House Administration.

By Mr. DULSKI:

H. Con. Res. 135. Concurrent resolution to request the President to initiate discussion of the Baltic States question before the United Nations with a view to gaining the independence of Lithuania, Latvia, and Estonia from the Soviet Union; to the Committee on Foreign Affairs.

By Mr. MONAGAN:

H. Con. Res. 136. Concurrent resolution expressing the sense of the Congress with respect to freedom determination for captive nations; to the Committee on Foreign Affairs.

MEMORIALS

Under clause 4 of rule XXII, memorials were presented and referred as follows:

By Mr. HARRISON: Joint memorial of the House of Representatives, 37th State Legislature of the State of Wyoming, memorializing the Congress of the United States to enact certain legislation to make various areas of reclamation nonreimbursables to the full extent of the national interest; to the Committee on Interior and Insular Affairs.

By the SPEAKER: Memorial of the Legislature of the State of Massachusetts, memorializing the President and the Congress of the United States to enact legislation granting to veterans of World War I pensions comparable to grants to veterans of American wars prior to World War I; to the Committee on Veterans' Affairs.

Also, memorial of the Legislature of the State of Washington, memorializing the

President and the Congress of the United States to call a convention for the purpose of proposing an amendment to the Constitution of the United States; to the Committee on the Judiciary.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. ADDABBO:

H.R. 5614. A bill for the relief of Anastasia Zafiropoulos; to the Committee on the Judiciary.

By Mr. ANDERSON:

H.R. 5615. A bill for the relief of Mrs. Nelly Ramirez and Sandra Ramirez; to the Committee on the Judiciary.

By Mr. AUCHINCLOSS:

H.R. 5616. A bill for the relief of Krystyna Brygida; to the Committee on the Judiciary.

By Mrs. FRANCES P. BOLTON:

H.R. 5617. A bill for the relief of Elizabeth Renee Louise Gabrielle Huffer; to the Committee on the Judiciary.

By Mr. MARTIN of Massachusetts:

H.R. 5618. A bill for the relief of Carlos Pavao Alves; to the Committee on the Judiciary.

By Mr. RYAN of New York:

H.R. 5619. A bill for the relief of Dr. Eric Kahn; to the Committee on the Judiciary.

By Mr. STAGGERS:

H.R. 5620. A bill for the relief of Mario Del Signore; to the Committee on the Judiciary.

By Mr. WALLHAUSER:

H.R. 5621. A bill for the relief of Matteo Monaco; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

85. By Mr. CUNNINGHAM: Petition of the City Council of the City of Omaha, Nebr., protesting the Internal Revenue Service proposal to eliminate the Omaha regional office; to the Committee on Ways and Means.

86. By Mr. HANNA: Petition to preserve the Monroe Doctrine; to the Committee on Foreign Affairs.

87. By Mr. SNYDER: Petition of Robert M. Tiller, attorney at law, Louisville, Ky., and others urging the Congress of the United States to conduct a complete and impartial investigation of the U.S. State Department; to the Committee on Foreign Affairs.

88. By Mr. HOEVEN: Petition of Martha Dows Society, Children of the American Revolution, Spencer, Iowa, urging enactment of legislation to authorize the designation of Patriotic Education Week; to the Committee on the Judiciary.

SENATE

WEDNESDAY, APRIL 10, 1963

The Senate met at 10 o'clock a.m., and was called to order by Hon. LEE METCALF, a Senator from the State of Montana.

The Chaplain, Rev. Frederick Brown Harris, D.D., offered the following prayer:

O Thou Father of our spirits, we turn unfilled to Thy exhaustless mercy, not in any assurance of our feeble hold of Thee, but in the assurance of Thy mighty grasp of us. By the benedictions of Thy renewing grace, may we be lifted above the mud and the scum of mere things to the holiness of Thy beauty, so that even drab, daily duties will be edged with crimson and gold.

In this tumultuous day when the hammers of Thy purpose are beating out new shapes on the anvil of this changing world, may this dear land, founded in Thy name, be fashioned into a fitting instrument through which Thy will may be done on the earth. So may we, though but earthen vessels, become partners with Thee in a world distraught, uncertain, uprooted, groping, and in desperate need of a pattern for peace found only in Thy will, as there comes to earth the kingdom of redeeming love which casts out all fear.

We lift our prayer in Christ's spirit and name. Amen.

DESIGNATION OF ACTING PRESIDENT PRO TEMPORE

The legislative clerk read the following letter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
Washington, D.C., April 10, 1963.

To the Senate:

Being temporarily absent from the Senate, I appoint Hon. LEE METCALF, a Senator from the State of Montana, to perform the duties of the Chair during my absence.

CARL HAYDEN,
President pro tempore.

Mr. METCALF thereupon took the chair as Acting President pro tempore.

THE JOURNAL

On request of Mr. MANSFIELD, and by unanimous consent, the reading of the Journal of the proceedings of Tuesday, April 9, 1963, was dispensed with.

LIMITATION OF STATEMENTS DURING MORNING HOUR

On request of Mr. MANSFIELD, and by unanimous consent, statements during the morning hour were ordered limited to 3 minutes.

COMMITTEE MEETINGS DURING SENATE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Committee on Rules and Administration, the Constitutional Rights Subcommittee of the Judiciary Committee, and the Veterans' Affairs Subcommittee of the Committee on Labor and Public Welfare be permitted to sit during the session of the Senate today. Let me say this request has been cleared with the minority leadership, and meets with their approval.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

EXECUTIVE COMMUNICATIONS, ETC.

The ACTING PRESIDENT pro tempore laid before the Senate the following communication and letters, which were referred as indicated:

PROPOSED SUPPLEMENTAL APPROPRIATION FOR DEPARTMENT OF THE INTERIOR, AND A PROVISION FOR DEPARTMENT OF DEFENSE, 1963 (S. DOC. NO. 11)

A communication from the President of the United States, transmitting a proposed appropriation in the amount of $6 million for the Department of the Interior, and a provision for the Department of Defense, for the fiscal year 1963, which, with the accompanying paper, was referred to the Committee on Appropriations, and ordered to be printed.

AUDIT REPORT ON GENERAL SUPPLY FUND, GENERAL SERVICES ADMINISTRATION

A letter from the Comptroller General of the United States, transmitting, pursuant to law, an audit report on the General Supply Fund, General Services Administration, fiscal year 1962 (with an accompanying report); to the Committee on Government Operations.

REPORT ON COMPILATION OF GENERAL ACCOUNTING OFFICE FINDINGS AND RECOMMENDATIONS FOR IMPROVING GOVERNMENT OPERATIONS

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on the compilation of General Accounting Office findings and recommendations for improving Government operations, fiscal year 1962 (with an accompanying report); to the Committee on Government Operations.

EXTENSION OF TIME FOR FILING CERTAIN PETITIONS

A letter from the Director, Administrative Office of the U.S. Courts, Washington, D.C., transmitting a draft of proposed legislation to extend to 30 days the time for filing petitions for removal of civil actions from State to Federal courts (with an accompanying paper); to the Committee on the Judiciary.

PETITIONS AND MEMORIALS

Petitions, and so forth, were laid before the Senate, or presented, and referred as indicated:

By the ACTING PRESIDENT pro tempore:

A joint resolution of the Legislature of the State of Michigan; to the Committee on the Judiciary:

"ENROLLED HOUSE JOINT RESOLUTION A

"Joint resolution ratifying the proposed amendment to the Constitution of the United States relating to the qualifications of electors

"*Resolved by the Senate and House of Representatives of the State of Michigan*, That the 87th Congress of the United States of America, at its second session, in both Houses, by a constitutional majority of two-thirds thereof, has made the following proposition to amend the Constitution of the United States:

" 'JOINT RESOLUTION PROPOSING AN AMENDMENT TO THE CONSTITUTION OF THE UNITED STATES RELATING TO THE QUALIFICATIONS OF ELECTORS

" '*Resolved by the Senate and House of Representatives of the United States of America in Congress assembled*, That the following article is hereby proposed as an amendment to the Constitution of the United States, which shall be valid to all intents and purposes as part of the Constitution only if ratified by the legislatures of three-fourths of the several States within 7 years from the date of its submission by the Congress:

" ' "ARTICLE—

" ' "SECTION 1. The right of citizens of the United States to vote in any primary or other election for President or Vice President, for electors for President or Vice President, or for Senator or Representative in Congress, shall not be denied or abridged by the United States or any State by reason of failure to pay any poll tax or other tax.

" ' "SEC. 2. The Congress shall have power to enforce this article by appropriate legislation.' "

"Therefore, in the name of, and on behalf of, the people of the State of Michigan, we do hereby ratify, approve and assent to the proposed amendment to the Constitution of the United States.

"*Resolved further*, That certified copies of this joint resolution be transmitted by the Governor of the State of Michigan, to the President of the United States, the Secretary of State of the United States, the President of the Senate of the United States, and the Speaker of the House of Representatives of the United States.

"Attest:

"NORMAN E. PHILLES,
"*Clerk of the House of Representatives.*
"BERYL J. KENYON,
"*Secretary of the Senate.*"

By Mr. SALTONSTALL (for himself and Mr. KENNEDY):

Resolutions of the General Court of the Commonwealth of Massachusetts; to the Committee on Finance:

"RESOLUTION MEMORIALIZING THE CONGRESS OF THE UNITED STATES TO ENACT LEGISLATION GRANTING TO VETERANS OF WORLD WAR I PENSIONS COMPARABLE TO GRANTS TO VETERANS OF AMERICAN WARS PRIOR TO WORLD WAR I

"Whereas the national policy of the United States concerning veterans of the United States has been to grant assistance to them in declining years by a pension, in consideration of their military services in defense of our country; and

"Whereas there has been no general pension granted to veterans of World War I by the United States: Therefore, be it

"*Resolved*, That the General Court of Massachusetts hereby urges the Congress of the United States to enact legislation granting a pension to veterans of World War I comparable to grants to veterans of American wars prior to World War I; and be it further

"*Resolved*, That copies of these resolutions be sent forthwith by the secretary of the Commonwealth to the President of the United States, to the Presiding Officer of each branch of the Congress, and to the Members thereof from the Commonwealth.

"House of representatives, adopted March 25, 1963.

"WILLIAM C. MAIERS,
"*Clerk.*

"Senate, adopted in concurrence, March 27, 1963.

"THOMAS A. CHADWICK,
"*Clerk.*

"Attest:

"KEVIN H. WHITE,
"*Secretary of the Commonwealth.*"

(The ACTING PRESIDENT pro tempore laid before the Senate resolutions of the General Court of the Commonwealth of Massachusetts, identical with the foregoing, which were referred to the Committee on Finance.)

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. JORDAN of North Carolina, from the Committee on Rules and Administration, without amendment:

S. Con. Res. 7. Concurrent resolution authorizing the temporary placement in the rotunda of the Capitol of a statue of the late John Burke, of North Dakota, and the holding of ceremonies incident thereto (Rept. No. 139);

S. Con. Res. 8. Concurrent resolution to print the proceedings in connection with the acceptance of the statue of the late John Burke, of North Dakota (Rept. No. 139);

S. Con. Res. 9. Concurrent resolution for ceremonies in the rotunda in connection with the statue of the late Joseph Ward, of South Dakota (Rept. No. 131);

S. Con. Res. 10. Concurrent resolution to tender thanks of Congress to South Dakota for the statue of Joseph Ward, to be placed in Statuary Hall (Rept. No. 131);

S. Con. Res. 11. Concurrent resolution to print as a Senate document the proceedings at the acceptance of the statue of Joseph Ward, to be placed in Statuary Hall (Rept. No. 131);

S. Con. Res. 30. Concurrent resolution to reprint copies of the committee print, 87th Congress, entitled "Part I of Concentration Ratios in Manufacturing Industry, 1958" (Rept. No. 132);

S. Con. Res. 32. Concurrent resolution authorizing the printing for the use of the Senate Select Committee on Small Business of its hearing of the 87th Congress on "Space Satellite Communications" (Rept. No. 133);

S. Con. Res. 35. Concurrent resolution authorizing the printing of additional copies of part 1 of the hearings of the Joint Economic Committee on the January 1963 Economic Report of the President (Rept. No. 134);

H. Con. Res. 86. Concurrent resolution to authorize the printing as a House document the pamphlet entitled, "Our Flag" (Rept. No. 135);

H. Con. Res. 98. Concurrent resolution to authorize the printing of a wall map of the United States (Rept. No. 136);

H. Con. Res. 108. Concurrent resolution to provide for the printing of "How Our Laws Are Made" as a House document (Rept. No. 137);

S. Res. 113. Resolution to print, as a Senate document, with additional copies, a report on the Alliance for Progress, 1963, by Senator HUBERT H. HUMPHREY (Rept. No. 129);

S. Res. 117. Resolution relating to printing of "Mission to Southeast Asia" (Rept. No. 130); and

S. Res. 119. Resolution to provide additional funds for the Committee on the Judiciary.

By Mr. JORDAN of North Carolina, from the Committee on Rules and Administration, with an amendment:

S. Con. Res. 6. Concurrent resolution accepting the statue of the late John Burke, of North Dakota, and tendering thanks of Congress therefor (Rept. No. 139);

By Mr. JORDAN of North Carolina, from the Committee on Rules and Administration, with amendments:

H. Con. Res. 119. Concurrent resolution to print as a House document the Constitution of the United States, with an analytical index and ancillaries regarding proposed amendments (Rept. No. 138).

MATTIE V. GRUBBS—REPORT OF A COMMITTEE

Mr. JORDAN of North Carolina, from the Committee on Rules and Administration, reported an original resolution (S. Res. 122); which was placed on the calendar, as follows:

Resolved, That the Secretary of the Senate hereby is authorized and directed to pay, from the contingent fund of the Senate, to Mattie V. Grubbs, sister of James O. Martin, an employee of the Senate at the time of his death, a sum equal to eleven months' compensation at the rate he was receiving by law at the time of his death, said sum to be considered inclusive of funeral expenses and all other allowances.

EDDIE H. NORWOOD—REPORT OF A COMMITTEE

Mr. JORDAN of North Carolina, from the Committee on Rules and Administration, reported an original resolution (S. Res. 123); which was placed on the calendar, as follows:

Resolved, That the Secretary of the Senate hereby is authorized and directed to pay, from the contingent fund of the Senate, to Eddie H. Norwood, widow of Thomas E. Norwood, an employee of the Senate at the time of his death, a sum equal to seven months' compensation at the rate he was receiving by law at the time of his death, said sum to be considered inclusive of funeral expenses and all other allowances.

FANNIE HILL, LEONARD M. HILL, AND LAWRENCE A. HILL—REPORT OF A COMMITTEE

Mr. JORDAN of North Carolina, from the Committee on Rules and Administration, reported an original resolution (S. Res. 124); which was placed on the calendar, as follows:

Resolved, That the Secretary of the Senate hereby is authorized and directed to pay, from the contingent fund of the Senate, to Fannie Hill, sister, and to Leonard M. Hill and Lawrence A. Hill, brothers of Elijah B. Hill, an employee of the Architect of the Capitol assigned to duty in the Senate Office Buildings at the time of his death, a sum to each equal to two months' compensation at the rate he was receiving by law at the time of his death, said sum to be considered inclusive of funeral expenses and all other allowances.

CAROLYN P. MERIWETHER—REPORT OF A COMMITTEE

Mr. JORDAN of North Carolina, from the Committee on Rules and Administration, reported an original resolution (S. Res. 125); which was placed on the calendar, as follows:

Resolved, That the Secretary of the Senate hereby is authorized and directed to pay, from the contingent fund of the Senate, to Carolyn P. Meriwether, widow of Yancey D. Meriwether, an employee of the Senate at the time of his death, a sum equal to one year's compensation at the rate he was receiving by law at the time of his death, said sum to be considered inclusive of funeral expenses and all other allowances.

REPORT OF JOINT COMMITTEE ON REDUCTION OF NONESSENTIAL FEDERAL EXPENDITURES—FEDERAL EMPLOYMENT AND PAY

Mr. BYRD of Virginia. Mr. President, as chairman of the Joint Committee on Reduction of Nonessential Federal Expenditures, I submit a report on Federal employment and pay for the month of February 1963. In accordance with the practice of several years' standing, I ask unanimous consent to have the report printed in the RECORD, together with a statement by me.

There being no objection, the report and statement were ordered to be printed in the RECORD, as follows:

FEDERAL PERSONNEL IN EXECUTIVE BRANCH, FEBRUARY AND JANUARY 1963, AND PAY, JANUARY 1963 AND DECEMBER 1962

PERSONNEL AND PAY SUMMARY

(See table I, p. 2)

Information in monthly personnel reports for February 1963 submitted to the Joint Committee on Reduction of Nonessential Federal Expenditures is summarized as follows.

Total and major categories	Civilian personnel in executive branch			Payroll (in thousands) in executive branch		
	In February numbered—	In January numbered—	Increase (+) or decrease (−)	In January was—	In December was—	Increase (+) or decrease (−)
Total [1]	2,483,511	2,477,940	+5,571	$1,382,859	$1,337,052	+$45,807
Agencies exclusive of Department of Defense	1,421,632	1,413,830	+7,802	800,080	789,232	+10,848
Department of Defense	1,061,879	1,064,110	−2,231	582,779	547,820	+34,959
Inside the United States	2,314,127	2,309,293	+4,834			
Outside the United States	169,384	168,647	+737			
Industrial employment	563,990	565,084	−1,094			
Foreign nationals	168,202	168,766	−564	27,545	28,865	−1,320

[1] Exclusive of foreign nationals shown in the last line of this summary.

FEDERAL PERSONNEL AND PAY, FEBRUARY AND JANUARY 1963

Table I breaks down the above figures on employment and pay by agencies.

Table II breaks down the above employment figures to show the number inside the United States by agencies.

Table III breaks down the above employment figures to show the number outside the United States by agencies.

Table IV breaks down the above employment figures to show the number in industrial-type activities by agencies.

Table V shows foreign nationals by agencies not included in tables I, II, III, and IV.

TABLE I.—*Consolidated table of Federal personnel inside and outside the United States employed by the executive agencies during February 1963, and comparison with January 1963, and pay for January 1963, and comparison with December 1962*

STATEMENT BY SENATOR BYRD OF VIRGINIA

Executive agencies of the Federal Government reported civilian employment in the month of February totaling 2,483,511 as compared with 2,477,940 in January. This was a net increase of 5,571, including a net increase of 3,498 in temporary employment under the public works acceleration program authorized by Public Law 87-658.

Civilian employment reported by the executive agencies of the Federal Government, by months in fiscal year 1963, which began July 1, 1962, follows:

Month	Employment	Increase	Decrease
1962—July	2,510,950	14,455	
August	2,512,199	1,249	
September	2,485,324		26,875
October	2,482,982		2,342
November	2,498,312	15,330	
December	2,486,628		11,684
1963—January	2,477,940		8,688
February	2,483,511	5,571	

Total Federal employment in civilian agencies for the month of February was 1,421,632, an increase of 7,802 as compared with the January total of 1,413,830. Total civilian employment in the military agencies in February was 1,061,879, a decrease of 2,231 as compared with 1,064,110 in January.

Civilian agencies reporting the larger increases (primarily seasonal) were Treasury Department with 4,685, Interior Department with 2,614 and Virgin Islands Corporation with 595. The largest decrease was reported by the Post Office Department with 1,894.

In the Department of Defense the larger decreases in civilian employment were reported by the Army Department with 1,768, Air Force Department with 1,054, and Navy Department with 1,006. The largest increase was reported by the Defense Supply Agency with 1,538.

Inside the United States, civilian employment increased 4,834 and outside the United States, civilian employment increased 737. Industrial employment by Federal agencies in February totaled 563,990, a decrease of 1,094.

These figures are from reports certified by the agencies as compiled by the Joint Committee on Reduction of Nonessential Federal Expenditures.

FOREIGN NATIONALS

The total of 2,483,511 civilian employees certified to the committee by Federal agencies in their regular monthly personnel reports includes some foreign nationals employed in U.S. Government activities abroad, but in addition to these there were 168,202 foreign nationals working for U.S. agencies overseas during February who were not counted in the usual personnel reports. The number in January was 168,766. A breakdown of this employment for February follows:

Country	Total	Army	Navy	Air Force
Canada	37			37
Crete	62			62
England	3,150		107	3,043
France	21,882	17,876	11	3,995
Germany	81,692	68,805	85	12,802
Greece	264			264
Greenland	138			138
Japan	51,909	18,507	14,266	19,136
Korea	6,224	6,224		
Morocco	2,231		763	1,468
Netherlands	56			56
Trinidad	557		557	
Total	168,202	111,412	15,789	41,001

REPORT OF JOINT COMMITTEE ON REDUCTION OF NONESSENTIAL FEDERAL EXPENDITURES — FEDERAL STOCKPILE INVENTORIES

Mr. BYRD of Virginia. Mr. President, as chairman of the Joint Committee on Reduction of Nonessential Federal Expenditures, I submit a report on Federal stockpile inventories as of January 1963. I ask unanimous consent to have the report printed in the RECORD, together with a statement by me.

There being no objection, the report and statement were ordered to be printed in the RECORD, as follows:

FEDERAL STOCKPILE INVENTORIES, JANUARY 1963

INTRODUCTION

This is the 38th in a series of monthly reports on Federal stockpile inventories. It is for the month of January 1963.

The report is compiled from official data on quantities and cost value of commodities in these stockpiles submitted to the Joint Committee on Reduction of Nonessential Federal Expenditures by the Departments of Agriculture, Defense, and Health, Education, and Welfare, and the General Services Administration.

The cost value of materials in inventories covered in this report, as of January 1, 1963, totaled $14,351,084,895, and as of January 31, 1963, they totaled $14,159,810,325, a net decrease of $191,274,570 during the month.

Different units of measure make it impossible to summarize the quantities of commodities and materials which are shown in tables 1, 2, 3, and 4, but the cost value figures are summarized by major category, as follows:

Summary of cost value of stockpile inventories by major category

Major category	Beginning of month, Jan. 1, 1963	End of month, Jan. 31, 1963	Net change during month
Strategic and critical materials:			
National stockpile[1]	$5,888,903,600	$5,879,281,200	−$9,622,400
Defense Production Act	1,500,603,900	1,500,905,400	+301,500
Supplemental—barter	1,298,441,167	1,304,643,502	+6,202,335
Total, strategic and critical materials[1]	8,687,948,667	8,684,830,102	−3,118,565
Agricultural commodities:			
Price support inventory	5,232,359,708	5,042,931,625	−189,428,083
Inventory transferred from national stockpile[1]	128,232,289	127,874,190	−358,099
Total, agricultural commodities[1]	5,360,591,997	5,170,805,815	−189,786,182
Civil defense supplies and equipment:			
Civil defense stockpile, Department of Defense	31,228,342	32,377,298	+1,148,956
Civil defense medical stockpile, Department of Health, Education, and Welfare	176,922,589	177,403,810	+481,221
Total, civil defense supplies and equipment	208,150,931	209,781,108	+1,630,177
Machine tools:			
Defense Production Act	2,230,800	2,230,800	
National Industrial Reserve Act	92,162,500	92,162,500	
Total, machine tools	94,393,300	94,393,300	
Total, all inventories	14,351,084,895	14,159,810,325	−191,274,570

[1] Cotton inventory valued at $128,409,100 withdrawn from the national stockpile and transferred to Commodity Credit Corporation for disposal, pursuant to Public Law 87-548, during August 1962.

Detailed tables in this report show each commodity, by the major categories summarized above, in terms of quantity and cost value as of the beginning and end of the month. Net change figures reflect acquisitions, disposals, and accounting and other adjustments during the month.

The cost value figures represent generally the original acquisition cost of the commodities delivered to permanent storage locations, together with certain packaging, processing, upgrading, etc., costs as carried in agency inventory accounts. Quantities are stated in the designated stockpile unit of measure.

The appendix to this report includes program descriptions and statutory citations pertinent to each stockpile inventory within the major categories.

The stockpile inventories covered by the report are tabulated in detail as follows.

Table 1: Strategic and critical materials inventories (all grades), January 1963 (showing by commodity net changes during the month in terms of cost value and quantity, and excesses over maximum objectives in terms of quantity as of the end of the month).

Table 2: Agricultural commodities inventories, January 1963 (showing by commodity net changes during the month in terms of cost value and quantity).

Table 3: Civil defense supplies and equipment inventories, January 1963 (showing by item net changes during the month in terms of cost value and quantity).

Table 4: Machine tools inventories, January 1963 (showing by item net changes during the month in terms of cost value and quantity).

TABLE 1.—*Strategic and critical materials inventories (all grades), January 1963 (showing by commodity net changes during the month in terms of cost value and quantity, and excesses over maximum objectives in terms of quantity as of the end of the month)*

Total	7,212,536	7,183,236	−29,300	do	35,377	35,236	−141	17,200	18,036

See footnotes at end of table.

TABLE 1.—*Strategic and critical materials inventories (all grades), February 1963 (showing by commodity net changes during the month in terms of cost value and quantity, and excesses over maximum objectives in terms of quantity as of the end of the month)*—Continued

Commodity	Cost value			Quantity					
	Beginning of month, Feb. 1, 1963	End of month, Feb. 31, 1963	Net change during month	Unit of measure	Beginning of month, Feb. 1, 1963	End of month, Feb. 31, 1963	Net change during month	Maximum objective [1]	Excess over maximum objective
Graphite, natural, other, crystalline: National stockpile	$1,896,400	$1,896,400		Short dry ton	5,487	5,487		2,100	3,387
Hydrochloride of quinine: National stockpile	1,400	1,400		Ounce	103	103		(2)	103
Hyoscine: National stockpile	30,600	30,600		do	2,100	2,100		2,100	(3)
Iodine:									
National stockpile	4,082,000	4,082,000		Pound	2,977,648	2,977,648			
Supplemental—barter	1,020,048	1,018,222	−$1,826	do	996,984	996,958	−26		
Total	5,102,048	5,100,222	−1,826	do	3,974,632	3,974,606	−26	4,300,000	(3)
Iridium: National stockpile	2,525,800	2,525,800		Troy ounce	13,937	13,937		4,000	9,937
Jewel bearings: National stockpile	3,805,800	3,805,800		Piece	51,037,267	51,037,267		57,500,000	(3)
Kyanite—mullite: National stockpile	828,700	824,400	−4,300	Short dry ton	9,585	9,536	−49	4,800	4,736
Lead:									
National stockpile	319,298,100	319,298,100		Short ton	1,050,370	1,050,370			
Defense Production Act	2,751,100	2,461,800	−289,300	do	7,262	6,499	−763		
Supplemental—barter	78,127,800	78,225,100	+97,300	do	327,998	327,998			
Total	400,177,000	399,985,000	−192,000	do	1,385,630	1,384,867	−763	286,000	1,098,867
Magnesium: National stockpile	131,434,200	131,338,800	−95,400	do	181,052	180,921	−131	107,000	73,921
Manganese, battery grade, natural ore:									
National stockpile	21,025,500	21,025,500		do	144,485	144,485			
Supplemental—barter	14,109,137	14,034,837	−74,300	do	137,671	137,671			
Total	35,134,637	35,060,337	−74,300	do	282,156	282,156		50,000	232,156
Manganese, battery grade, synthetic dioxide:									
National stockpile	3,095,500	3,095,500		Short dry ton	21,272	21,272			
Defense Production Act	2,523,600	2,523,600		do	3,779	3,779			
Total	5,619,100	5,619,100		do	25,051	25,051		20,000	5,051
Manganese, chemical grade, type A:									
National stockpile	2,133,300	2,133,300		do	29,307	29,307			
Supplemental—barter	7,134,700	7,127,300	−7,400	do	103,731	103,731			
Total	9,268,000	9,260,600	−7,400	do	133,038	133,038		30,000	103,038
Manganese, chemical grade, type B:									
National stockpile	132,600	132,600		do	1,822	1,822			
Supplemental—barter	6,833,200	6,826,200	−7,000	do	99,016	99,016			
Total	6,965,800	6,958,800	−7,000	do	100,838	100,838		53,000	47,838
Manganese, metallurgical grade:									
National stockpile	248,310,000	248,293,500	−16,500	do	5,852,002	5,851,828	−174		
Defense Production Act	176,710,900	176,710,900		do	3,056,771	3,056,771

---

[1] Maximum objectives for strategic and critical materials are determined pursuant to the Strategic and Critical Materials Stock Piling Act (50 U.S.C. 98-98h). The present objectives represent quantities of materials estimated to be necessary in the event of a 3-year war in which oversea sources would not be available.

[2] No present objective.

[3] Not in excess of maximum objective.

APPENDIX

STRATEGIC AND CRITICAL MATERIALS

National stockpile

The Strategic and Critical Materials Stock Piling Act (50 U.S.C. 98–98h) provides for the establishment and maintenance of a national stockpile of strategic and critical materials. The General Services Administration is responsible for making purchases of strategic and critical materials and providing for their storage, security, and maintenance. These functions are performed in accordance with directives issued by the Director of the Office of Emergency Planning. The act also provides for the transfer from other Government agencies of strategic and critical materials which are excess to the needs of such other agencies and are required to meet the stockpile objectives established by OEP. In addition, the General Services Administration is responsible for disposing of those strategic and critical materials which OEP determines to be no longer needed for stockpile purposes.

General policies for strategic and critical materials stockpiling are contained in DMO V–7, issued by the Director of the Office of Emergency Planning and published in the Federal Register of December 19, 1959 (24 F.R. 10309). Portions of this order relate also to Defense Production Act inventories.

Defense Production Act

Under section 303 of the Defense Production Act of 1950 (50 U.S.C. App. 2093) and Executive Order 10480, as amended, the General Services Administration is authorized to make purchases of or commitments to purchase meals, minerals, and other materials, for Government use or resale, in order to expand productive capacity and supply, and also to store the materials acquired as a result of such purchases or commitments. Such functions are carried out in accordance with programs certified by the Director of the Office of Emergency Planning.

Supplemental—barter

As a result of a delgation of authority from OEP (32 A C.F.R., ch. I, DMO V–4) the General Services Administration is responsible for the maintenance and storage of materials placed in the supplemental stockpile. Section 206 of the Agricultural Act of 1956 (7 U.S.C. 1856) provides that strategic and other materials acquired by the Commodity Credit Corporation as a result of barter or exchange of agricultural products, unless acquired for the national stockpile or for other purposes, shall be transferred to the supplemental stockpile established by section 104(b) of the Agricultural Trade Development and Assistance Act of 1954 (7 U.S.C. 1704(b)). In addition to the materials which have been or may be so acquired, the materials obtained under the programs established pursuant to the Domestic Tungsten, Asbestos, Fluorspar, and Columbium-Tantalum Production and Purchase Act of 1956 (50 U.S.C. App. 2191–2195), which terminated December 31, 1958, have been transferred to the supplemental stockpile, as authorized by the provisions of said Production and Purchase Act.

AGRICULTURAL COMMODITIES

The price-support program

Price-support operations are carried out under the charter powers (15 U.S.C. 714) of the Commodity Credit Corporation, Department of Agriculture, in conformity with the Agricultural Act of 1949 (7 U.S.C. 1421), the Agricultural Act of 1954 (7 U.S.C. 1741), which includes the National Wool Act of 1954, the Agricultural Act of 1956 (7 U.S.C. 1442), the Agricultural Act of 1958 and with respect to certain types of tobacco, in conformity with the act of July 28, 1945, as amended (7 U.S.C. 1312). Under the Agricultural Act of 1949, price support is mandatory for the basic commodities—corn, cotton, wheat, rice, peanuts, and tobacco—and specific nonbasic commodities; namely, tung nuts, honey, milk, butterfat, and the products of milk and butterfat. Under the Agricultural Act of 1958, as producers of corn voted in favor of the new price-support program for corn authorized by that act, price support is mandatory for barley, oats, rye, and grain sorghums. Price support for wool and mohair is mandatory under the National Wool Act of 1954, through the marketing year ending March 31, 1966. Price support for other nonbasic agricultural commodities is discretionary except that, whenever the price of either cottonseed or soybeans is supported, the price of the other must be supported at such level as the Secretary determines will cause them to compete on equal terms on the market. This program may also include operations to remove and dispose of or aid in the removal or disposition of surplus agricultural commodities for the purpose of stabilizing prices at levels not in excess of permissible price-support levels.

Price support is made available through loans, purchase agreements, purchases, and other operations, and, in the case of wool and mohair, through incentive payments based on marketings. The producers' commodities serve as collateral for price-support loans. With limited exceptions, price-support loans are nonrecourse and the Corporation looks only to the pledged or mortgage collateral for satisfaction of the loan. Purchase agreements generally are available during the same period that loans are available. By signing a purchase agreement, a producer receives an option to sell to the Corporation any quantity of the commodity which he may elect within the maximum specified in the agreement.

The major effect on budgetary expenditures is represented by the disbursements for price-support loans. The largest part of the commodity acquisitions under the program result from the forfeiting of commodities pledged as loan collateral for which the expenditures occurred at the time of making the loan, rather than at the time of acquiring the commodities.

Dispositions of commodities acquired by the Corporation in its price-support operations are made in compliance with sections 202, 407, and 416 of the Agricultural Act of 1949, and other applicable legislation, particularly the Agricultural Trade Development and Assistance Act of 1954 (7 U.S.C. 1691), title I of the Agricultural Act of 1954, title II of the Agricultural Act of 1956, the Agricultural Act of 1958, the act of August 19, 1958, in the case of cornmeal and wheat flour, and the act of September 21, 1959, with regard to sales of livestock feed in emergency areas.

Inventory transferred from national stockpile

This inventory, all cotton, was transferred to a Commodity Credit Corporation at no cost from the national stockpile pursuant to Public Law 85–96 and Public Law 87–548. The proceeds from sales, less costs incurred by CCC, are covered into the Treasury as miscellaneous receipts; therefore, such proceeds and costs are not recorded in the operating accounts. The cost value as shown for this cotton has been computed on the basis of average per bale cost of each type of cotton when purchased by CCC for the national stockpile.

CIVIL DEFENSE SUPPLIES AND EQUIPMENT

Civil defense stockpile

The Department of Defense conducts this stockpiling program pursuant to section 201 (h) of Public Law 920, 81st Congress, as amended. The program is designed to provide some of the most essential materials to minimize the effects upon the civilian population which would be caused by an attack upon the United States. Supplies and equipment normally unavailable, or lacking in quantity needed to cope with such conditions, are stockpiled at strategic locations in a nationwide warehouse system consisting of general storage facilities.

Civil defense medical stockpile

As authorized under Public Law 920, 81st Congress, and following the intent of Reorganization Plan No. 1, 1958, the Director, Office of Emergency Planning has delegated responsibility to the Department of Health, Education, and Welfare to plan and direct operation of the medical supply portion of the OEP stockpile. The warehousing of the medical stockpile is principally within the OEP warehouse system; in addition, the medical stockpile includes a program designed to pre-position emergency hospitals and other treatment units in communities throughout the Nation.

MACHINE TOOLS

Defense Production Act

Under section 303 of the Defense Production Act of 1950 (50 U.S.C. App. 2093) and Executive Order 10480, as amended, the

General Services Administration has acquired machine tools in furtherance of expansion of productive capacity, in accordance with programs certified by the Director of the Office of Emergency Planning.

National industrial equipment reserve

Under general policies established and directives issued by the Secretary of Defense, the General Services Administration is responsible for care, maintenance, utilization, transfer, leasing, lending to nonprofit schools, disposal, transportation, repair, restoration, and renovation of national industrial reserve equipment transferred to GSA under the National Industrial Reserve Act of 1948 (50 U.S.C. 451–462).

Statement by Senator Byrd of Virginia

The cost value of Federal stockpile inventories as of January 31, 1963, totaled **$14,159,810,325. This was a net decrease of $191,274,570 as compared with the January 1 total of $14,351,084,895. Net changes during the month are summarized by major category as follows:**

Major category	Cost value, January 1963	
	Net change during month	Total, end of month
Strategic and critical materials	−$3,118,565	$8,684,830,102
Agricultural commodities	−189,786,182	5,170,805,815
Civil defense supplies and equipment	+1,630,177	209,781,108
Machine tools		94,393,300
Total	−191,274,570	14,159,810,325

These figures are from the January 1963 report on Federal stockpile inventories, compiled from official agency data by the Joint Committee on Reduction of Nonessential Federal Expenditures, showing detail with respect to quantity and cost value of each commodity in the inventories covered.

STRATEGIC AND CRITICAL MATERIALS

So-called strategic and critical materials are stored by the Government in (1) the national stockpile, (2) the Defense Production Act inventory, and (3) the supplemental-barter stockpile.

Overall, there are now 95 materials stockpiled in the strategic and critical inventories. **Maximum objectives—in terms of volume—are presently fixed for 76 of these 95 materials. Of the 76 materials having maximum objectives, 65 were stockpiled in excess of their objectives as of January 31, 1963.**

Increases in cost value were reported in 21 of the 95 materials stockpiled in all strategic and critical inventories, decreases were reported in 25 materials, and 49 materials remained unchanged during the month of January 1963.

National stockpile

The cost value of materials in the national stockpile as of January 31, 1963, totaled $5,879,281,200. This was a net decrease of $9,622,400 during the month. The largest decrease was $6,329,200 in rubber.

Defense Production Act inventory

The cost value of materials in the Defense Production Act inventory as of January 31 totaled $1,500,905,400. This was a net increase of $301,500. The largest increase was aluminum, partially offset by a decrease in copper.

Supplemental-barter stockpile

The cost value of materials in the supplemental-barter stockpile as of January 31 totaled $1,304,643,502. This was a net increase of $6,202,335. The largest increases were in aluminum oxide, bauxite, and beryllium metal.

OTHER STOCKPILE INVENTORIES

Among the other categories of stockpiled materials covered by the report, the largest is $5.2 billion in agricultural commodities. Major decreases in agricultural commodities during January were reported for corn, soybeans, grain sorghum, and wheat in the price-support inventory.

Inventories of civil defense supplies and equipment showed increases in radiological equipment and medical stocks; and no change was reported in the machine tools inventories.

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. JAVITS (for himself and Mr. Cooper):

S. 1302. A bill to increase U.S. productivity in the national interest and for the benefit of the individual worker and businessman, by promoting mutual understanding and cooperation between labor and management, encouragement of public responsibility in the private economy, and maximization of technical and managerial progress, through the establishment of a National Productivity Council and the support of local and industrywide labor-management-public committees; to the Committee on Labor and Public Welfare.

(See the remarks of Mr. Javits when he introduced the above bill, which appear under a separate heading.)

By Mr. ENGLE:

S. 1303. A bill to establish the Channel Islands National Seashore, in the State of California, and for other purposes; to the Committee on Interior and Insular Affairs.

(See the remarks of Mr. Engle when he introduced the above bill, which appear under a separate heading.)

By Mr. KEATING (for himself and Mr. Javits):

S. 1304. A bill to authorize the appropriation of $2,936,000 as an ex gratia payment to the city of New York to assist in defraying the extraordinary and unprecedented expenses incurred during the 15th General Assembly of the United Nations; to the Committee on Foreign Relations.

By Mr. KEATING (for himself, Mr. Javits, and Mr. Morse):

S. 1305. A bill to authorize the appropriation of $1,500,000 as an ex gratia payment to the city of New York to assist in defraying the extraordinary and unprecedented expenses incurred during the 15th General Assembly of the United Nations; to the Committee on Foreign Relations.

(See the remarks of Mr. Keating when he introduced the above bills, which appear under a separate heading.)

By Mr. BYRD of Virginia:

S. 1306. A bill for the relief of Oakley O. Warren; to the Committee on the Judiciary.

By Mr. McCLELLAN (by request):

S. 1307. A bill to amend section 503 of the Federal Property and Administrative Services Act of 1949, as amended, to authorize a grant-in-aid program for the collection, preservation, and publication of papers of national historical value, and for other purposes; to the Committee on Government Operations.

(See the remarks of Mr. McClellan when he introduced the above bill, which appear under a separate heading.)

By Mr. McCLELLAN (for himself, Mr. Eastland, and Mr. Ervin):

S. 1308. A bill to prohibit wiretapping by persons other than duly authorized law enforcement officers engaged in the investigation or prevention of specified categories of criminal offenses, and for other purposes; to the Committee on the Judiciary.

(See the remarks of Mr. McClellan when he introduced the above bill, which appear under a separate heading.)

By Mr. SPARKMAN:

S. 1309. A bill to amend the Small Business Act, and for other purposes; to the Committee on Banking and Currency.

(See the remarks of Mr. Sparkman when he introduced the above bill, which appear under a separate heading.)

By Mr. COOPER (for himself and Mr. Morton):

S. 1310. A bill to amend the Agricultural Adjustment Act of 1938, as amended; to the Committee on Agriculture and Forestry.

(See the remarks of Mr. Cooper when he introduced the above bill, which appear under a separate heading.)

RESOLUTIONS

MATTIE V. GRUBBS

Mr. JORDAN of North Carolina, from the Committee on Rules and Administration, reported an original resolution (S. Res. 122) to pay a gratuity to Mattie V. Grubbs, which was placed on the calendar.

(See the above resolution printed in full when reported by Mr. Jordan of North Carolina, which appears under the heading "Reports of Committees.")

EDDIE H. NORWOOD

Mr. JORDAN of North Carolina, from the Committee on Rules and Administration, reported an original resolution (S. Res. 123) to pay a gratuity to Eddie H. Norwood; which was placed on the calendar.

(See the above resolution printed in full when reported by Mr. Jordan of North Carolina, which appears under the heading "Reports of Committees.")

FANNIE HILL, LEONARD M. HILL, AND LAWRENCE A. HILL

Mr. JORDAN of North Carolina, from the Committee on Rules and Administration, reported an original resolution (S. Res. 124) to pay a gratuity to Fannie Hill, Leonard M. Hill, and Lawrence A. Hill, which was placed on the calendar.

(See the above resolution printed in full when reported by Mr. Jordan of North Carolina, which appears under the heading "Reports of Committees.")

CAROLYN P. MERIWETHER

Mr. JORDAN of North Carolina, from the Committee on Rules and Administration, reported an original resolution (S. Res. 125) to pay a gratuity to Carolyn P. Meriwether; which was placed on the calendar.

(See the above resolution printed in full when reported by Mr. Jordan of North Carolina, which appears under the heading "Reports of Committees.")

ESTABLISHMENT OF A NATIONAL PRODUCTIVITY COUNCIL

Mr. JAVITS. Mr. President, in the present consideration of what we must do about dealing with endemic unemployment and the slowing down of the economy, the one thing that I think is missing is new ideas. If any of us have them, it is our duty to bring them forward at this time for the consideration of the country.

For a long time I have believed that we needed a central mechanism in this country which would not be a war production board, but which would be its equivalent in what we euphemistically call peacetime.

It is for that reason that I send to the desk for appropriate reference, on behalf of myself and the Senator from Kentucky [Mr. COOPER], a bill to establish a 25-member National Productivity Council to replace the President's Advisory Committee on Labor-Management Policy.

We need something with a lot more teeth and a lot more capability in terms of being grounded in congressional mandate, too, in order to do the job which the country wants done.

The Council could also coordinate and activate more vigorously the councils provided for under the Manpower and Training Act, which, with the kind cooperation of the Senator from Pennsylvania [Mr. CLARK], includes a provision for local councils, generally speaking, of that character. The Council I contemplate would include public as well as labor and management representatives. It would parallel the system of councils we had during World War II, of which 5,000 functioned with great benefit to productivity, the cutting down of waste, inefficiency and make-work practices in our whole establishment.

The important point is that we are as close to being in war as we could be without shooting all over the world. The question is, How will we organize for it in terms of the productivity race, in which the Russians have said they will bury us?

This proposed legislation follows a unanimous minority recommendation of the Joint Economic Committee of Congress in its 1963 economic report, issued March 13. In the report, the minority endorsed the creation of a National Productivity Council, as a means of stimulating increased productivity, "to promote the organization of voluntary labor-management-public councils at the industry, regional, and community levels."

These councils—

The report said—

> would provide a framework within which all interested parties could cooperate in smoothing the adjustment to technological change by promoting worker training, eliminating make-work practices, stimulating invention and innovation, and taking such other actions as would promote increased productivity.

In my view, the establishment of a National Productivity Council, along with national emergency strike legislation and revision of the antitrust laws, should have the highest priority, ranking with the tax cut in our effort to materially improve the economic growth rate of our Nation.

This is my recommendation for meeting the problem.

I wish to emphasize that the Productivity Council does not involve controls, allocations, wage and price ceilings, and the other aspects of wartime economic centralization which were involved in the War Production Board. But while we are now engaged in a cold war rather than a shooting war, clearly, our need for effective economic mobilization is no less great, particularly in view of the increasing economic warfare waged by the Communist bloc and the unsatisfactory growth rate condition of our economy.

The Council would provide a permanent mechanism for mutual discussion and cooperative efforts to identify and deal with the great variety of new problems arising daily as a result of the enormous changes taking place in the economic world of today—in automation, in the development of multinational trading association, such as the European Common Market, and in the underdeveloped areas just showing the beginning of diversification of the economy, to name only a few of the most dramatic of such changes.

The Council would act on the most authoritative level with the Congress as its partner and with the powers that only Congress can give in terms of calling upon other Government agencies, and in providing for authority throughout the whole Federal Government, especially in the executive department.

I think the measure is an extremely important one. As I have said, we are looking for ideas upon the subject. Here is an idea which follows and parallels tradition and practices and recognizes where we stand today, which is in a position of grave danger, especially in the area of productivity.

The Council would be composed of a broad range of members whose talents and responsibilities would represent all aspects of the U.S. economic complex. Headed by the Vice President, the Council would include the Secretaries of the Treasury, Agriculture, Commerce, Labor, and Health, Education, and Welfare; the Attorney General; the Administrator of the Small Business Administration; four representatives of management and four of labor organizations in manufacturing and services industries; two representatives of management and two of labor organizations in extractive and agricultural industries; two labor-management relations experts; and three members from the general public.

The impact of the Council would be most effectively felt through the creation of local labor-management-public boards on a plant, community, regional, or industry basis. An amendment which I sponsored to the Manpower Development and Training Act of 1962, which was adopted, calls for the establishment of such groups. This new bill details the areas in which the National Council would assist the local groups: apprenticeship and other training programs; waste and absenteeism; building code revision; transportation, safety and health of the labor force; expanded exports; studies of foreign techniques and programs in these areas; incentive programs; technical information and education.

The Advisory Committee on Labor-Management Policy, which the President created by Executive order on February 16, 1961, is similar to the Council which my bill proposes to establish, since it too consists of Government, labor, and industry members. But it is clear that the existing Committee without a legislative basis cannot do the job which is called for; it has neither the staffing nor the authority to initiate economic policy as between Government and business, and, in particular, it has no relationship with the local councils which must deal with the day-to-day effectuation of policy.

The need for a permanent mechanism of the proposed type is becoming increasingly well recognized. A New York Times editorial on April 10, 1962, said that the steel price battle showed the power the President can wield in economic matters, and added:

> To insure that the revised balance will promote freedom, as well as responsibility, immediate steps should be taken to improve machinery for the cooperation of industry, labor and the Government.

I believe the National Productivity Council should be a major objective in the drive to accelerate the productivity of our Nation's economic plant.

I ask unanimous consent that the bill may be printed at the conclusion of my remarks, and may lie on the desk until the close of business tomorrow for the purpose of enabling other Senators who wish to do so to add their names as cosponsors.

The ACTING PRESIDENT pro tempore. The bill will be received and appropriately referred and will remain at the desk as requested by the Senator from New York; and, without objection, will be printed at this point in the RECORD.

The bill (S. 1302) to increase U.S. productivity in the national interest and for the benefit of the individual worker and businessman, by promoting mutual understanding and cooperation between labor and management, encouragement of public responsibility in the private economy, and maximization of technical and managerial progress, through the establishment of a National Productivity Council and the support of local and industrywide labor-management-public committees, introduced by Mr. JAVITS (for himself and Mr. COOPER), was received, read twice by its title, referred to the Committee on Labor and Public Welfare, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "National Productivity Act of 1963".

CONGRESSIONAL FINDING

SEC. 2. Congress hereby finds and declares that the national interest requires a productivity drive in order to meet the continuing responsibilities of the United States for the development of its own domestic economic strength and that of the free world; and in order to meet the threat of the growing and aggressive Communist bloc economic power. The Congress further finds that the major problems facing such a national productivity drive are an unacceptable rate of endemic unemployment, the underutilization and obsolescence of production facilities, and the inadequacy of means for resolving labor-management disputes resulting in the loss of production vital to the national economy. The Congress declares that efforts to achieve success in a national productivity drive will be advanced through the acceleration of modernization of equipment, the elimination of make work practices in both management and labor, the reduction of absenteeism, the establishment of better procedures to avoid national emergency work stoppages, relieving the worker of hardship caused by any phase of a national productivity drive, and the promotion of higher morale, which can best be achieved through cooperative action among labor, management, farmers, voluntary organizations, consumers, and all levels of government, while preserving the traditional areas of responsibility and interest of each. The Congress also declares that it is the responsibility of the United States under present international conditions to require the most effective mobilization and the maximum utilization of all elements of the Nation's productive forces.

NATIONAL PRODUCTIVITY COUNCIL

SEC. 3. (a) There is hereby established in the executive branch an independent agency to be known as the "National Productivity Council" (hereinafter referred to as the "Council"), which shall be composed of twenty-five members as follows:

(1) The Vice President of the United States who shall be the Chairman of the Council;

(2) The Secretary of the Treasury; the Attorney General; the Secretary of Agriculture; the Secretary of Commerce; the Secretary of Labor; the Secretary of Health, Education, and Welfare; and the Administrator of the Small Business Administration;

(3) Four members who shall be representative of management in large and small businesses (as defined by the Small Business Administration) in manufacturing and service industries (including transportation);

(4) Four members who shall be representative of labor organizations in such industries;

(5) Two members who shall be representative of management in extractive and agricultural industries;

(6) Two members who shall be representative of labor organizations in such industries;

(7) Two members who are recognized experts in labor-management relations, at least one of whom shall be from the academic field; and

(8) Three members who shall be representative of the general public, and who shall be selected without regard to any interest or connection they may have with any of the foregoing areas.

(b) Members of the Council referred to in paragraphs (3) to (8) of subsection (a) shall be appointed by the President for terms of six years, except that of the members first appointed six shall be appointed for terms of two years, six shall be appointed for terms of four years, and five shall be appointed for terms of six years. Vacancies shall be filled in the same manner as the original appointments except that a member appointed to fill a vacancy occurring prior to the expiration of the term of his predecessor shall be appointed only for the unexpired portion of such term.

(c) The Council shall meet at least four times each year at such times as it shall determine or at the call of the President. A quorum shall consist of thirteen members.

(d) Members of the Council referred to in paragraphs (3) to (8) of subsection (a) shall receive compensation at the rate of $100 per diem while performing services for the Council, and while away from their homes in connection with attendance at meetings of the Council shall be entitled to transportation expenses and per diem in lieu of subsistence at the rate prescribed by, or established pursuant to, section 5 of the Administrative Expenses Act of 1946, as amended (5 U.S.C. 73b-2).

(e) The President is authorized to appoint, by and with the advice and consent of the Senate, an Executive Director of the Council. The Executive Director shall be the principal executive officer of the Council and shall be paid compensation at the rate of $20,000 per annum. The Council is authorized to appoint, in accordance with the civil service laws and regulations, and fix the compensation in accordance with the Classification Act of 1949, as amended, of such other officers and employees as may be necessary.

(f) With the consent of the heads of other departments and agencies of the Government, the Council is authorized to utilize the personnel, services, and facilities of such departments and agencies in carrying out its functions under this Act. Such departments and agencies shall cooperate with the Council to the greatest extent practicable for such purpose.

(g) The Council shall transmit to the President and to the Congress an annual report of its activities under this Act.

OBJECTIVES OF THE COUNCIL

SEC. 4. It shall be the objective of the Council—

(1) to enlist the cooperation of labor, management, and State and local governments, in a manner calculated to foster and promote free competitive enterprise and the general welfare, toward the implementation of the national policy declared in the Employment Act of 1946 to create and maintain "conditions under which there will be afforded useful employment activities, including self-employment, for those willing and seeking to work, and to promote maximum employment, production, and purchasing power";

(2) to promote peaceful labor-management relations;

(3) to promote free and responsible collective bargaining;

(4) to promote sound wage and price policies in the public interest;

(5) to promote a climate of cooperation and understanding between labor and management and the community, and the recognition by labor and management of the public interest in harmonious labor-management relations;

(6) to promote the maintenance and improvement of worker morale and to enlist community interest in increasing productivity and reducing waste and absenteeism;

(7) to promote the more effective use of labor and management personnel in the interest of increased productivity;

(8) to develop programs to deal with the social and economic problems of individual workers and management personnel adversely affected by automation or other technological change or the relocation of industries and to avoid any hardship to the individual worker and employee; and

(9) to promote policies designed to insure that United States products are competitive in world markets.

FUNCTIONS OF COUNCIL

SEC. 5. (a) In order to achieve the objectives set forth in section 4, the Council shall encourage and assist in the organization and the work of labor-management-public committees and similar groups established pursuant to sections 205 (b) and (c) of the Manpower Development and Training Act of 1962, on a plant, community, regional, or industry basis. Such assistance shall include—

(1) aid in the development of apprenticeship, training, and other programs for employee and management education for development of greater and more diversified skills;

(2) aid in the formulation of programs designed to reduce waste and absenteeism;

(3) aid in the revision of building codes, zoning regulations, and other local ordinances and laws, in order to keep them continuously responsive to changing economic conditions;

(4) aid in planning for the provision of adeqaute transportation for the labor force and the promotion of employee safety and health;

(5) aid in the exploration of means to expand exports as recommended in the October 4, 1962, Report to the President from the Advisory Committee on Labor-Management Policy;

(6) the encouragement of attendance by members of such groups at courses in industrial relations at institutions of higher education, and the fostering of close cooperation between such groups and such institutions for the purpose of developing such courses and for other purposes;

(7) the encouragement of studies of techniques and programs similar to those in paragraphs (1) to (6) of this subsection, as they are applied in foreign countries;

(8) aid in the development and initiation of production incentive programs;

(9) the dissemination of technical information and other material to publicize its work and objectives; and

(10) the dissemination of information and analyses concerning the economic opportunities and outlook in various regions and communities, and of information on industrial techniques designed for the increase of productivity.

(b) The Council is authorized to make recommendations to the President regarding legislation for price, wage, commodity, and materiel control, and commodity and materiel allocation, authorized to be exercised during periods of emergency, as it may deem necessary from time to time.

(c) The Council shall perform such other functions, consistent with the foregoing, as it determines to be appropriate and necessary to achieve the objectives set forth in section 4.

POWERS OF COUNCIL

SEC. 6. (a) The Council shall carry out the functions referred to in section 5 through—

(1) the utilization of the services and facilities of the departments and agencies of the Federal Government, and of such other governmental agencies, private groups, and professional experts as it deems necessary;

(2) the coordination of such services and facilities in order to supply technical and administrative assistance to labor-management-public committees and similar groups referred to in section 5(a);

(3) grants to groups or individuals for financing up to 50 per centum of the cost of carrying out any project or program, including the setting up of local, regional, or industry-wide labor-management-public committees, in furtherance of the objectives of the Council; and

(4) the holding of regional and industry-wide conferences to formulate ideas and programs for the fulfillment of the objectives set forth in section 4.

(b) The Council may accept gifts or bequests, either for carrying out specific programs which it deems desirable or for its general activities.

APPROPRIATIONS

SEC. 7. There are hereby authorized to be appropriated such sums as may be necessary to carry out the purposes of this Act.

CHANNEL ISLANDS NATIONAL SEASHORE

Mr. ENGLE. Mr. President, I have the honor and the pleasure today to introduce a bill to establish the Channel Islands National Seashore off the coast of southern California.

Since announcing in January my intention to propose this legislation, I have conferred with numerous conservation interests, obtained the views of various State and local groups, and worked with the National Park Service and the Navy in formulating this plan. Accordingly, the bill I am introducing has as its primary purpose the controlled development of public recreation on the islands and at the same time provides special consideration for the conservation and protection of their marvelous marine fauna, birdlife, and existing archeologic values.

The climate of the Channel Islands is ideal. Their rugged terrain is unique and inviting. It is my idea that the principal recreational uses which can be opened up to the people by this legislation are camping on the beaches and in the low mountains, swimming and surf sports, ocean fishing, yachting, hiking, exploration of the many sea grottos and marine gardens, wildlife study, and similar types of natural enjoyment. I believe also that some of the islands are ideally suited for summer cabin leases. Small-craft harbors are possible in a number of the bays.

I propose that the Channel Islands National Seashore include the following five islands which I shall describe briefly:

Santa Cruz: Largest of the group, it is 21 miles long and about 5 miles wide, covering 62,000 acres. It has mountain peaks from 1,700 to 2,400 feet in elevation, dense woods, sea caves including one—Painted Cave—with an entrance 70 feet high, and well-protected coves with suitable anchorage for small boats. The parklike atmosphere of Santa Cruz Island makes it highly suitable for camping and enjoyment of scenery. The clear waters of the sheltered north shore offer ample opportunity for swimming and observation of marine gardens. Santa Cruz Island is privately owned by two families.

To quote the author, Thorne Hall:

> Santa Cruz is an assortment of rich rolling meadows laced with oaks, pines and almond trees, tall grasses, vineyards, fat cows, swift rising mountain ranges, babbling brooks, three rivers, temperate year-round climate, hundreds of waterfalls spilling into the ocean over rugged jutting cliffs. Even the endless parade of seals that guard its secluded grottoes chortle happily in the noonday sun.

Santa Rosa: Second in size, this is 15 miles long and 10 miles wide, covering 55,000 acres. Its shoreline varies in character from bold rocky bluffs to several miles of white sand beaches with dunes up to 400 feet in height on the western end. The island is rich in archeological and paleontological values. Its wildlife includes sea elephants, otters, numerous rookeries of marine waterfowl, as well as a native species of fox and several varieties of deer. Santa Rosa Island is owned by a private estate.

San Miguel: Westernmost of the Channel Islands chain, it comprises about 14,000 acres including 10-acre Prince Islet just offshore. It has 24 miles of unspoiled sand beaches, scenic cliffs and sea caves. Cuyler Harbor is the largest of several places where anchorages and boat landings are possible. Here also sea lions, sea elephants, otters, seals and great rookeries of sea birds abound.

To quote Mr. Hall again:

> The island of San Miguel reeks of desolation, memories, and mysteries unsung. Here California's discoverer, Juan Rodriguez Cabrillo, met his death in 1543. Civilizations of Indians lie buried in the land. Ghosts of shipwrecked sailors haunt its jagged reefs.

San Miguel is presently owned and administered by the Navy as a possible missile site. The Navy Department and the Interior Department presently are working on a cooperative agreement for the protection of the island's outstanding anthropologic and historic values.

Anacapa: Established in 1938 as a national monument, Anacapa is really a slender chain of islands about 5 miles long and one-half mile wide, comprising 700 acres. It is characterized by high sea bluffs, bird rookeries, and rocky rests for marine mammals.

Santa Barbara: Also a national monument, it is the southernmost island in the proposed seashore, triangular in shape, containing 650 acres including 13-acre Gull Island just offshore. It is girdled by vertical cliffs up to 500 feet in height, small bays with numerous caves and rock bridges, occasional sandy beaches, and dramatic seascapes. Santa Barbara Island has the largest stand of giant coreopsis in the world. When in full bloom the brilliant, golden expanse of these huge sunflowers are said to be visable to ships 10 miles at sea.

That is the nature of the new national seashore that I propose. Only two of the islands—Santa Cruz and Santa Rosa—are privately owned, and just three families are involved. It will not be necessary for public purposes to acquire all of the private lands on these two islands. I want to respect the wishes and interests of the present owners as fully as possible.

Mr. President, I ask that the bill be printed in the Record at this point and referred to the appropriate committee for consideration.

The ACTING PRESIDENT pro tempore. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the Record.

The bill (S. 1303) to establish the Channel Islands National Seashore, in the State of California, and for other purposes, introduced by Mr. Engle, was received, read twice by its title, referred to the Committee on Interior and Insular Affairs, and ordered to be printed in the Record, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That in order to preserve for the benefit of the people certain property in the State of California possessing unique scenic, scientific, and other natural values, there is hereby established the Channel Islands National Seashore. The national seashore, subject to valid existing rights, shall comprise the islands of Anacapa, Santa Barbara, San Miguel, Santa Cruz, and Santa Rosa in the Channel Islands group, together with the lands, submerged lands, and waters within one nautical mile of the shoreline of such islands.

Sec. 2. Within the Channel Islands National Seashore the Secretary of the Interior is hereby authorized to procure lands and interests in lands, including submerged lands, by purchase, donation, purchase with donated funds, or otherwise. Lands and submerged lands owned by the State of California or any of its political subdivisions within the seashore may be acquired only with the consent of such owner. Notwithstanding any other provision of law, federally owned lands or waters lying within the seashore may, with the concurrence of the agency having custody thereof, be transferred to the administrative jurisdiction of the Secretary, without transfer of funds, for administration as part of the seashore.

Sec. 3. Lands and submerged lands acquired by the Secretary of the Interior and those transferred to his administrative jurisdiction pursuant to section 2, together with the former Channel Islands National Monument, shall be preserved and administered by the Secretary of the Interior as the Channel Islands National Seashore in accordance with the provisions of the Act entitled "An Act to establish a National Park Service, and for other purposes", approved August 25, 1916 (39 Stat. 535; 16 U.S.C. 1–4), as amended and supplemented, with special consideration for the conservation and protection of their existing marine fauna, bird life, and archaeologic heritage.

Sec. 4. To further the purposes of this Act the Secretary of the Interior is authorized to enter into cooperative agreements with the State of California, its political subdivisions, and other Federal agencies for the conservation and management of wildlife within or in the vicinity of the Channel Islands National Seashore, and for the development of small craft harbors on the islands.

Sec. 5. Any funds that may be available for the purposes of the Channel Islands National Monument shall hereafter be available to the Secretary for the purposes of the Channel Island National Seashore.

Sec. 6. There are hereby authorized to be appropriated such funds as are necessary to accomplish the purposes of this Act.

NEW YORK POLICE FORCE—REIMBURSEMENT OF NEW YORK CITY

Mr. KEATING. Mr. President, I am again introducing for appropriate reference bills to reimburse the city of New York for the extraordinary and unprecedented service afforded by the New York City police force during the 15th session of the General Assembly of the United Nations in the fall of 1960.

Mr. President, two bills are here involved. One, which is cosponsored by my colleague, Senator Javits, is identical with legislation we introduced in the last session to authorize the appropriation of $2,936,000. This sum, according to estimates prepared by the New York City Police Department, represents the cost of reimbursing the overtime work performed on the basis of the regular salary rate. In my judgment, this sum is reasonable and justified and should be approved.

At the same time, I recognize the practical difficulty that the Department of State has consistently recommended that the payment to the city of New York be limited to $1.5 million. The sum of $1.5 million was approved by the Senate Foreign Relations Committee last year when the bill H.R. 4441 was favorably reported by the Foreign Relations Committee. Unfortunately, it was never motioned up for floor consideration. The second bill, cosponsored by Senator Javits and Senator Morse, authorizes the appropriation of $1.8 million.

It proved impossible to secure action on this measure as an amendment to other legislation because of impending adjournment. Nevertheless, late in the session the distinguished senior Senator from Oregon, who was a Senate delegate to the United Nations during that historic session and the Senate majortiy leader both gave their assurances that they would support this legislation when introduced in the next session. In fact, the distinguished majority leader said on October 11:

> If the Senator will not press his proposal at this late point in the session, I assure him that I will do my very best to see that one of the first pieces of business to be considered by the Foreign Relations Committee in the forthcoming 1st session of the 88th Congress will be the proposal now under consideration.
>
> Furthermore, it is my strong belief that the Foreign Relations Committee will report the measure by an overwhelming vote.
>
> In addition, when that action is taken and the measure comes before the Democratic policy committee, I shall make an effort, based on a majority vote, to get the bill out of the policy committee and bring it to the floor of the Senate for a vote either for or against it.
>
> I am sure that the Senator is aware that if the question were brought to the floor in that manner, its chances of success would be greatly enhanced.
>
> I know that the one thing the Senator has consistently wanted is an opportunity of that sort. So if he will give the matter some thought and take what I have said as a promise, I assure him I will do everything in my power to fulfill that promise and obtain action as soon as possible at the first session of the new Congress.

Mr. President, the protection rendered by the city's police force to the 26 heads of State visiting our shores—including several unpopular and ruthless leaders of the Soviet bloc—was most effectively administered and deserves the gratitude of the entire Nation. We can all recall the tremendous anticipation and concern which prevailed from the time the *Baltika* docked in New York Harbor with Khrushchev until the time he boarded a plane at New York's International Airport and headed back to Russia. The scrupulous security precautions of the New York City Police prevented incidents which could have inflamed world tensions and created international havoc. America—in fact the world—should be indebted to the city's police force for the manner in which they conducted themselves and performed their duty.

Mr. President, let me illustrate to what lengths New York City's police force went to protect these heads of state. Castro arrived at Idlewild Airport in the latter part of September and was promptly led to a car which was escorted by a motorcycle and another car containing three officers with submachine guns. Two policemen flanked his car, a bus with 60 policemen followed, and 4 patrolmen were stationed at each bridge along the route. In addition, 200 policemen were waiting at his hotel when he arrived and a 24-hour motorcade was assigned to him for the duration of his stay. With Khrushchev, Tito, Gomulka, and Kadar, similar precautionary measures were taken.

It is very true, Mr. President—and I am first to acknowledge this fact—that New York City must share the responsibility of protecting delegates to the United Nations. We are proud that our city was chosen and we certainly are willing to accept a great deal of the responsibility as well as the brunt for its presence. However, Mr. President, I do not feel that anyone can justify loading the entire burden and expense for the protection of delegates from all over the world on the city of New York.

I am hopeful that this year with bipartisan support it will at last be possible to secure favorable action for the hard-pressed taxpayers of the city of New York. I ask unanimous consent to print, following my remarks, the texts of both bills.

The ACTING PRESIDENT pro tempore. The bills will be received and appropriately referred; and, without objection, the bills will be printed in the Record.

The bills, introduced by Mr. Keating, were received, read twice by their titles, referred to the Committee on Foreign Relations, and ordered to be printed in the Record, as follows:

S. 1304. A bill to authorize the appropriation of $2,936,000 as an ex gratia payment to the city of New York to assist in defraying the extraordinary and unprecedented expenses incurred during the 15th General Assembly of the United Nations:

"*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That there is hereby authorized to be appropriated, out of moneys in the Treasury not otherwise appropriated, the sum of $2,936,000 for payment to the city of New York. The said appropriation shall be considered an ex gratia payment to assist the city of New York to defray the extraordinary and unprecedented expenses which the city incurred in affording protection to visiting chiefs of state and heads of government during the Fifteenth General Assembly of the United Nations."

S. 1305. A bill to authorize the appropriation of $1,500,000 as an ex gratia payment to the city of New York to assist in defraying the extraordinary and unprecedented expenses incurred during the 15th General Assembly of the United Nations:

"*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That there is hereby authorized to be appropriated, out of moneys in the Treasury not otherwise appropriated, the sum of $1,500,000 for payment to the city of New York. The said appropriation shall be considered an ex gratia payment to assist the city of New York to defray the extraordinary and unprecedented expenses which the city incurred in affording protection to visiting chiefs of state and heads of government during the Fifteenth General Assembly of the United Nations."

GRANT-IN-AID PROGRAM FOR COLLECTION, PRESERVATION, AND PUBLICATION OF CERTAIN PAPERS.

Mr. McCLELLAN. Mr. President, by request, I introduce, for appropriate reference, a bill to amend section 503 of the Federal Property and Administrative Services Act of 1949, as amended, to authorize a grant-in-aid program for the collection, preservation, and publication of papers of national historical value, and for other purposes.

This legislation is being introduced at the request of the Administrator of General Services as a part of the legislative program of the General Services Administration for 1963. The Administrator of General Services has informed the committee that the legislation originated with and is recommended by the National Historical Publications Commission.

According to the Administrator, the purpose of this bill is to authorize the General Services Administration, within the limits of funds available therefor, to make allocations to Federal agencies, and grants to State and local agencies and nonprofit organizations and institutions for the collecting, describing, editing and publishing—including microfilming and other forms of reproduction—of documentary sources significant to the history of the United States.

Prior to making such allocations and grants, the Administrator should seek the advice and recommendations of the National Historical Publications Commission.

I ask unanimous consent that a letter addressed to the President of the Senate from the Administrator of General Services, dated March 20, 1963, which set forth additional justification and background on the proposed legislation, be printed in the Record at this point, as part of my remarks.

The ACTING PRESIDENT pro tempore. The bill will be received and appropriately referred; and, without objection, the letter will be printed in the Record.

The bill (S. 1307) to amend section 503 of the Federal Property and Administrative Services Act of 1949, as amended, to authorize a grant-in-aid program for the collection, preservation, and publication of papers of national historical value, and for other purposes, introduced by Mr. McClellan, by request, was received, read twice by its title, and referred to the Committee on Government Operations.

The letter presented by Mr. McClellan is as follows:

General Services Administration,
Washington, D.C., March 20, 1963.

Hon. Lyndon B. Johnson,
President of the Senate,
Washington, D.C.

Dear Mr. President: There is forwarded herewith for appropriate action a draft of legislation "to amend section 503 of the Federal Property and Administrative Services Act of 1949, as amended, to authorize a grant-in-aid program, and for other purposes."

This proposal is part of the legislative program of the General Services Administration for 1963. It originated with and is recommended by the National Historical Publications Commission.

The proposed legislation would amend section 503 of the Federal Property and Administrative Services Act of 1949, as amended, by authorizing the Administrator, within the limits of funds available therefor, to make allocations to Federal agencies, and grants to State and local agencies and nonprofit organizations and institutions for the collecting, describing, editing, and publishing (including microfilming and other forms of reproduction) of documentary sources significant to the history of the United States. Prior to making such allocations and grants, the Administrator should seek the advice and recommendations of the National Historical Publications Commission.

Section 503 of the Federal Property and Administrative Services Act of 1949 established the present National Historical Publications Commission and charged it with a dual responsibility: first, to "cooperate with and encourage appropriate Federal, State, and local agencies and nongovernmental institutions, societies, and individuals in collecting, preserving, and, when it deems such action to be desirable, in editing and publishing the papers of outstanding citizens of the United States and such other documents as may be important for an understanding and appreciation of the history of the United States"; and, second, to "make plans, estimates, and recommendations for such historical works and collections of sources as it deems appropriate for printing or otherwise recording at public expense."

During the past year the Commission has reviewed the progress made over the last decade and considered future needs to achieve a balanced national program. In its report to the President, formally approved by the Commission on November 28, 1962, the Commission concludes that it must take a more positive role both in establishing priorities among projects as regards financial support and in securing funds for approved projects.

The Commission found in its analysis of the major documentary publication projects now underway that not one of them is securely financed through to conclusion and that the progress of all the projects is adversely affected by uncertainties about continuity. The Commission found also a continuing pressing need for support of work in neglected areas. Private source of funds (largely philanthropic foundations), which have financed all of the major projects to date, have been confused by multiple demands for support to an extent that threatens to weaken overall support of the Commission's program.

The Commission feels that a firm and justifiable set of priorities must be established, and that a channel of distribution between sources and need is required. The Commission, as a national agency charged with responsibility for developing a national program, is in a unique position to act as such a channel for private philanthropy and to advise the Administrator of General Services with respect to the disbursement of Government funds.

At its meeting on November 28, 1962, the Commission recommended two specific lines of action: First, that the financial needs of high priority projects (publication of the Adams papers, the Franklin papers, the Hamilton papers, the Jefferson papers, and the Madison papers) should be met by foundation or other private grants of a permanent capital fund nature; second, that the needs of additional projects are so great that not less than $1 million annually should be made available for such projects. Half of this amount, $500,000, the Commission recommends, should be furnished by the Federal Government and half by private philanthropic foundations.

The Commission believes that the bulk of Federal funds should be used to support the microfilming of both Government records and private papers of national importance in order to make them generally available and for the preparation of essential guides, catalogs, indexes, and other finding aids to facilitate their use. The Commission recommends, however, that Federal funds be used to complete the editing and publication of the documentation relating to the debates over the adoption of the Constitution of the United States and the Bill of Rights and to publish the contemporary documentation relating to the work and debates of the First Federal Congress, which organized the Government under the Constitution.

The proposed legislation would authorize an appropriation of $500,000 annually to the General Services Administration to carry out the program recommended by the Commission. It would also authorize the establishment by the Commission of special advisory committees to assist in the establishment of priorities among projects proposed for the Commission's consideration. Such advisory committees would be selected from among the leading historians, political scientists, archivists, librarians, and other specialists of the Nation.

For the foregoing reasons the General Services Administration strongly recommends early enactment of the proposed legislation.

The Bureau of the Budget has advised that, from the standpoint of the Administration's program, there is no objection to the presentation of this proposed legislation to the Congress.

Sincerely yours,

BERNARD L. BOUTIN,
Administrator.

PROHIBITION OF WIRETAPPING BY CERTAIN PERSONS

Mr. McCLELLAN. Mr. President, on behalf of myself, and Senators EASTLAND and ERVIN, I introduce for appropriate reference a bill to prohibit wiretapping by persons other than duly authorized law enforcement officers engaged in the investigation or prevention of specific categories of criminal offenses. The bill incorporates the legislative recommendations submitted by the Attorney General and it is identical to that which was introduced in the preceding Congress and on which hearings were held by the Committee on the Judiciary on March 29, April 4, 5, 6, and May 10, 17, and 24, 1962.

The Congress has given considerable attention to this matter during the past several years and in the preceding Congress hearings were held before the Subcommittee on Constitutional Rights of the Committee on the Judiciary, of which I am a member, under the chairmanship of Senator ERVIN, on S. 1086, S. 1221, S. 1495, and S. 1822 on May 9, 10, 11, and 12, 1961.

The Attorney General has pointed out that existing law has proved ineffective, both to prevent indiscriminate wiretapping which seriously threatens individual privacy and to afford a clear-cut basis for the legitimate and controlled use of wiretapping by law enforcement officials.

State and local prosecutors, in those States which permit wiretapping under State law, are faced with the problem that the exercise of the wiretapping authority under State law may violate Federal law.

The Attorney General has pointed out that the inadmissibility of wiretap evidence in Federal courts has prejudiced the enforcement of Federal statutes designed to protect the national security.

The legislative proposal recommended by the Attorney General outlaws all private wiretapping and all wiretapping by law enforcement officials which does not conform to the limited authority which the bill would grant.

The bill would permit the FBI or Federal agencies having investigative responsibilities for a limited group of specified major offenses to tap wires to obtain evidence of the commission of such offenses, but only after obtaining a court order. In addition, the Attorney General could, without a court order, authorize wiretapping by the FBI in cases involving treason, espionage, sabotage, subversion, and unauthorized disclosure of classified atomic energy information. The Attorney General would be required to find that a serious threat to the security of the United States existed and that resort to the court order procedure would be prejudicial to the national interest. Wiretaps by State law enforcement officers would be permitted only in States which adopt a statute authorizing the court order procedure as set forth in the bill. If the State does not have an appropriate statute, then the attorney general of that State, or the principal prosecuting attorney for any political subdivision could apply for permission to wiretap in the investigation of the crimes of murder, kidnaping, extortion, bribery, or dealing in narcotic drugs or in marihuana.

I submit a section-by-section analysis of the bill, which has been prepared by the Department of Justice, and ask that it be printed at this point in the RECORD.

The ACTING PRESIDENT pro tempore. The bill will be received and appropriately referred; and, without objection, the section-by-section analysis will be printed in the RECORD.

The bill (S. 1308) to prohibit wiretapping by persons other than duly authorized law enforcement officers engaged in the investigation or prevention of specified categories of criminal offenses, and for other purposes, introduced by Mr. McCLELLAN (for himself, Mr. EASTLAND, and Mr. ERVIN), was received, read twice by its title, and referred to the Committee on the Judiciary.

The section-by-section analysis presented by Mr. McCLELLAN is as follows:

SECTION-BY-SECTION ANALYSIS OF DEPARTMENT OF JUSTICE WIRETAPPING PROPOSAL SUBMITTED IN THE 1ST SESSION OF THE 88TH CONGRESS

Section 2 contains legislative findings.

Section 3 provides that it shall be a felony, punishable by a fine of not more than $10,000 or imprisonment for not more than 2 years or both, for a person willfully to intercept, disclose or use the contents of any wire communication except as specifically authorized by the act. However, it shall not be unlawful for a switchboard operator, or any telephone company employee, to intercept, disclose, or use a wire communication in the normal course of his employment while engaged in any activity which is a necessary incident of the rendition of service.

Section 4 provides that no part of the contents of an unlawfully intercepted wire communication and no evidence derived therefrom may be received in evidence in any judicial, administrative, legislative, or other proceeding of the United States, or of any State or any political subdivision thereof.

Section 5 establishes procedures by which certain interceptions by law enforcement officers may be authorized.

For cases involving certain felonies affecting the national security—espionage, sabotage, treason, sedition, subversive activities, and unauthorized disclosure of atomic energy information—alternative procedures are provided. The Attorney General or an Assistant Attorney General may authorize an application to a Federal judge of competent jurisdiction for leave to permit the Federal Bureau of Investigation to tap wires. Alternatively, the Attorney General may authorize such wiretapping himself if he finds that the commission of the offense presents a serious threat to the security of the United States and that resort to the court order procedure would be prejudicial to the national interest.

Wiretapping may be authorized for certain other Federal crimes by court order upon application authorized by the Attorney General or an Assistant Attorney General. The Federal crimes for which such wiretapping is authorized are: murder, kidnaping or extortion under title 18 of the United States Code; any offense under 18 U.S.C. 201 (bribery), 18 U.S.C. 1084 (transmission of gambling information), 18 U.S.C. 1952 (travel or transportation in aid of racketeering enterprises); any offense involving violations of the Federal narcotic law; and any conspiracy to commit any of those offenses.

The attorney general of any State or the principal prosecuting attorney for any political subdivision thereof, if authorized to do so by State statute, may petition a State judge for leave to wiretap for the crimes of murder, kidnaping, extortion, bribery or dealing in narcotic drugs or marihuana or any conspiracy involving those offenses.

Section 6 authorizes persons, who have lawfully received information concerning a wire communication which was lawfully intercepted in accordance with the act, to make limited disclosure and use of such information. Any Federal or State investigative or law enforcement officer may disclose such information to another Federal or State investigative or law enforcement officer if such disclosure is appropriate to the proper performance of the official duties of both the officer disclosing and the one receiving such information. An investigative or law enforcement officer may use such information for the proper discharge of his official duties. Any person may disclose such information while testifying in a Federal or State criminal trial or grand jury proceeding.

Section 7 contains the penalty provision.

Section 8 provides procedures for applications for, and issuance of, court orders on both the Federal and State levels. Each application for a court order must contain a complete statement of the facts relied on to show probable cause; the location and nature of the telephone facilities involved; and information concerning all previous wiretapping applications involving the same telephone or the same suspected criminal. The judge may require additional evidence in support of the application. The judge may issue an ex parte order to tap a telephone within the territorial jurisdiction of his court if he finds probable cause for belief that an offense for which an application to wiretap is authorized, has been, is being, or is about to be committed; facts concerning such offense may be obtained by the proposed interception; no other means are readily available for obtaining such information; the facilities to be tapped are used in the commission of the offense for which tapping is authorized, or are leased to, listed in the name of, or commonly used by a person suspected of that offense. The order must specify the nature and location of the facilities to be tapped; the crime as to which information is sought; the identity of the law enforcement agency authorized to tap; and the period of time for which such tap is authorized. No order may authorize a tap for any period exceeding 45 days; extensions of not more than 20 days each may be granted upon the findings referred to above.

Before the contents of an intercepted communication may be introduced in evidence in a Federal criminal trial the defendant must be served with a copy of the court order or other authorization for the wiretap. A defendant in a Federal criminal trial may move to suppress wiretap evidence on the grounds that: the communication was unlawfully intercepted; the order or other authorization was invalid; in the case of court order, there was no probable cause for issuance of the order; or the interception was not made in conformity with the order or other authorization. All applications made to a Federal or State court and all orders granted by such courts must be sealed and may only be made public by order of the court or as provided for in the act.

Section 9 requires copies of all of the applications made and orders issued under this act to be transmitted to the Administrative Office of the U.S. Courts and to the Department of Justice. The Administrative Office is instructed to report annually to the Congress.

Section 10 contains the definitions.

Section 11 amends section 605 of the Communications Act of 1934, 48 Stat. 1103; 47 U.S.C. 605 to delete the second and fourth clauses of section 605 (dealing with interception and divulgence), and to exempt from section 605 the procedures authorized by this act.

Section 12 contains a separability clause.

AMENDMENT OF SMALL BUSINESS ACT

Mr. SPARKMAN. Mr. President, I introduce, for appropriate reference, a bill to amend the Small Business Act, and for other purposes. I ask unanimous consent to have printed in the Record a section-by-section analysis, and a letter from the Administrator of the Small Business Administration, relating to the bill.

The ACTING PRESIDENT pro tempore. The bill will be received and appropriately referred; and, without objection, the section-by-section analysis and letter will be printed in the Record.

The bill (S. 1309) to amend the Small Business Act, and for other purposes, introduced by Mr. Sparkman, was received, read twice by its title, and referred to the Committee on Banking and Currency.

The section-by-section analysis and letter presented by Mr. Sparkman are as follows:

Section-by-Section Analysis

FEDERAL SMALL BUSINESS ADMINISTRATION

Section 1 of the bill would change the name of the Small Business Administration to the Federal Small Business Administration; and section 2 would effect corresponding changes in references to the agency which are embodied in the Small Business Act, the Small Business Investment Act of 1958 and other laws of the United States. The purpose of this change is to provide the public with a clear indication that the agency is an instrumentality of the Federal Government, rather than a State or private organization. There is reason to believe that the existing name is inadequate for such purpose.

REVOLVING FUND AUTHORIZATION

Section 3 of the bill would effect four amendments to the provisions of section 4(c) of the Small Business Act governing the revolving fund authorization of the Small Business Administration. The first of these amendments would increase the total amount of the fund from $1,666 to $1,775 million. The second would increase from $1,325 to $1,375 million the amount of the total fund which may be outstanding at any one time for the purposes of the business loan program embodied in section 7(a) of the Small Business Act, the disaster loan program embodied in section 7(b) and the prime contract program embodied in section 8(a). The third amendment would make appropriate revisions in the terms of section 4(c) to insure that a disproportionate part of this combined authorization of $1,375 million is not used for any one of the three specified programs.

The fourth amendment would increase from $341 to $400 million the amount of the total fund which may be outstanding at any one time for the exercise of the functions of SBA under the Small Business Investment Act of 1958.

The reasons for the proposed increase in the $1,325 million figure are to be found in the legislative history of the statute (Public Law 87–550) which established this combined authorization for the three specified programs. The conference report accompanying the underlying bill (S. 2970) contains the following declaration of intent:

"The combined increased authorization * * * is intended to meet estimated needs for a 2-year period (fiscal 1963 and 1964). The agreement of the conferees upon this increased authorization was predicated upon their belief that SBA's business loan program should be reviewed at least every 2 years. In order to assure adequate time for consideration, the estimated business loan program needs for SBA for an additional 2 years should be submitted to the new Congress when it convenes in January 1963, and this process then should be repeated as necessary every 2 years as each new Congress convenes in order to provide for an orderly and recurring review of this program by the Congress and to avoid emergency appeals by SBA for additional authorization." (H. Rept. 1974, 87th Cong., 2d sess.)

In accordance with this expression of intent a review has been conducted to determine the probable requirements of the business loan program through June 30, 1966. The resulting calculations indicate that an authorization of $1,218 million will be needed for the purpose, and this amount has been rounded to $1,225 million to provide a small margin of safety. Thus the probable requirements of the business loan program leave only $100 million of the existing combined authorization available for disaster loans. Unless an appropriate increase is made in the authorization it will not be adequate to meet the needs of both the business loan program and the disaster loan program.

For the purpose of determining the size which this increase should assume, it is necessary also to project the requirements of the disaster loan program through June 30, 1966. In the case of disaster loans other than those for displaced businesses an annual estimate of $20 million has been utilized. This figure represents the average for the 5-year period ending June 30, 1962. For loans to displaced businesses the 1963 estimate is $6 million; and a gradual increase to $16 million, in 1966, is anticipated. These computations indicate that disaster loans and commitments outstanding on June 30, 1966, will amount to approximately $142 million. The latter figure has been rounded to $150 million, again to provide a small margin of safety.

Together with the requirement for business loans, this indicates a need for a combined authorization of $1,375 million. Accordingly the existing combined authorization should, as proposed by section 3 of the bill, be increased in the amount of $50 million.

The proposed increase in the combined authorization, from $1,325 million to $1,375 million, calls for a corresponding revision of the provisions of section 4(c) which are designed to insure that a disproportionate share of this authorization is not used for any one of the three programs. These provisions presently require SBA to report promptly to the appropriate committees of Congress whenever the aggregate amounts outstanding for the purposes of the business loan and prime contract programs exceed $1,222 million and whenever the aggregate amount outstanding for the purposes of the disaster loan program exceeds $103 million. Section 3 of the bill would increase these figures to $1,225 million and $150 million, respectively.

The fourth amendment proposed by section 3 of the bill, increasing from $341 million to $400 million the amount of the total fund which shall be outstanding at any one time for the exercise of the functions of SBA under the Small Business Investment Act of 1958, is based upon a projection of requirements through June 30, 1964. It is estimated that, as of the latter date, loans and commitments chargeable against this separate statutory authority will aggregate $393,600,000. In order to provide a small margin for contingencies, this figure was rounded to $400 million.

EXPANSION OF DISASTER LOAN PROGRAM

Section 4 of the bill would broaden the scope of the disaster loan program conducted by SBA pursuant to section 7(b)(2) of the Small Business Act. Under the terms of the latter section disaster loans are authorized to help any small business concern suffering substantial economic injury because of drought or excessive rainfall in the area in which such borrower is located, if the drought or excessive rainfall constitutes a major disaster as determined by the President, pursuant to the provisions of 42 U.S.C. 1855–1855g, or a natural disaster as determined by the Secretary of Agriculture pursuant to the provisions of 7 U.S.C. 1961.

It is hardly necessary to emphasize the value of these loans in tiding over small businessmen until the buying power of their customers has been restored.

Nevertheless drought and excessive rainfall are by no means the only disasters which can cause economic injury to small business concerns by destroying or reducing the buying power of their customers. Exactly the same injury is currently being reported, for example, by small enterprises in Florida as a result of the damage inflicted on the citrus crops of that State by the recent freeze. Also, such injury can, and sometimes does, stem from other physical disturbances such as flood, hurricane, fire, earthquake, and storm. No sound reason exists for extending disaster loans to alleviate economic injury in the case of drought or excessive rainfall and, at the same time, refusing such assistance in the other described situations.

Accordingly, section 4 of the bill would extend the benefits of section 7(b)(2) of the Small Business Act to any small business concern located in an area affected by any distaster, if the administration determines that the concern has suffered a substantial economic injury as a result of such disaster and if such disaster constitutes a major disaster as determined by the President, pursuant to the provisions of 42 U.S.C. 1855–1855g, or a natural disaster as determined by the Secretary of Agriculture pursuant to the provisions of 7 U.S.C. 1961.

In addition to this substantive amendment, section 4 of the bill would effect certain technical changes in the language of section 7(b)(2) to reflect the enactment of the Consolidated Farmers Home Administration Act of 1961.

FRAUD RELATING TO SBA MORTGAGES

Section 5 of the bill would provide criminal penalties for any person who, with intent to defraud, knowingly conceals, removes, disposes of, or converts to his own use, or to the use of another, any property mortgaged or pledged to, or held by, SBA. These penalties (a fine of not more than $5,000 or imprisonment for not more than 5 years, or both) are the same as those applicable for similar frauds committed against the Farm Credit Administration and other farm credit agencies of the Government.

The need for such legislation is reflected in the fact that, under existing law, the United States has no effective means of punishing persons who steal property mortgaged to SBA as security for a loan. Experience has demonstrated that, unless appropriate sanctions are established for such conduct, the Government will suffer substantial loss.

SEPARABILITY PROVISION

Section 6 of the bill contains the standard separability provision.

SMALL BUSINESS ADMINISTRATION,
OFFICE OF THE ADMINISTRATOR,
Washington, D.C., March 29, 1963.
Hon. LYNDON B. JOHNSON,
The President of the Senate,
U.S. Senate,
Washington, D.C.

DEAR MR. PRESIDENT: Enclosed are four copies of a draft bill, amending the Small Business Act, together with a section-by-section analysis thereof. For the reasons stated in the analysis we consider the changes proposed by the bill to be desirable.

The bill would effect increases in the revolving fund authorization of the Small Business Administration, would expand the disaster loan program in certain respects, and would change the name of the agency from the Small Business Administration to the Federal Small Business Administration. In addition, it would provide criminal penalties for persons guilty of certain fraudulent actions relating to property mortgaged to SBA as collateral for a loan. It is believed that, except for the proposed changes in the revolving fund authorization, none of the provisions of the bill would have a material effect on budgetary requirements.

It is my hope that the bill will be promptly enacted. The Bureau of the Budget has advised that it has no objection, from the standpoint of the administration's program, to the presentation of the bill to the Congress.

Sincerely,

JOHN E. HORNE,
Administrator.

TRANSFERRAL OF FLOODED COTTON ACREAGE FOR PURPOSE OF ACRE HISTORY CREDITS

Mr. COOPER. Mr. President, for myself and on behalf of my colleague from Kentucky [Mr. MORTON], I introduce a bill and ask that it be appropriately referred.

The ACTING PRESIDENT pro tempore. The bill will be received and appropriately referred.

The bill (S. 1310) to amend the Agricultural Adjustment Act of 1938, as amended, introduced by Mr. COOPER (for himself and Mr. MORTON), was received, read twice by its title, and referred to the Committee on Agriculture and Forestry.

Mr. COOPER. Mr. President, I have introduced the bill for myself and on behalf of my colleague from Kentucky [Mr. MORTON] to extend the law allowing flooded cotton allotments to be moved to new farms, and to allow the original farm to count the transferred acreage for purposes of acreage history credits, and I ask that the bill be printed in the RECORD.

The House of Representatives yesterday passed an identical bill, H.R. 5067, which has now been referred to the Senate Committee on Agriculture and Forestry. The need for the passage of the bill is immediate, since cotton farms must make the necessary arrangements to begin planting in the next week or so. The need for such legislation arises from the fact that for 3 successive years cotton farms have been flooded in Arkansas, Kentucky, Mississippi, Missouri, Illinois, Tennessee, and Louisiana. While legislation has been approved each year to allow the flooded acreage to be moved, a regulation of the Department of Agriculture states that these transferred allotments "shall be deemed to be released acreage for purposes of acreage history credits under sections 344(f)(8), 344(m)(2), and 377 of the act." Therefore, without legislation of this type, cotton allotments on farms which have been flooded for the past 3 years will be cut down this year.

The Department of Agriculture has estimated that 11,400 acres have been flooded this year, affecting about 656 farms in the 7 States I have mentioned. Because I believe the bill is important and should be passed soon, I have asked the chairman of the Agriculture Committee [Mr. ELLENDER] to have the committee consider and report either my bill or the House bill as soon as possible. I hope that this can be done.

The ACTING PRESIDENT pro tempore. Without objection, the bill (S. 1310), is ordered to be printed in the RECORD as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 344(n) of the Agricultural Adjustment Act of 1938, as amended, is amended (1) by striking out the figures "1962" where they first appear therein and inserting the figures "1963"; (2) by striking out the word "substantial" where it appears, and (3) by striking the period at the end of the second sentence thereof and substituting a colon therefor and the following proviso: "*Provided,* That, notwithstanding the provisions of section 344(m)(2) of this Act, the transfer of any farm allotment under this subsection for 1963 shall operate to make the farm from which the allotment was transferred eligible for an allotment as having cotton planted thereon during the three-year base period."

STATUE OF JOSEPH WARD—ADDITIONAL COSPONSOR OF CONCURRENT RESOLUTIONS

Mr. McGOVERN. Mr. President, I ask unanimous consent that my name be added as a cosponsor of Senate Concurrent Resolution 9, Senate Concurrent Resolution 10, and Senate Concurrent Resolution 11.

These measures provide that a statue of Joseph Ward be placed in the Capitol as a contribution from my fellow citizens of South Dakota.

It is fitting that South Dakotans present this statue to the Nation. For if any one story of an individual relates the drama of the settlement of the West and the self-sacrificing spirit of the early pioneers, the life and accomplishments of Joseph Ward tell the story.

Born in New York in 1838, Ward grew up in Sudbury, Mass., in a community dominated by New England traditions. He attended Phillips Academy at Andover and graduated from Brown University although his college career was interrupted by service in the Union Army.

Joseph Ward then attended the Andover Theological Seminary, and it was here that he was imbued with a missionary spirit which had a profound influence on his life.

Following his marriage in 1868, Ward accepted a missionary appointment at Yankton, S. Dak., then the capital of the Dakota Territory and he established the Congregational Church in South Dakota on a solid foundation.

Recognizing that the church and school are the twin foundations of a community, Joseph Ward opened a private academy which experienced a rapid growth. He then established a college, at which time his academy became the earliest public high school in Dakota. Yankton College, now one of our leading educational institutions in South Dakota, was founded in 1881, largely due to Ward's efforts.

Joseph Ward protected the school lands from speculators, and drafted the education law of our State. He was a humanitarian who helped establish a hospital for the insane. He was an active citizen who participated in the convention which framed a workable law for our State.

Joseph Ward authored our State motto, "Under God the People Rule." Perhaps this gifted phrase is the most compelling testimony to the conviction and motivation of this brilliant and courageous South Dakota pioneer. His life tells the story of the settlement of the West, and a great deal about the history of South Dakota.

A minister, educator, government leader, humanitarian, and easterner, if you will—these references summarize the life of Joseph Ward and the pioneers who settled the West.

Mr. President, I ask unanimous consent that a sketch of Mr. Ward's life written for the Dictionary of American Biography appear at this point in the RECORD along with the texts of the proposed resolutions.

The ACTING PRESIDENT pro tempore. Without objection, the Senator's name will be added as a cosponsor of the concurrent resolutions, and the sketch and concurrent resolutions will be printed in the RECORD.

The sketch and concurrent resolutions are as follows:

WARD, JOSEPH (MAY 5, 1838–DECEMBER 11, 1889)

Pioneer Congregational clergyman and educator of South Dakota, was born at Perry Centre, N.Y., the son of Dr. Jabez and Aurilla (Tufts) Ward, and a descendant of William Ward who settled at Sudbury, Mass., about 1638. Joseph grew up in a community dominated by New England traditions, and in a home strongly influenced by religion. After attending the public schools of his locality, he tried his hand at teaching and at farming for a time, and then entered Phillips Academy, Andover, where he was graduated in 1861. That same year he matriculated at Brown University. His college course was interrupted by service in the Union Army but sickness intervened and sent him back to his studies, although his summer vacations were spent with the U.S. Christian Commission. He graduated from Brown in 1865 and then spent 3 years at Andover Theological Seminary, an institution marked by a missionary spirit which did much to determine Ward's subsequent career. On August 12, 1868, he married Sarah Frances Wood.

Accepting a missionary appointment at Yankton, then the capital of Dakota Territory, he was ordained there on March 17, 1869. His activities in behalf of the religious and educational interests of the region were numerous and varied. Under his leadership the Congregational Association of Dakota was formed, and his influence over the Dakota missions was such that he may be regarded as the father of congregationalism in Dakota. Owing to the fact that Yankton was not then a separate school district and there was no adequate provision for securing funds by taxation, it was practically impossible to maintain common schools. A few years before Ward's arrival, a public school supported by the enterprise of the Yankton women had been started, and to supplement its work Ward opened a private school. It had a larger growth than had been expected and in 1872 was formally converted into the Yankton Academy. Ward continued in charge of it until he began to promote the establishment of a college, at which time the academy was given over to public control and transformed into the Yankton High School, the earliest public high school in Dakota. Yankton College, the first institution of collegiate rank in the Upper Mississippi Valley, the founding of which was largely the result of Ward's activities, was chartered August 30, 1881, and the cornerstone of its first building laid June 15, 1882. This institution he served as president and professor of mental and moral philosophy until his death.

He played a very conspicuous part in keeping the school lands of the territory out of the hands of eastern speculators, and the education law of South Dakota was almost wholly his work. Interested in every humanitarian enterprise, he was largely instrumental in securing the establishment in 1879 of the Dakota Hospital for the Insane. In the struggle for statehood, also he played a large part, especially in the formation of the Citizen's Constitutional Association, which brought about the constitutional convention at Sioux Falls in 1883. This convention, formed by direct authority of the people without authorization from the legislature or enabling act of Congress, framed a worthy organic law for the future State.

Spurning all chances for political advancement, Ward in his last years devoted himself to the service of Yankton College. In 1886 he became involved in a theological dispute over the possibility of future probation for those who died ignorant of Christ's teachings. Scornful of "institutional cowardice," he fought on what he considered the side of liberty, despite the fact that it threatened for a time to wreck the college. The storm soon passed and in 1887 Yankton College graduated its first class. A little more than 2 years later Ward died, the immediate cause of his death being blood poisoning occasioned by diabetes. He was survived by his wife and five children.

McMurtry, "Yankton College" (1907); Doane Robinson, "History of South Dakota" (2 vols., 1904); "Eighth Annual Catalog of Yankton College" (1890); "State of South Dakota: First Annual Report of the Superintendent of Public Instruction" (1890); "Congregational Yearbook" (1890); Andover Review, January 1890; Advance, Dec. 19, 1889; Press & Dakotan (Yankton), Dec. 19, 1889; Charles Martyn, "The William Ward Geneology" (1925).)

SENATE CONCURRENT RESOLUTION 9

Resolved by the Senate (*the House of Representatives concurring*), That the South Dakota State Historical Society of South Dakota is hereby authorized to place temporarily in the rotunda of the Capitol a statue of the late Joseph Ward, of South Dakota, and to hold ceremonies in the rotunda on said occasion; and the Architect of the Capitol is hereby authorized to make the necessary arrangements therefor.

SENATE CONCURRENT RESOLUTION 10

Resolved by the Senate (*the House of Representatives concurring*), That the statue of Joseph Ward, presented by the State of South Dakota, to be placed in the Statuary Hall collection, is accepted in the name of the United States, and that the thanks of the Congress be tendered said State for the contribution of the statue of one of its most eminent citizens, illustrious for his leadership as author of the State's motto, framer of the Territorial school law, founder of the first college, and outstanding churchman in the founding of Christian churches among whites and Indians: And be it further

Resolved, That a copy of these resolutions, suitably engrossed and duly authenticated, be transmitted to the Governor of South Dakota.

SENATE CONCURRENT RESOLUTION 11

Resolved by the Senate (*the House of Representatives concurring*), That the proceedings at the presentation, dedication, and acceptance of the statue of Joseph Ward, to be presented by the State of South Dakota in the rotunda of the Capitol, together with appropriate illustrations and other pertinent matter, shall be printed as a Senate document. The copy for such Senate document shall be prepared under the supervision of the Joint Committee on Printing.

SEC. 2. There shall be printed three thousand additional copies of such Senate document, which shall be bound in such style as the Joint Committee on Printing shall direct, and of which one hundred copies shall be for the use of the Senate and one thousand two hundred copies shall be for the use of the Members of the Senate from the State of South Dakota, and five hundred copies shall be for the use of the House of Representatives and one thousand two hundred copies shall be for the use of the Members of the House of Representatives from the State of South Dakota.

FEDERAL-STATE WATER RIGHTS—ADDITIONAL COSPONSOR OF BILL

Under authority of the order of the Senate of April 4, 1963, the name of Mr. JORDAN of Idaho was added as an additional cosponsor of the bill (S. 1275) to clarify the relationship of interests of the United States and of the States in the use of the waters of certain streams, introduced by Mr. KUCHEL (for himself and Mr. Moss) on April 4, 1963.

NOTICE OF HEARING ON INTERNATIONAL HOUSING

Mr. SPARKMAN. Mr. President, I should like to announce that the Subcommittee on Housing of the Banking and Currency Committee plans to hold hearings on the subject of "International Housing." The hearings are scheduled for April 22 through April 25, 1963, and will be held in room 5302, New Senate Office Building, commencing at 10 a.m. each day. Testimony will be received on the contents of papers prepared at the committee's request and published as a committee print.

NOTICE OF HEARING ON NOMINATION OF CHARLES B. FULTON TO BE U.S. DISTRICT JUDGE, SOUTHERN DISTRICT OF FLORIDA

Mr. EASTLAND. Mr. President, on behalf of the Committee on the Judiciary, I desire to give notice that a public hearing has been scheduled for Wednesday, April 24, 1963, at 10:30 a.m., in room 2300, New Senate Office Building, on the nomination of Charles B. Fulton, of Florida, to be U.S. district judge, southern district of Florida, a new position.

At the indicated time and place persons interested in the hearing may make such representations as may be pertinent.

The subcommittee consists of the Senator from South Carolina [Mr. JOHNSTON], the Senator from Nebraska [Mr. HRUSKA], and myself as chairman.

ADDRESSES, EDITORIALS, ARTICLES, ETC., PRINTED IN THE RECORD

On request, and by unanimous consent, addresses, editorials, articles, etc., were ordered to be printed in the RECORD, as follows:

By Mr. METCALF:

Statement of the Outdoor Recreation Resources Review Commission, relating to recreation values in the planning and design of highways.

TENTH ANNIVERSARY OF DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

Mr. RIBICOFF. Mr. President, tomorrow will make the 10th anniversary of the Department of Health, Education, and Welfare. While it is the newest of our Federal departments, it is performing a job which began even before the adoption of our Constitution. It was in 1785 that the Federal Government first began aiding education in this country. Other important functions of the Department, such as the Public Health Service, also have a long and distinguished history.

It was my great privilege to serve as Secretary of this Department at the start of the present administration. During my 18 months at HEW, I came to have a deep respect for the able men and women who work there. I know of no other department in our Government where ability and idealism are demonstrated to a higher degree by the career employees.

HEW serves all the people of this Nation. It serves them well, in an unbelievable variety of ways.

As new tasks have been assigned to it, the Department has grown rapidly in recent years. Each year, the Congress itself has voted increased funds for the Department, and has also authorized substantial increases in its personnel. In fact, for the 2 fiscal years during which I was associated with the Department, Congress voted for it more funds than the President's budget requested.

This Department has grown because each year Congress assigns it new and challenging tasks. While I served as Secretary, HEW was given responsibility for aid to dependent children of the unemployed, educational television, juvenile delinquency, manpower training, the Cuban refugee program, and expanded programs in radiological health, water pollution, control drug regulations, health research, welfare reforms, and social security benefits, to mention just a few examples.

The Department has a proud past, and I predict for it a bright future. It is the Department of the future. As new breakthroughs are recorded in medical research, as the public increasingly demands greater expansion of educational opportunities in this country, as proper financing of the health costs of the elderly becomes a reality, as increased protection is given the public against the hazards of polluted air and water and unsafe or worthless drugs, HEW will grow to meet these new challenges.

Mr. President, I ask unanimous consent to have printed in the RECORD a report, prepared by HEW, surveying its 10-year history. The report was prepared by HEW's Assistant Secretary, Wilbur J. Cohen, one of the most brilliant and dedicated men in public service today.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

THE 10TH ANNIVERSARY OF THE DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE—THE 1ST DECADE: CHANGE AND CHALLENGE

This year marks the 10th anniversary of the Department of Health, Education, and Welfare—the newest Federal agency to be represented in the President's Cabinet. However, the responsibilities it bears for the well-being of the American people date back to the early years of our Republic.

They began in 1785, when the Congress of the Confederation made grants of public lands to the States for public schools.

They were added to in 1798, when the fifth Congress established the Marine Hospital Service—forerunner of today's Public Health Service.

In 1867 the Federal Office of Education was established; in 1907 the Food and Drug Administration began as the Bureau of Chemistry in the Department of Agriculture; in 1912 the Children's Bureau was established; in 1920 the predecessor of the present Vocational Rehabilitation Administration began its important work; and in 1935 the Social Security Board was organized.

All these agencies were brought together in 1939 under the framework of the Federal Security Agency, and 14 years later the Agency was given Cabinet status when it became the Department of Health, Education, and Welfare.

In this chronology of the Department's growth, we can trace the Nation's growing recognition of the need for Federal participation in promoting the general welfare of the American people. Through periods of prosperity and depression, through civil strife and world conflict, the Federal Government has shared in the national concern for the well-being of every citizen.

We are now in an era of change and challenge which in many ways eclipses those critical periods of our past.

We are in the midst of a technological revolution which is changing the pattern of life and work of the American people.

As our national strength and prosperity have increased, we have grown more and more aware of pressing problems within our society which cry out for solution—problems of great magnitude and complexity that are beyond the resources of the individual and his local and State governments.

Some of these problems have long been with us and require solution even more urgently today; some are the outgrowth of the technological forces which are altering our society; others have arisen as a natural consequence of the higher human expectations of larger numbers of citizens.

In education, for example, we have a shortage of facilities and well-trained teachers at the same time that we face increasing demands for more schooling for more people. We have millions of young people and millions of adults whose lack of adequate education prevents them from enjoying a full measure of the Nation's prosperity and from making their full contribution to society.

Our aged men and women, those in the lowest income group and most subject to illness, have tragically inadequate insurance against the high cost of hospital care and related health services.

Other problems in our society represent an appalling waste of human lives and human potential: Mental illness and mental retardation, drug addiction, accidents, juvenile delinquency.

Increasingly we are concerned with problems of air and water pollution, and the proliferation of chemicals in the production and processing of foods.

In the following pages are summarized the progress this Department has made during the past decade in carrying out its responsibilities for the well-being of the American people.

As we review the successes of the Department's first 10 years, let us look forward to a second decade of helping to make available to all citizens full opportunities for the development of their talents and abilities. These are our most precious resources—our hope for the future.

ANTHONY J. CELEBREZZE,
Secretary of Health, Education, and Welfare.

THE 10TH ANNIVERSARY OF THE DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

(By Wilbur J. Cohen and Joseph W. Kappel)

Creation of the Department of Health, Education, and Welfare on April 11, 1953, culminated more than 30 years of effort by citizens who believed that the Federal Government needed an agency of Cabinet status to carry out effectively its constitutional responsibility for "promoting the general welfare." Only by such action could the health, education, and welfare interests of the American people receive their due consideration at the policymaking level of the President's Cabinet.

The changing concept of the Federal Government's responsibility with regard to the general welfare over a hundred-year period is evident when one contrasts the establishment of the Department of Health, Education, and Welfare in 1953 with the veto in 1854 by President Pierce of Dorothea Dix's bill for a grant of land to support the indigent curable and incurable insane in the United States. Despite "the deep sympathies of (his) own heart," the President vetoed this bill on the grounds that it was not proper nor constitutional for the Federal Government to provide "for the care and support of all those * * * who, by any form of calamity, become fit objects of public philanthropy."

Much has happened since that veto message was written. The importance of the change in viewpoint concerning the Federal Government's responsibility is demonstrated by the overwhelming, bipartisan support in the Congress when the legislation creating the Department in 1953 was enacted. After passage in the House by a vote of 291 to 86, it was approved by a voice vote in the Senate.

Senator Taft on that occasion said: "I am very much pleased that we have finally reached our objective. We have sought for a long time to give to the three agencies affected representation in the Cabinet, the policymaking section of the Government, immediately under the President. These activities of the Federal Government are tremendously important to the welfare of the Nation, although the Federal Government does not undertake to assume primary direction in the three fields."

Senator HUMPHREY stated that: "The plan meets a longfelt need for participation by the Federal Government in the services of health, education, and welfare. I concur in the view expressed by the Senator from Ohio [Mr. Taft] that the essential function of the proposed Department would be the carrying out of present programs, which are, in the main, State-aid programs, and represent mechanisms for cooperation between the Federal Government, State governments, and local institutions and governments in the field of health, education, and welfare."

DEMOGRAPHIC AND ECONOMIC BACKGROUND

Any account of the Nation's programs of health, education, and welfare during the past 10 years can be properly assessed only when viewed against the backdrop of the dramatic growth of our population and economy in recent decades. In the period for which figures are obtainable most closely matching the 10 years of the Department's history, the population increased by an unprecedented 30 million (July 1952 to July 1962). In 1963 the total population had reached 188 million people.

In 1962 we had over 17 million persons aged 65 and over, as compared with 13 million in 1952; our school-age population, largely concentrated in the 5 to 19 age group, numbered 52 million in 1962, as compared with 37 million in 1952. In the brief 30 months since the 1960 census and school age and younger population (under age 20) increased by over 4 million, while the adult working age population (20–64 years) increased by over 2 million.

Looking ahead to the next decades, a total population of about 250 million persons is estimated by the year 1980.

Aside from sheer growth, a remarkable feature of our demographic development in recent decades has been the shift from farm to city. While the population in urban areas increased by 28 million between 1950 and 1960 to a total of 125 million, the rural population actually declined from 54 million to 53 million. We have become an urban society with problems of health, education, and welfare concentrated in urban-suburban areas.

The period 1953–63 has been notable not only for its great increase of population but also for the vast growth of the American economy. The gross national product grew from $365 billion in 1953 to $554 billion in 1962. Personal income increased during this period, and per capita disposable personal income rose from $1,582 in 1953 to over $2,000 in 1963. At the same time, there were rises in the cost of living.

A significant factor from the standpoint of the programs of the Department of Health, Education, and Welfare has been the unusual increase in the cost of medical care. Whereas the overall Consumer Price Index rose from 93.2 to about 106 during the past decade, the index for medical care increased from 83.9 to 115. Most important of all, analysis of the medical care index reveals that physician's fees were consistent with the overall increase, and prescriptions and drugs declined somewhat, but the "hospital daily service charge" component rose from 74.8 in 1953 to over 131 in 1963. In dollars, this means that hospital care now averages more than $35 a day. This is the most dramatic increase in the Consumer Price Index.

Some significant developments in health, education, and welfare, 1952–62

Item	1952	1962
Mental hospital patients	596,000	604,000
Paralytic poliomyelitis cases	21,269	709
Hospital expense:		
Per patient day	$18.35	$34.98
Per patient stay	$138.73	[1] $267.37
Number of children under age 18	50,200,000	67,400,000
Elementary and secondary school enrollments	[2] 30,600,000	46,700,000
College and university enrollment	[2] 2,302,000	[3] 4,600,000
Educational expenditures (billions)	$11.3	$27.3
Old-age and survivors insurance beneficiaries	5,026,000	18,053,000
OASI payments per retired worker (monthly)	$49.25	$76.19
Number of aged 65 and over	13,000,000	17,300,000
Recipients of old-age assistance	2,646,000	2,226,000
Vocational rehabilitants	63,632	102,377

[1] 1961.
[2] 1951–52.
[3] 1962–63.

TOTAL EXPENDITURES FOR HEALTH, EDUCATION, AND WELFARE

The Federal role in health, education, and welfare, substantial as it is, is but one segment of a large national effort to which important contributions are made by State and local governments and by private individuals and organizations. All of these activities amounted to a total expenditure, public and private, on health, education, and welfare, of $42 billion in 1953; by 1963 this amount had increased to $101 billion. During this period, the ratio between private and public expenditures remained fairly constant, with $1 in private funds expended for approximately each $2 of public funds.

Of the $101 billion[1] estimated expenditures on health, education, and welfare in 1963: $34 billion was spent for health—25 percent from public funds and 75 percent from private funds; $28 billion was spent for education—80 percent from public funds and 20 percent from private funds; $41 billion was spent for social insurance and welfare—86 percent from public funds and 14 percent from private funds.

The significant roles of the public and private sectors of our society, in assuming the financial burden of these enormous expenditures, demonstrate the viability of a highly important and indeed unparalleled partnership in our society among private individuals and organizations, their local and State governments, and the Federal Government.

MAJOR CHANGES IN PROGRAMS

In 1954, Federal payments to States for the needy and destitute constituted 72 percent of the Department's total budget (excluding old-age and survivors insurance benefit payments), whereas they comprise only 51 percent of the Department's budget in 1963. This decrease in comparative importance of programs for the needy during a time when the total budget of the Department has increased symbolizes the major changes in the Department's programs during its first 10 years.

During this period, the other programs of the Department have experienced a fivefold expansion from a level of $540 million to $2.5 billion. While almost all of the Department's programs have shared in this growth, the major developments have been in the following three program areas:

1. Medical research programs of the National Institutes of Health.
2. Federal-State assistance programs in community and environmental health, especially in construction grants for hospitals and sewage treatment plants.
3. Federal aid to elementary, secondary, and higher education under the omnibus provisions of the National Defense Education Act.

The key feature of this 10-year period is patently a change of emphasis from amelioration to prevention and development. The newly born Department of Health, Education, and Welfare took over functions which in large measure looked back to problems created by past emergencies or depressions and other types of crisis, functions designed to help people adversely affected by these problems, whereas the Department of 1963, while making a major effort to improve its ameliorative programs, is stressing solutions to present and emerging problems and opportunities.

LEGISLATIVE DEVELOPMENTS

The shift in emphasis from amelioration to prevention has developed, in large measure, by means of the major legislative changes in the fields of health, education, and welfare that have been enacted over the past 10 years. This legislation has effected needed improvements and new directions in basic statutes governing the programs of the Department, and has also established important new programs of Federal assistance to the States and local communities to help solve pressing health, educational and social problems.

Social insurance has been strengthened in its role as the first line of defense against economic insecurity through legislative improvements that have broadened the coverage and strengthened the financial base of the program, raised benefit levels, and added a new category of benefits for disabled workers and their families. The supportive role of assistance programs has been given new dimensions by the Public Welfare Amendments of 1962, which emphasize preventive and rehabilitation services and the training of competent staff, and provide the States with new tools for making welfare programs more effective. Extension and improvement of vocational rehabilitation services have grown out of the Vocational Rehabilitation Amendments of 1954, which strengthened the financial base of rehabilitation programs and improved resources and facilities through more effective use of available Federal funds.

Public health legislation during the past decade has emphasized the preventive approach through new programs of Federal grants for environmental health control, of grants to promote research toward the prevention and cure of the physical and mental diseases of man, and of grants-in-aid for the construction of diagnostic centers, rehabilitation facilities, and nursing homes, and by strengthening the existing regulatory powers of the Federal Government with respect to food, drugs, and cosmetics.

The role of education as an indispensable factor in economic growth and the maximization of individual potential has been given statutory recognition in the National Defense Education Act, which has as its purpose the fullest development of the mental resources and technical skills of (the Nation's) young men and women.

MAJOR HEW LEGISLATIVE DEVELOPMENTS, 1953–62

During the 10-year period, Congress enacted more than 120 pieces of health, education, and welfare legislation, of which 27 were major new or amended programs.

---

[1] The adjusted total of $101 billion eliminates duplication in use of income-maintenance payments (public and private) for private purchase of health or education services. A complete tabulation of these expenditures will be presented in the May issue of Indicators. For an explanation of what is included in these figures see Ida Merriam's "Social Welfare Expenditures, 1960–61" in the November 1962 issue of the Social Security Bulletin.

No brief discussion can do justice to the important and many-faceted laws which have been enacted by the Congress during this decade. Even the list which follows, within space limitations, only enumerates the most important.

Listed first are enactments which initiated fundamental changes; in a second group are those changes in or additions to existing programs which are of only slightly less importance.

Basic legislation

Environmental

Air Pollution Control Act of 1955: Provides for studies, investigations, and dissemination of information and for grants and contracts for research, training, and demonstration projects in the field of air pollution control; date enacted, July 14, 1955; Public Law 84-159.

Federal Water Pollution Control Act Amendments of 1956: Provide for comprehensive programs for water pollution control; interstate cooperation; research, investigation, and training; grants for water pollution control programs; grants for construction of treatment works; enforcement measures against pollution of interstate water, etc. Supplants the Water Pollution Control Act of 1948 (Public Law 845, 80th Congress); date enacted, July 9, 1956; Public Law 84-660.

Federal Water Pollution Control Act Amendments of 1961: Broaden and strengthen the Federal Government's pollution abatement powers in this field, provide for a greatly stepped up program of grants for waste treatment works, authorize increased Federal support of State and interstate pollution control programs, provide for an intensified program of research into more effective methods of pollution control, and establish the principle of water quality control as a criterion in planning and building Federal reservoirs; date enacted, July 20, 1961; Public Law 87-88.

Manpower and Facilities

Health Amendments Act of 1956: Assists in increasing the number of adequately trained professional and practical nurses and professional public health personnel, and in the development of improved methods of care and treatment in the field of mental health; date enacted, August 2, 1956; Public Law 84-871.

Medical Facilities Survey and Construction Act of 1954: Amends the hospital survey and construction provisions of the Public Health Service Act (title VI) to provide grants for surveying the need for, and for constructing, diagnostic or treatment centers, hospitals for the chronically ill and impaired, rehabilitation facilities, and nursing homes; date enacted, July 12, 1954; Public Law 83-482.

Health Research Facilities Act of 1956 (adds title VII to Public Health Service Act): Authorizes grants for construction of health research facilities; date enacted, July 30, 1956; Public Law 84-835.

Food and Drug

Pesticide Amendment of 1954: Amends Federal Food, Drug, and Cosmetic Act with respect to residues of pesticide chemicals in or on raw agricultural commodities; date enacted, July 22, 1954; Public Law 83-518.

Food Additives Amendment of 1958: Amends the Federal Food, Drug, and Cosmetic Act to prohibit the use in food of additives which have not been adequately tested to establish their safety; date enacted, September 6, 1958; Public Law 85-929.

Kefauver-Harris amendments ("Drug Amendments of 1962") to Federal Food, Drug, and Cosmetic Act: Broaden factory inspection authority with respect to prescription drugs; require adequate safety and quality controls in drug manufacture; require new drugs to be cleared for efficacy (as well as safety) before they are marketed, permit summary suspension of new-drug clearance if there is an imminent hazard to public health, and otherwise improve new-drug regulation; require batch-by-batch certification of all antibiotics for treatment of humans; require prescription drug advertisements to be more informative; authorize standardization of nonproprietary drug names; require registration of drug manufacturers; date enated, October 10, 1962; Public Law 87-781.

Education

Cooperative Research (in Education) Act of 1954: Authorizes contracts or jointly financed cooperative arrangements with universities and colleges and State educational agencies for the conduct of research, surveys, and demonstrations in the field of education; date enacted, July 26, 1954; Public Law 83-531.

Library Services Act: Authorizes grants to States to promote the further extension of public library services to rural areas without such services, or with inadequate services; date enacted, June 19, 1956; Public Law 84-597.

National Defense Education Act of 1958: Provides, among other things, for college and university student loans; grants and loans for strengthening elementary and secondary school instruction in science, mathematics, and modern foreign languages; fellowships for graduate study; payments for programs of guidance, counseling, and testing in secondary schools; university centers for study in rare modern languages and institutes for teachers of modern foreign languages; grants and contracts for research and experimentation in the use of radio, television, motion pictures, and related communications media for educational purposes; grants for area vocational education programs; and grants to improve statistical services of State educational agencies; date enacted, September 2, 1958; Public Law 85-864.

Welfare and Income Maintenance

Social insurance and protection

Social Security Amendment of 1954: Amend the Social Security Act and the Internal Revenue Code to extend coverage under the old-age and survivors insurance program, increase the benefits, preserve the insurance rights of disabled individuals, and increase the amount of earnings permitted without loss of benefits; date enacted, September 1, 1954; Public Law 83-761.

Social Security Amendments of 1956: Provide disability insurance benefits for certain disabled individuals who have attained age 50, reduce to 62 the age on the basis of which benefits are payable to certain women, provide for child's insurance benefits for children who are disabled before reaching age 18, and further extend coverage; date enacted, August 1, 1956; Public Law 84-836.

Social Security Amendments of 1960: Extend and improve coverage under OASDI and remove hardships and inequities, improve the financing of the trust funds, and provide disability benefits to additional individuals under such system, provide grants to States for medical care for aged individuals of low income, amend the public assistance and maternal and child welfare provisions; date enacted, September 13, 1960, Public Law 86-778.

Public Assistance

Public Welfare Amendments of 1962: Assist the States in providing more rehabilitation services in order to get individuals off the welfare rolls and in developing better trained staffs to render these services; in increasing payments to the aged, the blind, and the disabled; in improving the aid-to-dependent-children program, to provide for protective payments, payments on the basis of the unemployment of the parent, community work and training programs, and payments to children removed by court order to foster home care, etc. Also provide for substantial increases in the authorizations for child welfare services; date enacted, July 25, 1962; Public Law 87-543.

Vocational Rehabilitation

Vocational Rehabilitation Amendments of 1954: Amend the Vocational Rehabilitation Act to promote and assist in the extension and improvement of vocational rehabilitation services, provide for more effective use of available Federal funds, and otherwise improve the provisions of that act; date enacted, August 3, 1954; Public Law 83-565.

Legislation effecting major program changes

Health

Indian Health Services Act: Transfers the administration of health services for Indians and the operation of Indian hospitals to the Public Health Service; date enacted, August 5, 1954; Public Law 83-568.

Authorizes the transfer of Freedmen's Hospital to Howard University and the construction of a new and modern teaching hospital for Howard's program of medical teaching, research, and service to the community; date enacted, September 21, 1961; Public Law 87-262.

Food and drug

Federal Hazardous Substances Labeling Act: Regulates labeling of hazardous substances in household-size containers which may cause substantial personal injury or substantial illness. Replaces the Federal Caustic Poison Act, except with respect to foods, drugs, and cosmetics, which remain subject to the latter act; date enacted, July 12, 1960; Public Law 86-613.

Color Additive Amendments of 1960: Amend the Federal Food, Drug, and Cosmetic Act to authorize the use of suitable color additives in or on foods, drugs, and cosmetics, in accordance with regulations prescribing the conditions (including maximum tolerances) under which such additives may be safely used; date enacted, July 12, 1960; Public Law 86-618.

Training and retraining

Area Redevelopment Act: Provides for Federal financial assistance for industrial projects, public facilities, urban renewal, and occupational retraining in designated areas of chronic unemployment and underemployment. The Secretary of Health, Education, and Welfare is responsible for providing assistance for occupational retraining of persons referred to him by the Secretary of Labor, through contracts with State vocational education agencies or with educational institutions; date enacted, May 1, 1961; Public Law 87-27.

Manpower Development and Training Act of 1962: Authorizes the Secretary of Labor to determine the skill requirements of the economy, encourage the development of programs, including on-the-job training, to equip the Nation's workers with the new and improved skills that are required; makes Secretary of Health, Education, and Welfare responsible for entering into agreements with States to provide occupational training to unemployed or underemployed persons referred to him by the Secretary of Labor, etc.; date enacted, March 15, 1962; Public Law 87-415.

Welfare and Income Maintenance

Social insurance and protection

Servicemen's and Veterans' Survivor Benefits Act (includes Public Health Service officers; also amends title II of the Social Security Act): Extends coverage under the OASDI program to members of the uniformed services on a contributory basis; date enacted, August 1, 1956; Public Law 84-881.

Social Security Amendments of 1958: Increase benefits under OASDI, improve actuarial status of the trust funds, and amend the public assistance and maternal and child health and welfare provisions of the

Social Security Act; date enacted, August 28, 1958; Public Law 85–840.

Public assistance

Public Welfare Amendments of 1961: Amend title IV of the Social Security Act to authorize Federal financial participation in aid to dependent children of unemployed parents; also includes Federal payments for foster home care of dependent children, 1-year extension of appropriation authorization for training grants for public welfare personnel, and increases maximum medical care expenditures (in behalf of old-age assistance recipients) with respect to which there will be Federal participation; date enacted, May 8, 1961; Public Law 87–31.

Juvenile delinquency

Juvenile Delinquency and Youth Offenses Control Act of 1961: Provides for Federal assistance for projects which will demonstrate or develop techniques and practices leading to a solution of the Nation's juvenile delinquency control problems; date enacted, September 22, 1961; Public Law 87–274.

LEGISLATIVE DEVELOPMENTS, 1961–62

In both 1961 and 1962 President Kennedy sent to the Congress special messages on education and health. In addition the President transmitted special messages in 1962 on public welfare and consumer protection—these were subjects of Presidential messages for the first time. During the past 2 years, Congress enacted and President Kennedy approved 26 significant legislative improvements in health, education, and walfare. These enactments brought about needed improvements and changes in the basic programs of the Department. In addition, important new programs of Federal assistance to States and local governments were initiated which will be of great significance in the solution of health and social problems.

Legislation enacted, 1961–62

Health

Drug Amendments of 1962, Public Law 87–781.

Federal Water Pollution Control Act Amendments of 1961, Public Law 87–88.

National Institutes of Child Health and Human Development, and of General Medical Sciences, Public Law 87–838.

Community Health Services and Facilities Act of 1961, Public Law 87–395.

Transfer of Freedmen's Hospital to Howard University, Public Law 87–262.

Health clinics for domestic migratory farm workers, Public Law 87–692.

Air Pollution Control Act, Public Law 87–761.

Vaccination Assistance Act of 1962, Public Law 87–868.

Education and Training

Manpower Development and Training Act of 1962, Public Law 87–415.

Practical Nurse Training Extension Act of 1961, Public Law 87–22.

Area Redevelopment Act—Vocational retraining, Public Law 87–27.

Training of teachers of the deaf, Public Law 87–276.

Captioned films for the deaf, Public Law 87–715.

American Printing House for the Blind, Public Law 87–294.

Extension of NDEA and impacted area program, Public Law 87–344.

Repeal of disclaimer affidavit in National Defense Education Act, Public Law 87–835.

Educational television, Public Law 87–447.

Surplus property for schools for the physically handicapped and mentally retarded, educational radio-TV, and public libraries; Public Law 87–786.

Welfare and Income Maintenance

Public Assistance Amendments of 1961 (aid to dependent children of unemployed parents), Public Law 87–31.

Public Welfare Amendments of 1962, Public Law 87–543.

Public Works Acceleration Act, Public Law 87–658.

Social Security Amendments of 1961, Public Law 87–64.

Assistance to U.S. citizens returned from abroad, Public Law 87–64.

Juvenile Delinquency and Youth Offenses Control Act of 1961, Public Law 274.

Migration and Refugee Assistance Act (Cuban refugee program), Public Law 87–510.

Alien orphan legislation, Public Law 87–301.

FEDERAL BUDGET AND DEPARTMENTAL APPROPRIATIONS

During the period under review, Federal budget expenditures increased from $74 billion in 1953 to $94 billion in 1963, and the Department of Health, Education, and Welfare's appropriations rose from $2 billion to $5 billion. The gross national product increased from $365 billion in 1953 to over $550 billion in 1963. The Department's appropriations amounted to .06 percent in 1953 and .09 percent in 1963—still less than 1 percent of the gross national product.

A consistent aspect of the Department's expenditures has been that 90 percent of its funds are allocated in the form of grants to States, local communities, and institutions. Despite the increase in these programs, Department of Health, Education, and Welfare grants have actually declined as a percentage of total grants of the Federal Government. Whereas the Department's grants amounted to 63 percent of total Federal grants in 1953, they had declined to 41 percent in 1963. This change is accounted for by increased Federal expenditures for highways and airport construction, housing and urban redevelopment, preservation of national resources, and promotion of agriculture.

A comparison of the appropriations for the programs of the Department of Health, Education, and Welfare in fiscal year 1954 (its first full year) and in fiscal year 1963 reveals important changes in emphasis. As noted above, appropriations moved up from almost $2 billion in 1954 to over $5 billion in 1963. Grants to the States for public assistance increased substantially in this period, reflecting such factors as the increase in the number of recipients of aid to dependent children and frequent congressional enactment of amendments increasing the Federal share of welfare payments and adding new categories of recipients. These Federal payments to States for the needy and destitute account for the great bulk of appropriations to the Department, an amount which is governed by the magnitude of State action and State expenditures on these programs.

INTRAMURAL OPERATIONS

In contrast with the grant programs of the Department, the direct (intramural) activities have averaged about 10 percent of the Department's funds. The largest single activity in this category in recent years is direct research, mostly health research of the National Institutes of Health. Another large amount, almost one-quarter of intramural funds, finances patient care activities through the Indian health program, the Public Health Service hospital system; St. Elizabeths Hospital for the mentally ill, and Freedmen's Hospital. Among other intramural activities, significant sums are used for regulatory programs such as that of the Food and Drug Administration, for civil defense activities, and for special foreign currency research programs.

Administration of the large grant programs of the Department took about six-tenths of 1 percent of the total funds of the Department, excluding trust funds.

STAFF

As Congress has added new responsibilities, the staff of the Department has grown from about 37,000 in 1954 to approximately 82,000 in 1963. Of this total, 45 percent were engaged in administering the old-age, survivors, and disability programs (the cost of which is not borne from general revenue funds), 22 percent for patient care programs, and 19 percent for direct research and technical assistance to the States.

The largest part of the staffing increase between 1954 and 1963 is accounted for by the social security (OASDI) program. Annual benefit payments under this program will reach $15 billion in 1963. A portion of the OASI growth is attributable to the national increase in workload deriving from population growth, and part to the frequent amendments to the Social Security Act which have been enacted by the Congress, giving social security coverage to more people, creating the disability benefit program, and modifying and liberalizing the existing benefits. A testimonial to the efficient operation of this program has been the remarkably small proportion of contribution income—2½ percent—represented by administrative costs.

Apart from the farflung organization of the Social Security Administration, the next largest single group of employees in the Department are those engaged in the direct care of patients in the Public Health Service hospitals, which provide care for merchant seamen, American Indians, and other Federal beneficiaries, and in St. Elizabeths and Freedmen's Hospitals in the District of Columbia. The expansion of staff in these programs is related to the expansion of coverage and the improvement of the quality of this care.

A third large block of employees are those carrying out direct medical research and the administration of research grant programs on the National Institutes of Health campus at Bethesda. The increase of about 7,000 employees over the period is primarily a measure of the extraordinary emphasis placed by the Congress on this field of endeavor in the past 10 years.

Increases of lesser magnitude, but still very significant, have been experienced in most other departmental programs, particularly those concerned with research and technical assistance to States and local communities in the fields of community and environmental health, and the consumer protection programs of the Food and Drug Administration.

TOWARD THE FUTURE

At the close of the Department of Health, Education, and Welfare's first decade certain signposts pointing to the activities of the Department during the following decade had become visible. The change of emphasis from amelioration to prevention and development was fortified by increased emphasis within the Office of the Secretary upon program interests which are found in more than one agency of the Department, as a result of the related responsibilities of the agencies. Major attention has been devoted to strengthened programs in the field of aging, juvenile delinquency, mental retardation, consumer protection, manpower development and training, and educational television. In recent years the international responsibilties of the Department had expanded considerably along with an increasing realization around the world that social reforms are major factors in national growth and stability.

At the very end of its first 10 years the Department undertook its most important organizational change by creating a new Welfare Administration, separating the Children's Bureau and the Bureau of Family Services from the Social Security Administration in order to give added prominence to these major programs.

Proposals for Federal action to further improve the Nation's health, education, and welfare have been made by President Kennedy this year in five special messages dealing with education, health, mental health and mental retardation, youth, and aging. The last three topics were the subjects of a special Presidential message for the first time in history. These messages indicate the areas in which improvements in existing programs are desirable and necessary.

The departmental developments during the past 10 years, as described above, have added a considerable number of new responsibilities to the programs of each agency of the Department.

A brief account of each agency's developments during the decade is presented. A final page reviews developments in the three educational institutions (Gallaudet College, Howard University, and the American Printing House for the Blind) which are supported by the Department.

THE PUBLIC HEALTH SERVICE, 1953–63

Over the past decade the Public Health Service broadened its support of research studies, training of research personnel, and construction of research facilities by private, nonprofit institutions. The scope of research conducted has undergone similar expansion: a 500-bed clinical center was opened at the National Institutes of Health in 1953; the seventh institute in the NIH complex—the Institute of Allergy and Infectious Diseases—was established in 1957; and in 1962 Congress approved the creation of Institutes of General Medical Sciences and of Child Health and Human Development.

Highlights of research by PHS scientists and grantees include advances in cancer chemotherapy and in open heart surgery, development of vaccines against influenza and upper respiratory infections, improved drugs for arthritics and mental patients, and the partial "cracking" of the genetic code. Emphasis has been placed on training grants, fellowships, and traineeships to help increase the Nation's supply of doctors, nurses, and other specialized medical and health personnel. Over $1 billion has been spent since 1953 under the Hill-Burton program for the construction of hospitals, nursing homes, and other health facilities.

A major national effort against environmental health hazards has gained momentum, resulting in the establishment of a number of new Public Health Service divisions and field laboratories. Legislation since 1953 has provided authority for expanded programs to study and control air and water pollution. In 1958 responsibility for the collection, collation, and dissemination of data on environmental radioactivity was delegated to the Service by the Secretary of DHEW. Radiological health activities were intensified following the resumption of atmospheric nuclear testing in 1961. Continued progress has been made in combating occupation health hazards and general sanitation problems, including food-borne diseases.

The critical need for comprehensive health services led to passage of the Community Health Services and Facilities Act of 1961 which authorizes PHS grants for community studies and demonstrations to develop new or improved out-of-hospital services, particularly for the aged and chronically ill. The health standards of American Indians and Alaskan natives have been steadily improved through a broad program of preventive and curative medical services since responsibility for health care was transferred from the Department of the Interior to the Public Health Service in 1955.

A National Library of Medicine was established in 1956; work began in 1961 on an electronic data processing system known as Medlars to improve the capacity to store, retrieve and disseminate information. Major PHS components engaged in measuring the Nation's health status were brought together in 1960 in a National Center for Health Statistics.

ST. ELIZABETHS HOSPITAL, 1953–63

The retirement in October 1962 of Dr. Winfred Overholser, long Superintendent of St. Elizabeths, provided an occasion for assessing the many changes that have taken place at the hospital:

Patient movement: There was a reversal of the long-term climb in the number of patients in the hospital but turnover and general patient activity increased. From a peak of 7,278 patients in June 1955, the average patient census declined at an accelerating rate to 6,771 in June 1962. The number of patients on visit or leave statuses rose from about 250 to over 1,100. Admissions increased by 41 percent from 1,438, 10 years ago, to 2,024 in 1962; discharges doubled from 814 to 1,649. Voluntary admissions increased 2½ times.

Changes in staff and facilities: The staff grew from 2,500 employees to 3,700, and the number of physicians increased from 43 to 82, but staff shortages are still acute. Since 1956 several new buildings have been opened including one for the admission and treatment of patients under age 64, an interfaith chapel, a maximum security building, and a physical rehabilitation building. Older buildings, equipment, and furnishings are being refurbished, and appropriations have been made for a psychiatric-rehabilitation center.

Changes in treatment methods and programs: The use of tranquilizing drugs was shown to be effective; psychosurgery (lobotomy) was discontinued. Racial integration was achieved without notable incident. The development of the "therapeutic community" was begun; studies of the interrelationships of staff, personnel and patients, and partial self-government by patients was initiated. A successful reemployment program for rehabilitated patients was developed. Publication of the report of the Joint Commission on Mental Health stressed new concepts of patient care, and a vigorous attempt was made, with increasing success, to send patients out to nonmedical facilities.

Development of national significance: The Durham decision of 1954 initiated constructive changes in attitudes toward criminal responsibility of the mentally ill. The hospital centennial was observed in 1955 with a 2-day scientific program featuring papers read by U.S. and foreign psychiatrists and subsequently published in book form. The Clinical Neuropharmacology Research Center (1957), and the Behavioral and Clinical Studies Center (1961) were established in collaboration with the National Institute of Mental Health. A 1960 statute made certain U.S. nationals who become mentally ill while abroad eligible for admission to the hospital. In 1962 an effort toward educating the general public regarding mental illness was made in a series of 26 5-minute transcribed broadcasts, heard in every State over some 450 radio stations.

THE FOOD AND DRUG ADMINISTRATION, 1953–63

For the Food and Drug Administration, the past decade has been one of steadily increasing responsibility and correspondingly rapid growth. Scientific progress, new legislation, and a new public awareness of the importance of consumer protection contributed to the evolving pattern.

Much of the change was stimulated by new product development in the regulated industries. Miraculous new chemicals for agriculture, strange new additives for processed foods, lifesaving but potentially dangerous new drugs, and useful but hazardous household chemical aids demanded stronger controls to keep public benefits and public risks in balance.

Marking a new trend in consumer protection, the principle of premarketing safety clearance by the Government, pioneered for new drugs and color additives in 1938, was extended to pesticides in 1954 and to additives for processed foods in 1958, and was further strengthened for color additives in 1960. In each case safety controls were provided to limit the amounts of new chemicals allowed in consumer products. These controls aim for prevention of harm rather than after-the-fact punishment or correction of violations. The burden of proof of safety is on the manufacturer.

The Hazardous Substances Labeling Act of 1960 contains labeling requirements aimed at protecting children and others from accidental injury from the many hazardous chemicals in use and storage in every household.

The Kefauver-Harris Drug Amendments of 1962 represent another milestone in consumer protection legislation. This new law extends the premarketing clearance principle to require that new drugs be proved both safe and effective before they are marketed, and provides other new controls to assure the integrity of drugs.

To keep pace with scientific and legislative developments, FDA has increased its scientific staff and broadened its scientific competence to assure proper evaluation of the safety of products for their intended use. Through application of the most modern methods and equipment, FDA has become one of the worlds leading laboratory institutions in the analysis of foods, drugs, and evaluating the safety of additives.

The mid-1950's had found the Food and Drug Administration at a low point in its ability to discharge its responsibilities. Despite rapidly multiplying problems in consumer protection, there were fewer enforcement personnel in 1955 than in 1941. Actions against frauds and cheats had to be stopped in order to carry out programs directly related to the public health.

A Citizens Advisory Committee appointed by the Secretary in 1955 to study FDA's responsibilities and resources pointed up the need for additions to staff, better facilities, and better equipment. The Committee report managed to communicate FDA's needs, and marked a turning point that presaged an era of growth and development. Appropriations increased from $5.6 million in 1953 to $28.3 million in 1963; budgeted positions rose from 829 in 1955 to 3,012 in 1963. A new headquarters building in Washington is nearing completion, and new and improved laboratories have been provided for 11 of the 18 district offices.

THE OFFICE OF EDUCATION, 1953–63

Since becoming a part of the Department of Health, Education, and Welfare on April 11, 1953 (Public Law 83–13), the Office of Education has passed through the most significant period in its 96-year history as the primary education agency of the Federal Government. The original mandate of the Office for gathering statistics and facts has been strengthened by legislative enactments. The Office identifies needs, evaluates resources, and provides professional and financial assistance to strengthen areas of education where there is an urgent national interest.

Financial aid for research, experimentation, and demonstration to extend basic knowledge in education was made possible through legislation in 1954 (Public Law 83–531). The cooperative research program enables projects to be supported in such fields as: retention of students, special abilities, mental retardation, staffing of schools and colleges, school and college organization and administration, instructional subjects of special concern, such as mathematics, sciences, and modern foreign languages, and the teaching of English. The Office disseminates information and seeks ways to translate into theory and ultimately into practice in education the findings of the research completed.

Other significant programs that have been added by new legislation during the past 10 years include: A grant-in-aid program to assist States in extending public library services to rural areas was provided by the Library Services Act of 1956 (Public Law 84–597, as amended). The most significant financial assistance for education which was added during the 10-year period was the National Defense Education Act of 1958 (Public Law 85–864, as amended). It authorized more than $1 billion in Federal aid from elementary through graduate school with student loans being the largest single item in the program. Federal assistance for the retraining of unemployed or underemployed persons has been provided by the Area Redevelopment Act of 1961 (Public Law 87–415). A 10-year program of $1 million a year in grants to institutions of higher learning and to State educational agencies to encourage expansion of education in the teaching of the mentally retarded was authorized by the Education for the Mentally Retarded Act of 1958 (Public Law 85–926, as amended). Grants to educational institutions that are training teachers of the deaf, and for scholarships, are provided by the Training Teachers for the Deaf Act of 1961 (Public Law 87–276).

The Office has continued during the past decade to collect, analyze, and publish national statistics on education at all levels.

THE SOCIAL SECURITY ADMINISTRATION, 1953–63

The social security programs were significantly improved and expanded during the decade since the establishment of the Department of Health, Education, and Welfare. Disability benefits were added to the old-age and survivors insurance program and the coverage of the system was extended to almost the entire working population. There were two general increases in benefit amounts, an additional increase in the minimum payable, and an upward adjustment for aged widows. Other liberalizations in the law included lowering the retirement age from 65 to 62, raising the amount that a worker can earn without losing benefits, and omitting up to 5 years of lowest earnings in calculating benefits. The number of beneficiaries more than tripled during the decade.

The Federal financial share in the public assistance programs was increased over the 10-year period, and provision was made for proportionately more help to those States where need is greatest and income and financial ability least. States were encouraged to extend and improve the medical care available to public assistance recipients, and a special program was started for elderly persons who are medically indigent.

Increasingly over the decade, the public assistance programs assumed the role originally intended for them, i.e., as supplementary to the basic social insurance program. With social insurance providing more and more effectively for minimum economic security, an increasing proportion of those on public assistance rolls were families with multiple problems and disadvantages. Provisions for social services by trained public welfare staff to such families and potentially dependent families were made in amendments to the Social Security Act.

Child welfare services were also expanded to better serve the current needs of the Nation: In this program and the maternal and child health and crippled children's programs, increased Federal financial support and leadership served to stimulate State and local action.

Intramural research in social security was expanded, moving toward the exploration of fundamental questions in the area of human resources and social welfare. Extramural research programs were initiated to acquire needed knowledge about causes and prevention of dependency, improvement of child welfare and reduction of delinquency.

Federal credit unions more than doubled their membership and tripled their assets to enhance their worth as a valuable adjunct to the social security programs. From 1958 on, the Bureau of Federal Credit Unions was supported entirely from fees for chartering and supervising local credit unions.

Responsibility for the Department's social security programs was realined effective January 28, 1963. The Social Security Administration was made responsible for the programs of the Bureau of Old Age and Survivors Insurance, the Bureau of Hearings and Appeals, and the Bureau of Federal Credit Union; and a Welfare Administration was organized with responsibility for the programs of the Bureau of Family Services and the Children's Bureau, the work of the special staffs on aging and juvenile delinquency, and the Cuban refugee program.

THE VOCATIONAL REHABILITATION ADMINISTRATION, 1953–63

Major progress has been made in rehabilitation of handicapped persons to productive and satisfying life. A new charter of operations passed in 1954 (Public Law 83–565) provided for expansion of the program of vocational rehabilitation through four major devices:

1. Adoption of a new grant-in-aid system to increase Federal and State funds for expanding services to disabled people. Rehabilitations rose from 55,800 in 1954 to 102,400 in 1962. Funds increased from $36 million ($23 million Federal and $13 million State) in 1954 to $173.4 million for 1963 ($100.4 million Federal, $73 million State).

2. Authorization of major programs of research and training: About 600 research and demonstration projects have been approved in many areas, including mental retardation, mental illness, blindness, speech and hearing problems. Research funds of $46.2 million have been committed. Teaching and training grants totaling $47 million have enabled about 6,000 students to obtain training in short-supply professional fields.

3. Temporary authority and support of incentive grants to expand services and facilities brought establishment or improvement of 112 facilities and workshops at a cost of $2.7 million in Federal and matching funds.

4. A continuing program of incentive extension and improvement grants, combined with regular support grants, have resulted in establishment or improvement of 280 facilities and workshops at a cost of $14.4 million in Federal and State funds.

In 1954, the Congress also authorized Federal money for constructing community rehabilitation facilities under the Hill-Burton program. This has resulted in 234 facilities of various types from $48 million of Federal funds and $102 million of local money.

In the same year the Social Security Act was amended to protect the retirement rights of disabled workers under OASI, and subsequent amendments made cash benefits payable to disabled workers, first over age 50, and then for such workers and dependents regardless of age. In these amendments Congress brought the concept of vocational rehabilitation into integral relationship with disability protection and expressed a preference for State vocational rehabilitation agencies to make disability determinations of persons applying for disability benefits, simultaneously affording them an opportunity for vocational rehabilitation services.

The Vocational Rehabilitation Administration is encouraging State vocational rehabilitation agencies to conduct with public assistance agencies cooperative demonstrations of rehabilitation of public welfare clients. Four such projects are underway or in advanced planning stages in California, Oregon, Vermont, and New Jersey; many more are expected within the year. The recent elevation in status from Office to Administration, coincident with creation of the Welfare Administration, underlines the importance of rehabilitation of dependents through cooperative effort.

FEDERALLY AIDED EDUCATIONAL INSTITUTIONS, 1959–63

Gallaudet College, the only college for the deaf in the world, was founded in 1864, to provide a liberal higher education for deaf persons who need special facilities to compensate for their loss of hearing. Gallaudet College's most significant development in the past 10 years has been accreditation by the Middle States Association of Colleges and Secondary Schools. The completion of 8 new buildings during the past decade have enabled Gallaudet to accommodate an increased enrollment which now numbers 600 and includes students from all over the world. A milestone in the education of the deaf has been achieved with the admission of deaf students into the graduate program for training teachers of the deaf. Gallaudet College is one of the 40 colleges participating in the program for training teachers of the deaf under Public Law 87–276.

The most significant events which have occurred at Howard University in the past 10 years include the establishment of programs leading toward the doctor of philosophy degree, begun in 1955 in the department of chemistry and expanded to the point where Ph. D. degrees are now offered in seven fields of study; the construction of nine new buildings, which have enabled the university to keep its physical plant abreast of academic expansions; the introduction of an academic program in African studies; the election of Dr. James Madison Nabrit, Jr., as president of Howard University in July 1960. In addition, during the past 10 years foreign student enrollment has grown to the point where Howard University now has the largest percentage of foreign students of any American university—approximately 16 percent of the total student body. Since 1953 national honor societies have been added in many areas of study, including the most renowned, Phi Beta Kappa and Sigma Xi.

The American Printing House for the Blind, which is the largest publishing house and manufacturer of special devices for the aid of the blind in the world, is the official channel through which the U.S. Government serves the States and the blind children in them. Allotments of credit are made to the schools for the blind and to the State departments of education against which they send in orders for materials manufactured at the American Printing House for the Blind based upon the number of children registered with this establishment by each State. This act has been amended several times, most recently in 1961 by Public Law 87–294, and is reviewed periodically to determine the adequacy of its provisions in light of changing developments in the field. The growing magnitude and complexity of the unmet needs in this area have been cause for increasing concern. Public Law 87–294 removes the limitation on the amount of appropriation and the provision for representation of State educational agencies on the board of trustees of the American Printing House for the Blind.

In 1879 about 2,200 pupils were being educated in our schools for the blind and the Federal appropriation to the Printing House that year amounted to $10,000. In 1952 a total of 6,145 pupils were served under a Federal quota of $125,000. In 1962, 15,973 pupils were served under a Federal quota of $639,000. An additional $41,000 were provided that year so that the Printing House could render advisory services to the States.

The ACTING PRESIDENT pro tempore. Is there further morning business? If not, morning business is closed.

YOUTH CONSERVATION CORPS

Mr. CLARK. Mr. President, I ask unanimous consent that the Senate resume the consideration of Senate bill 1, Calendar No. 89, the Youth Employment bill.

The ACTING PRESIDENT pro tempore. Is there objection?

There being no objection, the Senate resumed the consideration of the bill (S. 1) to authorize the establishment of a Youth Conservation Corps to provide healthful outdoor training and employment for young men and to advance the conservation, development, and management of natural resources and recreational areas; and to authorize local area youth employment programs.

Mr. CLARK. Mr. President, I suggest the absence of a quorum.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the attachés on both sides be instructed to notify all Senators that this may be a live quorum.

The ACTING PRESIDENT pro tempore. Without objection, that will be done.

The absence of a quorum has been suggested; and the clerk will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. MANSFIELD. However, the suggestion of the absence of a quorum will be renewed.

SUB HUNTING—UNITED STATES PUSHES RESEARCH FOR BETTER DETECTION OF UNDERSEA BOATS

Mr. SYMINGTON. Mr. President, as this country piles billions upon billions into the long-range missile field, we are perhaps prone to forget one of the chief menaces to our national security, the great and constantly improving Soviet long-range submarine fleet.

In this connection I ask unanimous consent that one of the most thought-provoking articles on this subject I have seen, which appeared in the Wall Street Journal of this morning, entitled "Sub Hunting," be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Wall Street Journal, Apr. 10, 1963]

Sub Hunting—United States Pushes Research for Better Detection of Undersea Boats—Threat of Increasing Soviet Fleet Bases Spurs Trend; More Killer Craft on Way

(By William Beecher)

WASHINGTON.—One dark night last fall crewmen of the U.S. destroyer *Cecil*, on blockade duty during the Cuban missile crisis, spotted an unidentified object on their radar scope. Soon the destroyer's underwater listening gear picked up the telltale sounds of a crashdiving submarine.

For 34 hours the *Cecil* and Navy patrol planes bearing sophisticated detection apparatus gave chase. At last the sub surfaced for air and recharging of its batteries; it hoisted a small Russian flag. The pursuers moved in, took aim and snapped its picture.

Such scenes, enacted several times during the crisis period, carry double meaning: They underscore both the growing Soviet undersea threat to U.S. security and this country's increasing ability to combat it.

Since the autumn crisis, the Russians have been improving Cuban harbors and building a new fishing port at Banes in northeast Cuba; all might some day accommodate Soviet subs. In Indonesia, Egypt, and Yemen, the Russians are adding to port facilities that might serve the same purpose. Moscow is said to be expanding by half a dozen each year its fleet of fast, long-endurance, nuclear-powered boats; about 20 of Russia's more than 400 subs are believed to be nuclear jobs. And the Soviets are working on long-reaching sub-launched missiles comparable to the U.S. Polaris.

PROBLEM OF DETECTION

U.S. strategists, vividly aware of this danger, are moving ahead on the major remaining frontier of antisubmarine warfare: The need for long-range, accurate, surefire detection. "The problem is not killing an enemy submarine once we've located it," emphasizes one Navy official, "but finding and identifying it."

Hush-hush research is being pushed into some rather exotic possibilities. One project involves employment of infrared heat-sensing equipment to pinpoint the warm-water wake of moving submarines, both nuclear and conventional powered. Another seeks to use magnetic readings to betray the entry of enemy vessels into vital areas of the earth's oceans. Either system might operate from highflying planes or globe-circling satellites.

Under study, too, is the Screamer, a magnetic radio device which might be sown in narrow channels and would lock onto the hulls of passing subs to broadcast a continuous stream of information on its location. Still another bet: The Sniffer, a sensitive airborne electronic instrument which could detect the presence of air whose atoms have been rearranged by the exhaust of sub engines. A variant of the Sniffer might seek out the trail of radioactive sea water behind nuclear subs.

Researchers in a number of laboratories are steaming ahead simultaneously on this urgent development mission. Some major university research facilities are involved. Among the bigger corporate participants are American Telephone & Telegraph Co.'s Bell Laboratories, General Electric Co., Hughes Aircraft Co., Westinghouse Electric Corp., Raytheon Co., Magnavox Co., Lockheed Aircraft Corp., and Bendix Corp.

RADAR AND SONAR

New and better snooping devices, when they come along, will join a corps of eyes and ears already on duty. Besides radar, antisubmariners count heavily on sonar equipment, often dangled deep in the water by ships or aircraft, that picks up sound waves from moving subs. The range of both radar and sonar has been greatly increased in recent years, but still is limited. Already developed, too, are underwater microphones called hydrophones and other devices which may be planted on the bottom of narrow channels to record the passage of enemy subs.

In all, the Kennedy administration has asked Congress for about $462 million for antisubmarine research and development in the fiscal year starting July 1, a jump of almost 60 percent from the current year and nearly double the past year's sum; Congress is expected to heartily approve. Much of the new total, it's understood, is earmarked for detection research.

But the planners are naturally looking beyond detection alone. To close in and help identify a suspect sub already located, the Navy is experimenting with such speedy craft as air-cushion vehicles that glide just above the water's surface and hydrofoil vessels that ride on pontoons; while slower than planes, either kind would have more endurance than aircraft and lots more speed than submarines. The Boeing Co. is developing a jet-powered hydrofoil craft designed to hit 115 miles an hour, more than three times the top known speed of any existing sub.

And the administration is seeking over $1 billion, or nearly half of its entire 1963-64 shipbuilding request, to build new vessels and convert old ones for both sub hunting and killing. Among the new ships requested: 6 specially designed nuclear-powered attack submarines (besides the 18 due to be on duty by mid-1963) and 10 small, fast destroyer escorts. In addition, the Navy proposes to convert 19 destroyers and 5 guided missile ships primarily for antisubmarine work.

SUBROC, ASROC, DASH

From the attack submarines, thought to be the most effective single antisub weapon, nuclear-tipped Subroc rockets may be launched against far distant enemy subs; a similar Asroc rocket may be launched from surface ships. In either case, the warhead detaches from the rocket as it enters the water and homes in on its target with electronic or other guidance.

From the converted destroyers or other surface ships, remote-controlled Dash helicopter drones can be dispatched as far as 15 miles to fire a pair of either high-explosive or nuclear-homing torpedoes against enemy submarines without any need for their mother ships to come within view of the targets. Plans call for equipping 5 ships with 2 Dash drones each by this summer; 80 vessels may be so armed by mid-1964.

It's no happenstance that nuclear weapons figure heavily in these plans. With their wide range of kill, they're considered particularly effective against nuclear-propelled submarines, which can travel faster and deeper than conventional diesel-electric subs. And it's thought no mere coincidence that Rear Adm. John Shaffer, a nuclear weapons specialist, was named to direct the Navy's antisubmarine warfare division more than a year ago. Although any decision to use nuclear weapons must be made by the President, some Navy men feel there would be less reluctance to use them underseas in a limited war than to use similar-yield weapons on land. Their reasoning: The effect of underwater nuclear explosions would be limited to the target and a few fish—whereas weapons detonated on land might inflict all sorts of unintended damage on civilian populations.

UP FROM "NAUTILUS"

The current antisubmarine buildup is already carrying the Nation's undersea defenses far beyond their strength of just a decade ago. It was as recently as 1954 that the *Nautilus*, the first nuclear-powered attack submarine, was launched. And the buildup is destined to continue for at least several years to come. By 1967, according to plans already okayed by Congress, the Nation will have a fleet totaling 48 attack submarines; that would be 7 more than the number of Polaris missile-firing subs due by the same date.

The weapons already available are breeding high confidence in U.S. ability to cope with the Soviet undersea threat. During last fall's Cuba crisis, U.S. sailors made more than 20 sonar and radar contacts with Russian submarines, and 6 of the boats were actually photographed. In a shooting situation, Navy men contend, every submarine detected could have been quickly destroyed.

Some military analysts, in fact, are convinced that the Russians actually intended then to install a fleet of missile-armed submarines in Cuba, and were foiled by U.S. firmness.

Up to now, Pentagon officials report, Soviet subs still haven't used Cuban ports. The consensus is that the Russians won't really try to estalbish a Cuban sub base any time soon. But the United States is keeping close watch on Cuban ports and Soviet sub movements to insure that nothing of the sort happens without our knowledge.

RED SUBS TO EGYPT, INDONESIA

U.S. strategists are concerned, anyway, over Russia's apparent determination to obtain strategically situated warm-water bases elsewhere for potential submarine use. As a possible prelude to establishment of bases, Egypt already has been presented with at least 9 Soviet submarines; Indonesia has received 20. Russian sailors are known to be manning subs operating out of the Indonesian port of Surabaja—just to train Sukarno's submariners, it's claimed. Not only are rubles being spent to improve port facilities in both these countries, but more than $11 million in Soviet money has gone into building up the port of Hodeida in Yemen. All three nations sit astride or beside critically important sea passages; Indonesia on the route between the Indian Ocean and the Pacific, Egypt on the Mediterranean-Red Sea route and Yemen between the Red Sea and the Indian Ocean.

Soviet technological advance, too, is an object of sober U.S. contemplation. The Russians, whose more than 400 submarines outnumber this country's total underwater force about 4 to 1, are laboring hard to catch up in the two areas of major U.S. advantage: Nuclear propulsion and long-reaching sub-launched missiles.

It won't be too long, the Navy told a congressional committee recently, before the number of Russian nuclear subs "will approximate the entire U.S. attack submarine force level." And though early Soviet submarine missiles had a range of only 350 miles (far short of the U.S. Polaris, 1,200 to 1,800 miles) and had to be launched from the surface, there are indications that they've stretched their missile reach quite a bit and may have solved the problem of submerged launchings. At any rate, Russia's Navy chief, Admiral Gorshkov, has claimed as much.

BISHOP IVAN LEE HOLT

Mr. SYMINGTON. Mr. President, as we approach the Easter season, it is a privilege to pay tribute to a great spiritual leader from the State of Missouri.

This leader is Ivan Lee Holt, retired bishop of the Methodist Church in Missouri, who has been characterized as a "20th century saint, whose life has been a beacon to thousands of Missourians, through war and peace, through change and upheaval, through depression and recovery."

Although we claim Bishop Holt as a Missouri citizen, he is also a true citizen of the world, having served as a leader of the world ecumenical movement for many decades.

I would share with my colleagues a recent tribute to this man of wisdom and good works; and therefore ask unanimous consent that the article entitled "Missouri's Man of God," by Jack Stapleton, Jr., from the Dunklin Daily Democrat, be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MISSOURI'S SERVANT OF GOD

Who would qualify as Missouri's most distinguished citizen?

The question is a difficult one; actually it is a subjective one, since each Missourian would have his own idea as to the man or woman who qualifies as the State's outstanding living resident.

For some persons, former President Harry S. Truman is unquestionably the State's most distinguished citizen. For during his lifetime, the man from Independence has altered the lives of millions in the world; it was this Missourian who ushered in the world's nuclear age.

Until his death, Dr. Arthur Holly Compton, a Nobel Prize winner and ofttimes called the father of the atomic bomb, may have been considered by some as Missouri's outstanding and most distinguished citizen.

There are perhaps other nominees from other Missourians, in the fields of industry, literature, politics, business, the professions.

Even though the risk may be great, we'd like to submit our nominee for this title, with the full knowledge that those who have not met him, those who have not thrilled to his words may actually be unaware of his magnetism, his intellect and his achievements.

Our nominee is not an honorary colonel and as far as we know has never been appointed to the post by any Missouri chief executive; our nominee is not a Missouri Squire, an organization established by former Gov. James T. Blair, Jr., to pay tribute to the State's outstanding citizens; our nominee is not even listed in "Who's Who in Missouri."

Can he be distinguished then? Anyone who asks the question should realize that such things as colonels, squires, listings in "Who's Who" are transient honors which generally aren't worth the paper they're embossed on.

What makes a man distinguished then? Perhaps it is that quality of a man which is embossed not on bonded parchment but in the hearts and souls of all who know him. Perhaps it is that quality which endears for a lifetime a man to all who hear him, to all who come in contact with him, to all who sit at his feet to listen to his words.

If these are the qualities of a distinguished man, then our nominee must be Ivan Lee Holt, a retired bishop of the Methodist Church in Missouri, a 20th century saint whose life has been a beacon to thousands of Missourians through war and peace, through change and upheaval, through depression and recovery.

This man, Ivan Lee Holt, who was in Kennett this past week, has been counted as one of the world's great church leaders for decades. His service and tenure with the World Council of Churches has earned for him the respect and the love of millions of Christians throughout the world; his name is known as well in the Fiji Islands as in Montgomery County, Mo.

Bishop Holt was to have been the first American to serve as president of the World Council of Churches; but politics entered into the selection and the honor went to another man. Despite this, he has served on the executive committee of the World Council since it was organized. He is a past president of the World Council of Methodist Churches, and has been one of a handful of leaders of his own church. Although he would deny this, Bishop Holt is perhaps the No. 1 leader of the world ecumenical movement; most certainly he has served as the guiding light of this interdenominational movement for decades. His belief in a worldwide ecumenical movement is abiding; he predicts its eventual fulfillment.

These are the honors Ivan Lee Holt has received during his long years in the ministry. As impressive as they are, they are not the only qualities which have earned him the respect of thousands of Missourians.

The important qualities go deeper than this; they go to a man's soul; they become a part of his intellectual and physical makeup.

Ivan Lee Holt has lived so closely to God that his personality has become imbued with the qualities of mercy, tenderness, and compassion so rare in other, more "distinguished" citizens. His entire life, even after his retirement as active bishop in 1956, has been devoted to others—a letter to a despairing friend, a book to a family distraught with physical illness, a note of encouragement to a struggling minister, be he Methodist, Baptist, or Presbyterian.

If Ivan Lee Holt is a Missourian he is also a southeast Missourian. He spent 4 years as pastor of Cape Girardeau's Centenary Methodist Church at a time when the Little River drainage district was being organized. One of his favorite stories concerns his efforts to close as many of cape's saloons as possible—and in 4 years he helped reduce the number from 28 to 16. But he laughingly tells of the efforts of one cape citizen to assist him in his efforts to close saloons; it seems the citizen was providing him with sufficient information about certain bars to get them closed. Each time the citizen suggested a saloon needed closing, he would provide Preacher Holt with sufficient evidence to get the bar's doors closed. After phenomenal success at saloon closing, the young minister found his informant was merely acting as an agent for a Cape Girardeau brewery, which was anxious to close those saloons not selling cape-brewed beer.

Bishop Holt doesn't drive; he travels by train, bus, or minister-chauffeured automobile wherever he goes. Last week he was in Dunklin County; last month he was in Florida; the month before that on the Tanna Island, in the Coral Sea near Australia, where he was welcomed by the Queen of Tanna and given full state honors. Last year he attended the World Council of Church meeting in New Delhi, flew from there to Italy, to Spain, and back to the United States. He has crossed the Atlantic 58 times, the Pacific 10 times, circled the globe so many times he forgets whether it's 5 or 6. In between, he will journey to Kennett, to Kansas City, to Montgomery County, bringing with him the greatness of the religion which is such a part of his life. We once took Bishop Holt to catch a late train in northwest Missouri, and he was so loaded down with country ham, beaten biscuit and pound cake which my grandmother had thrust upon him that he resembled a redcap far more than any employee at the train station. Yet despite the boxes, the luggage and his inevitable book under his arm, he was still obviously a great bishop.

Bishop Holt knows more Missourians than any one I have ever known, and that includes the late Forrest Smith whose remarkable memory of faces, names and families astounded a State. The retired bishop can cite the name of a minister who served in Kennett 50 years ago, tell where he is living now, cite the number of his children still living, and tell of his complete pastoral career.

Not long ago, Bishop Holt found himself in Orlando, Fla. He didn't recall knowing anyone in Orlando, but he did remember that a former church secretary of his 20 years before had two sisters who both married doctors and settled in Orlando. Scanning the yellow pages, he ran across a checkmark near an eye, ear, nose and throat specialist there, and he remembered one of the sisters had married such a specialist. He called the doctor's office, and inquired if the doctor's wife was from Mexico, Mo., and if her first name was Dorothy. It was the same Dorothy, whose sister had worked for Bishop Holt 20 years earlier at St. John's Church in St. Louis. The next morning in Orlando, a retired bishop and two sisters got together for breakfast and reminisced. Ivan Lee Holt has known Presidents, bishops, World Church Council leaders from almost every nation in the world. He has known kings, queens, royalty. But he has known, in greater abundance, the common citizens of Missouri, and it is to these persons that he has given his life, his great talents and his love.

This, gentle reader, is a mark of greatness.

Ivan Lee Holt is the greatest servant of God I have ever known. His sermons, at the age of 79, contain the same divine inspiration they did 20 years ago. And the chills which run down my back, when he speaks of the quality of mercy of God, are the same chills I have experienced on rare occasions when some moment of greatness touched my life. The tears which have come to my eyes as this man proclaimed the Gospel are the same tears I felt when Franklin Delano Roosevelt died, when a member of my family passed away, or when, on occasion, some American spoke of this Nation's heritage.

Ivan Lee Holt, more than any man I have ever known, loves humanity, all humanity, with the passion of a disciple. A man's church is not important as long as the man is in church; a man's character, with obvious flaws, is still a divine creation which can and will be changed.

A room is empty, although it is filled with people, until he enters. And then his presence adds a lustre which brings forth a knowledge, in one's heart, that one of God's best is near. And the moment that he speaks, that soft southern Oxford speech becomes a message which can fill one's life with meaning, tenderness, love, and compassion.

Bishop Holt has written great books, but he has also written simple but tender words to a family which has just lost a loved one. He has been honored by royalty, but he has also eaten chicken at a church dinner at the most rustic country church in Missouri. He has discussed the prophets with the greatest church leaders of the world, but he has also taught the teachings of Jesus of Nazareth to a rural Missouri Sunday School class. He has traveled to worldwide ecumenical conferences, but he has also taken a midnight bus to a remote church in rural Missouri to deliver a Sunday morning sermon.

Every moment I have been privileged to be in his presence, I have known he was more than a minister, more than a bishop, more than a world church leader. I have known, although he would be the first to deny it, that Ivan Lee Holt was one of the greatest servants of God since the disciples.

I have somehow known that this human man, concerned with mankind's destiny, has been a part of that destiny. And I have believed, as I believe now, that God's hand has been on his shoulder, guiding and directing this life which has had such impact upon the lives of thousands of Missourians. Would you think it strange if I said that there have been times, while Ivan Lee Holt spoke from the pulpit, that I could almost see that hand on his shoulder?

I have, you know.

DANGER TO DOMESTIC SHOE PRODUCTION

Mr. McINTYRE. Mr. President, the position of the shoe industry is a matter of urgent concern to many American communities and nowhere is this more true than in New England.

New England leads the Nation in the production of shoes, with New Hampshire as the sixth most important shoe-producing State. Fifty-five plants located in 28 different New Hampshire communities are actively engaged in the manufacture of shoes, with over 18,000 people dependent upon this industry for their livelihood.

I do not question our national dedication to expanding international trade upon which some 5 million American jobs depend, many of them, of course, in the same New England States. But in 1962, national exports of shoes continued to decline while imports rose a startling 50 percent. One hundred and seventy jobs were lost in the State of New Hampshire in 1962, and the average number of hours worked per week dropped from 38.8 in January of 1962 to 36.9 in January of 1963. I submit that the whirlwind increase in leather-type shoe imports from 8 million pairs in 1955 to 55 million pairs in 1962 deserves far more attention than it has received. The administration should give urgent priority and continued attention to this problem so that the shoe industry may retain its important part in the American economy and also so that the interest of the consumer in quality footwear may be protected. We should, in my opinion, work toward a voluntary quota system in any commodity where annual increases in imports are as great as 50 percent. Such action would arrest the speed with which domestic industries are asked to adjust to foreign competition.

INCOME FROM TIMBER SHOULD BE TREATED AS CAPITAL GAIN

Mr. McINTYRE. Mr. President, in a statement on water pollution a week ago I pointed out that New England's natural resource problems can only be solved through long-range management. Nowhere is this more true than in the timber industry. With the declining market for medium growth white pine there has come a need for imaginative forestry practices that will enable us to supply trees of larger size. Rural poverty can only be relieved through sound use, with State and Federal advice, of our 40,000 small woodlots. The State of New Hampshire conducts a splendid forest fire and pest control program, having controlled white pine blister rust on fully 96 percent of its large control area.

Our small woodlot owners and State forest management program would suffer severely if the income from timber could no longer be treated as capital gain. Their progress, while heartening, has been long in coming. I am sure that I speak for all concerned with the future of New England's lumber industry in objecting to proposed changes in the tax treatment of timberland revenue. There would be no surer way to undo the progress that has been made.

I ask unanimous consent that a resolution of the New England Section of the Society of American Foresters and a letter to the Secretary of the Treasury from the Society for the Protection of New Hampshire Forests be printed in the RECORD at the conclusion of my remarks.

There being no objection, the resolution and letter were ordered to be printed in the RECORD, as follows:

Whereas forest growth can be attained only through accumulation of wood capital in the growing forest and investments in growing time must be held for periods ranging up to 80 years and longer; and

Whereas the capital gains provision of the Internal Revenue Act of 1943 removed a major tax barrier to investment in forestry, encouraging many major improvements in the Nation's forest resources, including those of watershed and recreation, which has stimulated rural employment; and

Whereas continued progress in the management of our total forest resource depends upon maintaining the present system of capital gains taxation of timber revenues; be it

Resolved, That the New England Section, Society of American Foresters, at its annual winter meeting held at Manchester, N.H., on March 14–15, 1963, strongly endorses the current system of capital gains taxation on timberland revenues, under the Internal Revenue Code, section 631.

JOHN J. MAINES,
Secretary-Treasurer.

SOCIETY FOR PROTECTION OF
NEW HAMPSHIRE FORESTS,
Concord, N.H., March 21, 1963.

Hon. DOUGLAS DILLON,
Secretary of the Treasury,
Washington, D.C.

DEAR MR. SECRETARY: We here in New Hampshire are disturbed by the proposed change in the law which now permits gains when timber is harvested to be taxed under the capital gains method.

Except in a small portion of the West, we no longer have virgin timber. The whole country is rapidly approaching the condition we here in New England have been in for a long time. Timber must be grown from the start. Furthermore, satisfactory results require expense for starting the crop and cultural operations during its life. Utter neglect of the forest until very recent times has borne little fruit and we were rapidly approaching a diminution of forest products below the needs of a fast growing population.

Our State of New Hampshire recognized that private initiative was heavily penalized in practicing good forest management and in 1951 removed growing wood from the general property tax and substituted a severance tax at time of cutting, at considerable cost to the State.

In 1944 the Federal Government, cognizant of the need for encouraging long-term forest management, and discouraging sale of capital forest assets to achieve a reduction of tax liability, instituted the present method of permitting capital gains taxation for timber cut by the owner from his own land.

We believe this is fully warranted because of the nature of forest growth. Over the long period of 25 years for low value pulpwood up to 80–120 years for sawlogs, the actual return is of the nature of only 4–6 percent.

If much more than 25 percent is taken by the Federal tax, there is little incentive for private forest management, certainly by industry. And it is upon industry, whch has made great strides over the past 15–20 years that we must rely. The small forest ownerships which it is proposed to still favor up to $5,000 per year cannot possibly fill the void that may be created.

Here in New Hampshire we feel this proposed sharp increase will more than offset the encouragement our own law was designed to effectuate, and I may say has succeeded reasonably.

In forestry, improvement is painfully slow. The trend, if reversed, will not be noticed for some time, but once a decline in private activity starts, it will be difficult to correct, and possibly only by drastic new laws, subsidies, or further acquisition for public ownership after the forests are heavily depleted again.

The direct taxation of tree growth is self-defeating and we urge you and your committee to preserve the present capital gains tax on all timber so that present improvement may continue, especially as the rapid increase in population will naturally have need for more forest products rather than less.

Cordially yours,

LAWRENCE W. RATHBUN,
Forester.

ADDRESS BY THE HONORABLE THEODORE R. McKELDIN

Mr. JAVITS. Mr. President, when the persons who have done the most for U.S.-Israel friendship are finally listed in the annals of history, one of those who will be most highly named will be Theodore R. McKeldin, former mayor of Baltimore, former Governor of Maryland, and consistent champion of minority groups. Governor McKeldin was an organizer of the America-Israel Society. In Israel, a forest and a hospital wing bear the name "McKeldin" in tribute to his activities. He holds an honorary doctor of laws degree from the Jewish Theological Seminary of America, in New York, and he is also a fellow of the Hebrew University, in Jerusalem, and a fellow of Brandeis University, in Massachusetts, where a $50,000 teaching fellowship is named in his honor.

To all who are interested in human rights, the name of Theodore McKeldin is synonymous with our fight against prejudice and bigotry, and the sincerity and perseverance he has exhibited while working in behalf of the brotherhood of man have been acclaimed by his fellow men everywhere.

With such a background, it was especially appropriate for Theodore R. McKeldin to speak recently before the confirmation class of the Baltimore Hebrew Congregation. This Baltimore congregation was chartered in 1830.

I ask unanimous consent that Mr. McKeldin's remarks before this confirmation class be printed in the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

You are Americans, therefore you are heirs of the political tradition that goes back to 1776, as you have no doubt been told day after day in school. But you are at the same time heirs of a spiritual tradition that goes back many centuries beyond 1776, as you have certainly been told many times in this building.

It is not my purpose to describe either of these traditions except in one respect, which is the way they fit into each other. We think of them as separate and apart, and so they are in the formal, legal sense, but in essence, in their basic meaning, there is no break between them.

Let us take the document that created our Nation, and analyze it in the light of the older tradition. Many of you, I feel sure, know it by heart. "When in the course of human events it becomes necessary * * *" and so on. It announces the dissolution of political bands, a very important matter that our people were undertaking, and then adds, "a decent respect to the opinions of mankind requires that they should declare the causes."

That is to say, it is not enough to cherish our faith in our hearts. It must be proclaimed abroad, it must be announced to the world. It seems to me that I hear in this an echo of words that are very familiar to you. I think that its essential meaning is that of the familiar proclamation that begins with the words, "Hear, O Israel * * *" and that proclamation is intimately bound up with the whole history of your spiritual tradition.

"We hold these truths to be self-evident," the document continues, reaffirming the Psalmist's words, "I have chosen the way of truth: Thy judgments have I laid before me."

"That all men are created equal and endowed by their Creator with certain unalienable rights, that among these are life * * *." I invite you to stop and consider exactly when it was that the brand of Cain was laid upon the first murderer. It was not when he struck the blow. It was when he sullenly and insolently asked the Lord, "Am I my brother's keeper?" At that moment he denied any responsibility for his brother and that denial stamped him with the infamy of blood guilt. Our political tradition acknowledges the justice of that; for if all men are created equal and endowed with rights, the duty lies upon us to respect those rights and to be responsible for protecting them.

"To secure these rights, governments are instituted among men * * *." There is one in your tradition called the wisest of men, and the foundation of his wisdom was laid when he was called to political power and prayed to God in these words: "I am but a little child: I know not how to go out or come in. Give, therefore, Thy servant an understanding heart to judge Thy people, that I may discern between good and bad: for who is able to judge this Thy so great a people?"

One must be able to discern between good and bad if he is to protect the rights of the people; yet, says our tradition, to secure these rights is the whole purpose of government. The prayer of Solomon is the greatest political platform ever written, according to the American tradition; and the wisdom of Solomon is precisely the wisdom that we hope to find in the men we elect to exercise the powers of government; for who else "is able to judge this Thy so great a people?"

"Whenever any form of government becomes destructive of these ends it is the right of the people to alter or to abolish it, and to institute new government * * *." What can this mean, other than the judgment that the moving finger wrote upon Belshazzar's wall: "Thou are weighed in the balances and found wanting. Thy kingdom is divided and given to the Medes and Persians." No government, says the American tradition, that fails to secure the rights of the people is fit to survive. Legality cannot save it. Precedent cannot save it. All its good work performed in years gone by cannot save it, any more than the glory and the power of the kings, his ancestors, could save Belshazzar, the lightweight, after he was weighed in the balances of truth and found wanting.

Government of the people must be for the people. Solomon knew it, and that made him the wisest of kings. Belshazzar did not know it and that is why he was found wanting and his kingdom fell. It is the old tradition that rings in the Declaration of Independence, and that is why we hold its truth to be self-evident.

I know that the Constitution of the United States decrees separation of church and state, and I consider that one of its wisest provisions. But the Constitution is the law—the supreme law of the land—but only the law; and besides the law we have the prophets, the proclaimers of the spiritual traditions that are the background of the law. In this field the political tradition and the religious tradition are continuous and cannot be torn apart without damage to both.

I am dealing today with that intangible thing that a great French writer called the spirit of the laws, and I maintain that the spirit of the Judaic tradition and the spirit of the Declaration of Independence are one and the same. You cannot be true to the tradition that traces back to Ur of the Chaldees without being true to the spirit that traces back to Independence Hall in Philadelphia. I think it just as true that you cannot be true to Americanism, real Americanism, without being true to the essence of Judaism.

But in both cases one must be vigilant, one must be able to discern between good and evil, for there are countless false prophets who are proclaiming a false Americanism and a false Judaism. When such voices are heard in the land there is only one thing to do, and that is, go back to the sources, go back to the Declaration for your Americanism, go back to the scriptures for your Judaism. Never mistake partisanship for public policy, never mistake sectarianism for religion.

Pray for an understanding heart to discern between good and bad—not between this party and that, not between this candidate and that, not between this faction and that, but between good and bad. In politics, good is what secures to the people the rights with which their Creator has endowed them; bad is what fails to secure those rights. There is no other standard of measurement, that is, no other true one, although false measures are always being urged upon us—loyalty to party, loyalty to sect, loyalty to some person. But all these have been weighed in the balances and found wanting. The only loyalty that is of full weight is loyalty to the rights of the people.

Is not the same thing true of Judaism? "Hear, O Israel: the Lord our God is one Lord." To one Lord there is one loyalty, one duty, by which all others must be measured, and without which no others count. Whatever the clamorous, disputing voices may say, remember that. "Blessed is the man that walketh not in the counsel of the ungodly * * * but his delight is in the law of the Lord, and in His law doth he meditate day and night."

The law of the Lord is justice. The law of the Lord is truth. The law of the Lord is that we are each his brother's keeper, as far as his brother's rights are concerned; and if any one of us shall repudiate that responsibility the law of the Lord will lay upon him the brand of Cain.

But the man of whom it may truthfully be said, "In that law doth he meditate day and night" is a safe man, one in whose hands your rights and liberties are safe. By what rite he worships is neither here nor there; the question is, What loyalty does he hold sacred? If it is true Americanism, in his public acts he will be true to the spirit of Judaism; if it is not true Americanism, then he will not be true to the spirit of Judaism, no matter how careful he may be to conform to all its rites and ceremonies.

To you young Americans, adherents of the Jewish faith, I offer this urgent advice: hold it to be self-evident that men are created equal and endowed by the Creator with unalienable rights; for if you do so hold, then you must also hold that the greatest gift of God to a ruler of men is an understanding heart to discern between good and bad. Hold to the faith that the Lord our God is one Lord, and you will be bound to hold to the faith that under God men are created equal, and he who disregards the rights of his brother, who disavows his brother is betraying Americanism, no matter how often he waves the flag and screams about his patriotism.

Armed with that faith you may look to the future serenely. For "under God we shall do valiantly; for He it is that will trample down our enemies."

CIVIL LIBERTIES IN A FREE SOCIETY

Mr. JAVITS. Mr. President, Justice William O. Douglas recently delivered a notable address at the 15th annual conference of the National Civil Liberties Clearinghouse. Entitled "Education for a Free Society Under the Bill of Rights," his speech is a characteristically eloquent statement of the struggle which must continually be waged against blind conformity in order to keep the vitality of thought among our citizens essential to preserve the basic freedoms built into our Constitution.

I ask unanimous consent that the speech and an editorial in the Washington Post commenting upon it be printed in the RECORD.

There being no objection, the speech and editorial were ordered to be printed in the RECORD, as follows:

TASK FORCES FOR FREEDOM

Asserting a need for continuous education in the values of the Bill of Rights, Justice William O. Douglas last night called eloquently for task forces to teach the meaning and utility of restraints on governmental power. "Churches, unions, business groups, professional societies, school boards, parent-teacher associations, the pulpit, and the press," he said, "all have important stakes in the enterprise." Indeed they do. They could exist only in a society where the power of government is limited and where a variety of voluntary associations is left free to advocate the competing ideas and interests of free citizens.

The Justice paid tribute to the example set for the rest of the country by the District of Columbia in putting an end to arrests for investigation this month. "Arrests for suspicion," he observed, "fit the Communist society but they do not fit ours. Our fourth amendment—applicable to State and Federal Governments alike—allows only arrests for 'probable cause.' Our fourth amendment was designed to curb the police—to require them to use brains rather than brawn in solving the mysteries of crime." The fact is, however, that arrests for investigation, though banned in the Capital, are still common in many parts of the country. They have no place in the armory of American law enforcement.

Justice Douglas spoke at the dinner meeting of the National Civil Liberties Clearinghouse currently holding its 15th annual conference. Concerned with the development of understanding in the fields of civil liberties, civil rights, intellectual freedom and human rights, it serves in exemplary fashion as one of those task forces which the Justice summoned to action. Its deliberations should serve again, as they have in years past, to refresh American devotion to the principles of the Bill of Rights.

EDUCATION FOR A FREE SOCIETY UNDER THE BILL OF RIGHTS

(Address by William O. Douglas, Associate Justice, Supreme Court of the United States, National Civil Liberties Clearing House, Washington, D.C., March 28, 1963)

Many have been concerned in recent years over the lack of understanding of the Bill of Rights and the role it is designed to play in a free society.

One of several groups organized to promote this educational effort is the Civil Liberties Educational Foundation, of which Frank P. Graham is the president, and whose board contains such outstanding people as Nicholas Kelley, Minna Post Peyser, and Irving Dilliard.

In 1963 it prepared a document some 150 pages in length entitled "Civil Rights and Civil Liberties in the United States," an annotated bibliography. As stated in the introduction, "While CLEF has enjoyed the cooperation, encouragement and guidance of the personnel of the New York City Board of Education, it makes no claim that this volume or any part of its contents have been approved by the board."

Nevertheless, in February 1963, the acting superintendent of schools, Bernard E. Donovan, sent a notice to principals of all day schools in the city of New York: "Heads of schools are advised that these lists do not have the approval of the board of education and the suggested use of the lists and the implementation of 'instructions' contained in the accompanying letter are to be disregarded. Books on these lists, unless they are also found on approved lists, may not be accepted by librarians either as gifts or for purchase of such books from funds provided by the parent-teacher associations and similar sources."

One might think that this notice possibly could have been sent out of an abundance of caution lest the bibliography be thought by some to be a must. But that theory is dispelled by other episodes of the same character. In 1952 the Nation was barred from New York City's schools because it ran an article by Paul Blanshard critical of the influence of the Catholic Church in various phases of community life, including education. In January of this year the Nation was restored to the list. But the board, as if to offset the Nation's deleterious influence, added to the list at the same time the National Review which is hardly revolutionary in any sense of the word.

In California last month a school board banned from its libraries Walter Millis' "A World Without War"; and "The Community of Fear," by Harrison Brown and James Real. Millis has attempted to show how a viable world system could exist if swords were turned into ploughshares and the armies, navies, and air forces disbanded. "The Community of Fear"—the product of the thinking of our leading nuclear physicists—tells in calm terms, in a nondramatic way, the actualities of the hell that would be produced by nuclear war. Also banned was a brochure "The Rule of Law in World Affairs," by a Justice Douglas.

A youngster reading these three books or pamphlets might be disturbed at the complacency of the American people; he might indeed be roused to action. Or he might be so saturated with the tranquilizers of our times to think that the status quo was the rosiest of all possible regimes and remain oblivious of the great dangers inherent in our conformity.

"The Censors and the Schools," by Nelson and Roberts, gives a national account of this passion for sifting books in school libraries to find ideological strays. Many groups would restrict education to those materials which reflect that image of America they espouse. The profit motive and the role of the private and public sectors in the economy make up one controversial area. The Anthony Comstocks bring puritannical standards to the field of the arts and literature. Religious groups with an eye to their dogmas and creeds bear down hard on books like "The Dead Sea Scrolls," by A. Powell Davies. The censor whose world is built around laissez faire ferrets out trains of thought that lead to socialism. The isolationist opposed to the United Nations sees the rule of law in world affairs as part of the Communist conspiracy. Those who espouse segregation, those who oppose Negro membership in trade unions, those who view with alarm Negro voting have easy standards for determining what books have un-American overtones or contents.

Education by those standards is largely propaganda for one point of view or one school of thought. That is indeed pricisely the Communist approach to sociology, political science, history and art. One who visits the art galleries in Moscow that display contemporary drawings and paintings has indeed the distinct impression that he is in the billboard department of the Politburo.

Education in a free society should be radically different. It is education in the dialog—a concept that was put in classical form by Dr. Robert M. Hutchins:

"Education is a kind of continuing dialog, and a dialog assumes, in the nature of the case, different points of view.

"The civilization which I work and which I am sure, every American is working toward, could be called a civilization of the dialog, where instead of shooting one another when you differ, you reason things out together.

"In this dialog, then, you cannot assume that you are going to have everybody thinking the same way or feeling the same way. It would be unprogressive if that happened. The hope of eventual development would be gone. More than that, of course, it would be very boring.

"A university, then, is a kind of continuing Socratic conversation on the highest level for the very best people you can think of, you can bring together, about the most important questions, and the thing that you must do to the uttermost possible limits is to guarantee those men the freedom to think and to express themselves.

"Now, the limits on this freedom cannot be merely prejudice, because although our prejudices might be perfectly satisfactory, the prejudices of our successors or of those who are in a position to bring pressure to bear on the institution, might be subversive in the real sense, subverting the American doctrine of free thought and free speech."

What Dr. Hutchins said about universities is of course equally applicable to all our public schools. For the cause of full and free inquiry is damaged, wherever and whenever it is limited.

If we are to have the strength of men unafraid of ideas, we must be alert guardians of our school libraries. This means vigilant and vocal local groups who insist that school libraries cover the spectrum.

There is, I fear, more propaganda in our education than we appreciate. Many texts subtly downgrade the Negroes in favor of the whites. Some, as a recent report by the B'nai B'rith emphasizes, proclaim Protestantism over Catholicism and Christianity over Judaism by failing to describe the history of religious liberty in a fair way. I remember how misinformed I was on the Crusades. It was my first trip to Jerusalem as an adult that made me realize that we the Christians had been the great wrongdoers. When we took Jerusalem we beheaded thousands—because they did not believe as we did. Saladin, the Kurdish leader of the Arabs who retook Jerusalem a century later, was more Christian than the Christians. For he beheaded no one.

Teaching communism is becoming a fad. But we found that in spite of our preoccupation in denouncing it we had few teachers qualified to teach it. Moreover, the tendency has been to serve a political rather than an educational need. Those who travel Communist lands or who live there know how depressing life in that society is to those who have known the heady atmosphere of the free society. Yet they also know that a Communist regime is not all black, while we are all white. The intermediate shades are numerous. Is there enough courage and independence left to disclose what features of the Soviet system are not evil?

There is often a failure in our education to acquaint the students with the world as it is.

Americanism is often taught as a brief for whatever American foreign policy may be in effect, no matter how defeating it may be.

The bulldozer is the symbol of American power; and the American ideal emerges as one who levels the wilderness. Yet with our vanishing forests and our mounting population, education on conservation is sorely needed, starting with the primary schools.

I do not suggest that books be burned that do not meet the test. Nor do I join the ranks of those who censor books. My plea is different. We need task forces which make as sure as possible that the literature in our schools is adequate for the multiracial, multi-religious, and multi-ideological groups that make up our Nation.

Alert community groups cognizant of the values of the Bill of Rights are needed on many fronts. Lecturers visiting a locality are often the main source of enlightment, as the degeneration of the press has left many areas largely devoid of insight into the forces at loose in the world. Censorship at some universities has endeavored to fence the campus off from the world of controversy. Ohio State University, under the hammering of local newspapers, has been rocked by issues of that kind.

The presence of Gus Hall, Communist official, on the campus of the University of Oregon created quite a storm—not from inside the campus but outside. Irving Brant recently reported the episode in the Northwest Review:

"Hundreds of students heard Mr. Hall speak. What did he tell them about communism? Nothing. Did he advocate the dictatorship of the proletariat? No. Did he call for the nationalization of industry or land? Not a word. Did he tell them that every signer of a Communist Party card is expected to do, say, or think whatever the party bigwigs tell him to do, say, or think? Of course, he did not. Instead, Gus Hall made a respectable speech in support of social reforms and the constitutional rights of everybody. He came out for the welfare state and the Bill of Rights. In other words, he talked like John F. Kennedy trying to live up to the future and Richard M. Nixon trying to live down the past.

"Now what does this Communist tactic signify? It means that the present purpose of the Communist Party in the United States is to prove the respectability of its leaders and suggest the harmlessness of party intentions. That won't rebuild the party. Selling water in a red bottle does not create a market for vermouth. The fact is that Communist propagandists are in a box of their own making. They have the choice of stagnating party growth either by revealing the governing principles of communism or by concealing them."

Mr. Brant went on to say:

"If somebody is seen meandering around the campus dressed in a barrel, it should not be concluded that he lost his pants in Typhoon Freda. It will be Diogenes, looking for one university student who was converted to communism by Gus Hall."

The Communists are such miserable merchants of dreary ideas that they have difficulty getting recruits. Their lack of success under parliamentary regimes where the platform and press are open to them is notorious. They thrive under suppression, not in exposure. In Israel, where parties are freely formed, the Communists are weaker than in any Middle East nation. In India where the illiteracy rate is 78 percent and where grievances pile high, the Communists have only 41 members in a national Parliament of 745, or less than 6 percent. I have often thought that their greatest strength as a political party inside any country comes from fear of them. As Livy said, "The less there is to fear the less there is of danger."

When the Communists are judged as advocates or as purveyors of ideas, they turn out to be quite shabby. Better that they be forced into open debate and exposed than driven underground. American youth is highly critical and discerning. It does our youth an injustice to assume that many of their minds can be corrupted by blandishments either from the extreme left or extreme right.

Community groups interested in promoting debates of unorthodox ideas need not be booking agents either for the left or the right. Yet those who promote the society of the dialog need defend the right of anyone peaceable to assemble and to advocate ideological as well as religious ideas across the entire spectrum. This takes courage beyond the capacity of Madison Avenue. For it writes its slogans to fit the public mood. Promoters of the dialog undertake to reshape that mood, raise the sights of the people, and help create a tradition that honors courage and the independence of thought.

Discussion and debate are often finer badges of bravery than battle itself. Pericles said, "The great impediment of action is, in our opinion, not discussion, but the want of that knowledge which is gained by discussion preparatory to action. For we have a peculiar power of thinking before we act, and of acting too; whereas other men are courageous from ignorance but hesitate upon reflection."

The difficulty of living up to Pericles standards is exceedingly difficult these days. For information is sometimes classified as secret merely because disclosure would expose the Agency to criticism. And the complexity of the affairs of government makes it difficult to ferret out the facts on one's own. Yet the need has never been greater.

We had Committees of Correspondence in the days of our Revolution and they were important in creating unity and cohesion in that effort. We need comparable task forces today. They need to remind the people over and again of the words of Charles Evans Hughes, "Our institutions were not devised to bring about uniformity of opinion."

There is more to the free society than the maintenance of free and open discussion. Our philosopy has been that sovereignty unless restrained builds itself into tyranny. The Bill of Rights—as well as parts of the Constitution itself—places restraints on each of the three branches of Government. With the increase in size and complexity of Government, additional procedural safeguards of individuals have been provided by acts of Congress, by Executive orders, and by court decisions. Yet as time passes, the power of Government becomes more and more awesome and the capability of the individual to stand his own against it becomes more and more dubious. The multiplication of laws and of regulations makes every proceeding more and more of a maze. The power of the bureaucracy is crushing. Only the expert can find his way. One not flanked by lawyers has little chance to enjoy his rights. The lone individual without a spokesman loses his rights by default. That problem promises to get more serious whether it be thought of in terms of fairness of procedures in loyalty and security hearings or of procedures in qualifying business men as contractors or subcontractors.

A recent report of the Administrative Conference states: "Some 340 business firms are now barred from participating directly or indirectly in some or all Government procurement or surplus disposal contracts, and about 60 of these are also excluded from contracts for most federally assisted construction work throughout the United States. Except for a small percentage this Government action is taken without opportunity for an adversary hearing and if based on suspected criminal conduct is generally without being officially notified or informed of meaningful reasons, or opportunity to learn why."

The District of Columbia on March 15, 1963, put an end to arrests for investigation—a practice that had resulted in the arrest of several thousands of persons annually. Arrests for suspicion fit the Communist society but they do not fit ours. Our fourth amendment—applicable to State and Federal Governments alike—allows only arrests for probable cause. Our fourth amendment was designed to curb the police—to require them to use brains rather brawn in solving the mysteries of crime. Yet arrests for investigation are still common in some areas of the country. The persons arrested are not sons and daughters of the upper or middle classes. They come from the lower strata or from minority groups who do not know how to protect themselves and who do not have the prestige, courage, or resources to vindicate their rights through suits for false arrest.

Recent studies of vagrancy show that being poor and looking for a job is a crime in many of our localities. Our magistrates courts touch the lives of the people more intimately than any other. Some are still on the fee system—the judge being paid if he convicts and not being paid if he acquits. Lawyers seldom appear for clients in those courts. Bar associations that assign lawyers to represent indigents seldom assign members of the bar to cases in the magistrates courts; and legal aid societies are not equipped to render service there. Vagrants, whose only crime is poverty, are convicted by the thousands and no bar association committee concerns itself with the matter.

The poor who are accused of felonies often cannot raise bail prior to trial and therefore wait in jail months on end. In New York City Louis Schweitzer and his Vera Foundation found that the accused who were unable to raise bail were held as long as 1 year in jail awaiting trial. For some, that is the equivalent of a graduate degree in crime. As a result of Mr. Schweitzer's efforts the Manhattan bail project is now flourishing under the auspices of New York University Law School. Of the first 200 defendants released on personal recognizance only 2 failed to respond. In Manhattan the fate of indigent defendants is no longer in the hands of the bondsman. Yet in most large centers the indigent feels only the rough hand of the law and is wholly subject to the mercy of the bondsman. There are those who could, if they would, duplicate Mr. Schweitzer's efforts in their own bailiwick.

Some cities—and I speak principally of northern ones—have a widening river of hate between the races. Some are doing something about it; others are not. We know that when racial bias is indoctrinated into the police or when the police are allowed to treat a Negro or the member of another minority as a second-class citizen, the river of hate widens.

Task forces are needed north and south, east and west, to concern themselves with problems of the Bill of Rights in the modern setting. Churches, unions, business groups, professional societies, school boards, parent-teachers associations, the pulpit and the press all have important stakes in the enterprise.

It is the Bill of Rights and all the other protective features of our system of law that put us above the crowd. Other nations share the secret of science and technology and will soon be as far along the road of economic development as we are. But there are not many who have enshrined the ideas of liberty and equality and dignity of man in the manner of which we are proud. It is in those ideas that we find our real distinction. It is those ideas that set our civilization apart, not our automobiles, television sets, air conditioners, or the other earmarks of our high standard of living.

We profess to be anti-totalitarian and we spend much of our time denouncing the Communists. Yet once we substitute propaganda for the dialog, once we enthrone the police, once we make one group dominant in our multiparty, multiracial, multireligious, multi-ideological society, once we deny the poor rights that the rich enjoy, we forsake the tradition of the Bill of Rights. We need continuous education in its values, and only the task forces that are active in a community can turn the tides of intolerance, conformity, and ignorance that often engulf us.

THE PRESIDENT'S BUDGET

Mr. HUMPHREY. Mr. President, on the date of February 23 there appeared in the Washington Post and Times Herald a letter to the editor entitled "The President's Budget," signed by Prof. Seymour E. Harris, Littauer professor of political economy, Harvard University.

This letter explains in a concise, understandable and emphatic manner the purpose of the President's tax cut and budget proposal and the effect that such will have on the economy.

Dr. Harris reminds the Congress of the importance of timing of a tax cut. He explains it this way:

> The real danger is that the Congress will nibble at the program and prolong the gestation period of the new tax law, with the effect that the tax cut will prove innocuous. It is also necessary for the Congress to realize that the longer the period over which the reduction is spread, the less effective the policy will be.

Then Dr. Harris comes to grips with the issue of the tax cut and the possible effects of a sharp reduction in the budget. He describes it this way:

> It is important for the Congress to realize a tax cut and an accompanying reduction of expenditures mean stimulating the economy by reducing taxes, and then deflating it equally through a cut in expenditures. Nothing could be more foolish.

It would be well for every businessman to read what Dr. Harris has to say. I recall in my visit with the chamber of commerce this year on its legislative program that I attempted to make this point, namely, that a tax cut would lose much of its effectiveness if expenditures were sharply reduced by drastic cuts in the budget. My comment surely was not received by any enthusiastic support. In fact, it was given a less than polite hearing.

Dr. Harris is a respected economist. His advice and counsel is sought and used by government and private industry. And it is Dr. Seymour Harris who tells us clearly what I was trying to say with apparently less clarity. I believe that we are indebted to Dr. Harris for his forthrightness, but, above all, for his intelligence and his ability to articulate and express his views.

I ask unanimous consent that Dr. Harris' letter, entitled "The President's Budget," be printed in the RECORD. I trust that it will be reviewed and studied carefully by those who make public policy.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE PRESIDENT'S BUDGET

Neither conservatives nor liberals seem happy over President Kennedy's 1964 budget. Perhaps this suggests the budget is, in fact, the best possible compromise. For the conservatives the criticism is too much Federal spending and excessive deficits. For the liberals the charge is an inadequate tax cut and abandonment of liberal or Galbraithian principles of spending for welfare. In my view both the conservatives and liberals are wrong, and the administration essentially right.

The conservatives consider the total amounts of spending and deficits, and are shocked. But what is relevant is the size of the Federal sector in relation to the economy that has to support it, not the absolute amount of spending. In private life, the conservative mother does not give the 2-year-old the same number of calories as the 18-year-old, but is guided by size, energies used, etc.

Similarly, the conservatives should relate expenditures and deficits to the size of the economy. Federal expenditures in relation to gross national product are no higher than they were in 1959. The deficits seem large. But the three Kennedy deficits are 2 percent of GNP estimated for fiscal 1962–64. In the 8 great depression years, when Government could concentrate on welfare, the deficits were equal to 4 percent of GNP.

The conservatives tell us that the President continues to spend more for nonessentials, that is, welfare. Actually the dollar outlays, exclusive of military and related, are down in fiscal 1964. What is more, if allowance is made for the annual average rise of population, of wage rates (not offset by rising productivity) and of prices, the budget should rise by 3 percent without any new programs or improvements or extension of old ones. Hence, it may be assumed that as a minimum, welfare programs in real resources have been reduced by at least 3 percent and possibly more.

How much of a case have the economists or the liberals? In the 1930's public spending was considered the therapy for a malfunctioning economy. But spending programs have lost much of their appeal and in part because it is difficult to get the right kind of spending programs, or proper timing. Even at that the average economist might well have sought a compromise, say a $3 billion spending program to increase growth and a $9 billion tax cut. But, unfortunately, even this compromise is not acceptable to the country. Hence the President has to recommend not what is best but what is adequate and attainable. Thus we can explain the moderate size of the tax cut, the small recourse to spending programs, the stretchout of the tax cut.

The real danger is that the Congress will nibble at the program and prolong the gestation period of the new tax law, with the effect that the tax cut will prove innocuous. Then the modern fiscal policies, about which many of us have written, preached, debated, and fought since the 1920's, will be repudiated, and with loss to the country. We shall then have the deficits that would have prevailed in any case, and additional deficits related to the tax cut, and yet little stimulus to rising income which would yield additional tax revenues.

It is important for the Congress to realize a tax cut and an accompanying reduction of expenditures mean stimulating the economy by reducing taxes, and then deflating it equally through a cut in expenditures. Nothing could be more foolish.

It is also necessary for the Congress to realize that the longer the tax cut is postponed and the longer the period over which the reduction is spread, the less effective the policy will be.

It requires not only understanding but tremendous courage for the President to lead the Congress in these matters as he has more than any other President, just as only a courageous Congressman will lead his constituency.

It is not easy for the people to swallow a theory that even a deficit over the cycle is sound policy, when we have scarcely persuaded them that balance is not required every year so long as it is attained during the whole cycle.

I just do not believe that men of high intelligence such as Senator BYRD and Congressman MILLS do not understand the simple arithmetic involved in modern economics: inadequate buying by the private economy requires a larger contribution by Government; and vice versa in buoyant periods.

SEYMOUR E. HARRIS.

MANAGED NEWS

Mrs. SMITH. Mr. President, Members of this body will recall earlier statements that I have made about managed news and specifically with respect to announcements of contracts awarded by the Defense Department and the manner in which dedicated military officers were made to look like Gilbert and Sullivan comic opera characters and old movie "Keystone Kops" in the notices they delivered to the offices of Congressmen—but only after hours or days after the news had already been given to the favored Democratic Congressmen and Senators by others and thus already announced by them before the military officers had delivered the notices.

In connection with this managed news practice of the White House, I ask unanimous consent to place in the body of the RECORD at this point an article on this subject appearing in the March 31, 1963, issue of the San Diego, Calif., Union about the exercise of futility in which the defense couriers engage. The title of the article is, appropriately, "Pentagon Scooped On Contracts."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHITE HOUSE TIPS OFF FRIENDS—PENTAGON SCOOPED ON CONTRACTS

WASHINGTON.—Every working day at 2:30 p.m. uniformed military personnel filter through the Halls of Congress bearing glad tidings.

As regular as clockwork, they move from office to office with announcements of contracts awarded that day by the Defense Department. They visit Republicans and Democrats alike.

Each Congressman is told he is being tipped off in advance so he can notify the news media in his district.

Newspapers and radio and television stations then presumably will carry the story, giving credit, of course, to the man who gave it to them.

This is the kind of news that Congressmen live on. Some figure that if the voters see and hear the Congressman's name linked to enough juicy contracts and grants, they are likely to decide that he is doing a bang-up job in Washington and deserves reelection.

But the Defense Department's congressional courier system, impressive as it is to the casual onlooker, is a dismal flop.

The White House noted for its "managing" of news, sees to it that Representatives and Senators friendly to the administration are the first to learn of Federal aid plums.

Against such competition the Defense Department and other Federal agencies do not have a chance. The White House scoops them every time.

White House aids telephone favored Congressmen each morning about 11:30—3 hours before the Defense couriers start their futile rounds.

ECONOMIC ACTIVITIES

Mr. JORDAN of Idaho. Mr. President, I want to call the attention of my colleagues to an excellent article I read the other night in the April 1963 issue of the Yale Political. The senior Senator from South Dakota has written an exceptional statement on our foreign aid programs and economic activities. I hope every Senator will take the time to read it for he has painted a crystal-clear picture of what I believe to be the thinking of most Americans on our foreign aid problems. Our esteemed colleague is eminently qualified to speak on this subject for he knows from firsthand experience the results of programs previously implemented, and we would all do well to listen to his wise words.

Mr. President, I ask unanimous consent that this article by Senator Karl Mundt be printed at this point in the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

Economics Activities

(By Senator Karl E. Mundt)

(Senator Mundt, like Senator Humphrey a member of the Foreign Relations Committee, has represented South Dakota as a Republican Member of Congress since 1939. He was first elected to the House, and since 1949 has served in the Senate. Foreign aid is seen by Senator Mundt primarily as a tool to help forward the United States' international objectives. He believes that we should be more discriminating in our aid policy, giving more to those who are in sympathy with the aims of the United States.)

The same reasons in the main prevail for our giving so-called foreign aid to Latin America as those which prevail for our overall global program of foreign aid. That means, realistically, that by far the greatest percentage of the many billions of dollars of foreign aid which we have been providing more than 80 nations around the world is made available for what is believed to be the best national interest of the United States. Our great country, of course, has a longstanding tradition of providing disaster relief and emergency aid for humanitarian reasons wherever a country is suffering from disaster, from famine, from the ravages of insurrection, or from any other cause which brings widespread suffering to the general public. However, in the main, the reasons for providing the aid to Latin America and elsewhere in the amounts and of the type now being made available to them stem from the fact that in this era of challenge from imperialistic communism it is felt to be in the national interest to try to strengthen the economic systems and the political institutions of countries which are outside of the Communist sphere of control.

In my opinion, economic aid if wisely provided for Latin American countries is of more benefit to them and to us than an overemphasis on military aid. For many generations to come the most effective defense against outside attacks by Communist military forces upon Latin American countries must come from the maintenance of a sufficiently strong Defense Establishment in the United States and from policies which impel us to enforce the time-tested provisions of the Monroe Doctrine. Consequently, a wise utilization of economic aid designed to expand the middle-income classes of Latin America, to increase the success of private enterprise institutions in that area, to improve communications, education, and health would seem to be our most productive means of being a friendly neighbor and an effective friend to the Latin American countries.

CONDITIONS OF U.S. AID

The question of the conditions we should attach to this aid relates to the problem of whether our gigantic expenditures in foreign aid in Latin America are to prove beneficial both to the recipients and to the giver or whether they are to be dissipated through a series of isolated projects which fail to follow a consistent pattern of performance and which fail to develop within the recipient countries the attitudes and policies which will help them to help us to help them in an enduring fashion. My major criticism of the present administration of foreign aid both in Latin America and elsewhere grows out of the conviction that I feel that the Kennedy administration is making the same mistake in connection with its foreign aid policies that it is making in connection with its domestic policies. By this, I mean, that in both areas of activity there is a definite and demonstrable tendency to place too great a reliance upon strengthening the powers of the politicians in the capital cities of the countries and to place too little reliance upon developing an opportunity system which enables private entrepreneurs and individual economic enterprises to expand the opportunities so essential to the development of sound economic growth and stability.

Beyond this, the administration of our foreign aid policies both in Latin America and elsewhere should demonstrate a sharp increase in its selectivity. I definitely feel there should be a difference in the degree and type of aid which we provide to countries which demonstrate a desire and willingness to cooperate in the curtailment of communism and in the development of free institutions as against those countries and areas which either insist upon a sterile type of neutralism or, in fact, give aid and comfort to the Communist regime in Moscow.

The contest which the free world is compelled to wage in self-defense against communism cannot be and should not be solely an activity financed and promoted by the United States. We need assistance in diplomatic matters at the United Nations, we need cooperation in developing world opinion opposed to communism, we need the cooperation of many nations both large and small in reducing the effectiveness of Communist subversive ventures around the globe. When countries demonstrate a willingness to undertake a part of this responsibility and to associate themselves with us in the global resistance to communism, they are entitled to greater economic and military assistance from the United States than that which is made available to those who are willing to take everything but offer nothing in return.

Neither in Latin America nor around the world has our foreign aid program lived up to expectations insofar as its results are concerned. It has had a fair measure of both successes and failures. Until and unless we develop a greater degree of selectivity, however, I feel that in the future it is likely to suffer from the law of diminishing returns. Likewise, until and unless more of our economic aid is directly used to help people to help themselves, and to stimulate the growth of private enterprise in other lands, I am afraid that much of it will actually be used to build up the totalitarian techniques of an overly powerful central government which, after all, comprise some of the very evils which are exhibited and demonstrated by the Communist system.

IMPROVING OUR AID PROGRAM

There are several specific ways of making our aid programs more successful in the future. Rather than utilizing so much of our foreign aid in building things and doing things for our friends abroad, I feel we should concentrate more of the money on showing these folks the methods, techniques and procedures by which they can do things for themselves. On the whole, I think it is more important that we export ideas and techniques to the developing countries than that we export machinery, build roads, or construct bridges. Also, we should develop techniques which would tend to eliminate the political usage abroad of American funds to maintain established political regimes and to utilize such funds in the development of an opportunity system, financed by local enterprises, which will upgrade the living standards, increase the income, and expand the opportunities of those in other lands who want to get ahead.

FOREIGN AID AND U.S. NATIONAL INTEREST

Important issues in the administration of foreign aid concern the policies and programs the United States should insist upon or endeavor to promote in those areas where we are providing an abundant amount of either economic or military aid. It would, of course, be the optimum situation if we could work only with democratic representative governments, freely elected, in every area of the world which have not fallen into the clutches of communism. Unfortunately, we live in no such world today. Consequently, on occasion, I feel we are justified in providing economic and military aid to areas and countries which do not fully practice the precepts of representative government as we feel that they should.

Democracy is a way of life utilizing a whole series of practices, self-restraints, customs, and methods which must be learned by doing. And people must "do them" for awhile in order to fully appreciate them and to preserve them. For that reason, while we should certainly never permit our aid overseas to be utilized for the establishment of any type of dictatorship over the people, we must be somewhat tolerant in recognizing that aid at times must be given to countries in which existing conditions fall far short of our desires. We can and should, however, insist upon certain concessions and certain reforms as a quid pro quo for our assistance. And as a minimum, we can increasingly insist upon a cooperative attitude supported by cooperative actions in such forums of the world as the United Nations, and in other areas of activity, which will link the countries which are recipients of American aid in a mighty network of governments and peoples doing at least something in one way or another to combat the growing menace of communism. This support of the free way of life, this cooperation with the United States and other major nations of the free world, can be manifest in many ways, small and large. Increasingly, however, it seems to me that our Government in the United States should insist upon some type of manifestation that the recipient country is not simply taking advantage of a perilous global situation to seek aid from us without in any way doing anything on its own to strengthen the overall position of the free world and to weaken the forces of the Communist conspirators.

An example of what the United States should not permit to occur in a country which is a recipient of our foreign aid is the expropriation of American private property. Obviously, we cannot permit the expropriation of property owned by American citizens at the same time that we are providing economic aid to the government and to the country which is either promoting or permitting policies of that type. Furthermore, in my opinion, we should sharply step up a realistic program of impressing upon the people and the governments of all the countries which receive American aid the fact that they too are in the target area of imperialistic communism and that they should have an interest as active and alert as ours in reducing the dangers of such Communist aggression.

FLEXIBILITY AND IMAGINATION

In conclusion, perhaps the greatest weakness of our whole foreign aid program in Latin America and elsewhere stems from the fact we utilize too little imagination, initiative, and selective judgment in making it available to other lands. Because a certain formula worked rather well in Greece and Turkey under the point 4 program and the Marshall plan many years ago, there is a tendency to continue to use precisely the same techniques and formulas in every country of the world, with people of every culture, and to meet and attempt to solve every problem. That simply will not work. It will not work any more effectively than a careless physician could succeed by giving the same pill to every patient to cure every disease in the neighborhood.

POWER COMPANY OVERCHARGES

Mr. METCALF. Mr. President, last year I pointed out in my newsletter that electric consumers are required to pay the Montana Power Co. at rates which permit the company to receive the highest profit of any major utility in the country.

The 1960 Montana Power Co. report to stockholders listed $49.3 million as total revenue and $9 million paid out in dividends. The 1961 report listed $51.2 million as total revenue and $9.7 million paid out in dividends. Thus, in both years more than 18 percent of the income went to stockholders. Most of this exorbitant amount, collected from Montana ratepayers, went to non-Montana stockholders.

A study last year by Arnold H. Hirsch, public utility consultant, appeared in the May 1962 issue of Public Power. It listed the average annual rate of return of the largest electric utility operating company in each State, over the 3-year period 1958 to 1960. The rate of return in Montana, for the Montana Power Co., was the highest among all the States, 9.3 percent.

The response of the Montana Power Co. to my illumination of these facts was a personal attack on me, by the president of the company, in a recent report to stockholders.

Mr. President, the National Rural Electric Cooperative Association has compiled data which show the amount of overcharges by power companies, including Montana Power Co. and 37 others. This compilation of overcharges is based on the assumption that 6 percent is a fair rate of return. The study covers the 5-year period between 1956 and 1960.

Mr. President, I ask unanimous consent to insert at this point in the RECORD the table compiled by NRECA.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

POWER COMPANY OVERCHARGES

Estimated totals for 38 electric utilities, based on taxes actually paid, for 5 years, 1956–60

[Expressed in thousands of dollars]

Name of company	Estimated amount of overcharge					
	1956	1957	1958	1959	1960	Total
Alabama Power Co.	12,150	13,640	14,954	11,933	9,992	62,669

Total	242,468	238,168	225,950	271,473	280,984	1,259,043

Mr. METCALF. Mr. President, I ask unanimous consent to insert in the RECORD also an Associated Press article based on the NRECA figures and the reply of the Montana Power Co., whose response was again a personal attack, who termed the information released by NRECA "false and vicious."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Great Falls (Mont.) Tribune, Feb. 22, 1963]

MONTANA POWER CO. ACCUSED OF OVERCHARGING—CLAIM DENIED BY FIRM'S PRESIDENT

BILLINGS.—Electric cooperative association research economists claim that the Montana Power Co. overcharged its customers by over $39 million between 1956 and 1960 and should give it back.

Economists of the National Rural Electric Cooperative Association based their claims on 6 percent as a fair rate of return on investments and used taxes paid as their yardstick.

The study released said Montana Power was one of 38 major electric utilities that overcharged its customers more than $1.25 billion in a 5-year period. Pacific Power & Light Co. was listed at $40.8 million.

The economists estimated Montana Power overcharges in 1956 at $7.76 million, in 1957 at $7.1 million, in 1958 at $7.94 million, in 1959 at $7.96 million and in 1960 at $8.72 million.

The association said the study will be sent to congressional committees, the Federal Power Commission, and consumer groups.

The NRECA legislation and research director in Washington, D.C., Kermit Overby, said the study "shows a critical need for State and Federal legislation which require the companies to return these overcharges to their customers."

ANSWER ISSUED

The president of the Montana Power Co. Thursday branded as "false and vicious" a press release issued by the National Rural Electric Cooperative Association which alleged that the company had overcharged its electric customers.

"There is absolutely no basis of fact or justification for the fantastic figures contained in this charge," J. E. Corette, chief executive officer of the utility, said.

He also labeled the press release misleading in that it purported to quote "REA research economists."

"The NRECA is a trade organization which claims to be the spokesman for a number of REA-financed cooperatives and is headed by Clyde Ellis, a paid manager," Corette said. "It has no official connection with the Rural Electrification Administration or the Federal Government in any way."

He pointed out that the company's electric rates have been considered thoroughly by the Montana commission, adding that in 1958 the commission granted Montana Power a return of 5.33 percent on the fair value of its electric properties after a public hearing which brought out voluminous testimony and evidence.

The utility president added that NRECA "apparently sets itself up as a more informed authority on electric rate regulation than the commission in 38 States throughout the country, whose intelligence and integrity NRECA has questioned."

"In our opinion, this false and vicious attack by NRECA is nothing more than an attempt to hasten Mr. Ellis' objective, which is the nationalization of the electric utility industry," Corette said. "In addition, it is a deliberate effort to draw the taxpayers' attention away from the fact that the REA-financed agencies which Mr. Ellis purports to represent escape the payment of the Federal income taxes, pay other taxes at a much lower rate than the investor-owned utilities against which they compete and are able to finance their operations by borrowing money at a 2-percent interest rate when it cost the Federal treasury 4 percent to provide that money."

Corette emphasized that these subsidies enjoyed by REA-financed agencies add to the burden of taxpayers throughout the Nation.

"Mr. Ellis and his organization apparently have decided to launch this irresponsible attack on investor-owned utilities and public service commissions throughout the country to divert attention from the increasing demands that REA-financed agencies operate under the same business and tax rules that are applicable to the investor-owned utilities against whom they are competing," he said.

SUMMER EMPLOYMENT UNDER CIVIL SERVICE

Mr. MILLER. Mr. President, on February 20 of this year I invited attention of my colleagues to an article by Mr. Joseph Young of the Washington Evening Star appeared in that day's paper which uncovered a plan to place summer employment of students under partisan political patronage for all practical purposes. Mr. Young reported that the feeling among Government career personnel officers was that such a plan was wrong and that Civil Service Commission officials had privately expressed dismay over the idea. I expressed the hope that the White House would swiftly make it clear that partisan political considerations would play absolutely no part whatsoever in the consideration of the applications for summer trainee positions and that treatment of these applications would make it clear beyond question that such a policy is indeed being followed. Mr. Young's timely article appears at page 2657 of the Record.

Although the White House unfortunately did not see fit to do anything about the matter, I am pleased to note that the Civil Service Commission itself took action on April 8 to prevent the White House and Federal agencies from appointing students to summer Federal jobs here in Washington on the basis of partisan political considerations.

An article by Mr. Jerry Kluttz appearing in yesterday's Washington Post reports this development, indicating that the Civil Service Commission withdrew from all agencies authority to make these temporary appointments and that the authority will not be restored unless the Commission is convinced that the appointments are made without political clearances and in full compliance with the law and its rules. Mr. Kluttz quotes from a statement released by the Commission which says, among other things:

> The image of the Federal service can be gravely damaged and future quality staffing can be jeopardized unless all doubt as to the integrity of merit system operations is dispelled.

The Commission also is reported to have told agency heads that political clearance in filling competitive jobs for summer employment is clearly illegal.

The article by Mr. Kluttz reveals how the plan to turn these summer jobs into a partisan political patronage picnic was being developed. Although the White House repeatedly gave assurances that it had no plans to require a political test for summer Federal jobs, nevertheless the White House sent agencies data sheets which asked "By whom recommended" in the case of each applicant. College Democrats were carefully advised to have Members of Congress send their completed job applications forms direct to the White House, and a member of the staff of the Democratic National Committee was assigned to advise student applicants on how to get jobs. Agency officials were told that the jobs were to be filled on a political basis despite the Civil Service Commission and the laws.

In an article by Joseph Young appearing in yesterday's Washington Evening Star which made the original disclosure to which I referred in my statement of February 20, Mr. Young also relates the behind-the-scenes maneuvering which has taken place in the last few weeks. It reveals a brazen disregard for the law and for the integrity of the Civil Service Commission by White House and other administration officials in persisting to go through with the original plan and how the Civil Service Commission finally was forced to take the action it did to preserve the reputation and integrity of the Federal Civil Service merit system.

Another article by Mr. Jerry Kluttz appears in today's Washington Post, which sheds more light on the willful and shortsighted attitude of these White House and other administration officials whose actions belied their words to the point that the Civil Service Commission found the situation intolerable. Several opportunities had been given for the White House to retreat gracefully from its unfortunate plan, but these opportunities were spurned. Even a plea by the National Civil Service League, a good-government group, was turned down.

It is reporting such as this on the part of Joseph Young and Jerry Kluttz which is in the best traditions of the free press. It is too bad that some public officials cannot resist the temptation to defy the law and that their fear of the sharp glare of publicity furnished by a free press through the efforts of fearless reporters is the only way the American people can be satisfied that these officials will conduct themselves properly as servants of the taxpayers.

I ask unanimous consent that the articles by Mr. Young and Mr. Kluttz be printed in the Record.

There being no objection, the articles were ordered to be printed in the Record, as follows:

[From the Washington Star, Apr. 9, 1963]

CSC Acts To Bar Patronage in Summer Jobs—Commission Plans Exams To Prevent Political Favors

(By Joseph Young)

All Federal department and agency heads have been notified that political clearance for summer Government jobs "is illegal and will not be tolerated," the Civil Service Commission said today.

The Commission said it is now developing plans to hold nationwide competitive examinations for these jobs, many of which are filled by students. The decision does not affect numerous summer job appointments available to Members of Congress and not covered by Civil Service regulations.

These examinations, the Commission said, will eliminate both political patronage and nepotism from summer job dispensing. It has been charged by the Republicans, and denied by the Democratic administration, that summer replacement jobs are being handed out as political favors.

The actions resulted from the Star's disclosures that the Kennedy administration was requiring White House clearance of all summer students jobs in Government. Criticism from Republican Members of Congress as well as the press caused the administration to reassess its position.

AUTHORITY SUSPENDED

In order to bar political patronage this year, the CSC has suspended the authority of all Federal departments and agencies to hire for these jobs, except in the case of competitive registers for college interne and trainee jobs, as well as some typist positions.

The CSC suspended authority of agencies to make schedule A non-civil-service appointments for these jobs, as well as the authority to appoint students to summer jobs not to exceed a total of 700 hours or other jobs for which direct hiring has been allowed.

This suspension will be in effect between May 1 and October 1, 1963, the period of summer employment unless an agency convinces the CSC that no politics will be involved.

In order to have the suspensions lifted, each agency head must satisfy the CSC in writing that no political considerations will be given.

Furthermore, specific documentation of the agency's hiring program, to convince the CSC that political factors will not be applied, will be required.

NAMES TO WHITE HOUSE

This also means that agencies must refrain from sending to the White House the names of any job applicants, the CSC said. Once a student is hired and is on the rolls, it then would be all right for an agency to furnish the White House with the name of the employee for the purpose of planning student seminars, the CSC said.

Commission officials said its action was taken without clearance from the White House and that the White House was notified of the action at the same time as the press.

Since the Star first disclosed the White House clearance situation, the administration has been sharply criticized, with the result that many administration officials felt that greater political liability than good would accrue from the policy.

CSC officials said the situation reached the breaking point when the Star a week ago Sunday in a followup to its original story disclosed that the National College Democrat, the official publication of the National Federation of College Young Democrats, gave its members specific instructions on how to get political clearance from the White House.

The Young Democrats also were told to contact the college director of the Democratic National Committee in connection with the jobs.

INTEGRITY AT STAKE

A top CSC official declared, "We couldn't allow the situation to continue. The reputation and integrity of the Government's civil service merit system was at stake."

The entire situation has also made the CSC decide to hold nationwide competitive exams for all student summer jobs starting next year. This not only would eliminate political patronage but also the nepotism in which agency officials hire their sons and daughters and the children of friends.

The CSC heretofore had been opposed to nationwide competitive exams because of the cost involved. But recent events caused the CSC to change its mind. It now feels that whatever extra cost and time is involved will amply justify the protection of merit system principles.

About 6,000 Government summer jobs for students are available in the Washington area, and another 5,000 or 6,000 elsewhere in the country.

[From the Washington Post, Apr. 9, 1963]

CIVIL SERVICE MOVES TO BAR POLITICS FROM SUMMER JOBS FOR STUDENTS

(By Jerry Kluttz)

The Civil Service Commission yesterday acted to prevent the White House and Federal agencies from appointing students to summer Federal jobs here on the basis of political pull.

It withdrew from all agencies authority to make the temporary appointments, and the power won't be restored unless the Commission is convinced that the appointments are made without political clearances and in full compliance with the law and its rules.

The tough antipolitical interference order was a departure for the agency, which generally contents itself with issuing warnings to prevent undermining of the merit system and its laws and rules by either agencies or individuals.

"We must make sure," CSC announced, "that no steps are taken to defeat the President's expressed intention to protect fully the civil service merit system." It further explained:

"Recent press reports alleging that political clearance is necessary for summer employment in civil service positions in the Washington metropolitan area indicate serious misunderstandings about this program. The image of the Federal service can be gravely damaged, and future quality staffing can be jeopardized unless all doubt as to the integrity of merit system operations is dispelled."

CSC then informed agency heads in a special bulletin that political clearance in filling competitive jobs is clearly illegal, and it quoted the appropriate rule and the sweeping authority it has to enforce it. To assure compliance with the rules, CSC concluded, it was necessary for it to suspend all agency authorizations to make temporary appointments in the Washington area between next May 1 and October 1.

The Commission also directed its staff to make special inspections during the summer months to make sure that summer appointments comply with its rules and the law.

CSC will restore the hiring authority on an agency-by-agency basis but only after the agency head certifies that he and his staff fully understand the civil service laws and rules and will carry them out.

Chairman John W. Macy also announced that CSC is developing plans for a nationwide competitive exam that would be used to fill summer jobs in 1964. This would be the first time for such a test and it would discourage both nepotism and partisan political considerations.

A CSC official commented: "We were sorry to have to do it but we were placed in an impossible situation where our honor and virtue and the integrity of the system was at stake."

The White House repeatedly assured CSC that it had no plans to require a political test for summer Federal jobholders. But Dorothy Davies of the White House sent agencies data sheets that asked for the names, addresses and other information on applicants. The significant question on the form in CSC's eyes was "By Whom Recommended?"

College Democrats were advised to have Members of Congress send their completed Forms 57's, job application forms, to Mrs. Davies along with recommendations from the Members. James Hunt was assigned by the Democratic National Committee to advise student applicants on how to get jobs.

Agency officials also advised CSC that they were being told that the jobs were to be filled on a political basis despite CSC and the laws.

The hard-hitting CSC directive will have the effect of canceling commitments made to hundreds of students who were promised jobs here this summer. CSC stressed that agencies must use appropriate competitive registers to fill their summer jobs unless their hiring authority is restored.

Incidentally, the order will have the effect of improving job prospects of students who have passed the student aid, trainee, Federal service entrance, typing and other competitive tests. Most of the summer hiring will be from these registers.

Federal agencies last year hired nearly 10,000 students for temporary summer jobs and a recent CSC survey indicates they plan to hire about 6,000 this summer.

But the controversy over summer jobs and cuts by Congress in agency budgets have combined to lower estimates to around 3,000.

[From the Washington Post, Apr. 10, 1963]

WHITE HOUSE INVITED CSC CRACKDOWN ON STUDENT JOB POLITICS

(By Jerry Kluttz)

The White House invited the black eye administered to it by the Civil Service Commission which has cracked down hard on political interference in summer jobs.

Its behavior on the job issue was strange and contradictory. Although it denied any intention to give political clearances to summer job appointees, its actions aroused deep suspicions of political involvements.

The Commission had cautioned the White House staff several weeks ago that a political clearance system would be illegal and that it would be forced to take actions to prevent its use.

After all, Civil Service officials are realists. They know only too well that the President and White House staff members, in both Democratic and Republican administrations, have been instrumental in getting summer jobs for friends and friends of friends.

CSC or the most partisan Republican in Congress wouldn't have dreamed of making an issue if White House staffers informally recommended and agencies hired a couple of hundred students for temporary summer jobs. In fact, most of them would defend the practice.

What, then, is so different about the job picture this year? What brought on the tough CSC directive that canceled the authority of agencies to make temporary appointments until it is satisfied that no politics is involved in them and to move toward filling summer jobs on the basis of competitive merit tests?

The answer is: at least two new elements. First, Dorothy Davies and her superiors on the White House staff sought to formalize summer hirings through her office, and second, CSC was placed in the intolerable position of not knowing what it was talking about in its own jurisdiction—the Federal personnel field.

Several weeks ago Mrs. Davies discussed summer job problems with two top Civil Service officials at her White House office. She had set up last summer's seminars for students which were generally rated a success. The President and others took time out to give the students an insight of Government and to encourage them to make careers in it.

The CSC was sympathetic to Mrs. Davies' concern over improving the seminars but they failed to understand clearly what she had in mind in the matter of appointments.

At the time the Commission was considering a nationwide competitive test to select students for summer jobs. Mrs. Davies showed little sympathy for the idea. Anyway, the session ended with the first suspicion that the White House had a political interest in the jobs.

The following week Mrs. Davies had another meeting at which no CSC people were invited. Significantly many of those attending handled patronage for their agencies along with a few career personnel directors. Summer jobs were discussed and the suspicion deepened that the White House planned to use the jobs for political purposes. But Mrs. Davies and others promptly denied the reports.

It was at this juncture that Civil Service officials explained to White House staffers that a political test for summer jobs would be illegal. They suggested issuance of a clear-cut statement to explain in effect that the summer jobs would be filled largely from civil service and agency tests as has been past practice. Several staff members liked the idea.

But in the end the White House decided not to go along with any such statement on the ground that none was necessary since no change was planned in summer hirings. It was argued that the statement implied guilt on the part of the White House. The White House action added to the suspicions but at least CSC was partially satisfied with its denials of political interference.

The job issue was down to a simmer 2 weeks ago today when CSC Chairman John W. Macy confidently assured the House Civil Service Committee that the White House interest in summer jobs was confined to planning seminars for students.

But a few hours afterward the Commission was jolted when it was shown a copy of personnel data sheet sent to a few agencies by the White House. The document requested the name, address, and other background information on summer job applicants and appointees. The crucial question, in the eyes of the Commission was "By whom recommended?"

CSC went into a hurried special session and issued an extraordinary warning to agency heads that it would be illegal to submit names of student applicants to the White House for political clearances. It hinted punitive actions against those who might indulge in it. That should have settled the issue and it gave the White House another opportunity, also ignored, to retreat gracefully.

Next came reports that regular agency personnel offices, staffed with career people, were being bypassed and that those who handle patronage in the agencies and dubbed "political commissars," were making commitments to hire students. It was assumed their actions were motivated by political considerations and pressures.

Student Democrats were advised to send their form 57's, the Government job application form, to their Members of Congress and to have them relay the forms, with recommendations, to Mrs. Davies. James Hunt of the Democratic National Committee was the contact man for the students.

Finally, the White House ignored a friendly letter written to the President by the National Civil Service League, a good-government group, which urged him to disavow any plan to have the White House set up a political clearance system for student jobholders.

The situation called for decisive action to recapture some of the lost faith in the merit system which the President is on public record to protect and to strengthen.

CSC did it with its tough antipolitical interference order. The Commission means to enforce the law and its rules. Only time will tell whether it will be allowed to succeed.

WILL KENNEDY BACK AGRICULTURE?

Mr. MILLER. Mr. President, in the Waterloo Daily Courier for March 27, 1963, the lead editorial entitled "Will Kennedy Back Agriculture?" merits attention. The editorial points out the present deplorable situation arising from the discriminatory variable import duties imposed by the Common Market on some of our agricultural exports. U.S. sales of poultry and eggs dropped 40 percent during the first 4 months these duties were in effect; flour exports dropped 65 percent, and wheat sales dropped 77 percent. With negotiations scheduled in May in Geneva under the General Agreement on Tariffs and Trade, the editorial wisely advises that if our Government is devoted to the best interests of American agriculture, it must refuse to bargain on lowering of tariffs on industrial products if the Common Market countries refuse to bargain on lowering these variable import duties affecting our agricultural exports.

I ask unanimous consent that the editorial be printed in the Record.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

Will Kennedy Back Agriculture?

The Common Market countries last August imposed variable import fees on most imports of agricultural commodities. Effect of the fees is to prevent any imports of commodities produced in these countries from selling below the Common Market support price.

Effect of the program was instantaneous. During the first 4 months, according to U.S. News & World Report, U.S. sales of poultry and eggs in Common Market countries had dropped 40 percent below the year's earlier figures. Flour exports dropped 65 percent and wheat sales slumped 77 percent.

These declines were greater than had been anticipated since it was not considered possible for the Common Market countries to replace American supplies that rapidly. But the result has been a serious blow to American farms.

Spokesmen for American agriculture, therefore, must watch closely the tariff negotiations in May in Geneva. This is the meeting of the 41 nations involved in the General Agreement on Tariffs and Trade (GATT). The American Government, if devoted to the welfare of American agriculture, must refuse to bargain on the lowering of tariffs on industrial products if the Common Market countries refuse to bargain on lowering of the variable fees on American farm imports.

The ideal of world trade is that each nation produces what it does most efficiently and trades for the products in which it is inefficient. But the Common Market countries have abandoned this concept on agricultural products and are returning to the old protectionist concepts. The result can only be a gradual return to high tariffs on both sides.

Because the Kennedy administration is so committed to the concept of an expansion in free world trade, however, it will be tempted to sacrifice American agricultural trade. The spokesmen for American agriculture must organize to determine that this doesn't happen.

DECREASE OF FREE WORLD SHIPPING TO CUBA

Mr. MAGNUSON. Mr. President, from time to time I have placed in the Record reports on free world shipping to Cuba. Sometimes I have been able to obtain the figures for monthly periods. Recently, I have been obtaining them for 2-week periods.

During the period from March 22 through April 5, our allies sent to Cuba 11 ships, including 2 tankers, whose gross tonnages total 51,694. Great Britain appears to have gained the lead again, in shipping 35,384 tons. I state the gross tonnage, because it is in direct ratio with the amount of cargo which can be transported.

Tankers under British and Greek flags totaled 27,390 tons. It is heartening to note that total free world tonnage has dropped off 33,216 tons, as compared with that for the preceding 2-week period, and that tanker tonnage was reduced by 13,292 tons over the same period. A new arrival on the scene is the Moroccan ship *Toubkal*, of 8,748 tons.

Reliable sources indicate that the Soviet Union, in a move said to be designed to strengthen the availability of dry-cargo ship tonnage under direct Russian control for trade with Cuba, has purchased a dozen Liberty ships, in excellent condition, from European owners. The 10,000-ton, 10-knot ships were purchased in Great Britain, Belgium, and Italy, at prices reported to be considerably above the present market level for such tonnage. The average price involved was said to be $180,000, which would be some $25,000 above the current price level for free-transferable Liberty vessels. This circumstance indicates to me that the Russians are beginning to feel the pinch occasioned by the reduction of free world shipping to Cuba.

The tonnage of free world shipping which continues to go to Cuba is still too great and our allies still are not cooperating to the extent to which I believe they should.

The list of free world ships going to Cuba, their flag of registry, and their tonnage during the period of March 22, 1963, through April 5, 1963, is as follows:

Ardmore, British, 4,664 tons.
Athelcrown (tanker), British, 11,149 tons.
Linkmoor, British, 8,236 tons.
Sierra Madre, Spanish, 999 tons.
Lord Gladstone, British, 11,299 tons.
Penelope, Greek, 6,712 tons.
Sirius (tanker), Greek, 16,241 tons.
Toubkal, Moroccan, 8,748 tons.
Tine, Norwegian, 4,750 tons.
Dugi Otok, Yugoslav, 6,997 tons.
Olga, Lebanese, 7,199 tons.

So the free world is still giving the Russians this advantage, in connection with the shipment of supplies to Cuba, by helping them with the shipping and by selling them some of the old Liberty ships.

Mr. President, the last list of freighters serving the Cuban trade is particularly interesting, in that it shows the British to be far out in front in terms of total tonnage.

During a 5½-week period from January 31 through March 8, six British ships totalling 76,066 gross tons, were listed—including two ships in the 16,000- to 22,000-ton class. Greece was the only other country whose combined tonnage was significant. Six vessels in this period accounted for 47,442 tons.

The combined tanker tonnage of 93,555 tons shipped much needed petroleum products in vessels under British, Greek, and Norwegian flags.

I wish to add that in all the weeks I have been putting into the Record from week to week the list of vessels sailing in the Cuban trade, there has been a very conspicuous absence of ships from Central or South America, which shows a fine degree of cooperation of the so-called free nations in the Latin Alliance, which are helping us with the economic problem of quarantining Cuba.

WASHINGTON TO BOSTON RAILROAD PASSENGER SERVICE

Mr. BOGGS. Mr. President, the distinguished Senator from Rhode Island, Mr. Claiborne Pell, has proposed a resolution for congressional consent for a multistate authority to help modernize and operate railroad passenger service along the eastern seaboard, Boston to Washington. The number of people traveling in this megalopolitan area increases from year to year. Yet the existing railroad facilities seem to have less and less attraction for meeting the passenger service requirements.

This multistate area's importance is well known. It accounts for the payment of about 27 percent of our Federal income taxes and approximately 30 percent of our annual industrial production.

There is really a great problem with intercity passenger transportation between Boston and Washington. Senator Pell's proposal for a multistate authority is indeed a positive suggestion to meet this great need for modernized and better intercity passenger transportation service. His proposal is attracting increasing interest and support. I think it is worthy of the greatest consideration.

On April 6, 1963, an editorial appeared in the Washington Post endorsing this proposal, and I ask unanimous consent to have it printed in the Record at this point.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

Off the Track—II

The steady deterioration of railroad service is evident to anybody who passes through Union Station, where a shroud of gloom hovers over splendors past. It is the conviction of at least one Senator, however, that the afflictions of the passenger lines are curable in the populous Northeast. Claiborne Pell, Democrat from Rhode Island, is offering a plan that could lead to a rebirth of rail service and make it possible for travelers to speed from Washington to Boston in 4 hours.

Mr. Pell is sponsoring a joint resolution that would give congressional consent to the establishment of a multi-State authority to modernize and operate passenger service between Boston and this city. In addition to the District, the eight States included in the Pell plan are Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Delaware, and Maryland.

The first point the Senator makes is that these Atlantic States are rapidly becoming a megalopolis. The Northeast now has a population of over 37 million and contains 30 percent of the country's manufacturing and 21 percent of the retail establishments. Intercity transportation is vital to the seaboard, and the railroads in theory should be able to provide reliable, swift, and profitable service. Yet though the railroads have the track and right-of-way, they lack the capital necessary to install high-speed service.

As the Senator sees it, a multi-State public authority could raise $500 million under tax-exempt bonds; the money would be used to modernize the rails and install high-speed service that would take a passenger from Washington to Boston in 4 hours. Precisely the same technique of multi-State compacts is already employed for the building of port facilities, bridges, and highway. Why not extend the concept, Mr. PELL asks, to the railroad business?

Why not, indeed. The seaboard megalopolis is sure to become more densely populated and more intricately interwoven. Highways and airways will not be sufficient to meet staggering demands on interurban facilities. One rail line, Senator PELL points out, can carry as many passengers as 32 highway lanes.

As a first step, Congress is being asked to appropriate $1 million for a full-scale study. The request has White House approval, and Richardson Dilworth, former mayor of Philadelphia, is being mentioned as a possible director of the study. Prompt approval of the appropriation would be an investment in the future.

Such a study need not be—and should not be—carried out in a hostile spirit. The railroads have been badly hurt by competition from airlines, which enjoy a Federal subsidy, and trucks, which use a publicly maintained right-of-way. Within their limited capital resources, some effort is being made to improve passenger service. The Pennsylvania Railroad, for example, announced the other day that 50 modern coaches will be added to the fleet operating between New York and Washington. The aim should be to make this affirmative attitude contagious.

COTTON EXPORT PROGRAM

Mr. EASTLAND. Mr. President, the Department of Agriculture has just made the third substantial downward revision in its estimate of cotton exports for the current season. Until just 6 months ago, the outlook for exports was 5.2 million bales. Its latest estimate is about 4 million bales. Trade sources indicate exports will probably not even be this high.

During the first 6 months of the season only 1.3 million bales were exported as compared with 2.6 million for last season—just one-half as much. What caused such a rapid deterioration in foreign markets for U.S. cotton? The answer is simple. U.S. cotton has not been priced competitively in foreign markets as required by section 203 of the Agricultural Act of 1956.

Let me review why we have a mandatory cotton export program and how it operated for the first few years. As a result of the umbrella which our price support held over prices in foreign cotton producing countries, foreign acreage expanded by leaps and bounds in the late 1940's and early 1950's. As a result, we built up an all-time record carryover of 14½ million bales on August 1, 1956. Our exports dwindled to 2¼ million bales—the lowest in peacetime since 1871.

To combat this situation, Secretary Benson announced a cotton export sales program under general authority accorded him in the CCC Charter Act and the Agricultural Act of 1949. But he failed to offer U.S. cotton at prices which were competitive with foreign growths. After a series of conferences and an exchange of letters, it was clear he would not change the price to a competitive level. There was no alternative but for Congress to take action. This was done and section 203 of the Agricultural Act of 1956 was enacted. This requires that U.S. cotton be made available in foreign markets at prices which are competitive with foreign grown cotton. It also requires that our fair share of the export market be reestablished and maintained.

This forced the Secretary of Agriculture to lower the price at which he was selling U.S. cotton abroad to a competitive level. As a result, export sales shot up dramatically. During the short period of 4 weeks CCC sold as many bales for export as had been exported during the entire 1955–56 season. For that year, we exported a total of 7.6 million bales, which was three times the level of the previous year and the highest since 1932.

During the following marketing year, our export price was raised over 2 cents a pound and exports fell off. In 1958, the higher export price was maintained and exports dwindled to 2¾ million bales. As a result of demands from the cotton industry and insistence by the Congress, the export subsidy was increased from 6 to 8½ cents per pound in 1959 and our export price was made competitive. Again our exports shot up to 7¼ million bales. In 1960, it was possible to reduce the subsidy, as the market price was lowered during that year. Our prices were competitive and we had a good export year.

Once we got our prices for U.S. cotton competitive in foreign markets through the passage of section 203, we had a very successful export program, except for 1 year. That was 1958–59. Exports for the other 4 years averaged 6¾ million bales. Even including that year, we averaged shipping 6 million bales abroad. This contrasted with an average of only 3.6 million bales for the 5 years preceding the establishment of the export program.

We were able to achieve these greatly increased exports largely because the expansion in foreign cotton acreage was brought abruptly to a halt when U.S. prices became competitive. Likewise the expansion in foreign rayon production slowed down appreciably. The U.S. carryover had dropped from an all-time high of 14.5 million bales in 1956 to a manageable 7.2 million bales in 1961. Government stocks had dropped from over 14 million bales to 1½ million bales during this same period. Largely as a result of our increased exports we were able to realize a modest increase in our acreage.

Secretary Benson's able administration of the cotton export program under section 203 is responsible for this remarkable record of building back our export markets and getting cotton on a sound footing.

A few weeks after the present administration took office, I had occasion to discuss the export program personally with the present Secretary of Agriculture. I told him of the good results generally experienced under this program, and pointed out the importance of keeping our cotton competitive in world markets. I cited the splendid record when we were competitive and the miserable failure the year we got our price out of line. During this time, there was talk that the price support would be set at a level which would substantially raise the market price for U.S. cotton in this country. I also told the Secretary that any increase in the price of cotton in the United States must be accompanied by an increase in the export subsidy so that the price at which our cotton is sold in foreign markets would not get out of line.

In a letter which I addressed to him on this subject dated February 13, 1961, I stated as follows:

> Therefore, if the 1961 price support is at a level which increases the U.S. market price of cotton, the export subsidy must be increased by a corresponding amount in order to maintain this competitive relationship as required by the cotton export law.

On February 21, 1961, the price support was set at a level which increased the domestic price by about 3½ cents per pound. In January 1961, the average price for Middling 1-inch cotton in the official spot markets was 30.14 cents per pound. By October, it was up to 33.59 cents per pound.

In spite of the warnings that any increase in the domestic price of cotton must be accompanied by a corresponding increase in the export subsidy, the subsidy was increased by only 2½ cents per pound, whereas the price was increased 3½ cents. This raised the price of U.S. cotton in foreign markets and put the price out of line with competitive growths. As a result, our exports fell from 6.6 million bales to 4.9 million bales.

Our export prices have continued to be out of line. For the current marketing year, which is the second full year this administration has been in office, exports will likely go below 4 million bales. So for the 2 years of the present administration, we will export an average of something less than 4.5 million bales. This contrasts with an average of 6 million bales exported for the first 5 years in which the export policy was set under the 1956 law. This is Secretary Benson's record.

During these last 2 years, foreign cotton acreage made its first significant expansion since 1956. During this time it increased by 3 million acres, and foreign production jumped 4½ million bales. The output of synthetic fibers abroad also climbed sharply. In addition our carryover has jumped from 7.2 million bales to an estimated 10.6 million bales. Government stocks increased from 1½ million bales to over 10 million. CCC's investment went up from $300 million to $1¾ billion. U.S. cotton acreage has been cut from 18.5 million to 16.3 million acres, the minimum permitted under law.

It is obvious that if we continue to go in the direction we have been going during the past 2 years, we will pile up more surpluses and force more restrictions on U.S. cottongrowers. The outlook is that we will produce more cotton under the minimum allotment provided by law than we are consuming and exporting this year.

In the face of this condition, the Department announcd a continuation of the current export subsidy rate of 8½ cents per pound. They did this even though our prices have been 1 to 2 cents higher than the price of foreign cotton in the foreign market during the current season. The announcement stated, however, that the 8½ cents would be the initial subsidy rate. The announcement further stated that the rate would be periodically adjusted. At the same time the Department announced a new cotton sales for export program under which stocks of CCC cotton in inventory will be offered for sale periodically on a bid basis. The sales for export program is intended to supplement the subsidy programs.

I am pleased that the Department has decided to use both these techniques. I hope these programs will result in U.S. cotton again becoming competitive in the world markets in accordance with the purpose and intent of the law. This is long overdue. U.S. cotton has been noncompetitive too long.

But this program cannot be fully effective unless the price of U.S. cotton for the next season is made competitive with foreign growths in foreign markets immediately. In order for this to be done an announcement should be made immediately that the export subsidy rate will be increased so that our cotton can move at competitive prices. Furthermore, the minimum price at which CCC sells for export must be set at the level to meet foreign competition. The announcement should be so worded and the program must be so administered as to reduce uncertainty to a minimum and to provide price stability.

If the CCC minimum price changes with every sale, the uncertainty in the market will increase to the point of chaos.

One of the great needs is to replenish the cotton pipelines around the world, which have been reduced to the lowest levels of record in relation to consumption. This has been due primarily to the uncertainty of U.S. cotton price policy. These pipeline stocks should be 2 million bales larger than they are presently.

This will not happen without a reasonable amount of price stability. No merchant, no mill, no finisher, no converter, no wholesaler will dare make any commitments except for immediate turnover purposes in the face of the uncertainty of an ever-changing Government minimum selling price. They cannot risk the loss that will be imposed upon them by further price reduction. The longer foreign mills hold off buying, the more desperate the foreign sellers will become. They will certainly drop their prices. They will force U.S. exporters to constantly reduce the price at which they bid for CCC cotton in order to compete. This means that many bids will be below the price which the Department of Agriculture officials will be willing to accept.

A minimum should be determined initially by the Department of Agriculture at a level designed to make U.S. cotton generally competitive in world markets during the season, in the light of current conditions and previous experience.

I have repeatedly pointed out to the Department of Agriculture that the competitive position must be considered broadly and over a reasonable period of time. Section 203 certainly does not require the CCC to fix the price of U.S. cotton equal to the price at which every foreign bale is sold every day by every competitor. This obviously is impossible.

The other provision of the law requires the Department to operate the program so as to maintain our fair historic share. I have urged the Department to exercise judgment in carrying out this provision. I have stated that I do not feel it is necessary that they announce a figure because exports will naturally fluctuate depending upon the textile cycle abroad and the relationship of foreign production to foreign consumption.

But I insist that we have not maintained our fair historical share of the export markets during the past 2 years. U.S. cotton exports were 33 percent of the amount of cotton consumed in foreign countries in the 1930–39 period, and about 20 percent in the 1948–52 period. Foreign consumption has risen from an average of 24 million bales in 1948–52 to an estimated 40 million bales in 1962–63. If we had the same share today as we had in the 1930's, we would be exporting 13 million bales a year. Even if we took the lower 20-percent figure which prevailed during 1948–52, our fair share of the export market would be 8 million bales. It is obvious that 4½ million bales is way below our fair share.

The administration must act promptly and decisively to carry out the cotton export law as intended. This is essential if we are to have a sound and prosperous cotton economy. But that is not all. By carrying out the intent and purpose of the cotton export law, cotton can make a greater contribution to the Nation's economic well-being and to the all-important balance-of-payments problem which is plaguing the administration.

SENATORS AND CITIZENS JOIN TO SUPPORT GI BILL

Mr. YARBOROUGH. Mr. President, at the hearing before the Senate Subcommittee on Veterans' Affairs yesterday, Senator BIRCH BAYH, the dynamic junior Senator from Indiana testified on a major bill for the first time since becoming a U.S. Senator.

His testimony was forceful, cogent, compelling. It was for the GI bill, to provide readjustment assistance to the cold war GI veterans. Senator BAYH'S facts were so clear and his reasoning so just and logical that I ask unanimous consent to print his testimony at this point in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR BIRCH E. BAYH BEFORE SUBCOMMITTEE ON VETERANS' AFFAIRS ON S. 5, TUESDAY, APRIL 9, 1963

Mr. Chairman and members of the committee, it is a pleasure for me to appear before you today in support of S. 5 which I am cosponsoring. As one who was personally enabled to gain a college education through the GI bill of rights, I know the value of such aid to a young person just mustered out of the service.

The reasons for supporting this measure are compelling and I would like to briefly discuss several of them with you. First, the young people who have served their country in the armed services since 1955 have earned the aid provided in S. 5, just as those who served in the early cold war years did. We need only recall the headlines of these years to realize that these young people served their country in a time of extreme peril to this Nation and themselves. Berlin, Formosa, Korea, Laos, Thailand, and South Vietnam are just a few of the areas in which servicemen went to bed at night not knowing whether or not they would wake up the next morning in a shooting war. I point this out because some may argue that benefits should be given only to veterans of a shooting war or those serving outside the United States.

The original GI bill provided benefits to all servicemen and women regardless of the fact that many did not participate in actual combat or leave the confines of the United States. Veterans of the cold war period in the years between the end of active hostilities in 1945 and the beginning of the Korean conflict were eligible for benefits. We were technically at war but active hostilities had ended. The criterion for receiving benefits in both the war and postwar periods was that the veteran had served his country in whatever capacity he was called upon to serve. It is a matter of equity that men and women who serve in a similar cold war period today be accorded equal treatment.

We are all aware that selective service has been in operation during this period. Young men have been taken from their families and their careers to serve their country. Yet, despite selective service, only 46 percent of the young men of eligible age have served in the armed services during this period. Those not required to seve in the Armed Forces have had the opportunity to advance themselves educationally, professionally, and financially. It is only fair and equitable that those men who have had their lives and careers interrupted by service be compensated for that interruption.

The second reason for supporting S. 5 is that not only will individual Americans benefit from the program but so will America herself. The money spent under S. 5 would be an investment in the group most capable of profiting from the expenditure. The young people discharged from the service have undergone a sobering, maturing experience. Most of them are in their early to midtwenties and are purposeful, determined, and dedicated. When these mature young men gain a higher education, our society as a whole is the richer.

The GI bills of World War II and the Korean war provided for our Nation 205,000 doctors, dentists, and nurses, 150,000 physical and research scientists, 500,000 engineers, and 350,000 schoolteachers. In my own State, Indiana, 210,019 young people received additional education from the two bills. This has meant a great deal to Indiana's economy and industrial capability as well as to the people themselves.

Each day more and more untrained people lose their jobs because of automation. In times of economic distress, untrained workers are naturally the first to lose their jobs. We hear a great deal these days about the problems of unemployment. Better trained people, possessing the skills required in space age industry, young men and women, capable of holding a job, represent a long-range bulwark against the unemployment problem.

Money spent under S. 5 will be returned in taxes because of the higher incomes which history has proven almost inevitably come from a higher education. This is a self-financing program in the finest sense of the word.

By the end of this fiscal year, this country will have spent $413 billion on national defense since 1955. The almost negligible fraction of that amount which will be spent to provide benefits for the cold war veterans should be considered part of the obligation incurred during the current cold war period, part of the obligation to keep our country militarily and economically strong. The individual veteran and the entire Nation will profit from our meeting this obligation. I urge you to act favorably on S. 5.

Mr. YARBOROUGH. Mr. President, another energetic Senator, the able Jennings Randolph, of West Virginia, like Birch Bayh, one of the 39 cosponsors of the GI bill, also testified yesterday in support of early action on S. 5, the GI bill. I ask unanimous consent that his testimony be printed at this point in the Record.

There being no objection, the statement was ordered to be printed in the Record, as follows:

Statement by Senator Jennings Randolph, Prepared for the Senate Subcommittee on Veterans' Affairs, April 9, 1963, in Support of S. 5

THE COLD WAR VETERANS READJUSTMENT ASSISTANCE ACT

Mr. Chairman, I am most appreciative of this opportunity to appear before your committee to offer my support for the so-called cold war GI bill. I would be remiss if I did not also extend my gratitude and my commendations to you, Senator Yarborough, for the conscientious efforts you have made and the leadership you have provided in advancing this measure.

In the interest of equity for the individuals affected and in furthering the economic and social well-being of the Nation as a whole, the pending measure should be enacted by Congress without further delay.

The young men and women inducted into the Armed Forces since January 31, 1955, are presently denied the adjustment benefits which a grateful nation accorded veterans of World War II and the Korean conflict. This inequity can be justified neither by the quality of service of Armed Forces members of today nor by a lessening of the importance of national security. Current members of the Armed Forces are on constant airborne alert with the Strategic Air Command, are roaming the seas in Polaris submarines, and are occasionally being killed as "advisers" in the jungles of South Vietnam. These are "peacetime" veterans only in the most euphemistic sense of the word. They are, in all good conscience, entitled to comparable adjustment benefits provided for their predecessors.

In terms of the national welfare, it is doubtful that any other single proposal on the agenda of this Congress will do as much to raise the reservoir of human skills in the United States. Under the Adjustment Assistance Acts for veterans of World War II and the Korean conflict, more than 10 million veterans advanced their educational and vocational qualifications. And of these, more than 3¼ million attended college. Though the benefits of such education cannot be measured with mathematical precision, the U.S. Bureau of the Census estimates that increased earning power achieved by veterans as a result of the previous GI bills returns more than a billion dollars a year in taxes to the Federal Treasury.

Of even greater importance, however, has been the contribution of such legislation to the tremendous increase in human capacities available in our society and the resultant technical and scientific progress. In our State of West Virginia, some 220,000 veterans have availed themselves of the educational benefits under previous GI bills, of whom 9,200 have become engineers, 7,200 schoolteachers, 2,600 doctors, dentists, and nurses, and 3,000 have been graduated at various levels in scientific studies.

Finally, Mr. Chairman, I would draw your attention to the unemployment rate among veterans of World War II and the Korean conflict. I do not have at my disposal the figures for the United States as a whole, but a recent report from King Parsons, director of veterans' education in West Virginia, states that unemployment among West Virginia's World War II veterans is at the almost irreducible minimum of 2.1 percent—a highly encouraging figure in comparison to West Virginia's overall unemployment rate of approximately 12.5 percent. I believe one may justifiably infer that the highly satisfactory employment rate among veterans is due in considerable degree to the educational and loan benefits they have received from the GI bill.

It is for these reasons that I most earnestly support the pending proposal and hope that it will soon be reported favorably by this subcommittee. Then we of the full Committee on Labor and Public Welfare can advance S. 5 for action in this session of the Congress.

Mr. YARBOROUGH. Mr. President, Mr. Carter L. Layne of Gretna, Va., testified yesterday, as a member of the Association of Young Farmers of Virginia, proving that the GI bill is needed by the farm families and economy of America, and Andrew J. Biemiller, legislative director, AFL-CIO, testified today with one of the finest analyses yet heard of the GI bill and its effect on labor and our economy. The facts set out in these papers are irrefutable. The GI bill is an urgent American need. It should be at the top of a legislative must list.

I ask unanimous consent that both of their statements be printed at this point in the Record.

There being no objection, the statements were ordered to be printed in the Record, as follows:

Statement by Carter G. Layne, Young Farmers of Virginia, Gretna, Va.

My name is Carter G. Layne. I am a full-time farmer in the Renan community of Pittsylvania County, Va. I am a charter member of the Renan Association of the Young Farmers of Virginia, an organization of young farmers enrolled in continuation classes in vocational argiculture. I am here to testify in behalf of the American Vocational Association.

I am a veteran of World War II and, as one of approximately 20,000 Virginia veterans who received institutional onfarm training for veterans during the period from 1946 to 1961, I am happy to appear before you to relate my experiences as a young farmer and tell you how this type of training has benefited me. I am convinced that my story is no different from that of thousands of other young farmers throughout Virginia and the Nation.

With the exception of the years spent in military service, my entire life has been spent on the home farm. During my childhood, my father practiced general farming with tobacco as the principal cash crop. Upon graduation from the Renan High School before World War II, I decided to make farming my life work. My plans for becoming established in farming were interrupted by the advent of war. I entered the armed services and served for nearly 4 years. I participated in five major campaigns in the European theater. While in service, I realized that I would need additional training in order to be successful in the rapidly changing field of agriculture.

Upon my return to the farm it was gratifying to learn that provisions had been made for a program of onfarm training for veterans. I enrolled in the program at Renan High School and received the instruction provided for the maximum period of 4 years. With instruction received in classes and on field trips and with the advice and guidance of my teachers of vocational agriculture, I soon realized that farming was quite different from that which I had been accustomed. I soon realized that to be a successful farmer it was necessary to expand the operation in order to justify mechanized equipment. I also learned that to effectively use the farm labor necessary for producing tobacco, additional enterprises should be added.

Upon the death of my father I inherited a one-third interest in the home farm. Since my two brothers had decided upon other areas of work, I purchased their share and will become sole owner at my mother's death. In 1948 I purchased a second farm of 225 acres and in 1960 I purchased another 150-acre farm. This size operation has enabled me to establish a dairy herd and operate an economically sound farming business.

I have continued to keep up to date on farming methods and practices by attending Young Farmer classes regularly. Members of these classes are affiliated with the Young Farmers of Virginia in which I have taken an active part. Although this organization has no direct relationship to on-farm training for veterans, it is an outgrowth and one result of that program. A major of our Young Farmer class members are veterans who received training under either Public Law 346 or 550. Without the training and benefits received from the veterans' farm training program, I would not be as well established as I am today. I believe I can name many others in the same category.

The following is a summary of accomplishments of veterans enrolled in institutional on-farm training in Virginia during 1953-54. Enrollment for this period was 1,469, which was many times smaller than the peak enrollment of 8,418 for 1949-50. I use figures for 1953-54 because during that year about half of the enrollment was made up of veterans training under Public Law 550 and the remainder under other GI training provisions.

Significant accomplishments of the 1,469 veterans in on-farm training classes in Virginia in 1953-54 are:

Number who were farmowners	614
Number breeding animals purchased (dairy, beef, swine)	11,080
Number items made in school farm shop	11,952
Number farm soil conservation plans developed	638
Number home orchards established	529
Number acres of pasture developed	7,785
Number tractors purchased	553
Number other farm machines purchased	3,284
Number acres of forestry improved	1,796
Number new homes constructed	260
Number homes in which running water was installed	403

Of course, some of the above would have been done if no training had been available; however, I know from experience that a major portion of these accomplishments was a direct result of instruction and assistance made possible by our veterans' training program.

If training for veterans was important 15 years ago, it is even more important at the present time. Changes in the business of farming are taking place more rapidly than at any time in the history of our Nation.

When a young man was called to serve in the Armed Forces 20 years ago, even if he served 4 years, farm practices and methods changed relatively little while he was away from the farm. Now, when a young man is called to serve his country, he will not even recognize many of the practices being conducted when he returns. It is no longer true that a farmer must know only how to perform a certain practice, he must also know why. In other words, science as well as mechanization has completely changed the farming picture.

We hear much about the increased population that this country faces. We also hear that the need for young men in farming is decreasing. This may be true but it is only part of the story. With increased mechanization and fewer but larger farms, the need for increased education and training opportunities for these young men who remain on the farm is greater than ever before. We in Virginia and throughout this Nation are not beginning to train the number of farm operator replacements needed.

We are losing the "cream of the crop" in agriculture and will eventually face an extreme shortage of young men on farms. Let me illustrate what I mean. A young man is called to serve 2 years in the Armed Forces. He has probably been out of high school 2, 3, or 4 years where he has made a small start toward becoming established in farming. He has accumulated some assets in the farming business. When he goes into service he probably disposes of his livestock or whatever he may own as his share in a farming business. When he returns to the farm, adjustments have been made during his absence, the cost of starting to farm has advanced, and new methods introduced. Rather than start all over again, he seeks employment elsewhere.

We must maintain and increase our productive capacity in agriculture not only for our increased population but for national defense. Many specialized types of farming are coming into existence which require highly skilled and trained farm operators. We realize that it is most difficult for older farmers to adjust to change. It is, therefore, necessary that we keep our best young men on the farm. We feel that making available certain educational and training benefits will induce more of our young men to stay on the farm.

We realize that our country is not engaged in a military conflict and we hope it will never be. We understand that the purpose of the Serviceman's Readjustment Act of 1944 and related legislation since that time was to aid veterans of the armed services in making the necessary adjustments to civilian life. It was not simply a means of remuneration for serving their country in time of war. If this was true in 1944 and again in 1952, it should still be true in 1963. The adjustments in farming are much more difficult today than in either of the previous periods.

In view of the invaluable contributions of the veterans' training program to young farmer veterans of service in World War II and the Korean conflict and in view of the continuation of the draft, we urge the enactment of legislation that will continue the benefits of this training for veterans of service in the Armed Forces who entered the service since January 31, 1955.

Statement of Andrew J. Biemiller, Director of Legislation, American Federation of Labor and Congress of Industrial Organizations Before the Subcommittee on Veterans' Affairs on S. 5, April 10, 1963

Mr. Chairman, my name is Andrew J. Biemiller. I am director of legislation of the AFL–CIO. I am accompanied by Lawrence Rogin, director of the AFL–CIO department of education.

We are very pleased to testify before this subcommittee in support of the Cold War Veterans' Readjustment Assistance Act, S. 5, which has been introduced by Senator Yarborough and a distinguished group of his colleagues.

There are a number of features in this bill which make it particularly attractive to organized labor. We have, of course, always been concerned with Federal legislation for the assistance of the schools and of the young people. But this bill seems to us to particularly merit support, and we can only regret that it was not included among those proposals for aid to education recommended by the President in his message to this session of Congress.

The purpose of this program, as stated in the bill itself, is to provide "vocational readjustment" and restore "lost educational opportunities to those service men and women whose educational or vocational ambitions have been interrupted or impeded by reason of active duty between January 31, 1955, and July 1, 1963," and to aid these young people attain "the educational and training status which they might normally have aspired to and obtained had they not served their country."

This is the primary consideration so far as this bill is concerned. It is a matter of simple justice. Compulsory military service is not easily compatible with American concepts of democracy and only because of the unusually tense international situation has it been continued in the absence of war.

It has been said that this proposed legislation represents a radical departure from the concept of providing veterans of wartime service with readjustment benefits upon their return to civilian life. In reply to this we would like to suggest that compulsory peacetime military service is itself a radical departure from the traditions of the past. What is more, the Servicemen's Readjustment Act of 1944—the so-called GI bill of rights—was itself a radical departure from all previous veterans legislation. This was no "40 acres and a mule" program. It was an attempt to compensate veterans for the disruption of their civilian life caused by their service in the Armed Forces. It was an enlightened recognition of the fact that America demands such disruption of civilian life under only the most unusual circumstances, whether the circumstances be war or so uneasy a peace as to bear many of the characteristics of war.

Many of the veterans had distinguished themselves heroically in combat; others had gone through their military careers with no actual combat experience. All of them had experienced the disruption of their lives that selective service necessarily entails.

It is precisely the same with the post-Korean veterans. In Berlin, Vietnam, Laos, and other places, members of the Armed Forces have performed under conditions closely resembling war. Other members of the Armed Forces have not been involved in international conflict at all. But all of them have had their lives disrupted by the unusual demands which the times have placed upon the individual.

Even if there had been no Servicemen's Readjustment Act of 1944 or the sequel to that act which extended similar benefits to veterans of the Korean war, there would still be compelling arguments for starting such a program at the earliest possible moment. It is simple justice for a nation which demands service in the Armed Forces even though there is no state of war existing, to compensate those young people when it comes time for them to make their readjustment to civilian life.

Fortunately, however, we do have the experience of the two GI bills of rights. On the basis of that experience we can safely predict the benefits to the individuals and to the Nation, which would be the consequences of this bill.

All in all, more than 10 million veterans, men and women, took advantage of the provisions of the GI bills: 3,435,000 of them entered institutions of higher education; 4,364,000 of them entered schools below the college level; and 2,656,000 of them learned important skills in on-the-job and on-the-farm training programs. Fewer young people would be affected by this proposed bill which simply proposes to do on a modest scale what has already been done before on a much larger scale.

Based upon the sample study of Norman Frederiksen and W. B. Schrader, it is reasonable to guess that at least 600,000 of the veterans who went to colleges and universities would not otherwise have done so.

In higher education the results were spectacular. The ratio between college enrollment and college-age population nearly doubled between 1941 and 1949. Not only that but the entrance of the GI's into the universities marked the beginning of a new era in higher education. To go to college became far more nearly the common practice for young people. Never again did college attendance drop back to prewar levels, and in 1961, college enrollment was at the all-time high of 38 percent of the population in the 18- to 21-year age group.

All of this has nothing to do with higher birth rates. The higher birth rate of the late 1940's has not yet reached the colleges. This is the result simply of a tremendous increase in the proportion of our young people seeking higher education. Not only did the veterans go to college, but in many cases their example inspired their younger brothers and sisters to go to college too. It is an axiom of higher education that the children of college graduates are more likely to attend college than the children of noncollege graduates. It may, therefore, be assumed that the sons and daughters of the veterans, who will soon be of college age, will also be entering college in larger proportions than would otherwise have been true.

The median educational achievement of the American people has increased by two grades since World War II. The GI bills were a major reason for this.

This has all been an inestimable gain to the United States, an investment that has paid off in higher achievements and higher earnings for the veterans. Those higher earnings have, in turn, yielded an estimated $1 billion a year in additional tax revenue to the Federal Government. But the gain to the Nation in the increased knowledge and the increased skills cannot be measured in dollars and cents. This was a bold experiment and the experiment was successful beyond most hopes.

Fortunately, we do not have to approach the cold war Veterans' Readjustment Assistance Act as an experiment. The experimental phase is over and we know what this bill can do for the veterans and for the Nation.

There are some special aspects of this cold war bill, however, which we feel are particularly important.

During World War II we needed a tremendous military force. All in all more than 15 million men and women served in the Armed Forces. Under such circumstances the selective service system reached most of the eligible youths.

The demands of a peacetime army are not nearly so severe. It is expected that by 1973 there will be approximately 4½ million post-Korean veterans. Yet there are approximately 25 million men and boys in the age groups which would be subject to the draft between 1955 and 1973. We talk as though this were a time of universal military service, but in fact, it is not that at all.

Back in January 6, 1956, U.S. News & World Report predicted excellent chances that various groups of men would have of avoiding military service altogether. Despite frequently changing regulations, little has happened to change that situation. For some young people it is relatively easy to delay and in some cases, altogether avoid military service. Some recent advice to young people from Lt. Gen. R. L. Vittrup, Deputy Chief of Staff for Personnel, includes the essential point:

"To the young man presently in school, my advice is simple—continue your education as long as you are able to do so. Your decision will depend upon your financial ability as well as your mental potential.

It is a shocking revelation, included in this well-intended piece of advice, that your ability to delay or even avoid military service depends upon, among other things, your financial ability. But it is true, and under present circumstances, it is probably unavoidable. Yet the fact remains that because of this arrangement, youths from low income backgrounds are more likely to be drafted than are youths from high income backgrounds.

What is more, selective service regulations draw a sharp distinction between college education on the one hand and trade, vocational and other post-high school education on the other. Young people pursuing the former are eligible for deferment, but those pursuing the latter are not.

Because of these characteristics of peacetime selective service, the cold war Veterans' Readjustment Assistance Act would make it possible for thousands of economically deprived young people to attend college or learn valuable skills. This is one of the aspects of the bill which we find most satisfying; that it offers assistance where assistance is most needed and most merited.

It is also one of the considerable advantages of this bill that it offers this assistance on a noncompetitive basis. Many of the young people who would benefit from this bill would in all likelihood not score among the highest groups in various college aptitude tests, and we feel that this is all to the good. Most existing scholarship programs are competitive and designed to assist young people with the best intellects. But America needs to educate and train its second bests and its third bests too. And this bill can accomplish that better than any existing or proposed scholarship plan.

The cold war Veterans' Readjustment Assistance Act is not, strictly speaking, an aid-to-education bill. Its purpose is essentially one of aiding veterans whose lives have been disrupted by their military service. Nevertheless, the bill, if passed, would obviously have important implications to institutions of higher education and these implications add up to an impressive set of secondary benefits which may be expected to flow from the bill.

By aiding students, this proposal would indirectly aid the institutions which they would attend. For several years now Congress has been struggling to find formulas which will satisfy both public and private institutions, church-controlled schools and secularly controlled schools. Here is one bill that provides a completely satisfactory method by which Federal policy can be helpful to all manner of institutions, State-supported universities, church sponsored universities, ivy league universities, junior colleges, and all of the others that contribute to the diversified nature of higher education in America.

Under existing programs of Federal assistance to higher education, the unhappy fact is that the great bulk of Federal funds are concentrated in a very few institutions. Harold Orlans, in his Brookings Institution study of "The Effects of Federal Programs on Higher Education," has demonstrated that 20 universities now receive more than 60 percent of all Federal funds for higher education. The remaining Federal funds, less than 40 percent, were distributed among the more than 2,000 other institutions of higher education. According to Orlans, the one time in recent years when there was a shift in this trend and Federal funds were more widely dispersed among all of the institutions of higher education, was in 1947-48, the peak year of enrollment under the original GI bill.

We believe that the bill which we are presently discussing would have a similar effect today and that this would be highly desirable. Just as we have said that America needs to encourage not only its best brains but its second and third best brains, so too we feel that the Nation needs widely diversified institutions of higher education. It is not enough that Federal policy encourage only the best institutions. We need to encourage the second best, the third best, in fact all of the institutions which contribute toward meeting our educational needs. Even though this bill has not been primarily conceived as an aid-to-education bill, there are few proposals that could have as stimulating an effect as this one in assisting and strengthening the small schools, the specialized schools, and the schools serving regional areas.

We would particularly like to comment on the vocational training features of the cold war Veterans' Readjustment Assistance Act. It is by now well known that technological changes in industry have resulted in a general upgrading of the skills needed in the labor market. Veterans who are released from the Army without skills and in many cases without significant work experience face the likelihood of prolonged unemployment in an economy which has little need for additional unskilled labor.

It is important to these veterans and important to the Nation as a whole that they learn job skills which can equip them for jobs in modern industry.

Not all cold war veterans will desire or qualify for college. Forty percent of them have not graduated from high school, and it is not likely that all of the high school graduates will want to go to college. But America needs skilled workers just as surely as it needs teachers and doctors and lawyers.

Here, just as in the provisions of the bill for higher education, justice for the veteran is fortunately identical with the national interest. The future will be bleak for our veterans if they must simply compete for the diminishing supply of unskilled jobs. And the future will be equally bleak for the Nation if the veterans are merely added to the already much too large ranks of the unemployed.

The GI bills of World War II and the Korean war were responsible for raising the level of education and skills of the Nation. We believe that the cold war veterans' bill will have a similar effect, bringing new skills and greater education to hundreds of thousands of young people who would not otherwise be able to get them.

We trust this subcommittee and the Committee on Labor and Public Welfare will act expeditiously on this bill so that it may reach the floor of the Senate for debate in the very near future.

Mr. Chairman, I appreciate this opportunity to present the views of the AFL-CIO in support of the cold war veterans' readjustment assistance bill. Thank you.

CENTRALIZATION OF THE GOVERNMENT IN THE HANDS OF THE EXECUTIVE DEPARTMENT

Mr. DOMINICK. Mr. President, I take great pleasure at this time in presenting a speech which deals with one of the more important questions which our country is facing. That is the centralization of the Government in the hands of the executive department. The particular speech to which I refer was delivered by my very able colleague from Colorado [Mr. ALLOTT] at the directors' luncheon of the National Association of Manufacturers on April 3, 1963. I ask unanimous consent that his speech be printed at this point in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I want to try and pose for you today—not answer, but simply put into plain words—the one great issue of contemporary American public policy. It is an issue that, more and more with every passing day and every specific debate over every particular item of public policy, it seems to me we must face up to. Must face up to—or else face, instead, the progressive decay and finally the destruction of the American constitutional order. And if this traditional system of government is overturned, so too goes the whole fabric of private liberties and of creative individual enterprise that we like to label "the American way."

A tired old cliche this may be. But surely it is one that most all of us—the overwhelming bulk of the American people—truly cherish. We believe in it. We never cease in reaffirming this belief. But now I feel I must ask: are we prepared to do battle to preserve it?

I measure my words when I thus define this one great issue of American public policy: we must face up to a full-scale, no-quarter assault on the very foundations of the American constitutional system. We live in a revolutionary era—and revolutionary in the deepest sense, pointing to the overturn of all those systems and structures of ordered liberty that have been both sword and shield against every form of tyranny through all the years of the American national experience.

Who or what is the prime agent of this revolutionary assault? Again I carefully measure my words. The attack comes from the executive establishment—not the President as a man, nor even the President as party leader, but from a bureaucratic behemoth that conspicuously lacks any sense of built-in self-imposed limitation, that treats the whole area of public policy and of the national interest as its own exclusive playground, and that responds to every challenge to its undivided authority with thinly veiled contempt and, at the end, with sheer fury. Or, I must add, with cynical manipulation of information and with crude personal blackmail—underscored always with the overwhelming power of government and with pious rationalizations in the name of the popular will.

Who or what is the target of this unrelenting attack? The essential target, I repeat, is the American constitutional system itself and thus the whole fabric of our social and economic order. But in particular, the target is one political institution which I am proud to represent—the Congress of the United States—and the complex of private and voluntary associations of which you gentlemen are by definition leaders and spokesmen—namely, the American system of free and creative enterprise.

I submit to you that we—the Congress, the American business community, and indeed every free American worker and farmer—are equal partners in one overriding enterprise: the defense of traditional American liberties and the preservation of the American Constitution against Executive absolutism. Indeed, the President himself—any President, the leader of either major party—ought to assume a further partnership, because he is increasingly the captive of this same executive establishment which is beyond the power of any one man to comprehend, much less command or control. Even if and when he has the will to do so—as does not now appear to be the case.

That I am not speaking simply of some fantastic "spook," called into being for partisan political purposes, is a fact that can be amply and grimly documented. Mr. Roger Blough can provide some of this documentation—not to mention those newsmen with their hair-raising reports of midnight callers during the appalling April days of the steel price showdown. General Electric and General Motors and a thousand other firms and corporations can add still more—as they confront an Antitrust Division which now treats bigness as a crime and business success as a mortal sin. It is no mere question of antibusiness bias along the New Frontier; it is, infinitely more seriously, an executive establishment whose dream of a new paternalism leaves no room for private initiative or for personal liberties, least of all for the unpredictable and irrepressible choices of free individuals.

And I, as a Member of the U.S. Senate, could pile up an endless catalog of case-histories—all of them with this one factor in common: each one a gross inroad by the Executive into the area, traditionally, of shared responsibility and of balanced power. Let me tick off just a few illustrations of what I mean:

There was the recent case of a steam powerplant to be built in Colorado with REA loan funds. While the question of certification by the State PUC was under active consideration, the U.S. Secretary of the Interior took it upon himself publicly to accuse private power firms of bad faith and to threaten a shift in Federal funds to neighboring States.

There is the present case of new regulations for power transmission lines running across Federal lands, regulations under the uncontrolled jurisdiction of either the Secretary of the Interior or of Agriculture. Even the FPC, a part of the executive branch itself, strongly objected. Its grounds: an invasion of its own statutory responsibilities—responsibilities, that is to say, laid down by Congress in the first instance. But by Executive order, these new regulations, only slightly modified, went into effect just last week.

There are such cases as the Bureau of Outdoor Recreation and, more blatantly still, of the so-called Domestic Peace Corps. In neither case is there open and avowed statutory authority—in the latter case, public debate has barely even begun—and yet the funds have been scraped together and the staffs are being hired (with the inevitable promise of yet bigger staffs and of inflated budgets still to come). By Executive order, and by Executive fiat only, these new bureaucracies of enormous potential power have been spawned. Congressional authorization? Merely an afterthought.

And there are grabs for future power, without number and without effective limit, in areas of concern running from urban affairs to national water resources, from agricultural commodity production control to health insurance for the aged. I speak here of requests now under consideration by the Congress, and thus of congressional resistance to Executive power still maintained.

But the pressure is relentless. And by its cynical manipulation and its exploitation of special interest groups, the executive establishment masks these power grabs in the guise of public interest and popular will. If our counterattack is to succeed—ours in the Congress, and yours in the free American business community—we must bring to bear an equal intensity, equal endurance, and still greater devotion to the principles of freedom.

In all these cases, I have been saying, the attack is a full-scale revolution against the traditional American constitutional system, a system of ordered liberty and of balanced power. Let our defenses be mounted in the name, as in the spirit, of these high principles. And let us not be diverted, nor our counsels divided, by the attempt of the executive establishment always to appropriate the banner of national interest and popular mandate for its aggressive power plays. Of course, all the issues to which I've been referring are indeed matters of great and grave public concern. That is not my quarrel. But in spelling out the details of that legitimate concern, I submit that no single institution of Government is more responsive to popular mandate nor more responsible to popular will than the elected representatives of the entire American people—the Congress of the United States, local constituency by local constituency.

We cannot do the job alone, however. We need help. We need sound advice and sober judgment. We need the constant support of the whole American community—and certainly not least of those private and voluntary groups and associations into which the American people freely channel their collective energies. Our purposes are the same. We seek only and always to preserve and extend American freedom.

There is a reflection, across the face of the Nation, of the preoccupation with the Presidency that has fostered and nurtured the growing imbalance in our governmental structure.

How much of the activity and interest of great national organizations, including your own, gentlemen, is oriented toward the executive rather than the legislative branch? I think that, on careful inspection, you will find that a disproportionate amount is so oriented.

The underlying assumption of many such activities is that the character of the man in the White House determines the state of the Union. Certainly his character shapes, through its leadership, a goodly portion of that state. But it is the action or inaction of the legislative branch that must finally determine it.

We can say that this or that administration, for instance, is probusiness or antibusiness. And such evaluations have validity. But the excesses of the executive which, today for instance, have earned the label of antibusiness can be curbed by Congress. You may ask why they haven't, if that's the case.

My answer would be that the Congress today, on both sides of the aisle, does in fact represent an active curb against executive excesses which, if given fully free rein, would completely swamp our free economic system in the bow wave of advancing state economic control by economic theoreticians. We have only to look at the rising bipartisan objection to the President's budget and tax plans to see that the executive party's plans are being subjected to the closest scrutiny by both of the legislative parties.

Still, we often think of elections, of government itself, in terms of the Presidency. When we engage in programs to get out the vote, for instance, we are getting out presidential votes, by and large. When great issues are debated, they often are debated in terms of presidential candidates who espouse or oppose them. The major emphasis, in fact, of most so-called grassroots movements is presidential in emphasis whether consciously or not.

We see, also extensive programs in so-called economic education without any equivalent programs in governmental education. If there were such programs and emphasis we might hear less criticism of Congress for taking its time in considering legislation and more criticism of those times when, at Presidential prodding, it rushes pellmell into programs it has not studied adequately.

Perhaps even more to the point are programs of direct relationship to the legislative branch. While great national organizations pour immense resources into their grassroots programs, to educate the so-called man-in-the-street, what support do these organizations provide for the representatives of the man-in-the-street who, ultimately, must do the work that directs our destiny? There are precious few.

Congress, without the vast research resources available to the executive, must depend upon a comparatively skeletal staff for much of its research. Its Members desperately need informational and research assistance, day by day, session by session. It can, of course, call upon expert witnesses during committee hearings. But even then the information may be too little and too late.

If great public organizations, and individual citizens and corporations, could divert even a fraction of their great grassroots enthusiasms and support toward truly bipartisan efforts to provide research assistance to the legislative branch, a mighty step would have been taken toward restoring the balance between legislative and executive impact. As it is, I can think of only a tiny handful of conscientious research efforts which, without grinding axes, attempt to bolster the Congress directly and effectively.

At election time, of course, the difference in emphasis becomes more painful—from a legislative point of view. We have national organizations aplenty, with millions aplenty, devoted to action during presidential campaigns. At the State level there also are committees and organizations to beat the drum and pass the hat for State officials. Even at the local level, our friends and neighbors get out their precinct books and hiking shoes to work for the sheriff, the councilman, the mayor, and so forth.

The Senator often stands in this equation rather like the poor relative of the State ticket. The poor Congressman stands there almost like an orphan. In off-year contests he is lucky to even have his name mentioned amid the other, apparently really important races, such as that for dogcatcher.

Where are the programs, the committees, the resources devoted year round to the support of good candidates to the most representative and, I think, most crucial house of our entire governmental structure? They are lacking, by and large, because we, all of us, have a diminished sense of Senate and Congress. We are beginning to accept the caricaturists' version of the legislator. We are beginning to stare hypnotically at the televisionlike screen of the Executive's awesome power.

The symbol of this great land is becoming a grin, a smile, a hairdo, a painting on the White House wall. It should be the dome of the mightiest edifice of freedom ever constructed—the Capitol of the United States.

For the public at large this requires firm answers to some questions which have taken on new and crucial meaning.

If Congress puts the brakes on executive agreements to disarm this land, or even disarm the whole free world, will you say that Congress is filled by war hawks? The Executive will.

If Congress demands that the Soviet satellite to our south be put under the full pressures of the Monroe Doctrine, will you say that Congress is moving to the brink of destruction? The Executive has and will.

If Congress asks that every projected Federal expenditure be subjected to careful weighing as to need, cost, and result, will you say that Congress is a stumbling block? The Executive has and will.

If Congress asks that our national budget be handled with the good sense of our business and household budgets will you accuse us of being old fashioned? The Executive will.

If Congress seeks to crack open the walls of secrecy and news management that are arising in Washington, will you say that they are meddling in matters best left to the selected few? The Executive will.

If Congress is jealous of your rights in the making of law, if Congress seeks to strengthen the responsibilities of your States and your municipalities, will you say that we are walking an outdated frontier? The Executive will.

If Congress seeks answers for our major problems outside the Central Government, will you say that we are stone age advocates of an individual responsibility that no longer has a place in our life? The Executive will.

Or will you, instead, return your support and your attention to your own representatives, giving the executive the deference due the office but not abdicating to it all your powers and your future?

A free people will.

Or will you vote away your rights and responsibilities in return for the illusory comforts of having your decision made by the machine processes of an all-powerful Executive?

A frightened people will.

Free or frightened, able to shoulder the responsibilities of our own choices or weakly handing them on to the remote, regal power of purple executive majesty—those are the challenges you face and which you must answer.

These are questions also which must be asked and answered by men such as you who have key responsibilities in business and in organizational activity.

Are your programs balanced between broad, executive-oriented or grassroots movements and tightly targeted programs?

Do they directly enhance the Congress, the quality of its membership, and the ability of those members intelligently to consider legislation?

Do your internal efforts to spur political interest just stir up activity? Or do they encourage a true realization of the issues and the institutions of our form of government?

Do you support activities that simply whoop and holler, seeking headlines? Do you support activities that provide solid research and factual data and seek to help those in Congress who must have such information?

Does your political support, financial and personal, pursue the phantom causes and organizations whose highflying titles appeal to you and attract, or do your activities, personal and financial, support political effort at the place it counts the most in National elections—the election of Congressmen and Senators?

It is often said that a Republic such as ours can only be preserved by the action of all the people. That's true so far as it goes. But, in a republic such as ours, the resolve and spirit of the people, day by day, can only be expressed through one branch of our Government—the legislative branch. The President may try to lead all of the people. He rarely tries to represent them all.

In the transition from freedom to tyranny, wherever it has happened in history, the suppression of the representatives of the people and the substitution of executive authority has been a recurring theme. It can happen anywhere. It can happen slowly and innocently, almost unknowingly wherever people become bedazzled by slogans of executive efficiency and forgetful of freedom's constant demand for individual responsibility and for true representation. It can happen wherever the goal of government becomes the manipulation of the majority rather than the concept of the commonweal. It can happen wherever class struggle becomes the marching order of government and where people are compartmentalized into so-called special interests with no realization of the common interest.

The only answer that history has ever found has been our own concept of government with the consent of the governed and the protection of the minority. If we consent instead, to be ruled by the Executive, there will be no answer—nor any future for freedom.

NEAR AIR COLLISION OVER SYRACUSE, N.Y.

Mr. KEATING. Mr. President, this morning's newspapers carry the story of a near collision between a commercial airliner with 57 persons aboard and an Air Force jet fighter at 22,500 feet over Syracuse, N.Y., at about 8 p.m. on April 8.

The commercial plane was an American Airlines turboprop Electra flying nonstop from Boston to Detroit. The jet fighter was an F-101 interceptor based at Griffiss Air Force Base at Rome, N.Y.

The collision was averted only through evasive action taken by the American pilot, Captain Biedermann, a veteran of some 20 years of flying experience with the airline. Although a collision was avoided, unfortunately 5 of the 52 passengers aboard the airliner were injured. The result could, of course, have been much worse; and on the basis of the facts now known, Captain Biedermann deserves credit for preventing a major air disaster.

Mr. President, this incident raises serious questions of air safety under the administration of the Federal Aviation Act. Among the purposes of the Congress in passing this legislation in 1958 was to assure better coordination of air traffic control as between the commercial and military sectors of aviation. In this case, the jet interceptor's training flight was controlled by a radar team at Hancock Field, Syracuse, while the airliner's flight was under the control of the Boston Air Traffic Center operated by the Federal Aviation Agency.

As yet there is no apparent explanation—although the incident is under investigation, and I assume there will be—as to how the two aircraft involved had so little separation between them in the air space 22,500 feet over Syracuse, that this extreme "evasive action" on the part of the commercial pilot had to be taken. This incident, therefore, demands an immediate, thorough investigation by both the Federal Aviation Agency and the appropriate military officials. I have this morning contacted Administrator Halaby to this effect, and it is my understanding from the news reports that Brigadier General Elder, Inspector General of the Air Defense Command Headquarters, is already on the scene to determine whether the Air Force had knowledge of the American Airlines plane's presence in the path of the jet training flight.

Mr. President, because of the importance of the safety of air travel throughout the country and the necessity for coordination between military and civilian authorities, I ask unanimous consent to have printed at this point in the RECORD the Associated Press dispatch entitled "Airliner With 57 Dives To Miss Jet," published in the New York Times of today, April 10, 1963.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AIRLINER WITH 57 DIVES TO MISS JET—AIR FORCE BEGINS AN INQUIRY INTO UPSTATE INCIDENT

SYRACUSE, April 9.—A commercial airliner with 57 persons aboard was forced into a sharp dive to avoid an Air Force jet fighter at 22,500 feet last night. The Air Force began an investigation.

The evasive action was taken by an American Airlines turboprop Electra flying nonstop from Boston to Detroit. The action was so violent that 5 of the 52 passengers were injured, none seriously, an airlines spokesman said.

Passengers were thrown into the aisle and across seats, and dishes and cups were tossed about the plane.

The crash threat was "closer than you like to have it," the airliner's pilot, Capt. M. T. Biedermann of Ann Arbor, Mich., said later in Detroit.

The jet was an F-101 interceptor based at Griffiss Air Force Base at Rome, near here. It was occupied by 1st Lt. Denis J. Haney of New York, pilot, and 1st Lt. Jerry E. Crown of Kansas City, Kans., radar operator.

Both officers are assigned to the 49th Fighter-Interceptor Squadron of the Air Defense Command.

GENERAL INVESTIGATES

Brig. Gen. William Elder, inspector general of the Air Defense Command Headquarters at Colorado Springs, flew here to determine "whether Air Force officials were informed of a civilian plane in the area of the near-crash."

The planes were about 5 miles northwest of here.

An Air Force spokesman said earlier that he could give no estimate of how close the planes came. "They were close," he said.

Captain Biedermann, 41 years old, an American Airlines pilot for 20 years, said he had had other close calls in the air, but "not like this one." He declined to estimate how close the planes were.

The incident occurred about 8 p.m., while dinner was being served.

A passenger, Ralph McKenney, 17, of Grosse Pointe, Mich., said the Electra dived down and to the right.

"Coffee flew all over the ceiling," he said. "In the back, by the tail section, people were thrown into the aisles."

The flight continued to Detroit and arrived nearly on schedule.

Four injured passengers were treated at Annapolis Hospital at Wayne., Mich., and discharged. They were Mrs. Louise Warman of Framingham, Mass., Vernier Johnson of Woburn, Mass.; M. E. Johmson of Boston, and Roderick Keeler of Detroit.

The fifth injured passenger, who refused hospital treatment, was identified as W. L. Cronin of Longmeadow, Mass.

An Air Force spokesman for the 26th Air Division at Hancock Field, Syracuse, said the jet interceptor's training flight was controlled by a radar team at Hancock. He said the airliner's flight was directed by the Boston Air Route Traffic Control Center. The Federal Aviation Agency is the coordinating Agency.

ASSAULT ON CONSTITUTIONAL SYSTEM

Mr. HRUSKA. Mr. President, in the past several months, I have discerned among my colleagues a growing uneasiness about the relative roles of the Congress and the Executive in the shaping of national policies and national decisions.

This mood is akin to frustration. More and more Senators of both parties have alluded to it, often with a sense of having lost something but not being quite sure what it is.

Our colleague, the senior Senator from Colorado [Mr. ALLOTT], has spelled it out for us in an arresting and memorable speech before the directors of the National Association of Manufacturers here in Washington on April 3.

The simple truth, Senator ALLOTT points out, is that there is mounted in this country today a full-scale, no-quarter assault on the very foundations of the American constitutional system.

It is a thoughtful, reasoned thesis that Senator ALLOTT lays before us. Every Member of the Senate and the House of Representatives should read and ponder it. So should every American citizen, many of whom, like us, are becoming uneasily aware of a subtle change in the constitutional balance of power they were taught as schoolchildren.

Mr. President, some of us have been trying to say what Senator ALLOTT has said. None of us has succeeded as he has. I ask unanimous consent that the full text of Senator ALLOTT's speech be printed in the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

SPEECH BY SENATOR GORDON ALLOTT

I want to try and pose for you today—not answer, but simply put into plain words—the one great issue of contemporary American public policy. It is an issue that, more and more with every passing day and every specific debate over every particular item of public policy, it seems to me we must face up to. Must face up to—or else face, instead, the progressive decay and finally the destruction of the American constitutional order. And if this traditional system of Government is overturned, so too goes the whole fabric of private liberties and of creative individual enterprise that we like to label "the American way".

A tired old cliche this may be. But surely it is one that most all of us—the overwhelming bulk of the American people—truly cherish. We believe in it. We never cease in reaffirming this belief. But now I feel I must ask: are we prepared to do battle to preserve it?

I measure my words when I thus define this one great issue of American public policy: we must face up to a full-scale, no-quarter assault on the very foundations of the American constitutional system. We live in a revolutionary era—and revolutionary in the deepest sense, pointing to the overturn of all those systems and structures of ordered liberty that have been both sword and shield against every form of tyranny through all the years of the American national experience.

Who or what is the prime agent of this revolutionary assault? Again I carefully measure my words. The attack comes from the executive establishment—not the President as a man, nor even the President as party leader, but from a bureaucratic behemoth that conspicuously lacks any sense of built-in self-imposed limitation, that treats the whole area of public policy and of the national interest as its own exclusive playground, and that responds to every challenge to its undivided authority with thinly veiled contempt and, at the end, with sheer fury. Or, I must add, with cynical manipulation of information and with crude personal blackmail—underscored always with the overwhelming power of government and with pious rationalizations in the name of the popular will.

Who or what is the target of this unrelenting attack? The essential target, I repeat, is the American constitutional system itself and thus the whole fabric of our social and economic order. But in particular, the target is one political institution which I am proud to represent—the Congress of the United States—and the complex of private and voluntary associations of which you gentlemen are by definition leaders and spokesmen—namely, the American system of free and creative enterprise.

I submit to you that we—the Congress, the American business community, and indeed every free American worker and farmer—are equal partners in one overriding enterprise: the defense of traditional American liberties and the preservation of the American Constitution against Executive absolutism. Indeed, the President himself—any President, the leader of either major party—ought to assume a further partnership, because he is increasingly the captive of this same executive establishment which is beyond the power of any one man to comprehend, much less command or control. Even if and when he has the will to do so—as does not now appear to be the case.

That I am not speaking simply of some fantastic "spook," called into being for partisan political purposes, is a fact that can be amply and grimly documented. Mr. Roger Blough can provide some of this documentation—not to mention those newsmen with their hair-raising reports of midnight callers during the appalling April days of the steel price showdown. General Electric and General Motors and a thousand other firms and corporations can add still more—as they confront an Antitrust Division which now treats bigness as a crime and business success as a mortal sin. It is no mere question of antibusiness bias along the New Frontier; it is, infinitely more seriously, an executive establishment whose dream of a new paternalism leaves no room for private initiative or for personal liberties, least of all for the unpredictable and irrepressible choices of free individuals.

And I, as a Member of the U.S. Senate, could pile up an endless catalog of case histories—all of them with this one factor in common: each one a gross inroad by the executive into the area, traditionally, of shared responsibility and of balanced power. Let me tick off just a few illustrations of what I mean.

There was the recent case of a steam powerplant to be built in Colorado with REA loan funds. While the question of certification by the State PUC was under active consideration, the U.S. Secretary of the Interior took it upon himself publicly to accuse private power firms of bad faith and to threaten a shift in Federal funds to neighboring States.

There is the present case of new regulations for power transmission lines running across Federal lands, regulations under the uncontrolled jurisdiction of either the Secretary of the Interior or of Agriculture. Even the FPC, a part of the executive branch itself, strongly objected. Its grounds: an invasion of its own statutory responsibilities—responsibilities, that is to say, laid down by Congress in the first instance. But by Executive order, these new regulations, only slightly modified, went into effect just last week.

There are such cases as the Bureau of Outdoor Recreation and, more blatantly still, of the so-called Domestic Peace Corps. In neither case is there open and avowed statutory authority—in the latter case, public debate has barely even begun—and yet the funds have been scraped together and the staffs are being hired (with the inevitable promise of yet bigger staffs and of inflated budgets still to come.) By Executive order, and by Executive fiat only, these new bureaucracies of enormous potential power have been spawned. Congressional authorization? Merely an afterthought.

And there are grabs for future power, without number and without effective limit, in areas of concern running from urban affairs to national water resources, from agricultural commodity production control to health insurance for the aged. I speak here of requests now under consideration by the Congress—and thus of congressional resistance to Executive power still maintained.

But the pressure is relentless. And by its cynical manipulation and its exploitation of special interest groups, the executive establishment masks these power grabs in the guise of public interest and popular will. If our counterattack is to succeed—ours in the Congress, and yours in the free American business community—we must bring to bear an equal intensity, equal endurance, and still greater devotion to the principles of freedom.

In all these cases, I have been saying, the attack is a full-scale revolution against the traditional American constitutional system, a system of ordered liberty and of balanced power. Let our defenses be mounted in the name, as in the spirit, of these high principles. And let us not be diverted, nor our counsels divided, by the attempt of the executive establishment always to appropriate the banner of national interest and popular mandate for its aggressive powerplays. Of course, all the issues to which I've been referring are indeed matters of great and grave public concern. That is not my quarrel. But in spelling out the details of that legitimate concern, I submit that no single institution of government is more responsive to popular mandate nor more responsible to popular will than the elected representatives of the entire American people—the Congress of the United States, local constituency by local constituency.

We cannot do the job alone, however. We need help. We need sound advice and sober judgment. We need the constant support of the whole American community—and certainly not least of those private and voluntary groups and associations into which the American people freely channel their collective energies. Our purposes are the same. We seek only and always to preserve and extend American freedom.

There is a reflection, across the face of the Nation, of the preoccupation with the presidency that has fostered and nurtured the growing imbalance in our governmental structure.

How much of the activity and interest of great national organizations, including your own, gentlemen, is oriented toward the executive rather than the legislative branch? I think that, on careful inspection, you will find that a disproportionate amount is so oriented.

The underlying assumption of many such activities is that the character of the man in the White House determines the state of the Union. Certainly his character shapes, through its leadership, a goodly portion of that state. But it is the action or inaction of the legislative branch that must finally determine it.

We can say that this or that administration, for instance, is probusiness or antibusiness. And such evaluations have validity. But the excesses of the executive which, today for instance, have earned the label of antibusiness can be curbed by Congress. You may ask why they haven't, if that's the case.

My answer would be that the Congress today, on both sides of the aisle, does in fact represent an active curb against executive excesses which, if given fully free rein, would completely swamp our free economic system in the bow wave of advancing State economic control by economic theoreticians. We have only to look at the rising bipartisan objection to the President's budget and tax plans to see that the Executive party's plans are being subjected to the closest scrutiny by both of the legislative parties.

Still, we often think of elections, of government itself, in terms of the Presidency. When we engage in programs to get out the vote, for instance, we are getting out presidential votes, by and large. When great issues are debated, they often are debated in terms of presidential candidates who espouse or oppose them. The major emphasis, in fact, of most so-called grassroots movements is Presidential in emphasis whether consciously or not.

We see, also extensive programs in so-called economic education without any equivalent programs in governmental education. If there were such programs and emphasis we might hear less criticism of Congress for taking its time in considering legislation and more criticism of those times when, at Presidential prodding, it rushes pell mell into programs it has not studied adequately.

Perhaps even more to the point are programs of direct relationship to the legislative branch. While great national organizations pour immense resources into their grassroots programs, to educate the so-called man-in-the-street, what support do these organizations provide for the representatives of the man-in-the-street who, ultimately, must do the work that directs our destiny? There are precious few.

Congress, without the vast research resources available to the executive, must depend upon a comparatively skeletal staff for much of its research. Its members desperately need informational and research assistance, day by day, session by session. It can, of course, call upon expert witnesses during committee hearings. But even then the information may be too little and too late.

If great public organizations, and individual citizens and corporations, could divert even a fraction of their great grassroots enthusiams and support toward truly bipartisan efforts to provide research assistance to the legislative branch, a mighty step would have been taken toward restoring the balance between legislative and executive impact. As it is, I can think of only a tiny handful of conscientious research efforts which, without grinding axes, attempt to bolster the Congress directly and effectively.

At election time, of course, the difference in emphasis becomes more painful—from a legislative point of view. We have national organizations aplenty, with millions aplenty, devoted to action during presidential campaigns. At the State level there also are committees and organizations to beat the drum and pass the hat for State officials. Even at the local level, our friends and neighbors get out their precinct books and hiking shoes to work for the sheriff, the councilman, the mayor, and so forth.

The Senator often stands in this equation rather like the poor relative of the State ticket. The poor Congressman stands there almost like an orphan. In off-year contests he is lucky to even have his name mentioned amid the other, apparently really important races, such as that for dogcatcher.

Where are the programs, the committees, the resources devoted year around to the support of good candidates to the most representative and, I think, most crucial House of our entire governmental structure? They are lacking, by and large, because we, all of us, have a diminishing sense of Senate and Congress. We are beginning to accept the caricaturists' version of the legislator. We are beginning to stare hypnotically at the television-like screen of the Executive's awesome power.

The symbol of this great land is becoming a grin, a smile, a hairdo, a painting on the White House wall. It should be the dome of the mightiest edifice of freedom ever constructed, the Capitol of the United States.

For the public at large this requires firm answers to some questions which have taken on new and crucial meaning.

If Congress puts the brakes on executive agreements to disarm this land, or even disarm the whole free world, will you say that Congress is filled by war hawks? The Executive will.

If Congress demands that the Soviet satellite to our south be put under the full pressures of the Monroe Doctrine, will you say that Congress is moving to the brink of destruction? The Executive has, and will.

If Congress asks that every projected Federal expenditure be subjected to careful weighing as to need, cost, and result, will you say that Congress is a stumbling block? The Executive has and will.

If Congress asks that our national budget be handled with the good sense of our business and household budgets will you accuse us of being old-fashioned? The Executive will.

If Congress seeks to crack open the walls of secrecy and news management that are arising in Washington, will you say that they are meddling in the matters best left to the selected few? The Executive will.

If Congress is jealous of your rights in the making of law, if Congress seeks to strengthen the responsibilities of your States and your municipalities, will you say that we are walking an outdated frontier? The Executive will.

If Congress seeks answers for our major problems outside the Central Government, will you say that we are stone age advocates of an individul responsibility that no longer has a place in our life? The Executive will.

Or will you, instead, return your support and your attention to your own representatives, giving the Executive the deference due the office but not abdicating to it all your powers and your future?

A free people will.

Or will you vote away your rights and responsibilities in return for the illusory comforts of having your decision made by the machine processes of an all-powerful executive?

A frightened people will.

Free or frightened, able to shoulder the responsibilities of our own choices or weakly handing them on to the remote, regal power of purple executive majesty—those are the challenges you face and which you must answer.

These are questions also which must be asked and answered by men such as you who have key responsibilities in business and in organizational activity.

Are your programs balanced between broad, executive-oriented or grassroots movements and tightly targeted programs?

Do they directly enhance the Congress, the quality of its membership, and the ability of those members intelligently to consider legislation?

Do your internal efforts to spur political interest just stir up activity? Or do they encourage a true realization of the issues and the institutions of our form of Government?

Do you support activities that simply whoop and holler, seeking headlines? Do you support activities that provide solid research and factual data and seek to help those in Congress who must have such information?

Does your political support, financial and personal, pursue the phantom causes and organizations whose high-flying titles appeal to you and attract, or do your activities, personal and financial, support political effort at the place it counts the most in national elections—the election of Congressmen and Senators?

It is often said that a republic such as ours can only be preserved by the action of all the people. That's true so far as it goes. But, in a republic such as ours, the resolve and spirit of the people, day by day, can only be expressed through one branch of our Government—the legislative branch. The President may try to lead all of the people. He rarely tries to represent them all.

In the transition from freedom to tyranny, wherever it has happened in history, the suppression of the representatives of the people and the substitution of executive authority has been a recurring theme. It can happen anywhere. It can happen slowly and innocently, almost unknowingly wherever people become bedazzled by slogans of executive efficiency and forgetful of freedom's constant demand for individual responsibility and for true representation. It can happen wherever the goal of government becomes the manipulation of the majority rather than the concept of the commonweal. It can happen wherever class struggle becomes the marching order of government and where people are compartmentalized into so-called special interests with no realization of the common interest.

The only answer that history has ever found has been our own concept of government with the consent of the governed and the protection of the minority. If we consent instead, to be ruled by the Executive, there will be no answer—nor any future for freedom.

OUR NATIONAL BUDGET

Mr. McGEE. Mr. President, on April 4 my esteemed friend and colleague the junior Senator from Utah [Mr. Moss] delivered a speech to a student assembly at Utah State University at Logan, Utah.

In that speech Senator Moss made an excellent and insightful analysis of the controversy on our national budget and what constitutes valid Federal services and expenditures.

Mr. President, I believe that this speech represents a commonsense approach to this problem and I ask unanimous consent to have it printed in the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

SPEECH OF SENATOR FRANK E. MOSS

In at least one respect, an American politician is not unlike the knights of old—in a doggedly determined manner, he sets out to slay dragons. He chooses dragons because he knows that everyone is against them. He also knows that few have ever seen them. Thus, vague and undefined dragons such as "waste" or "excessive costs" are perennially pursued by the more politically minded among us.

This year's dragon, it would seem, is a familiar one. This year's dragon is "unnecessary Government spending." Everyone is against unnecessary Government spending—by definition one would have to be. Yet few of the dragon slayers ever tell us what it is or where it can be found. We in the West are usually sure that the dragon inhabits the Eastern, urban regions. Midwesterners think he is in the South living on price supports for peanuts, cotton and tobacco. And southerners know that he is on the western frontier, developing powerplants and industrial facilities that will never be needed.

Thus we give stern warning that the dragon must be slain; that unnecessary Government spending must cease; that the big spenders in someone else's district must be thwarted. But, in the end, the dragon reappears, as regularly as clockwork, as undefined as ever, when the next political campaign begins.

Having allowed me this lighter moment, I would like now to give a longer and more serious look at this dragon of unnecessary spending, in the hope that perhaps we can expose him once and for all.

Since the present-day tax load is so large, the burden of proof lies heavily on those who advocate programs which require additional Government spending. We must always be certain that any new expenditure—whether it be for street lights on our own block, for an Interstate Highway System, for waste treatment plants, or a flight to the moon—is important to our welfare and worth the money.

As citizens, we have always been concerned with taxation and spending. And in a year in which the state of the American economy and Government fiscal policy have been made the central issues of a great national debate, there is added concern. Unfortunately, accompanying this added concern, is an added barrage of political propaganda, with no small portion of charges and countercharges. It is this barrage of propaganda which is of particular concern to me, for until we can see our way through the political smoke-screen which has been created, no constructive consensus will be reached.

The subject of Federal expenditures is a particularly difficult one to approach. It is difficult, first, because of the many diverse, and occasionally conflicting, elements and interests involved. When we speak of spending, we are not speaking only of sums, but also of individual, local, State, and regional interests, all of which must be considered. Because of this, it is always difficult, and often impossible, to decide what is a necessary expenditure and what is a wasteful one. This difficulty, however, has not seemed to hamper our ardent efforts to attack the undefined evil, "waste."

Nevertheless, because we do want to spend as little as possible, and because we do want every dollar spent to be spent wisely and well, we must face this difficulty and attempt to draw the line around what is and what is not "necessary." However, while it is very tempting to do so, we cannot draw this line only in terms of our own State, our own economic group and our own interest.

This Nation is first and foremost 1 union of 50 States, not 50 States in 1 union. This is a fine distinction, but one which must be made. History, of course, has proven this point. And, obviously, the strength of this union can be no greater than the strength of each of its component parts. With a mobile population in an industrial and interdependent society, poor schools or inadequate roads—any chronic and consistent weakness—in one section of the country will affect the other sections as well. Thus, Federal expenditures must be viewed in the light of national need.

We in the West, as the relatively underdeveloped area of the Nation, are the main beneficiaries of such a national outlook today. At the present time, Utah is reported to receive more Federal funds per capita than any other State in the Union. These funds have built roads, developed water resources, built missiles, and bolstered the economy of our State. And in doing so, they have bolstered the economy of the Nation. Which of these expenditures do the dragon slayers say are unnecessary?

Where have these funds, which have been used for the development of Utah, come from? In part, they are the taxes of the citizens of Utah. However, this accounts for a very small part of the Federal funds spent in our State, for we receive almost three times as much as we contribute in taxes. Other, more fully developed and wealthier States have, thus, been helping us. These wealthier States receive back in Federal funds a far smaller portion of Federal revenue than their taxes constitute. This may seem, to some, inequitable; however, I feel that this is as it should be, for just as all share the benefits of our Union, all must share its burdens.

Thus, your representatives in Washington must look at the national budget in terms of both Utah and the Nation. The proposed Dixie project in southwestern Utah is a case in point. This reclamation project, at an estimated cost of $42 million, will be invaluable to Utah in providing a supplemental and full irrigation water supply to about 21,000 acres in Washington county. In addition, it would provide municipal and industrial water supply, generate hydroelectric energy and give flood control protection. When the Dixie bill comes to a vote in the Congress, however, we will need the support of other States—Alabama, the Dakotas, Oregon, New York, and so on—other States which will receive no direct benefit from the Dixie project. Only with this so-to-speak uninterested support will we see this reclamation project realized.

By the same token, I will be asked to lend my support to projects which are of little or no direct benefit to Utah, except insofar as they are of benefit to the entire Nation. These, too, will involve spending—spending which is perhaps every bit as necessary to a particular State or area as the Dixie project is to us. For example, there is little need here in the open spaces for maritime subsidies and oceanic research or navigation channels along our coasts and rivers. Yet there is a great need for these in the coastal cities and river ports of the Nation. If they are to receive the funds they need in this regard, they need our support.

For most of us this dragon of unnecessary spending is that which helps the other fellow. This kind of easy and self-interested reasoning serves only to weaken the Nation and warp our purpose.

As I mentioned earlier, if we are realistically to examine and to evaluate Government expenditures, we must consider both national need and individual interests. Such an evaluation is even more difficult than this would indicate, however, for in addition to the tangible needs and interests to be considered, there are intangibles which must be counted. Government spending involves more than an assessment of figures and amounts; it also involves an assessment of ideals and goals. It involves our national purpose. For this reason, in seeking to draw the line around what is necessary and what is not, we must talk not only of dollars and cents, deficits and surpluses; we must also consider human costs and human returns. And we must consider not only the needs of the present, but also our plans and hopes for the future.

With this in mind, I want to take a brief look at our national budget. Before doing so, however, I would like to give you quickly my own philosophy on Government spending and Government assistance to the people.

I believe most fervently, as I have always believed, that everyone should stand on his own feet and do everything possible to meet his own problems. Like many of you, I worked my way through college and law school, and, may I add, long before the GI bill and numerous scholarships. I have fasted not by choice. Those of us who have had the privilege of growing up in Utah are steeped in the tradition of our hardy pioneers. We know what problems our forefathers faced, and how well they met them. We are proud of the extent to which Utah has been able to develop its own human and natural resources.

I believe also that private enterprise should be encouraged to do whatever jobs it can do. And it should be free to do these jobs. This is the basis of our American system, and the basis of America's greatness.

But I feel we must be realistic. When there are problems which private enterprise cannot solve, and which the States or the cities and counties cannot or do not move to meet, the Federal Government will be importuned, will be pressured, to move on them. And I hold with Abraham Lincoln that it is the responsibility of the Government to do for the people what they cannot do so well for themselves—I think this truth is self-evident.

Now, with this brief statement of where I stand, let us take that look at the Federal budget for fiscal year 1964. It proposes to spend $98.8 billion. This is a great deal of money. However, merely because it is a great deal of money, it does not necessarily follow that it is excessive. And merely because we have not needed so large a budget in the past, it does not follow that we do not need it now. The measure of necessity is where this $98.8 billion is to go.

Contrary to what the self-styled prophets of gloom and doom would have you believe, we are not spending this $98.8 billion on unwanted and untested "welfare programs." Note first that over half of our total budget will be spent directly for the defense of this Nation. These expenditures support the most powerful defense network which the world has ever known. And they provide the insurance, without which any dollar which we might save by cutting our defense expenses, would be worthless.

Another 13 percent of the budget similarly relates to our national security and serves to reinforce our defense efforts. This 13 percent includes expenditures in the international field and for space exploration. Thus, 63 percent of the budget—the bulk of our Federal spending—is the result of the great burden of defense which we must bear for ourselves and for freemen around the world. Finally, if we add the allocations for veterans' payments and interest on the national debt—payments which are the price of past wars—we find that a full 80 percent of the $98.8 billion budget relates to the price which we must pay for peace and security.

Eighty percent of $98.8 billion, or approximately $79 billion, is indeed a high price to pay. However, this is where we must assess more than dollars and cents. We must look beyond the face value of the figures. For, of what value would a savings of $1, or $2, or even $10 billion be, if we were not free to enjoy that savings? On the other hand, even $1 is an excessive amount if it is not necessary to that defense.

An interesting illustration of this is afforded by a recent action of the House of Representatives. For several weeks the budget cutters have been prating economy and promising to cut "waste" and "unnecessary spending." They have glibly promised that their Republican colleagues would show us where the budget should be cut. But about 2 weeks ago a military appropriation bill was before the House, and over half of the dragon-slaying, budget-cutters on the Republican side of the aisle voted to appropriate an amount for military spending greater than that thought necessary or proper by the President and the Secretary of Defense.

In fairness I should add that this is not a pure Republican-Democrat conflict. If it were, the increase would have been voted down. The fact is there were many Democrats as well as Republicans on the winning side, but the main driving force for this increase came from some of the more dedicated dragon slayers in the Congress.

Having seen that a full 80 percent of our Federal funds are expended for national security purposes, there is 20 percent as yet unaccounted for. This 20 percent is spent here at home. Again, contrary to what many would have you believe, only about 7 percent of the total budget, or 7 cents out of the tax dollar, relates even remotely to what we might term "welfare." Seven cents—less than the cost of a cup of coffee—or should I say glass of milk—is hardly an exorbitant amount. However, we are looking beyond face value today, and by this standard, even 1 cent is excessive if that penny is not soundly spent.

What, then, would constitute sound spending?

In the case of national security it is easy for us to agree that our vast expenditure represents a sound investment if it buys us freedom. It is easy for us to agree because the threat to our safety is direct and visible. If we are not fully prepared, if we do not have an adequate missile system, and so on, the Soviets will be the victors. It is that simple.

In the case of domestic spending, however, evaluating our expenditures is a great deal more difficult. The threat is not immediate, and the results not as readily apparent. Thus, the small amount spent domestically falls under exaggerated fire.

The 7 cents for welfare includes grants to the States for the aged, the blind, the disabled, and the dependent. It includes grants to the States for water pollution control, hospital construction, aid to education—including funds to land-grant colleges—vocational rehabilitation, and a variety of other programs. And it includes the administrative costs of such Government functions as unemployment compensation programs, health and medical research, and the policing of labor unions.

Critics of these programs point out that if we end the vocational rehabilitation program, for example, those who participate will suffer, but, after all, not everyone will. If we end our medical research efforts, the cure for cancer or heart disease may be somewhat longer in coming, but it will come. By this kind of reasoning, every penny thus spent on these domestic programs is spent unnecessarily and unwisely.

I, for one, cannot agree. For just as we must invest in our future through national security programs, we must invest in the future of our resources—both in the natural resources which surround us and in the human resources which are our ultimate strength.

There are those who would argue that the tradition of independence and self-reliance upon which this Nation was founded does not allow for this type of investment. These apostles of the past cry that we are encouraging weakness and idleness—coddling the citizen from cradle to grave. They wring their hands and warn of creeping socialism and the paternalistic state.

What they fail to note, however, is that our proud tradition of independence and self-reliance, both in 1789 and 1963, and our proud tradition here in Utah, did not and does not preclude a governmental concern with and involvement in the development of its resources. The Government of the United States was ordained and established to promote the general welfare and secure the blessings of liberty to ourselves and our posterity. Our Founding Fathers did not specify that the Government was ordained and established to promote the general welfare and secure the blessings of liberty only if it can do so without spending any money.

These rules set down in 1789 remain the rules by which we can judge Government's actions today. They were set down for the Government of a small nation of farmers and craftsmen, isolated from the trials and turmoils of the Old World. It is no small tribute to the wisdom of our Founding Fathers that these same rules are equally valid and valuable for the Government of a mighty nation which spans a continent and extends across the sea—a nation of industrial and commerce, upon which all of the Old World and most of the new now depend.

But while the rules remain unchanged, between 1789 and 1963 we have had to adapt to the most far reaching and pervasive social changes which have ever faced a nation in so short a time. That we have accomplished such a change, so successfully and with so little disruption and within the framework of our Constitution, is testimony to the strength of our system.

However, along with these social changes, we have also had to make psychological changes. While we retain the rules and values of old, we have redefined these and related them more realistically to the new face of our Nation. For example, we once thought of freedom or liberty in terms of self-sufficiency. The freeman was the man who had his own land, kept the fruits of his own labor, and relied on no man for aid or comfort. The Government was merely a policeman—and its role was to keep order. Today this definition has little to do with the world we know. Today, we must think of freedom in different terms; we must think of freedom in terms of life in an interdependent and industrial society. Thus, freedom is not self-sufficiency, for many of us own no land. Many of us work for large concerns and depend on men hundreds of miles away for the necessities of life. Yet we are still free—free to choose our job and way of life—free to think and to speak—free from hunger. We cannot qualify or calculate this freedom or estimate whether we have gained or lost with the change. But the change is real, and because it is real it must be reckoned with. It is this kind of adjustment which the apostles of the past have failed to make.

If this Nation is to realize its promise and remain preeminent, we must make this adjustment in our own minds. We cannot bow in blind obedience to the past. Once this has been accomplished we will be able realistically to evaluate the necessity or the validity of Government expenditures for domestic assistance—for the "general welfare." Thinking in terms of current conditions as well as past patterns, we can evaluate each program in terms of:

Is the individual able to protect himself in this regard?

If not, can private enterprise do it?

If not, is there a local, private, or church organization which can accomplish this?

If not, can the State governments do it alone?

And finally, if not, can the Federal Government carry out such an activity successfully within the standards set down in the Constitution?

Only when the first answers are negative and the last question is reached and answered affirmatively is the spending necessary. Note, however, that nowhere do we ask—has it been done before?

By this standard, I do not think that we are advocating socialism or dragging the country to destruction when we propose that the American consumer be given protection—the same protection—which we have given to our cattle since 1913. Because of our giant corporations and vast network of interstate commerce, only the Federal Government is able to accomplish this effectively.

Similarly, I do not think we are sapping the Nation's strength and encroaching upon our freedom in proposing that Federal taxes help to pay those who nurture the minds of our children an amount equal to that which we pay to those who care for our pipes and plumbing. The States themselves cannot always accomplish this.

For example, even though the recent session of the Utah State Legislature voted a larger spending authorization for education than ever before, there is a deep and sincere feeling on the part of a vast majority of the members of the Utah education association that the present financial impasse was not satisfactorily settled, and, as you all know, they have voted to suspend negotiations on next year's contracts.

I regret this most unfortunate situation, but I do understand the interest of Utah's teachers in improving the quality of education in Utah—and I am with them all the way.

To review briefly, I hold that if in judging the necessity of Federal expenditures, we look at them in the light of the world in which we live today, rather than through the eyes of apostles of the past, and we hold all that we do firmly within the framework of our Constitution, the Federal Government will not move beyond its province.

We must keep in mind the mobility of our people, and the fact that no longer is Alabama's problem strictly Alabama's concern. It has become the concern of all of us. We must keep in mind the kind of awesome world in which we live in the 1960's. We must judge today's world by today's standards. We must remember that the Federal Government is our Government every bit as much as the State government is our government, that we are citizens of Utah, but also citizens of the United States.

These, then, are the facts with which responsible citizens must contend when talking about reducing the Federal budget. It is obvious from this analysis that wholesale budget cuts are impossible without dangerously curtailing essential programs. The question remains: are there savings which could be realized in specific areas without hurting our economy, crippling important programs, or undermining our strength in the cold war? I think there are, and I intend to pursue them.

Also, once we have decided that a program is essential by these standards, we must set out to see how carefully and economically it can be administered, and how thoroughly we can eliminate any waste and inefficiency—how we can get the most for every taxpayers' dollar. Waste and inefficiency are unquestionably unnecessary expenditures in anybody's lexicon.

These are not dragons just to be slain at election time—they are the problems of the real world—to be solved only by painstaking analysis and detailed effort. The Congress will give full consideration to anyone who can show us—in dollars and cents—how to get more for the taxpayers' dollar.

But do not be misled by those who claim that billions are being thrown away, just because they do not happen to approve of a program, or those who insist that Federal programs or Federal investment are not needed in today's world.

Members of Congress have a favorite story, which, while it exaggerates, beautifully describes some people who discuss Federal spending in cliches and avoid specifics. Let me read it to you.

ON HIS OWN FEET

A young man lived with his parents in a low-cost public housing development. He attended public school, rode the free schoolbus, enjoyed the free lunch program. Following graduation from high school, he entered the Army and upon discharge kept his national service life insurance. He then enrolled in a university, receiving regularly his GI check.

Upon graduation, he married a public health nurse, bought a farm with an FHA loan. Later going into the feed and hardware business in addition to farming, he secured help from the Small Business Administration when his business faltered. His first baby was born in the county hospital. This was built in part with Hill-Burton funds. Then, he bought considerable additional acreage adjoining his farm, and obtained emergency feed from the Government. He then put part of his land under the Eisenhower soil bank program and used the payments for not growing crops to help pay his debts. His parents, elderly by now, were living comfortably in the smaller of his two farm homes, using their social security and old-age assistance checks. Lacking electricity at first, the Rural Electrification Administration supplied the lines, and a loan from the Farmers Home Administration helped clear the land and secure the best from it. That agent suggested building a pond, and the Government stocked it with fish. The Government guaranteed him a sale for his farm products. The county public library delivered books to his farm door.

He, of course, banked his money in an institution which a Government agency had insured up to $10,000 for every depositor. As the community grew, he signed a petition seeking Federal assistance in developing an industrial project to help the economy of his area. About that time he purchased business and real estate at the county seat aided by an FHA loan.

He was elected to office in the local chamber of commerce. It was rumored he joined a cell of the John Birch Society in the county seat. He wrote his Senators and Congressman protesting excessive Government spending and high taxes, and enclosed John Birch pamphlets, some containing outlandishly false statements.

He wrote, "I believe in rugged individualism. People should stand on their own two feet, not expect Government aid. I stand on my own two feet. I oppose all those socialistic trends you have been voting for and demand return to the free enterprise system of our forefathers. I and my neighbors intend to vote against you next year."

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Bartlett, one of its reading clerks, announced that the House had passed a bill (H.R. 5067) to amend the Agricultural Adjustment Act of 1938, as amended, in which it requested the concurrence of the Senate.

ENROLLED BILL SIGNED

The message also announced that the Speaker had affixed his signature to the enrolled bill (H.R. 4423) permitting the Secretary of the Interior to continue to deliver water to lands in the third division, Riverton reclamation project, Wyoming, and it was signed by the Acting President pro tempore.

HOUSE BILL REFERRED

The bill (H.R. 5067) to amend the Agricultural Adjustment Act of 1938, as amended, was read twice by its title and referred to the Committee on Agriculture and Forestry.

YOUTH CONSERVATION CORPS

The Senate resumed the consideration of the bill (S. 1) to authorize the establishment of a Youth Conservation Corps to provide healthful outdoor training and employment for young men and to advance the conservation, development, and management of natural resources and recreational areas; and to authorize local area youth employment programs.

Mr. CLARK. Mr. President, if there are no other Senators who wish to speak on other matters, I shall suggest the absence of a quorum.

Mr. DIRKSEN. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER (Mr. RIBICOFF in the chair). The Senator will state it.

Mr. DIRKSEN. Has morning business been concluded?

The PRESIDING OFFICER. Morning business has been concluded.

Mr. CLARK. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. DIRKSEN. Mr. President, I ask unanimous consent that further proceedings under the quorum call may be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The committee amendment is a substitute for the bill, and, under the Senate precedents, will be considered as original text for the purpose of amendment. The committee amendment is open to amendment.

Mr. GOLDWATER obtained the floor.

Mr. CLARK. Mr. President, will the Senator yield for a parliamentary inquiry?

Mr. GOLDWATER. I yield.

The PRESIDING OFFICER. The Senator from Pennsylvania will state his parliamentary inquiry.

Mr. CLARK. Unfortunately I was engaged in a colloquy with another Senator and I did not hear the parliamentary ruling by the Presiding Officer. Will the Presiding Officer repeat it?

The PRESIDING OFFICER. The committee amendment is a substitute for the bill, and, under the Senate precedents, will be considered as original text for the purpose of amendment.

The committee amendment is open to amendment.

Mr. CLARK. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. CLARK. Is the committee amendment now before the Senate?

The PRESIDING OFFICER. The committee amendment is the pending question before the Senate.

Mr. CLARK. I thank the Chair.

The PRESIDING OFFICER. The Senator from Arizona may proceed.

Mr. GOLDWATER. Mr. President, I am opposed to the enactment of S. 1. Nevertheless I would like to point out at the outset that I have a deep concern for the problems and challenges faced by our young people today. It is this deep concern that leads me to oppose this bill and urge that the Senate reject it.

The Youth Conservation Corps and the so-called Home Town Corps which would be established by this legislation hold an emotional and political appeal to certain segments of our society; nevertheless, I believe that this program, if enacted, would prove a sham.

The harsh reality of our modern society makes the benefits which would accrue to our young people from this program minimal, at best. The very people the two corps are intended to help would find that the vague promises offered by the administration and the other supporters of S. 1 are illusory. This legislation does not treat the very real problems of America's youth; it merely bypasses them. In short, the youth employment bill does not do the job.

I believe that a problem does exist. Substantial unemployment among our young people between the ages of 16 and 21 is a fact that no one will dispute. The causes of this problem and the means to alleviate it are our concern. I do not believe that shouting slogans and attempts to revitalize the emergency programs of a bygone era contribute to the solution of the problems of our youth in the 1960's.

The problem which faces America's youth can be described in all its essentials is a relatively few words. Lester Velie, in his recent Reader's Digest article entitled "Why Johnny Can't Get a Job," put it this way:

> One out of five boys between the ages of 16 and 19 who looks for work fails to find it. Yet thousands of highly paid jobs are going begging.

Vast unemployment exists side by side with a tremendous demand for workers of all kinds. The key to this riddle lies, of course, in the fact that the great demand is for men and women who possess a variety of skills while our young people enter the labor market often lacking even the most modest skills.

A graphic illustration of America's unemployment dilemma can be found in the Nation's Capital itself. The February 1963 Labor Department figures show that more than 27,000 people are unemployed in the Washington, D.C., metropolitan area. Nevertheless, the Washington newspapers carry want ads which offer an abundance of jobs. On a presumably representative Sunday, March 24, 1963, the Washington Post and the Sunday Star carried classified ads for more than 1,500 and 1,100 job openings, respectively. The problem is, of course, that these positions require a variety of skills which too many of our people, particularly our youth, do not possess.

It would seem, therefore, that the Nation must address itself to the very real task of providing our youth with the proper vocational training rather than trying to treat the symptoms with legislation such as S. 1. President Kennedy himself grasped the reality of the situation when he recently reported to the Congress concerning "the need for providing new training opportunities in occupations which have relevance to contemporary America to the 21 million youth now in grade school who will enter the labor market without a college degree during the 1960's. These youth—representing more than 80 percent of the population between the ages of 16 and 21—will be entering the labor market at a time when the need for unskilled labor is sharply diminishing."

Appearing before the Manpower Subcommittee in behalf of the bill, Secretary of Labor Wirtz stated:

> There is no suggestion that this training program will qualify one of the enrollees for a skilled occupation.

Again, in testimony before a House committee, the Secretary proclaimed:

> There is no future in this country for the unskilled worker. What has been his job is going to be done by machines.

I ask my colleagues to consider the significance of these two statements. When read together, they constitute my reason for opposing this legislation. Our young people need skills and this bill, despite its professed objectives, does nothing to fill that need.

I would like to turn for a moment to the proposed Youth Conservation Corps. During the hearings on S. 1, much was said about the values which the boys would supposedly gain by serving a stretch in the Corps.

The specific values which the Corps is to inculcate into its members include improved physical health, increased weight, cheerfulness, self-confidence, and a feeling of security. These benefits, mostly psychological or esthetic in nature, are not to be depreciated. When they are combined with the conservation aspects of the YCC, the program has obvious appeal as a force for "good."

I do not dispute the possible esthetic or psychological value of this program. I submit, however, that the fact that the Corps would be "nice" or "good" is not enough to justify the expenditure of millions of the taxpayers' dollars. The underlying purpose of the program is said to be the improvement of the employment prospects of our youth. Supplying them with suntans and an appreciation of outdoor living simply will not help them find jobs.

The Youth Employment Act was allotted $100 million in the President's budget. This figure, apparently arrived at by some form of guessing game, was raised by another $20 million in the bill's authorization adopted by the majority of the Labor Committee. Actually, both figures were arrived at through the haziest kind of calculations, and are therefore virtually meaningless.

Consider, for example, the estimated costs of title I, the YCC, submitted by the Secretary of Labor. The estimated 12-month cost per enrollee is $3,985. This cost does not include the expense of materials and equipment; in addition, it assumes camp construction costs of only $250,000—although testimony indicated that such costs would be $385,000—per installation amortized over a 20-year period. That this program is authorized for a maximum of 5 years, not 20 years, was conveniently ignored in these estimates. Nevertheless, forgetting these inaccuracies for a moment, it is interesting to compare these 1963 figures with those submitted by the Kennedy administration in 1961, when a similar legislative proposal was before the Congress.

The Department of Agriculture and the Department of the Interior submitted figures in 1961 which showed that the annual cost per boy in a 25-man unit would be $12,297. These figures, which included construction costs as well as running expenses, indicated that the cost per boy in the largest conceivable camp—a 200-man unit—would be $7,171, nearly double the administration's "guess" for this year.

We submit that this vast discrepancy proves that the administration and the proponents of S. 1 do not know what the program might cost the taxpayers. The wide variance between the administration's own estimates also illustrates, it seems to me, why this Nation is faced with the largest planned peacetime deficit in its history. "Cost" is a word that the Kennedy administration sometimes refers to, but obviously does not understand.

Senator Prouty brought the 1961 administration cost estimates to the attention of administration spokesman Wirtz during the hearings on this bill. The Secretary's reply was as follows:

> I am just not familiar with that source. You will realize that, thanks very much to the consideration of this committee, we have had an opportunity last year and now this year to do a good deal more careful costing than we were in a position to do before.

The Secretary's "careful costing" represents one of the most fantastic pieces of mathematical legerdemain in history.

Mr. LAUSCHE. Mr. President, will the Senator yield?

Mr. GOLDWATER. I am glad to yield to the Senator from Ohio.

Mr. LAUSCHE. I heard some figures mentioned about the cost per boy who will be sent to these camps. Can the Senator from Arizona tell me what the maximum cost per boy has been conceded to be by the proponents of the bill?

Mr. GOLDWATER. I mentioned, before the Senator asked me to yield, that the Deparemtnt of Agriculture and the Department of the Interior submitted figures for 1961 which showed the annual cost per boy in a 25-man unit to be $12,297. In the estimates, as I understand, at that time, for a boy in a 200-man camp, the cost per boy was $7,171, which is almost double the administration's guess. I was trying to point out that a boy can go to Harvard cheaper than we can send him to the YCC camp, or cheaper than we could send a boy to any ivy league college.

Mr. LAUSCHE. On page 29 of the report there appears the statement:

> The estimated 12-month cost per enrollee is $3,985.

Mr. GOLDWATER. Yes.

Mr. LAUSCHE. Is that the maximum figure that is conceded by the proponents of the bill, or is it the minimum figure?

Mr. GOLDWATER. This is merely the cost for this year. If the Senator will read on, he will see the statement:

> This cost does not include the expensive materials and equipment; in addition, it assumes camp construction costs of only $250,000 (although testimony indicated that such costs would be $385,000) per installation amortized over a 20-year period.

I call the Senator's attention to the fact that the program is authorized for only 5 years. Therefore, it is proposed that we amortize it in 5 years instead of 20 years, which greatly increases the cost.

Mr. LAUSCHE. Has there been any challenge of the figures for the year 1961, showing a cost of $12,297 per year per boy?

Mr. GOLDWATER. No evidence was presented that it was incorrect. The committee in its hearings has reduced this figure. The question in my mind is how they came to this latest figure.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. LAUSCHE. That is, if the cost per boy at Harvard is $2,300 per year, and the cost of sending a boy to the Youth Camp is $3,985, the cost of sending a boy to one of these camps would be about 100 percent more.

Mr. GOLDWATER. The cost of sending a boy to Harvard is less than $3,000 a year.

Mr. LAUSCHE. The $2,300 a year figure is mentioned in the report.

Mr. GOLDWATER. Yes; we can send a boy to any Ivy League college for about half of what it would cost to send him to camp.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. GOLDWATER. I yield.

Mr. CLARK. I wish the Senator would yield so I may comment on this colloquy. In the first place, the figure of $2,300 for sending a boy to Harvard is entirely incorrect. It is 100 percent wrong. I happen to know, because I have served on the board of overseers of Harvard for 6 years. The cost to send a boy to the college is almost twice the $2,300 figure. The cost to the boy, if he is a very economical and careful boy, is probably around $2,300. However, Harvard has one of the largest endowments of any university in the country. The boy is taken into Harvard at a substantial loss to the university. The real test is not what it costs the boy, but what it costs the college.

My next point is that the figure of $3,985 as the cost of each enrollee is the result of testimony given by Secretary Wirtz. That figure is not, as the Senator from Arizona implied, the committee's figure. It is the figure of the Secretary of Labor. He took into consideration the estimates for 1961, which were substantially higher. He felt these estimates were wrong. In my opinion, although I know the Senator from Arizona and the Senator from Vermont will not agree with me, the Secretary, in very satisfactory testimony, justified this figure, as is shown on page 12 of the report.

One final word. The figure of $250,000 for the cost of the camps is not, as was indicated on the floor yesterday, the cost of building the camps. No one ever mentioned that it was. This is the amortized cost over the useful life of the camp, which is 20 years, amortized on an annual basis of what it would cost to fix the camps or build new ones.

The bill calls for a 5-year program, but any reasonable accountant, who wanted to be fair, would amortize the cost of the camps over their useful life. Of course, they can be used for other purposes than for enrollees in this program. A very large majority of the Committee on Labor and Public Welfare and of the Subcommittee on Employment and Manpower, who heard the testimony, stands on the figures in this report, believes them to be accurate, and is satisfied that the testimony of the Secretary of Labor amply justified this figure.

I know the minority does not agree with me. However, we should keep the facts straight.

Mr. GOLDWATER. Certainly the minority does not agree, or there would not be any minority. I might point out to the Senator from Pennsylvania, with respect to his statement about the cost of sending a boy to Harvard is not reflected in tuition fees alone, that that is generally true throughout the United States, not only with respect to Harvard or to any of the other heavily endowed colleges in the East.

It is also true that we are not reflecting in the bill the administrative cost of collecting taxes and the cost of running the Government, any more than the cost of running Harvard is reflected in the actual tuition fees. I will comment on this point in a little while, but first I yield again to the Senator from Ohio.

Mr. LAUSCHE. Mr. President, what is the amount of money that has been asked for in this operation for the first year?

Mr. GOLDWATER. It is $100 million, after yesterday's action by the Senate.

Mr. LAUSCHE. How many enrollees are expected to be financed by $100 million?

Mr. GOLDWATER. Fifteen thousand in title I.

Mr. CLARK. Now, let us be fair. The Senator from Arizona is talking about the whole bill. The Senator from Ohio is talking about title I. The Senator from Arizona said 15,000. There are 15,000 in title I. There are 60,000 in title II.

Mr. GOLDWATER. I should like to ask the Senator from Pennsylvania a question on that point. After the cut we made yesterday, will it change the number of people who will be benefited by the bill?

Mr. CLARK. I imagine it will in the end cut it down some, but not much, because actually the figure of $100 million, or $50 million for each title, was in the administration's proposal. They suggested a ceiling of 15,000 for title I and a ceiling of 60,000 for title II. I must be candid in admitting that the exact number of enrollees cannot be definitely stated, because there are, as the Senator has been pointing out rather clearly, a number of variables involved.

Mr. PROUTY. Mr. President, will the Senator yield?

Mr. GOLDWATER. I yield.

Mr. PROUTY. I should like to comment on the last statement made by the distinguished Senator from Pennsylvania.

As a result of the reduction in authorization made yesterday, and assuming that the figure which the proponents have suggested—$15 million—is necessary for the renovation of existing camps—I think the amount is probably double that; but assuming their figure is accurate—only 8,235 boys will be eligible as enrollees in the camps.

Mr. CLARK. Mr. President, will the Senator from Arizona yield?

Mr. GOLDWATER. I yield.

Mr. CLARK. I categorically deny that statement. The administration bill provides the full $50 million in the first year for 15,000 enrollees. There is still $50 million in the bill for title I; there will still be 15,000 enrollees.

Mr. PROUTY. I categorically deny the accuracy of the Senator's statement. Later on I shall quote from a statement made by Robert Wolf, a member of the majority staff of the Committee on Interior and Insular Affairs. It appears on page 548 of the hearings. I shall quote in a few moments only the pertinent parts of the statement, which relate to this particular discussion.

> This year Secretary Wirtz estimates the cost per enrollee including the camps but exclusive of work equipment and supplies, at $3,985.

But first let me turn to another matter. I call attention also to the fact that the distinguished junior Senator from Wisconsin [Mr. NELSON] who appeared before the subcommittee, said that work camps in Wisconsin cost $3,100 per enrollee. They were camps which were established to take care of boys for 6 months, but only during the summer. He made that very plain and emphasized that they were only summer camps. Obviously, a year-round installation would be much more expensive.

Mr. ROBERTSON. Mr. President, will the Senator from Vermont yield?

Mr. PROUTY. I yield.

Mr. ROBERTSON. I was a Member of the House when the law authorizing Civilian Conservation Corps camps was passed. Prior to that, Congress had voted President Roosevelt $5 billion to use as he pleased; and then in January of 1935 an additional $4.8 billion. From those funds, he established Civilian Conservation Corps camps. There was no law providing for Civilian Conservation Corps camps until June 1937.

Then we passed a law in which we agreed to pay Director Robert Fechner a salary of $10,000 a year. The bill now before the Senate provides an annual salary of $20,000 for the Director. Two days later we passed the first appropriation bill, which provided $350 million for the Civilian Conservation Corps for 1 year. That program remained in existence until it was necessary to discontinue it because of World War II.

I checked today to see what it would cost to build barracks similar to those which were built in 1937. Both the Census Bureau figures and the military figures show that a barracks today costs 300 percent more than the cost in 1937. So I say there is not enough money in the bill even to house these boys. It is the most absurd financial proposal that has ever been seriously presented to the Senate. The boys could not be housed for $75 million. There is not that much money in the bill. They could not be equipped with the necessary trucks and jeeps and equipment for the barracks, including cooking utensils and other supplies. Funds for those items are not even included in the cost.

I shall have available before long the amounts which were spent in depression years, and only for construction. We are getting into a program which will cost about three times as much. I have just stated that barracks will cost three times as much as they cost in 1937. We paid Director Fechner a salary of $10,000. The bill before the Senate provides a salary of $20,000 for the Director.

They were good jobs in those days. I was able to have more camps located in my district than anyone else in Virginia. I appointed good political leaders. I managed to get good, efficient men. But it was mighty good patronage. They received salaries of $150 a month. Those who will be appointed to similar positions today will get $400. It will still be good patronage, but I do not know whether they will get as good results.

I merely wished to assure the Senator from Vermont, who is attempting to present figures to the Senate, which Senators will not remain here to listen to, and which they will not know about when we vote, that the estimate of the cost of this program is so hopelessly low that, as he said yesterday, it would be absurd if it were not so tragic.

Mr. GOLDWATER. Mr. President, I have yielded to the Senator from Vermont, who in turn yielded to the Senator from Virginia. He may yield to whomever he wishes, provided I do not lose the floor.

Mr. PROUTY. Mr. President, I refer again to Mr. Wolf's report, or study, on page 548 of the hearings. As I understand, Mr. Wolf was loaned to the Committee on Labor and Public Welfare by the Senate Committee on Interior, so he is an expert in this field. I quote briefly from his statement:

> This year Secretary Wirtz estimates the cost, including the camps but exclusive of work equipment and supplies, at $3,985. The camp cost on an amortized 20-year basis, using the 50-man camp (estimated to cost in total $250,000) becomes $250 per enrollee per year. Added to the $3,985 is the cost of work equipment and supplies which run between $150 per man-year and $1,000 per man-year, depending upon the complexity of the work undertaken. Last year's comparable figure was an average of $500, and this would be reasonable to use.

I question the accuracy of that statement. I think the amount would be much higher. However, I am quoting Mr. Wolf. I call the particular attention of the Senator from Pennsylvania to this statement by Mr. Wolf:

> Therefore, a fair average estimate for the current legislation of the total cost would be $3,985 plus $500 or about $4,500 per enrollee.

Using those figures, we find that the total authorization, as a result of the amendment adopted yesterday, would be $50 million; the cost of renovation of existing camps would be $15 million; leaving a balance of $35 million for the remainder of the program, at a cost of $4,250 per enrollee.

Assuming that the camps have been renovated, I have eliminated any figure for amortization and have reduced the amount per enrollee to $4,250 instead of $4,500.

Mr. Wolf estimated that 8,235 boys could be accommodated. I am using figures presented by the proponents of the measure.

Mr. LAUSCHE. Mr. President, will the Senator from Vermont yield?

Mr. PROUTY. I yield.

Mr. LAUSCHE. Fifty million dollars is now available. What was that amount cut to?

Mr. PROUTY. According to the proponents, 11,000 boys could be cared for under the $60 million figure, with a $15 million cut for renovation. The Senate has now reduced that figure. It would have amounted to $45 million. Now we have reduced it to $35 million.

Mr. LAUSCHE. So it is not possible to take care of 15,000 boys, at $4,500 a boy, with $35 million.

Mr. PROUTY. Not within the $50 million appropriation, or anywhere near it.

Mr. LAUSCHE. On the basis of the calculation by the Senator from Vermont, the maximum number of boys who could be taken care of would be 8,000.

Mr. PROUTY. That would be the very maximum. I think the number would probably be nearer 5,000. These figures are "guesstimates," not accurate estimates. There has not been sufficient time to present a true picture.

Mr. LAUSCHE. Even on the basis of a cost per boy of $3,985, it would not be possible to take care of 15,000 boys with the money authorized?

Mr. PROUTY. No.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. GOLDWATER. Mr. President, what is the situation with respect to who has the floor?

Mr. PROUTY. Mr. President, I yield back the floor to the Senator from Arizona.

Mr. GOLDWATER. Mr. President, I yield to the Senator from Pennsylvania.

Mr. CLARK. I may say to the Senator from Ohio [Mr. LAUSCHE]—and I ask the attention of the Senator from Virginia [Mr. ROBERTSON] also—that the President of the United States, through five Cabinet officers, came before our committee and told us that with a $60 million authorization and appropriation they could train 15,000 boys. I believe that. I think they made a good case. The Senator from Vermont [Mr. PROUTY] is very astute with his mathematics. He adds, subtracts, divides, and multiplies and reaches the conclusion that it is not possible to train as many as 15,000 boys.

In the end, this will not be a question of mathematics; it will be a question of administration. I dispute the figures of the Senator from Vermont; he disputes mine. I think the administration knows what it is doing. I think the President of the United States would not have sent a bill to Congress and said, through the five Cabinet officers who testified, "If you will provide $60 million, it will be possible to train 15,000 boys in the camps," if he did not believe that that was correct.

The majority of the committee, after hearing the testimony, thought he was correct. Of course, one can add, subtract, multiply, and divide all one pleases; but a very overwhelming majority of the Committee on Labor and Public Welfare believes the administration, believes the Secretary of Labor, and believes that 15,000 young men can be trained by the expenditure of $60 million.

Let me say to the Senator from Virginia—who knows how much I love him—that it seems to me that in his speech he "missed the boat" in two regards. In the first place, the vast sum of money he mentioned in connection with the CCC program of many years ago is in contrast with the proposal to spend the amount here contemplated for the training of 15,000 young men in this program. In the CCC program in 1936, 378,000 were enrolled; in 1937, 270,000—and so on, through the years. The average was approximately 200,000, and the cost per young man was approximately $1,000. Under those circumstances, it was necessary to build the camps. But today, as the record shows, in most instances—although not in all—the camps have already been built, and merely have to be renovated.

I suggest that those in the administration who have gone through all these figures are at least entitled to the presumption that they know more about this matter than do Senators who are considering it for the first time.

Mr. ROBERTSON. In the first place, the distinguished Senator from Pennsylvania did not know the distinguished grandfather for whom I was named——

Mr. CLARK. Robert E. Lee? [Laughter.]

Mr. ROBERTSON. No, although he was my hero. My grandfather used to tell me, when I was a boy, that the tendency of everything is to be more so.

The Senator from Pennsylvania does not know that in 1935, when it was proposed that Congress give the President the power to spend more than $4,800 million, which included the funds for the CCC camps, I predicted that if any such amount was spent, we would live to see the day when the national debt would be $50 billion. Was I correct? The national debt today is in excess of $300 billion.

Mr. CLARK. The Senator from Virginia is correct; and I ask him, too, if the gross national product has also increased, and today is much greater than it used to be.

Mr. ROBERTSON. In my opinion the gross national product is a misnomer. Some items are included at factory prices and some at retail prices and the billions of Government spending are included in the gross national product. We cannot get rich simply by increasing the spending of borrowed money. It is clear that if we do not stop spending such large amounts of borrowed money, we will live to see the day when the interest will be a billion dollars a month, and our grandchildren will live to see the day when the payoff will be in 10-cent dollars; the cost of the national debt being more than they can bear.

Mr. CLARK. Mr. President, will the Senator from Virginia yield?

Mr. ROBERTSON. I yield.

Mr. CLARK. I hope the Senator from Virginia will also live to see that day—and I am sure he will, because I know he will be very long lived; and, in the second place, let me say that I think the average American observer will agree that the people of the United States are much better off today than they were in 1935.

Mr. ROBERTSON. I agree that there have been many technological advances which have resulted in gains, and the standard of living of our people has risen.

But when we already face a deficit of $12 billion in the next fiscal year, and when, if a tax cut is made and becomes fully effective, there will be $10 billion on top of that, certainly the time has come to stop many of these huge spending programs.

On March 7, in a Senate speech, which many Senators have neither read nor paid any attention to, I called for reduction of authority to spend $107 billion, with actual expenditure to be nearly $100 billion. I recommended the amount of $6 billion as unnecessary new spending. In that connection I listed the cost of the proposed mass transportation program. But the Senate voted for it. I also listed this program, as a second one. But on the basis of the vote taken yesterday, the Senate will also vote for this one.

So I repeat that in 1935 I quoted my grandfather, who said, "The tendency of everything is to be more so."

I ask my friend, where will we ever stop all this?

I thank the Senator from Arizona for yielding to me.

Mr. GOLDWATER. Mr. President, I have enjoyed the colloquy very much.

Mr. LAUSCHE. Mr. President, will the Senator from Arizona yield to me?

Mr. GOLDWATER. I ask the Senator from Ohio to wait just a minute, please; I have about yielded myself out. [Laughter.]

In reply to the question of the Senator from Virginia in regard to how these figures were arrived at, I should like to quote from page 478 of the hearings, in order to give the Senator some idea of the dependability of one of the sources of the figures. At that point in the hearings the Senator from Vermont [Mr. PROUTY] read from a statement which quoted the Secretary of Labor, Mr. Wirtz, as follows:

> Secretary of Labor W. Willard Wirtz has acknowledged to me that a rosy statement on unemployment he issued on the eve of the November 6 elections contained "invalid" statistical comparisons.

But even though a man is big enough to admit errors, that still does not eliminate, in my opinion, the probability that he will make other errors.

In order to give some idea of why I think he has made errors, I shall quote now from page 134 of the hearings, where we find the 1961 estimates for the cost of building these camps. They were as follows: for a 25-man unit, $200,625; for a 50-man unit, $260,550; for a 100-man unit, $456,900; and for a 200-man unit, $776,500.

My simple arithmetic indicates that the average is about $300,000 and that the total cost just "to get the show on the road" will be approximately $43 million.

In order to give Senators a further idea of these rather ridiculous estimates, I shall refer to a field about which I know a little. In 1961, they called for a radio network; and the estimated cost for one for a 25-man unit was $7,000, and the estimates went up to $19,000 for a 200-man unit. I suggest that the finest radio equipment which could be purchased to link together these camps—which, according to the plans, would vary in size from 25 men to 200 men—could be obtained for approximately $200,000, total.

I merely state that these costs are guessed at, and they have not been accurately worked out.

When the Senator from Vermont states that the proposed costs are totally inadequate, I can speak better of the situation in my own State than I can of the situation elsewhere. I know the places the Senator from Minnesota listed in the RECORD the other day at page 5666. They are supposed to be the locations for all-year-round camps. When I examined the list, I found that one camp is located in a forest which is closed almost 8 months of the year, because of snow; another one is also covered with snow a good part of the year; and the next one is not an all-year-round camp either. The next one happens to be at a place we call Blue Point, which is where the sheep track crosses the Salt River. It is located in delightful country, if one loves the desert. The temperature there in the summer is about 120° in the shade. I do not know how the trainees would help the sheep get across the river. They have been doing it for more than 100 years. But even if learning to help the sheep get across the Salt River will be of benefit to boys from New York, Detroit, or Washington, I do not know how that will help the country.

Mr. TOWER. Mr. President, will the Senator from Arizona yield to me?

Mr. GOLDWATER. I yield.

Mr. TOWER. The Senator said the temperature there is 120° in the shade. Is there any shade there?

Mr. GOLDWATER. Certainly, if one wishes to stretch out under a cactus. [Laughter.]

Mr. ROBERTSON. Mr. President, will the Senator from Arizona yield to me?

Mr. GOLDWATER. I yield.

Mr. ROBERTSON. Considering the costs during the depression, when the expense would have been about one-third of what it will be now, and considering the fact that an expenditure of $10,000 during the depression would require an expenditure of approximately $30,000 now, and that during the depression assistants could be employed for $150, whereas now the cost would be $300 or $400, would it be safe to say that if the program is begun again—and I point out that it is said that the cost will be amortized over a period of 20 years, which is a rather long time—would it not it be safe to say that in the first 5 years the program would ultimately cost $500 million if we did anything at all about taking boys off the streets and giving them any worthwhile training?

Mr. GOLDWATER. I cannot say definitely that I would agree that it would be $500 million or $1 billion. But I know it would be much more than we have estimated, because of one simple fact I shall mention. I have read the figures pertaining to 1961. We all know that the cost of construction has increased in the time that has intervened. I estimate that in the past 2 years the cost would have gone up perhaps 2 or 3 percent. Nevertheless, it would be far greater than the average figure that I have arrived at, which is $300,000 a camp.

Mr. ROBERTSON. Is it not true that no limitation would be placed upon what would be appropriated after the first year? Would not blanket authority be given.

Mr. GOLDWATER. The camel's nose would be under the tent. Then the whole camel would come in. The program could become one of the greatest boondoggling acts of history. It could even surpass the boondoggling of the 1930's. That is all we are trying to eliminate. We oppose the bill because the program was tried back in the 1930's, as were many other plans, and the program was not eminently successful at that time. So we are resisting it, not because we are against youth, but because we think that there is a better way to take care of the boys than the program proposed.

Mr. ROBERTSON. Is it not true that the committee rejected the recommendation that only boys of good character should be accepted?

Mr. GOLDWATER. The Senator is correct. I have an amendment pertaining to that feature of the bill. I shall discuss it later today.

Mr. RANDOLPH. Mr. President, will the Senator yield?

Mr. GOLDWATER. I yield.

Mr. RANDOLPH. I have watched the Senator from Virgina [Mr. Robertson] as he has looked at the Senator from Arizona [Mr. Goldwater], and as the Senator from Arizona has looked at the Senator from Virginia. The Senators have been talking about the failure of the Civilian Conservation Corps in the 1930's. I have listened very carefully to what has been said by my beloved friend from Virginia [Mr. Robertson]. I was a Member of the House of Representatives in the period to which the Senator has made reference, as was also the Senator from Virginia. I should like to have the Record indicate that on the vote which created the Civilian Conservation Corps by law on May 12, 1937, the present Senator from Virginia [Mr. Robertson], then a Representative of a district in Virginia, voted with the majority to create the Civilian Conservation Corps.

Mr. ROBERTSON. I have never denied that statement. My Virginia district had more camps than others in the State. I thought it was a fine program. But I was disappointed that the value of the work done was only 50 percent of what could have been done by contract. I suggest that we would not receive 10 cents out of every dollar spent under the proposed program. At that time we received 50 cents out of every dollar spent. I thought that the program would be a good thing. I am trying to tell the Senate what the program would cost. The cost would be three times what it was then.

Mr. RANDOLPH. As I discuss the question I assure the Senator that I am in good humor. The vote in the House of Representatives on that date was 389 for the measure to 7 opposed. Prior to the creation of the Civilian Conservation Corps, through an Executive order of the President of the United States, there was a beginning of the program.

I now desire to speak of the other distinguished Senator from Virginia [Mr. Byrd], who was a Member of the Senate on May 20, 1937, and joined 66 other Senators in voting for the program. The vote in this body to create the original Civilian Conservation Corps was 67 for and only 2 against.

It is my hope that both Senators from Virginia [Mr. Byrd and Mr. Robertson] will now vote on the measure before the Senate as they voted in the Senate and in the House of Representatives at that time.

Mr. ROBERTSON. Apparently the Senator from West Virginia believes that we never learn by experience. At that time we were in the worst depression of our history. We were turning to many devices of a "pump priming" nature to bring ourselves out of that condition. We tried many approaches. They did not work. We know they did not work. It required the rearmament program of 1940 to get us out of that depression. We never gave up those camps until war spending and the draft forced us to do so. We could not afford to operate both the camps and the Military Establishment at the same time.

Certainly, I will not vote for the program in a period of our greatest prosperity, with the knowledge that what we would do would be merely a piddling start. We would ultimately spend hundreds and hundreds of millions of dollars in a period of our greatest prosperity. To do what? We are told it would relieve unemployment. I checked with Ewan Clague. I asked him how unemployment was figured.

He said, "I take a sampling of 35,000 families out of 180 million. On the basis of the replies we receive, the figure goes up or down."

We know that the figure includes housewives who have never had a job. It includes boys who have dropped out of high school with no ambition or desire to work at anything. It includes those who have preferred to get exactly the job they want. So I say that the situation is entirely different.

In addition, we have learned through bitter experience that pump priming does not lift a nation out of a depression.

Mr. RANDOLPH. Mr. President, will the Senator yield further?

Mr. GOLDWATER. I shall be happy to yield to the Senator from West Virginia in a moment, but first I should like to state that the Senator from Viriginia [Mr. Robertson] has placed his finger on the difference between the situation in the 1930's and the present situation. In the 1930's, when the Civilian Conservation Corps was created, our country was in a rather deseparate financial situation. At the time the bill was passed I believe unemployment was in the neighborhood of 17 or 19 million. Today unemployment is running at an unsatisfactory figure, but it is not running at that rate.

The Civilian Conservation Corps program plus the other measures that were tried in the 1930's did not pull this country out of a depression. So I agree with the Senator from Virginia, who as a Representative at that time voted for the measure, and I agree with the attitude of the senior Senator from Virginia [Mr. Byrd]. If he were present, I know he would state that we have learned our lesson. I am not impressed by a vote of 389 to 7. Such a vote does not necessarily mean that the bill was a good one. In my opinion it was a healthy vote for an unhealthy act.

I now yield to the Senator from West Virginia.

Mr. RANDOLPH. Mr. President, I intend to speak later at length—I hope not too great length—on the pending measure. I now wish merely to say that there is another America besides the so-called affluent America of which we speak. I shall touch on that aspect later. Today in the State of West Virginia the unemployed represent 12.5 percent of the total work force. If the Senator from Arizona observed such a rate of unemployment in his State, I am sure that he would stand on the issue as I now stand, and support the proposed program, which is not pump priming, but dividend paying. I believe this to be such a program. I shall work for the passage of the bill.

Mr. ROBERTSON. How many unemployed coal miners between the ages of 17 and 22 would go into the proposed camps?

Mr. GOLDWATER. Mr. President, I have not yielded. In a moment I shall do so. I desire first to answer the allegation of the Senator from West Virginia.

The present Congress has given President Kennedy every antidepression measure for which he has asked. I ask the Senator from West Virginia whether those measures have done West Virginia any good. Have they relieved unemployment? Have the public works program, the area redevelopment program, the increase in the minimum wage, and the increase in unemployment compensation, done the good that was supposed to have been done?

Mr. RANDOLPH. Mr. President, first I should like to answer the question of the Senator from Virginia as to how many youths would go into the camp program. In the Civilian Conservation Corps program the average was about 5,000 West Virginia boys a month. With regard to the figures for teenage unemployment, today it is not the figure mentioned, but it is approximately 15.6 percent unemployed for teenage youth.

Now, in reply to the Senator from Arizona [Mr. GOLDWATER], the programs of this administration have been of great value to the State of West Virginia. It was not expected that this or any administration would remake the State in 2 years. However, several new industrial plants have been established with the assistance of the Area Redevelopment Administration. More than 90 projects had been approved as of March 1 of this year under the accelerated public works program, including libraries, water facilities, sewage treatment plants, recreation facilities, and hospitals. And there are many others pending. These and other programs have contributed significantly to the economic development and higher employment of our work force in West Virginia.

When we speak of the figures related to unemployment, I return to the statement that there is another America which calls for a program of the type proposed. It is not a leaf-raking program. The investment would not only pay 100 cents on the invested dollar, but would also return a dividend to the people of America, and especially to the youth who would participate directly.

Mr. GOLDWATER. Mr. President, at the very outset of my remarks I recognize that there is a problem. I agree with the Senator from West Virginia that there is a problem. I must remind the Senator from West Virginia that the problem is caused by virtue of the fact that the young people have not been taught skills.

The statements I have read during the course of my remarks attest to the fact that unemployment exists today because the unskilled labor field is being covered more and more by automation. What we should be doing for these young boys, in my estimation, is training them in some skill.

My remarks are directed toward title I. To some extent title II does get at this problem.

I think I made my position adequately clear during the course of the discussions in the committee. I think we are very deficient in this country with respect to training boys and girls who have no intention of going beyond high school. We give them a good education in high school, and then they quit school or drop out and want to go to work. There are no longer a sufficient number of unskilled jobs available for them to fill.

I previously mentioned the fact that in 1 day in Washington, D.C., both the morning and the evening newspapers listed 1,500 and 1,100 jobs, respectively, waiting for people to fill, but those were skilled jobs. The want ad sections of the big metropolitan dailies list hundreds of jobs going begging, because we have not taught the young people how to use their hands—how to run a lathe, how to do welding, how to operate a drillpress, or how to work in a factory. I suggest that teaching boys how to wield an ax or how to shovel will not increase their skill one bit.

Mr. RANDOLPH. Mr. President, will my colleague yield again?

Mr. GOLDWATER. I yield.

Mr. RANDOLPH. We have indicated in the report that these skills would be taught: automotive repairing, baking, carpentry, clerical, construction equipment operation, conservation and engineering aid, electrical wiring, masonry, metalworking, photography, plumbing, surveying and mapping, truck and tractor driving, and a host of other jobs. Do these categories not involve skills which would increase the employment prospects of the enrollees.

Mr. GOLDWATER. I do not refer to title II. I remind the Senator that I am talking about title I.

Mr. RANDOLPH. These that I referred to come under title I.

Mr. GOLDWATER. I have not seen any place in the bill where it calls for the teaching of that kind of skill.

I point out Secretary Wirtz' language again. He said:

> There is no suggestion that this training program will qualify one of the enrollees for a skilled occupation.

I take the word of the Secretary of Labor in that regard. He jumps around a bit, and he is inaccurate at times, but he should know what causes unemployment in this country, and I think he has put his finger on the problem very adequately.

Mr. RANDOLPH. Mr. President, will my colleague again yield?

Mr. GOLDWATER. I yield.

Mr. RANDOLPH. I ask the Senator to turn to page 542 of the hearings. I should like to clarify whether I misunderstood the reference to title I.

Mr. GOLDWATER. I am looking at that page.

Mr. RANDOLPH. Is it not title I to which reference is made?

Mr. GOLDWATER. I ask the Senator from West Virginia a question. The Senator sat through the hearings. How would a boy be taught automotive repairing?

Mr. RANDOLPH. I ask the Senator how we taught them in the earlier CCC program? I should like to read a statement on that subject.

Mr. GOLDWATER. I remind my friend that they did not learn skills in that period, either. That was one of the troubles.

Mr. RANDOLPH. We disagree on this question.

Mr. GOLDWATER. I had to participate in the reeducation of a thousand of those boys, when they came into the armed services. That work did not help them a bit, so far as skills were concerned. It took them off the streets, put them into camps, and got some trails built.

I can understand that a boy, in certain types of that work, would be carried some place in an automobile or a truck, and be exposed to it. He might be exposed to baking, if he worked in the kitchen. He might be exposed to some carpentry.

I am talking about the teaching of skills, so that the boy could come back from the camp and qualify for a skilled job. The Secretary of Labor himself said the program would not accomplish that.

Mr. RANDOLPH. I wish to quote for the Senator what General Marshall said in 1940 about the skills learned in the Conservation Corps program.

Mr. GOLDWATER. I shall be glad to hear it again.

Mr. RANDOLPH. He said:

> My opinion is that the CCC offers a natural setup and opportunity for the specialized training in a large number of activities that are very important.
>
> They are engaged daily in actual work which is the best form of training that can be had. They have companies that are working every day operating bulldozers, tractors, trucks, road graders.

Then from the report of the Civilian Conservation Corps itself, for the fiscal year ending June 30, 1939, I wish to read a partial list of the fields in which enrollees received training:

> Auto mechanics, blacksmithing, blueprint reading, bridge construction, building construction, bulldozer operation, care of tools, carpentry, clerking, office, compressor operation, concrete construction, crusher operation, dam construction (small dams)—

I remember that there were more than 50 small dams in West Virginia—

> diesel engines, drafting, drainage, equipment maintenance, explosives, farm woodlot management, foreman and leader training.

Those skills were taught in the earlier CCC program. What reason would we have to believe they would not again, at least in part, be taught under this program?

Mr. GOLDWATER. The Senator has read the comment by General Marshall, written about 1940. I am talking about 1963. Many of the skills which the Senator mentioned are skills in which people today cannot find employment, because many of those fields have been taken over by automation. If the people really were trained in those skills to the point where they could come out of the camps and really know how to do these things, it would be different.

I repeat that I can speak only from my experience. Before the war and in the early stages of the war, my job was training. Many a boy who came into the Air Corps at that time came from the CCC camps. We not only had the problem of retraining them, but also many of them—not most of them, but many of them—had not absorbed those skills. This year I do not think the situation in that respect would be different from what it was in 1935 or 1940.

Mr. PROUTY. Mr. President, will the Senator yield?

Mr. GOLDWATER. I yield.

Mr. PROUTY. I should like to quote some testimony on that subject, given by Richard G. Farrow, Director, Bureau of Youth Services, Office for Children and Youth, Pennsylvania Department of Public Welfare.

In Pennsylvania there are operated a number of 50-man camps of the same type contemplated under the pending proposal.

Mr. LAUSCHE. To what page is the Senator referring?

Mr. PROUTY. Mr. Farrow's testimony begins on page 398 of the hearings. I shall go into this subject in more detail at a later time, but I think perhaps it would be well to quote briefly from the testimony at this point in the debate.

I asked Mr. Farrow if these boys, after they had served in the camps, acquired any outstanding skills. I mentioned brick masonry, carpentry, plumbing, and so forth. Mr. Farrow's answer was:

> No, sir; they are not. They get learning in the use of tools, what a saw is, and what a hammer is and what a level is, and what an ax is—although we don't cut down many trees—but they do get an idea of how to work with men and how to work with a boss, to take orders, and what the tools are for.
>
> I would not say that many of them develop a great deal of skill in a trade that they can apply outside, but they are prepared to work as an apprentice or a helper.

Then I asked the question:

> They are unskilled when they leave the camp?

Mr. Farrow replied:

> By and large, yes. A few of them, who might work as unskilled workers, might get what would be called beginning skills. They are not journeymen by any means.

As the Senator from Arizona has indicated, Secretary Wirtz on numerous occasions has admitted that that is the fact. These boys will not acquire any worthwhile skills. That is why I am so opposed to title I.

Going further, I refer the Senator to page 542 in the hearings, where there is listed subjects which can be taught at the YCC camps through accredited home study schools, including the Armed Forces Institute.

I should like to read a list of some of these subjects:

> Accountancy, agriculture, air conditioning, aircraft and drafting mechanics, appliance servicing, auto body and fender, automotive work—

I will skip some—

> boilermaking, bookkeeping, bricklaying, building construction, estimates and maintenance, cabinetmaking, camera repair, carpentry, civil engineering.

Just how is a boy who has perhaps never been to high school and who is going to camp in the woods for 6 months, or even a year, going to become a civil engineer?

I continue with the list:

> Club and camp management, college preparatory, concrete engineering, construction, diesel engines, drafting, electroplating, engines, farm management, marketing, shopwork, foremanship, forging, foundry, gardening, high school subjects—

Of course, high school subjects might be possible—

> horticulture, instrumentation, jewelrymaking, landscaping and gardening, livestock management, lumberyard management.

I happen to know something about lumberyards. I certainly would not hire a boy who had been to camp for 6 months and think he was qualified to manage a lumberyard or any other lumber enterprise.

I continue with the list:

> Machine shop, machine trades, mechanical engineering, merchandising, metalcrafts, metallurgical engineering—

This is the place for all aspiring engineering students to go, I guess. I continue:

> mining, mapping and surveying, patternmaking, photography, plumbing, poultry raising, showcard and sign lettering, stenotypy (machine shorthand), telephony (electronic and nonelectronic), textiles, typewriter repair, waterworks and sewage plant operation, welding, wiring, woodworking.

In only a few instances will they be able to receive any training. Based on the figures given to the subcommittee, only two instructors will be available for a 50-man camp. How are two men going to be qualified in all these different fields, and, even if they were qualified, give training to 50 of these boys who might be interested in 50 different skills?

That is what is so ridiculous about the whole program. The boys will go to camp, and when they come out of camp they will be without any experience. We are going to waste a lot of money which could be given to benefit unemployed youth in many better ways.

Mr. GOLDWATER. Mr. President, to continue with my remarks, it was also pointed out during the hearings that the cost of sending a boy to a YCC camp is considerably higher, based on any estimate, then it would be to send him to an Ivy League college. A boy can spend a year at Harvard for less than $3,000 while his year with the Conservation Corps would run the taxpayers from $4,000 to $12,000. I submit that the taxpayers would not be getting their money's worth.

Another aspect of the Conservation Corps particularly bothers me. It seems to me that these YCC camps offer a very real possibility for serious trouble. This potential for trouble arises from the fact that groups of boys, some having police records, will be thrown together in unusual environments,

In his appearance before a subcommittee of the Committee on Labor and Public Welfare to consider S. 812 during the 86th Congress, Mr. Conrad L. Wirth, Director of the National Park Service of the Department of the Interior, who was closely associated with the former Civilian Conservation Corps, stated:

> We had one camp in Yellowstone that came from the Bronx, N.Y. It was a 200-man camp. The camp had been back in the remote section of Yellowstone for barely 2 weeks, when the superintendent got a call for help from the camp commander, who was a Reserve officer in the Army. He had a riot on his hands.
>
> The superintendent sent some rangers in to help the commanding officer and in short order they had the boys quieted down again. The investigation routed out about 19 boys and they were shipped back to the Bronx.
>
> The only thing they could get out of these boys was that they just could not stand the quiet nights and the coyotes howling and a few things of that kind.
>
> It is funny, but it is pathetic. They had to get back to the concrete, the noise, the subways, and so forth, because that was their way of life.

This incident indicates the type of problem which will face the directors of the Youth Conservation Corps if it is authorized by Congress.

In this conection, I noticed that one of the witnesses who appeared in behalf of the bill ran into a discipline problem of his own the other day. A UPI wire service story of March 6, 1963, described this young man's plight.

The headline read, "Youth Corps Backer Charged in Burglary," and the story went as follows:

> Michael Ford, 16, who last month testified before a House subcommittee on the city's Youth Conservation Corps, was arrested Tuesday on burglary charges.
>
> The boy's stepfather, Robert Williams, went to police after finding a loaded revolver in the suspect's room. "I think I made the right decision," Williams said.
>
> Police charged Ford in the burglary last Saturday of a bakery near his home. They said $1,070 in cash and $642 in checks was taken. The youth said he found the gun and money in an alley over the weekend. He said he discarded the checks and spent all but $13 of the money on clothes and a portable radio.
>
> Williams said the boy is "in the clutches" of a street gang. "I knew damned well he was mixed up in something" Williams said.
>
> The youth testified last month at the invitation of Representative CARL D. PERKINS, Democrat of Kentucky, and told the subcommittee if more boys were interested in the Youth Conservation Corps "there would be less tendency for them to get into trouble."

The bill approved by the committee contains a vague requirement that enrollment in both Corps be limited to individuals "whose participation * * * will be consistent with the purposes of this title." In the case of the YCC, this language means that the boys enrolled must enhance the two purposes of the title, namely "conservation" and their "increased employability." In effect, no meaningful limitation has been placed on the type or character of boy to be admitted into the Corps. A young man who had committed murder might actually meet these enrollment requirements and join the YCC.

The enrollment of unruly, incorrigible boys is looked upon as the duty of the Corps by some of its proponents. Social workers, judicial officers, and others who work with juvenile delinquents consider the Conservation Corps camps as "outdoor reform schools."

Consider, for example, the testimony of Dr. Carl Hansen, the Superintendent of Schools for the District of Columbia. During questioning by the Senator from Vermont [Mr. PROUTY] on this subject the following colloquy took place:

> Senator PROUTY. If I understand you correctly, you are suggesting that we should take the delinquents and send them to the camps.
>
> Dr. HANSEN. This would be my suggestion. Now, I understand, I know this, from the point of view of the product at the end of 6 months, and being able to make a record to show that this has been very successful and productive, it is much more difficult, and there is a far greater risk of failure and upheavals and assaults in the camp and that sort of thing.
>
> But what are you going to do? Leave these youths out on the streets alone?

Mr. CLARK. Mr. President, will the Senator yield at that point?

Mr. GOLDWATER. I yield.

Mr. CLARK. I should like to note for the RECORD that Dr. Hansen, for whom I have the highest regard, was called as a witness at the request of the Senator from Vermont [Mr. PROUTY]. His point of view does not represent either that of the majority of the committee or the administration.

Mr. GOLDWATER. I would be the first to recognize that. I am finding it rather strange that the Senator from Pennsylvania expects all committees to agree unanimously on everything we do. The purpose of committees is to allow the minority to voice their views and the majority to voice their views. I did not know Dr. Hansen was called at the request of the Senator from Vermont [Mr. PROUTY], nor did I understand that Dr. Hansen would testify that he felt this way. I merely read, from the testimony, what he said. We all have a high regard for him.

Mr. PROUTY. Mr. President, will the Senator yield?

Mr. GOLDWATER. I yield.

Mr. PROUTY. I asked that Dr. Hansen be called because I believe that, if he was not the only one, he was one of a very few educators who appeared before the subcommittee. I thought we should have their advice on a matter as important as this, which is supposed to involve education and training.

As the Senator from Arizona has pointed out, Dr. Hansen views this program as a way to get a few delinquents off the streets of Washington. That was his chief interest. I can quite understand that. But that is not the purpose of the legislation.

Mr. LAUSCHE. Mr. President, will the Senator yield for a question?

Mr. GOLDWATER. I am faced with a problem. I had a 20-minute speech, which has been going on now for nearly 2 hours. I have an appointment in my office at 12 o'clock. If the Senator will keep his questions short and not engage in a prolonged colloquy, I shall be glad to yield to him.

Mr. LAUSCHE. Dr. Hansen said he wanted to get juvenile delinquents off the streets. My question to the Senator from Vermont is: At what cost per delinquent? It is about $4,200 a year, is it not?

Mr. PROUTY. It is $4,250, I believe, using the committee's figures, with which I disagree.

Mr. LAUSCHE. That means that, to get a juvenile delinquent off the street, we would spend $4,250 a year, knowing that many families do not have that much money even for their whole families.

Mr. PROUTY. There are better ways of accomplishing the purpose of the bill, which will be far more beneficial to juveniles.

Mr. GOLDWATER. Despite the obvious potential for trouble at the camps, the program's planners have chosen to ignore the problem rather than prepare for it. The old Civilian Conservation Corps, the model for the present legislation, maintained the necessary discipline through the use of Army personnel and methods. The final report to the Secretary of Interior on the CCC praised the War Department's role in insuring "cooperation and team play" at the camps. In fact, Brig. Gen. George P. Tyner, one of the representatives of the War Department on the Advisory Council, stated before a committee of Congress that he felt that the training of the boys in the CCC camps was equal to 75 percent of the type of training required of the soldiers in the Army.

The exclusion of the Defense Department and the Armed Forces of the United States from a role in the YCC is one of the program's most serious defects. The absence of military guidance in keeping a potentially explosive situation under control is further proof that the programs authorized by this bill are divorced from reality.

Mr. President, I ask my colleagues these questions: Will the people of their States welcome having a Conservation Corps camp nearby? How many communities will like the idea of groups of undisciplined juvenile delinquents as their neighbors?

I contend that this legislation, in addition to failing to meet the problems of our young people, would do positive harm. Several provisions of the bill consciously weaken the family relationship which has been a backbone of our free society for hundreds of years.

The tie between parent and child is severed by some of the bill's provisions. For example, young men and women, some as young as 16 years of age, may join either corps without the permission of his or her parents. Once in the Corps the child will be given whatever money he or she earns without reference to the parents or legal guardian. The enrollee may provide an allotment for his parents; however, the decision is left up to the youth, a complete reversal of the traditional pattern of parent-child relationships.

These aspects of the Youth Corps smack ominously of totalitarianism. Removing young people from their homes without the permission of their parents and placing them in a Federal corps is reminiscent of the Hitler youth programs of Nazi Germany and bears a striking resemblance to the various young Communist organizations. The Soviet Union's Young Pioneers seem particularly close to the proposed Youth Conservation Corps in both name and spirit.

During the committee's consideration of S. 1, I offered amendments which would have returned some responsibility for the enrollees to the parents. Unfortunately, the bill's proponents rejected these amendments and chose instead to permit the Federal Government to act as a sort of "big brother" in place of the parents or guardians.

This, I submit, is no way to go about solving the problems facing America's youth. The family concept must be strengthened, not weakened, if our young men and women are to become useful citizens of a free society.

The weakening of family ties is a primary goal of totalitarian states. Let us not let it happen here.

Placing young men in uniform and sending them off in a politically inspired Youth Corps to learn how to live in the forest will not solve the problem. Boys and girls mopping hospital floors will not solve the problem, either. If the youth employment bill is enacted, the tragic result will be that the members of both corps will return from serving their "time" no better equipped to obtain the skilled work that is available today than they were when they enrolled.

I believe that the problem facing our young people is one of attaining the skills necessary to gain regular employment in this modern age. This bill does not meet this real problem; its most fervent proponents have admitted this time after time.

I urge the Congress and the Nation to address itself to the real world of the 1960's. The outmoded concepts of the thirties are no longer applicable to the problems of today. Accordingly, I urge the Senate to reject the bill now before it.

Mr. President, before I yield the floor I am fortunate in seeing on the floor of the Senate at this time both the author of the bill and the Senator in charge of the bill on the floor. I have a few questions to ask of both those Senators, to clear up some points in my own mind with respect to the bill.

The first question is this: The pending bill contains no provisions dealing with racial or religious discrimination and segregation. Amendments to prohibit these practices were rejected by a majority of the committee consisting almost entirely of members of the opposite party. I would therefore like to address a few questions to the Senator handling the bill on the floor in connection with this question.

The statute creating the old CCC in the 1930's specifically prohibited racial or religious discrimination in the selection of enrollees. The pending bill contains no provisions against discrimination or against segregation. My question to the Senator from Pennsylvania is this: Does he know what policy would be followed on racial discrimination and segregation by those who administer these programs, should they become law?

Mr. CLARK. In answer to the Senator's question, I invite the Senator's attention to the testimony of the Attorney

General at pages 136 to 138 of the record, where the Attorney General indicated his opposition to writing civil rights riders into the bill itself, but assured the committee that the administration will be working in opposition to any discrimination in the administration of the act, if passed. He gave assurances to the committee that if there is any discrimination, action will be taken to eliminate it. There is a similar statement in the record by the Secretary of Labor, Mr. Wirtz, which appears at page 431 of the record, I believe.

The committee stands on the statements of these two members of the administration on the issue which the Senator has raised.

Mr. GOLDWATER. The Senator from Pennsylvania is a lawyer, and I am quite a bit handicapped because I am not; at least I think so.

Mr. CLARK. I would not say that the Senator from Arizona is ever handicapped by any lack of any kind of formal education.

Mr. GOLDWATER. On what ground would the Attorney General act, when there is no specification of these grounds in the proposed act?

Mr. CLARK. He would act under the provisions of the 14th amendment and the decision of the Supreme Court in Brown against Board of Education.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. GOLDWATER. I yield.

Mr. JAVITS. I find these assurances completely unsatisfactory. The Senator from Arizona is absolutely correct about the fact that they come after the fact. There can be suits if the act is administered in a discriminatory way. I do not know under what section the Attorney General would proceed, in view of the fact that the so-called part III, which gives the general right to sue under the 14th amendment, has been consistently defeated in the Senate.

The Attorney General is very uncertain about where he can sue and where he cannot sue. The only way in which this problem can be handled is in the administration at the beginning. We must have more solid assurances than are contained in the bill, to the effect that the administration by the man who will hand out the money will operate the program so that it will not be conducted in a discriminatory way, by controlling it at the source.

Mr. HUMPHREY. I call attention to the fact that when the Manpower Training and Development Act was enacted in 1961 assurances were given along the lines of those that have been given by the chairman of the subcommittee, the Senator from Pennsylvania [Mr. CLARK]. The Manpower Training and Development Act did not contain a civil rights rider. The act has been administered properly.

Furthermore, the present occupant of the chair, the Senator from Connecticut [Mr. RIBICOFF], when he was Secretary of Health, Education, and Welfare, made that crystal clear by his pronouncements that thenceforth Federal aid to school districts where there was a substantial impact caused by Federal activity would be administered in a nondiscriminatory manner. This pledge is being unimplemented by his successor.

I wish to say in all candor that it is well known in the Senate that when we seek to attach legislative riders affecting so-called civil rights, it generally results in tying up legislation and dooming it.

In connection with certain housing legislation a number of years ago, some of us voted to table such an amendment, because we wanted to have housing legislation.

A national policy has been established, which has been enunciated by the executive branch of the Government, which has been enunciated by the Supreme Court, and which is contained in the Constitution of the United States under the equal protection clause of the 14th amendment. I have no reason to believe that this policy will be deviated from. To the contrary, it will be applied.

Mr. GOLDWATER. Mr. President, I wish to tell the Senator from Minnesota that I have no intention of injecting any type of amendment along that line into the bill. However, I have great concern about this subject.

Mr. HUMPHREY. I understand.

Mr. GOLDWATER. I do not believe the pending bill can be compared to the Manpower Training and Development Act. The pending bill envisions more than 100 camps all over the country. My next question to the Senator from Pennsylvania [Mr. CLARK] will bear on this point. However, first some of my colleagues in the Senate have asked me to yield to them. I yield first to the Senator from Texas.

Mr. TOWER. I should like to ask the Senator from Pennsylvania or the Senator from Minnesota, What are the arguments against including in the bill specific provisions which would prohibit the denial of enrollment because of race, creed, or color? What is the argument against having in the bill specific provisions which would prevent the camps from being segregated? What is the argument against having in the bill an amendment or a specific provision which would preclude Conservation Corps members or the beneficiaries under title II from working on segregated facilities? I still do not see why we should not nail down our express legislative intent in the bill. If it is said that these conditions will be met anyway, I do not know why this is a mischievous proposition.

Mr. HUMPHREY. Apparently the Senator has not been a Member of the Senate very long. If he does not think it would be mischievous, let him go back in history and see what happens when such language is offered. I am not so naive that I am not interested in the sudden conversion to the cause of civil rights of the Senator from Texas. I shall be happy to join with him in introducing basic civil rights legislation. I shall be happy to cosponsor with him right now a fair employment practices bill, since he is so interested in civil rights. I hope that his interest will be sustained and maintained through many years until our efforts shall have culminated in success. Although I have not witnessed any such conversion up to this moment, there is always rejoicing in heaven over the repentance of a single sinner. If the Senator from Texas wishes to join with the faithful, I shall be happy to have him come.

I have been a Member of the Senate long enough to know that if we want to tie up such legislation in an endless filibuster, one need only do what the Senator from Texas has suggested.

If it is desired to give such proposed legislation a fair chance, since the record of this administration and the previous one is pretty good, we should permit this bill to be passed. It will be administered in a responsible, sensible, sane manner. There will not be any discrimination in terms of recruitment. If any Senator wishes to add to the bill a clause that there should be no discrimination with respect to recruitment, it is his privilege to offer such an amendment. We have in the record statements from the Secretary of Labor and the Attorney General as to how the program will be administered.

Mr. TOWER. Mr. President, will the Senator from Arizona yield, that I may respond to the Senator from Minnesota?

Mr. GOLDWATER. I think I understand the interest of other Senators in this particular question. The old CCC legislation prohibited discrimination.

Mr. HUMPHREY. In selection.

Mr. GOLDWATER. Nevertheless, the camps were segregated. They were either all white or all Negro. We have probably come a long way since those days; but since the original bill provided that there should be no segregation, and so much emphasis was placed on that issue in the original bill, I was caused to ask the question as to why such a provision was not included in this bill.

Mr. TOWER. Mr. President, will the Senator from Arizona yield?

Mr. GOLDWATER. I yield.

Mr. TOWER. I readily concede that I have not been a Member of the Senate long enough to become an authority on everything. In due course, I hope to become an authority on many things, as are many of my colleagues. I did not take a position either for or against civil rights legislation; I merely asked, if this is the way the act will be administered, why not provide legal authority for doing so? I think these actions should be taken with legal authority.

I voted to extend the life of the Civil Rights Commission. I have never advocated the denial of constitutional guarantees to any American citizen.

Mr. CLARK. Mr. President, will the Senator from Arizona yield, so I may answer the question specifically?

The PRESIDING OFFICER. Does the Senator from Arizona yield to the Senator from Pennsylvania?

Mr. GOLDWATER. I will yield if the Senator will be brief.

Mr. CLARK. I shall be brief.

If the Senator from Texas will turn to page 136 of the hearings, he will note that the Senator from Vermont [Mr. PROUTY] was interrogating the Attorney General of the United States as to whether the Attorney General did not think it desirable to have written into the bill a provision which would prohibit discrimination in the corps because of race, creed, or color.

The Attorney General answered:

> I do not think it is necessary in this bill.

The Senator from Vermont asked if the Attorney General would give his reasons for that statement. The Attorney General replied:

> I think we have made progress over the period of the past 20 years. I think the administration of this program under the Secretary of Labor, the direct interest that he is going to have in it, the interest of other members of the Cabinet will have in this program, is such that it will be administered in such a way that that kind of provision would not be necessary or helpful.

On page 138 of the hearings, we find an elaboration of this statement by the Attorney General:

> But I do not think by putting in this kind of a provision in this very important bill it would be of assistance. I think it would be a hindrance. And so I would be against it, Senator.
>
> Senator Prouty. Can you give categorical assurance that there will be no discrimination by reason of race, color, or creed, if this program becomes effective?
>
> Mr. Kennedy. I can give you the assurance that this administration will work toward that end. If we find that there is any discrimination, action will be taken.

The reason why the Attorney General felt that way, although I do not attempt to read his mind, is the reason so ably stated by the Senator from Minnesota. I have not been a Member of the Senate as long as he has, but I know, as he knows, that when an attempt is made to attach a civil rights rider to a bill of this sort, or to a manpower retaining act, or an education act, the purpose is to kill the bill.

Mr. TOWER. Mr. President, will the Senator from Arizona yield a moment to me?

Mr. GOLDWATER. I yield.

Mr. TOWER. The testimony given by the Attorney General and the questions asked of him are not a part of the legislative history. They have not the force and effect of legislation.

I further ask the Senator if he means that a southerner can salve his conscience and vote for the bill if there is not in the bill a provision that the Administrator can do something he may do anyway?

Mr. CLARK. It is my task, as the Senator in charge of the bill, to endeavor to have the bill passed. I will do my best to have it passed, but "I ain't agonna get it done if I take your civil rights rider."

Mr. JAVITS. Mr. President, will the Senator from Arizona yield briefly to me?

Mr. GOLDWATER. I yield.

Mr. JAVITS. I am not at all satisfied with what is to be done with the money, unless we have some assurance from the Administrator as to who is to disburse it. The U.S. Civil Rights Commission has reported that in the handling of the money of the Federal Government there is a most outrageous use of it in segregated and discriminating ways. That is one of the big points made by the Civil Rights Commission.

I want the bill to pass, although I am not for title I, which I shall probably vote to strike. But I should like to have the bill pass. I am not for an amendment of the type discussed.

This case is not like other cases, in which Federal money is statutorially required to be given. In this case the Administrator and Secretary of Labor can give aid to a project. I am not worried about the YCC camps; but I am bothered about title II, which would give aid to communities where there is a pattern of segregation and discrimination in the particular communities.

Therefore, I say to the Senator that before the bill has run its course, assurance must be given as to how the money will be administered.

I think if such assurance is given, there will be a clear legislative road, to which we are entitled. We who favor the bill are also entitled to an assurance that the money will be dealt with in the way we intend it shall be used, and not on the basis of local custom.

Mr. GOLDWATER. One of the reasons why I have not joined the Senator from New York and one of the reasons why I do not have the complete faith in the Attorney General which the Senator from Pennsylvania has, is that the Attorney General has not moved to end segregation in the labor movement. Time and again I have offered amendments to bills in committee which would do this. Time and again such amendments have been defeated. The hackneyed old argument is made that it would defeat the whole measure. If the bill is no good, it may be that it ought to be defeated. I think it is time for us to live up to our responsibilities. The only time we do anything about civil rights is in the overall field of civil rights. In this bill, we have an opportunity to spell out what we mean.

The Attorney General has not moved under the 14th amendment to end discrimination in the labor unions; but we know that discrimination exists. So we shall hear this argument again and again, until some day we meet it and defeat it.

I should like to address my third question to the Senator from Pennsylvania: Under the old CCC, despite the prohibition of discrimination in the selection of enrollees, camps were established on a segregated basis—either all white or all Negro. What would be the policy in this respect under the pending bill?

Mr. CLARK. I do not know what the record shows with respect to the testimony of both the Secretary of Labor and the Attorney General. But speaking for myself, I would be much surprised if segregated camps were found to exist.

Mr. LAUSCHE. Mr. President, will the Senator yield for a comment?

Mr. GOLDWATER. I yield.

Mr. LAUSCHE. I think the time is appropriate for me to make this comment. I have become alarmed about the frequency with which we accept statements made by Secretaries concerning what they will do, instead of writing into the laws that which we expect to be done. In practically every bill which comes before the Senate with respect to the subject of grants, I listen to statements made by one Secretary or another about what he will do. We then allow those extra senatorial declarations to become what is supposed to be written into the bills.

In connection with the mass transit bill we accepted the word of the Administrator of the HHFA as to what he would do. We did not write into the bill what we expected would be done. I, for one, will begin to insist that we exercise our responsibilities, and no longer abdicate them in favor of men whose opinions may change from day to day when they are not bound by provisions written into the law.

Mr. GOLDWATER. My next question is as follows: If the policy is to require integration in the YCC camps, will any of the integrated camps be located in the Southern States?

Mr. CLARK. I do not know. In the CCC days, the Army was completely segregated, but it is no longer segregated. So progress has been made; and I expect further progress to be made. But I am not in a position to commit the administration on this point. I stand on the record which has been made.

Mr. GOLDWATER. My next question is as follows: Under title II, enrollees will be assigned, in many cases, to work on or in local facilities, such as hospitals, parks, playgrounds, recreation areas, schools, nurseries, and so forth. Will enrollees in title II projects be required to perform such work on segregated facilities?

Mr. CLARK. I think that, again, it must be remembered that title II projects must be initiated at the local level by either the State or the county. The local community will put in a matching grant. The Federal Government will screen the projects. I would interpret what the Attorney General and the Secretary of Labor have already stated for the record, which is that they will be working against discrimination.

Mr. GOLDWATER. They are to be initiated at the local level; but I must point out that it will be done with Federal money, and that factor has a great bearing.

Mr. CLARK. It is to be partly with local money, too.

Mr. GOLDWATER. I have asked the Senator this question, and he has not yet figured out the full answer. When he gets it, I shall appreciate his placing it in the Record.

Yesterday, the Senate approved an amendment decreasing the total authorized appropriation from $120 million to $100 million. Does this mean $50 million for each title instead of the $60 million provided in the bill? And if so, would not this require a reduction in the number of enrollees from 150,000 in title I and 60,000 in title II? And if so, how much of a reduction in each?

What does the cut from $120 million to $100 million, which was voted yesterday, do to the entire bill? How will it reduce the number of enrollees under title I and title II?

Mr. CLARK. The Senator from Vermont and I had a rather spirited argument about that question. My position is that the cut will not do anything to the program, because the administration bill calls for the exact authorization we now have after the Proxmire-Symington-Goldwater amendment was adopted, and therefore, in my opinion, that will not have any effect on the number of enrollees.

Mr. GOLDWATER. I thank the Senator from Pennsylvania for adding my name to that axis. After all, all these Senators will be running for reelection next year; and I ask that my name be added as a cosponsor of all such amendments.

Mr. HUMPHREY. Mr. President, I ask unanimous consent that all budget-cutting amendments include, among the names of the sponsors, the name of the Senator from Arizona [Mr. GOLDWATER].

Mr. CLARK. I object.

Mr. HUMPHREY. And including amendments dealing with Arizona projects.

The PRESIDING OFFICER. The attention of Senators should be called to rule XIX, which provides that no Senator shall interrupt another Senator in debate without his consent, and that to obtain such consent a Senator should first address the Presiding Officer. The Chair asks that Senators observe the rule.

Mr. GOLDWATER. Mr. President, do I have the floor?

THE PRESIDING OFFICER. The Senator from Arizona has the floor.

Mr. GOLDWATER. I have one more question to ask the Senator in charge of the bill. I understand that the Peace Corps has prohibited certain religious activity by its members. Will that prohibition be carried out in the proposed Youth Conservation Corps?

Mr. CLARK. I do not know. I did not know that had been done.

Mr. GOLDWATER. I refer to the denial in some instances of places of worship. I believe the Civilian Conservation Corps had churches or places of worship. I wonder whether anything in this measure calls for the erection of a proper place of worship in each camp.

Mr. CLARK. I understand that there will be no interdenominational services in the camps. I have no understanding of the details in regard to the buildings to be erected.

Mr. GOLDWATER. I thank the Senator from Pennsylvania for his help in answering the questions, because they deal with matters which are vital if the program is to succeed.

Again I thank the Presiding Officer for the courtesy he has extended to me; and I hope rule XIX will be scrupulously observed. We usually do so.

Mr. AIKEN. Mr. President, will the Senator from Arizona yield for a question?

Mr. GOLDWATER. I yield.

Mr. AIKEN. As a member of the committee, can the Senator from Arizona advise me who will select the members of the Corps, and how they will be selected? From reading the bill, I find that a committee is to be established. Who will make the selections, and how will the selections be made?

Mr. GOLDWATER. I think the junior Senator from Vermont [Mr. PROUTY] is better able to answer that question. I yield to him.

Mr. PROUTY. I think they are to be selected with the cooperation of local and State authorities.

Mr. AIKEN. Who are the local and State authorities?

Mr. PROUTY. They will be officials of the various governments involved.

Mr. AIKEN. Will the enrollees be selected in the same way that postmasters are selected?

Mr. PROUTY. My guess is that the U.S. Employment Service would select them.

Mr. AIKEN. That is very reassuring.

Mr. PROUTY. For the information of my colleague, I shall read a table which indicates the numbers who will be eligible from each State based on the population formula:

Youth Corps enrollees—Approximate distribution by State (for fiscal year 1964) under population half of formula

	Percent	Number
United States	100.0	----------
American Samoa	(1)	
Alabama	1.8	60
Alaska	.2	15
Arizona	.7	52
Arkansas	1.0	75
California	9.2	690
Colorado	.8	60
Connecticut	1.3	98
Delaware	.2	15
District of Columbia	.4	30
Florida	2.6	195
Georgia	2.2	165
Guam	(1)	----------
Hawaii	.4	30
Idaho	.4	30
Illinois	5.1	382
Indiana	2.4	180
Iowa	1.2	90
Kansas	1.0	75
Kentucky	1.8	135
Louisiana	1.8	135
Maine	.6	45
Maryland	1.6	120
Massachusetts	2.8	135
Michigan	4.3	323
Minnesota	1.8	135
Mississippi	1.2	90
Missouri	2.4	180
Montana	.4	30
Nebraska	.6	45
Nevada	.2	15
New Hampshire	.2	15
New Jersey	3.5	262
New Mexico	.4	30
New York	9.0	67
North Carolina	2.6	195

Washington	1.6	120
West Virginia	1.4	105
Wisconsin	1.8	135
Wyoming	.6	45

(1) Less than 0.1.

Mr. HUMPHREY. Mr. President, first I wish to express my appreciation to the distinguished Senator from Pennsylvania [Mr. CLARK] for his splendid leadership on the bill, and congratulate him not only for his lucid presentation of the Youth Employment Act, explaining each and every provision, but also for his outstanding leadership in seeing that S. 1 was properly processed through the Subcommittee on Employment and Manpower and finally the full Committee on Labor and Public Welfare with such success.

As I noted in my remarks on S. 1 last week, the hearings on this bill were highly constructive in nature, gave both proponents and opponents an opportunity to express their opinions and develop evidence, and developed a wealth of information and opinion concerning the Youth Employment Act.

LEGISLATIVE HISTORY

The minority views on S. 1 contain the assertion that we rushed headlong into a public relations campaign to pass this legislation. Somewhere along the line, the Republican critics overlooked the extensive legislative history that has been developed over the past 6 years.

I should like briefly to review that legislative history. I first proposed the establishment of a pilot Youth Conservation Corps program in the 85th Congress. However, no action was taken on this pilot proposal and the bill died. In the 86th Congress, despite the opposition of the Eisenhower administration, the Youth Conservation Corps bill was reported favorably by the Labor and Public Welfare Committee, largely through the fine efforts and leadership of the senior Senator from West Virginia [Mr. RANDOLPH]. The Senate passed this bill, S. 812, by a narrow margin of 47–45 in August 1959. The House of Representatives failed to act and once again the legislation died at the end of the 86th Congress. In the 87th Congress, my original bill to create a Youth Conservation Corps, S. 404, was supplemented with President Kennedy's proposals to establish a broader youth employment opportunities program. This committee amended S. 404 to include a Hometown Youth Corps and favorably reported the bill in September 1961. The legislation remained on the Senate Calendar throughout the second session of the 87th Congress waiting for favorable action in the House. Once again, this action was not forthcoming.

To recapitulate: The legislation has been introduced in four Congresses, considered three times by the Labor and Public Welfare Committee, each time winning a favorable report, and passed by the Senate once.

I find it difficult to understand how we can be justly accused of "rushing headlong" into advocating this legislation in the 88th Congress. A headlong rush ought not to take 6 or 7 years.

The Senator from Pennsylvania has explained the contents of S. 1 as favorably reported by the Committee on Labor and Public Welfare. I would like to review briefly once again the principal arguments in favor of the legislation.

I wish to compliment the committee on its report, because I believe that every point that has been raised in the debate thus far has been fully covered by the report.

BASIC CAUSES OF YOUTH UNEMPLOYMENT

First. What are the basic causes of youth unemployment? If we go to the roots of the problem, what do we find?

We find an economy that is lagging behind its potential in terms of providing new jobs for both adults and young people. That is not a new experience. It has been lagging for some years. Fortunately our rate of unemployment is a little less now than it was some time ago. But the economy is still not providing opportunities for gainful employment that a growing population forces upon it and that automated industry makes inevitable.

We find also an elementary and secondary school system that often fails to provide the education each American child rightfully deserves. We find a society that considers vocational education to be second-rate education and has never provided adequately for such instruction. We find the American society—both urban and rural—undergoing profound transformations that radically alter the traditional modes of employment, family living, and social organization.

Do the proponents of the Youth Employment Act claim that the Youth Conservation Corps or the Hometown Youth Corps will provide the solutions to these root causes? Of course they do not.

Do the opponents of this legislation presume to possess solutions to these basic problems? If they do, they have been remarkably circumspect in bringing these solutions to the attention of Congress and the American people.

It is even more revealing to note that many of the same Senators who oppose the Youth Employment Act, because it supposedly is unable to provide adequate vocational training, voted to eliminate training allowances for young persons, 16 to 21, in the Manpower Development and Training Act. These same Senators attempted to cut the entire manpower retraining program from 4 years to 2 years.

I would have my colleagues note that the main argument used thus far against the bill is that it would not go far enough, that it would not result in employment of a sufficiently large number of young people.

The distinguished Senator from Arizona [Mr. GOLDWATER]—who, regrettably, is not presently in the Chamber, but who will have an opportunity to review the RECORD—made his case this morning primarily on the assertion that the program would not meet the basic problem of youth unemployment; yet the same Senator joined with two Democratic Senators to sponsor an amendment which would have cut back the amount of appropriations to be allowed for this particular program. One cannot have it both ways.

The fact of the matter is, of course, that this is to be a beginning program. This is to be a modest program. The program has been held down because of our budget considerations and because of the fiscal situation facing this Government and our country.

It also will be a program which begins to pioneer in the area of providing gainful employment for our young people; affording one-the-job training, affording academic instruction, permitting vocational instruction, and developing work habits, a vital factor in any future employment opportunity.

Mr. President, it is even more revealing to note that many of the opponents of the Youth Employment Act oppose it supposedly because it would not provide adequate vocational training, yet many of these same opponents voted to eliminate training allowances for young persons from the Manpower Development and Training Act of 1961, and voted against the Clark substitute for the Prouty amendment, a substitute which would have put into the Manpower Training and Development Act a certain percentage of the total funds to be used for youth training allowances, for youths between the ages of 16 and 22.

Mr. President, vocational education has suffered in this country for years. I am delighted to see this sudden new interest in it. If the bill has not done anything else, it has convinced some Senators that the several vocational training acts which are a part of the public laws of this country ought to be implemented further, ought to be expanded, and that vocational training ought to be greatly enlarged and facilitated in this country.

Mr. President, this program would provide some vocational training. It would provide more vocational training than the school dropouts and other young people involved are getting under the present circumstances. More importantly, it would provide work. It would provide gainful work for restless, energetic young people who, when they stand on the street corners of our large cities, become involved in trouble.

I heard one Senator today talk about the cost of this program being, oh, $4,500 per boy. I submit to any reasonable citizen, whether he be a Senator or not a Senator, that the cost of one delinquent in any community far exceeds $4,500. But, more importantly, there is a cost of heartbreak. There is a cost of the stigma upon that boy, his character, his background, and his experience. It is a cost which is incalculable.

It has now been judged by the juvenile courts that one delinquent costs the taxpayers approximately $25,000. Under the proposed program a young man could be put into gainful employment—doing constructive work, strengthening his country, protecting our natural resources—while at the same time building his body, educating himself, enlightening his mind. And what would he be paid for that? Sixty dollars a month for his salary plus his food, his clothing, his medical care, and education.

I submit that this will be a wise investment. We never hear Members of the Senate say that we ought not provide for our military camps. We provide for good food and clothing for members of our Armed Services, as we should. We provide everything that is necessary for the security of this country, as we should.

But I submit that when we are considering a youth employment program, which will provide gainful work, constructive work—which will save this Nation millions and millions of dollars worth of its resources—suddenly we start to get out a yardstick and ask, How much is this going to cost?

We should be concerned about young people who no longer can work in their fathers' grocery stores, because their dads do not have grocery stores; who no longer can work on their fathers' farms, because there are no longer that many small farms; who no longer can work in their fathers' tin shops, hardware stores, or drugstores, because there are no longer that many private enterprises. The big chains, the big organizations, have taken over in many areas. When a person works now, he works as a wage earner, not as a member of a family getting work experience.

Mr. President, this program involves something which is needed in this country; namely, the developing of good work habits. That is a skill every person needs. Work habits are valuable. They train a man how to work. A man can be put through school for 20 years, and if he has never been taught how to work—taught the discipline of good, wholesome work—he is never going to be much of an employee.

Mr. President, again I return to the sudden conversion to vocational education, which is refreshing to me.

I ran a vocational education program in the State of Minnesota; and it was a good one. I have been closely associated with the vocational Education Association of the United States. I have been given awards by that organization for my work in Congress, my attempts to get money and programs for vocational education.

But I tell Senators it was a lonesome fight. I did not have all of these new recruits and all these sudden enthusiasts for training our young people. It is interesting to note the current interest in vocational education and technical education.

I am willing to join with any Senator in this body to double or triple the vocational education program of this country.

I say to Senators, you will have to go a long way before you will find a better vocational institute than the Dunwoody Industrial Institute in Minneapolis. There are many other such training and vocational schools. We pioneered in vocational education, gentlemen. We have put our money into it.

I have stood in this Chamber time after time during my 14 years in the Senate and fought for funds under the George-Barden Act, under the Smith-Hughes Act, under a host of acts which deal with industrial arts and agricultural education; and it has been a lonesome, hard fight. Now we find out what is wrong. It is that we do not have enough vocational education.

Mr. President, if the opponents of the youth bill seriously believe they are able to curb the youth unemployment problem through programs that only treat the final stage of a cancer that affects the entire society—the cancer of unemployment, inadequate education, and social upheaval—then I say they do not understand the problem in its full dimensions.

What, then, do the proponents of this legislation claim? What is it that those of us who have sponsored the bill say?

Simply this: The Youth Employment Act provides a unique opportunity for thousands upon thousands of young Americans victimized by fundamental social and economic ills far beyond their power to control or to alleviate. We propose employment opportunities that are particularly relevant to assisting these young Americans who have never experienced anything but frustration, failure, and defeat.

I may add that the rate of school dropouts is a problem that necessitates not only the attention of the Senate, but the attention of every school authority in America. Many such authorities have testified in favor of this bill. This program will not answer the problems of school dropouts. Why is it that young men and women drop out of school? Why is it?

Perhaps we ought to examine what is wrong with American education. Perhaps we ought to ask ourselves if American education is adequate to the needs of modern society. Does it do its job?

We do not make the pretense of claiming that the Youth Conservation Corps or the Hometown Youth Corps will remove the cancer of youth unemployment from our society. But we do claim—and claim most emphatically—that the on-the-job experience and the complementary vocational training provided for in this legislation will provide the impetus for a high percentage of these youths to become productive and self-sustaining members of society.

We do not claim that the methods contained in this legislation are applicable in all cases of unemployed young people. We do not say that the more traditional methods of vocational training should not be expanded, or that specialized manpower training programs should not be enlarged. We say none of these things.

What we do say this this: For many young people, particularly those who have abandoned regular school attendence, the more traditional and formalized training procedures are practically useless. They lack the personal self-discipline, maturity, self-confidence, and work experience to profit from such opportunities.

It offers these young men and women who, through no fault of their own in many instances, have become victims of the social structure and have dropped out of school before completing their education. This act offers them an opportunity which they so urgently seek—the opportunity to succeed in a job within their limited capabilities, the opportunity to work, the opportunity to labor diligently, the opportunity to gain maturity, the opportunity to gain self-confidence and self-fulfillment, and the opportunity to acquire basic job skills.

When a program is proposed that offers those opportunities, I think it is one which is worthy of the confidence and the support of the Senate, the Congress, and the entire country.

Many of the young people today who cannot get jobs, cannot do so because they have never had jobs. They have never had work experience. They have never been with a group of men or women who had work experience. What we offer here is a kind of apprenticeship, giving young men an opportunity to work, to gain experience, an opportunity to develop their minds, bodies, and skills. I submit that without those qualifications or characteristics, vocational education or any other kind of education does not make for a skilled worker or a happy worker.

Mr. RANDOLPH. Mr. President, will the Senator yield?

Mr. HUMPHREY. I yield.

Mr. RANDOLPH. It is not on the street corner that there exists the climate for a teenager to find work, but in the woodlands, in the forests, in the fields. There we find the atmosphere which is conducive to this kind of work and these skills. We have never claimed that this program will create a journeyman in 6 months or a year. But neither does any program. However, within 6 months or a year there will be the beginning of skills in a climate and in an atmosphere which will allow these young people to stand alongside others, to join hands, so to speak, and say, "Let us get the job done."

That is certainly the essence of the thought behind this work program.

I do not want to indulge in a mere pleasantry, but I wish the RECORD to clearly indicate that the Senator from Minnesota, who now addresses his colleagues on this subject, has made a notable contribution, not only in his remarks today, but in the vigorous manner in which he has proposed this program through the years.

In my judgment, when the history of the U.S. Senate during the era in which the Senator serves, is written, his achievements in connection with the plans, programs, and purposes for the youth of America will loom large in that history.

What I have now said is a very genuine tribute, and I want the RECORD to indicate that in the passage of this act—and I believe it will pass the Senate; I cannot conceive that this effort will be rebuffed—much credit, in fact, the major credit, will go not only to the astuteness and the adroitness of the Senator from Minnesota, but the rightness of his efforts in behalf of American youth.

Mr. HUMPHREY. I thank the Senator for his generous remarks. I expressed earlier—and I do not repeat merely to respond in kind—my deep appreciation for the work of the Senator from West Virginia in the 87th Congress on this legislation.

I have a deep interest in this subject. I was a scoutmaster for 6 years. We had several Eagle Scouts in my troop. We won the President's Award for 3 years in succession, which was no small task. I have been interested in juvenile work. We have a hard time passing any kind of measures on education, but within a few days, if not within a few hours, there will be a military procurement bill brought before the Congress that will represent many millions of dollars, and it will pass in a few hours or a few minutes.

I have been in the Senate when we passed a $50 billion appropriation for the Defense Department, and it did not take half a day.

May I say that the Civilian Conservation Corps proved its worth. Western Reserve University made a study of those programs back in the depths of the depression, at a time when unemployment was serious. It made a sampling of 6,500 youths in the Greater Cleveland area.

Specialists from the university interviewed these boys, and found that 80 percent of them had been unemployed before they went to the CCC camp. Upon returning home, 70 percent of them obtained jobs, and 50 percent of these found full-time employment.

What else do we do in this program, in addition to giving experience? I repeat, it offers them the opportunity they so urgently seek, the opportunity to succeed in a job within their limited capabilities, the opportunity to labor diligently, the opportunity to gain maturity, self-confidence, and self-fulfillment, and the opportunity to acquire basic job skills.

Let me quote from the hearings at page 541 with respect to education:

> EDUCATION
>
> In addition to the job-related training every enrollee will have an opportunity for supervised home study choosing subjects from the extensive curriculums provided by the Armed Forces Institute and many other accredited correspondence schools. A partial list of these subjects is attached. Completion of these courses will be evidenced by certificates which are accepted by employers. The entire staff of the camp will participate in the educational program insofar as their abilities permit, and the school resources of nearby communities will be utilized to the greatest extent possible. Many enrollees will be enabled to complete eighth grade and high school education and will receive certificates and diplomas as evidence of their satisfactory completion of their schooling. Every enrollee will also receive meaningful information on the purposes of the conservation work in which they are engaged. Some may choose vocations in the natural resources field as a result of this experience.

In connection with what has been said about this experience out of doors, I have a son who is going into conservation work. It is not necessary to learn to be a machine tool worker to acquire a skill. There are jobs for park rangers, and geologists, and forest rangers. The great lumber companies of this country are looking for forest rangers with experience in forestry. This is a tremendous enterprise in the United States. The YCC will provide a start in learning such occupations. Sometimes we get the feeling that if we are not learning to drive a diesel engine or how to be an astronaut or how to be a physicist or how to be a craftsman, that we are not learning anything.

I could not help overhearing the Senator from Rhode Island refer to the driving of a foreign sports car—that, if one does not learn how to drive a foreign sports car, he is not learning anything. It may be far more important for a young man to learn about conservational forestry or recreation. This is a very important occupational pursuit and he can begin his education in conservation through participation in the YCC.

I devoutly hope that our civilization has not reached a plateau of technical sophistication where hard, honest labor is no longer required in the successful employee. The evidence submitted by dozens upon dozens of expert witnesses suggests quite another answer.

Let me quote from the Senate hearings on S. 1.

The Honorable John J. Skiffington, a State representative from Rhode Island and a former member of the CCC, testified about the benefits he received from his work-camp experience:

> As far as the good it did, I think it did a tremendous amount of good—physically and mentally.
>
> I have seen, myself—I am not big today, but while I was in there, I think I went in weighing about 115 pounds or so, and I came out weighing about 145 pounds. And I have seen scrawny, underfed, underprivileged youth at that time in America go into the CCC's and come out physically and mentally alert.
>
> Some of them, you might say, were gigantic when they came out. At least it seemed that way when they came home. They were used to doing a day's work. The money was not great, but at that time it was well appreciated.
>
> I think it gave me a background as far as working is concerned. I never had a job before. And meeting people, living with them, and getting to understand people—I think it did me a world of good.

Eli E. Cohen, executive secretary, National Committee for the Employment of Youth, testified:

> The young people get discouraged. Many of them are frightened in the first place. They lack confidence, often give up before they start seriously seeking work. In a great many instances they just do not know how to look for a job, how to handle themselves in a job interview, et cetera.
>
> In this kind of situation, it seems to me terribly important that there be provided some type of bridge, some transition, between school and work for these young people. We need to create a situation in which they can have tryout work experience, where they can learn how to work, where they can learn how to take orders from a boss and get along with their coworkers and report to work on time and follow through on responsibility, where they can develop some self-confidence; where they can develop hope for themselves in the future; where they can get training and supplementary education to further equip themselves for employment; where they can have a job reference when they go out to seek regular employment.
>
> In other words, what I am trying to say is that what we need here for many of the young people today is the kind of developmental experience, through which they might mature into better employees and better citizens. I think this is really the essence of what is important about the proposed Youth Employment Act.

Mr. PROUTY. Mr. President, will the Senator yield?

Mr. HUMPHREY. I yield.

Mr. PROUTY. Along the same line, I should like to quote from the testimony of Mrs. Agnes Meyer, who, we all know, is an outstanding American and certainly a very fine person, who is familiar with and very much concerned about the problems of youth, as well as the problems of other people. She said:

> No matter how much a young man may profit from the training and helpful influences of the Youth Conservation Corps, he will eventually have to return to the home from which he came and be again subjected to the detrimental influences from which he has temporarily escaped. This proved to be a great difficulty to many of the CCC graduates (p. 153, hearings).

If the Senator from Minnesota will yield further, I should like to quote also from the testimony of Richard G. Farrow, director of youth services of Pennsylvania, in response to a question by a member of the subcommittee about the skills that the boys would learn in the camp. Mr. Farrow said:

> One of the big problems in this program, as with the institutional programs which we also run, is: What happens to the boys after they leave camp? We feel that a boy changes a great deal within a month or 2 months after he arrives at camp. A good deal of his hostility, his suspicion disappears. He becomes more cooperative, more relaxed, more interested, and he works better. This change persists until he leaves, and then he has to go back to a community which by and large has not changed as much as he has. He has to fit in with his change to an old situation which he finds often to be very difficult.

Mr. HUMPHREY. We have tried to make it clear that we do not consider this program to be a panacea for all the social ills of the country. What the testimony indicates is that while the boy is in camp it is good for him.

Mr. PROUTY. He is going to be better fed.

Mr. HUMPHREY. He is going to be better fed, he will develop good working habits, and he is going to do constructive work.

Mr. PROUTY. Then he returns home without any skills.

Mr. HUMPHREY. No. That is not what the testimony shows.

Mr. PROUTY. That is the whole experience.

Mr. HUMPHREY. That is not what happens. The Senator knows that. What the testimony shows is that when he returns home it is the same old world.

Mr. PROUTY. I did not say that.

Mr. HUMPHREY. I want to help change the world.

I want to make it better. What the testimony of Mrs. Meyer showed was that after the young man returns home, he returns into the conditions that existed before he left home.

Mr. Farrow said it was a good idea to have the boys in camp, but that when they left camp and returned home, it was the same old world.

Perhaps we ought to do something about the world or the community in which we live.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. HUMPHREY. I yield.

Mr. PASTORE. Does that not happen to every young man who goes away to college?

Mr. HUMPHREY. Certainly.

Mr. PASTORE. After he returns home he comes back to the same old world. Is that a reason for not going to college? How ridiculous can we get?

Mr. PROUTY. That is far from analogous.

Mr. PASTORE. I do not know about that. It is the same analogy that has been used here.

Mr. PROUTY. What this woman said was that it does not do them any good, because when they return, it is the same old world.

Mr. PASTORE. That is nonsense.

Mr. PROUTY. What I believe should be done is to provide the youngsters with schools, so that they can qualify for useful employment.

Mr. PASTORE. That is exactly what the bill provides.

Mr. PROUTY. That is not exactly what the bill provides. It does not provide for that.

Mr. PASTORE. That is the way the Senator from Vermont reads the language, but it is not the way the Senator from Minnesota or the Senator from Rhode Island reads it.

Mr. HUMPHREY. In response to the statement of the Senator from Vermont, who has been harping on this string for weeks and weeks, and I must say without too much effect, the simple fact is that vocational training programs are available to these young people. On-the-job training will be available. The young man in the camp will be under the supervision of a trained professional superior or foreman. He will be at work, learning how to work. He will be doing the job to which he will be assigned. He will receive work experience. He will be recruited by the U.S. Employment Service. When he leaves the camp, he will be followed through by the U.S. Employment Service, which will help to find jobs for these young men. They will have work experience and have a work reference, which they would not have had had they not received camp experience.

These young men can have the very educational courses which the men in the U.S. Army have. They will have the facilities of local high schools available under contract.

Mr. PROUTY. Mr. President, will the Senator yield?

Mr. HUMPHREY. I yield.

Mr. PROUTY. The Senator is painting a very rosy picture, but it is far from accurate or realistic. How many personnel will be engaged in the 50-man camps to do that which the proponents of the bill have been talking about? How many personnel will be involved in the educational training program?

Mr. HUMPHREY. First, the Department of Health, Education, and Welfare will enter into educational contracts with local school authorities to provide such training. In some cases, local teachers will be brought to the camps. In other cases, the enrollees will travel to local schools.

Mr. PROUTY. The Senator has not answered my question.

Mr. HUMPHREY. Basic training is provided in the schools under contract.

Mr. PROUTY. But these camps will be out in the wilderness. The only communities will be small ones, having populations of 500 or 600. They will not have the educational facilities to benefit men living in camps 40 or 50 miles away.

Under the budget as suggested by the proponents, only 2 individuals in a 50-man camp will be on the payroll whose purpose it will be to give instruction and educational training of one kind or another.

Mr. HUMPHREY. They will be there for the purposes of supervision, and for running an educational program, for which school facilities also will be available.

Mr. PROUTY. They will not be available.

Mr. HUMPHREY. College correspondence courses will be available. First of all, the enrollee will have two more teachers than he would have had were he not in the camp.

Mr. PROUTY. I shall offer an amendment at the appropriate time which I believe will take care of the situation. It will offer quite a substantial authorization. So I am not opposed to a program of some kind.

Mr. HUMPHREY. I am delighted to know that.

Mr. PROUTY. However, I favor a program which will achieve the results which we all hope will be available at such camps.

Mr. HUMPHREY. With all due respect, this great, new interest in vocational education is welcome. I am delighted. I think it is marvelous. I wish there had been the same interest in manpower training and development in 1961, when the Senator from Vermont offered amendments to cut portions of that program.

Mr. PROUTY. Mr. President, inasmuch as the Senator has referred to me—and I anticipated such a development—I have prepared a brief statement which, with his permission, I should like to make.

Mr. HUMPHREY. Mr. President, at the conclusion of my remarks, I shall be happy to listen to the Senator from Vermont make that statement.

Mr. PROUTY. I should like to have it appear at this point in the RECORD.

Mr. HUMPHREY. I yield for that purpose.

Mr. PROUTY. Mr. President, on April 4, 1963, the distinguished senior Senator from Minnesota made the following statement regarding votes that took place on the Manpower Development and Training Act:

> In the 87th Congress, for example, the same persons who now oppose the Youth Employment Act for the reason that it fails to provide sufficient vocational training, voted to eliminate training allowances for young persons—16 to 21—in the Manpower Development and Training Act. The same persons attempted to cut the entire manpower retraining program in half by reducing the program's authorization from 4 to 2 years.

At the time the Manpower Development and Training Bill was before the Senate, there were a million persons who had been seeking work for more than half a year. This total was equal to the postwar high reached in August of 1958.

Men 45 years and over represented 30 percent of those out of work more than 6 months, as compared with 25 percent of the civilian labor force.

The rate of unemployment nationally at that time was 6.9 percent and had remained unchanged for 8 straight months.

Furthermore, at that time two-fifths of the jobless married men had been out of work for 15 weeks or longer.

It seemed to me under the circumstances the better part of wisdom to make a maximum amount of money available for the training of married men with families to support.

Indeed to a large extent the then Secretary of Labor went along with this point of view. In a letter to the distinguished senior Senator from Pennsylvania he stated:

> It is my firm conviction that priority and emphasis must be accorded the experienced unemployed heads of families.
>
> I do not anticipate the need to expend much of the authorized funds for training allowances for youths. Careful review of the needs and the resources leads me to conclude that less than 5 percent of the total funds authorized for carrying out the purposes of this bill would be required for training allowances for youths. In administering the bill, I would not expend more than this sum for this purpose.

It should be pointed out also that under the Clark amendment which imposed a 5-percent ceiling on training allowances for youths, a 16-year-old boy could receive an average of $32 a week while he went through vocational training. Remuneration of this kind would certainly entice many youngsters to leave high school, one of the very things many of us have tried to prevent.

Later on in conference, special provision was made for young people but the weekly allowance was limited to $20 or less.

In regard to another matter, I did ask the Senate to limit the Manpower Development and Training Act to a 2-year program but I made it unalterably clear at that time that I would support its continuation if it proved to be successful, and I think it has.

Just prior to the debate in the Senate with respect to the question of whether we should have a 2-year program or a 4-year program, the Armour Co. in Oklahoma City conducted a training program for many employees who were laid off. The program was pretty much a failure.

In addition, the chairman of the Michigan Employment Security Commission had testified before the Employment and Manpower Subcommittee that there were thousands of people in Michigan for whom retraining would do little if anything.

It is significant to note that when the matter of appropriations came under consideration in the Senate, the committee controlled by members of the majority party sliced in half the request for funds to implement this program.

The distinguished senior Senator from Michigan and I attempted to round up support for full restoration of the cut, only to find later that a compromise had been reached between the majority leadership and the committee whereby only a part of the cut was restored.

The implication that I was ever opposed to getting the manpower development and training statute underway with ample funds for its implementation is an implication that is misleading and false.

Mr. HUMPHREY. Mr. President, I want to have the RECORD clear as to what the program will offer. The Senator was in committee. He knows what the program will offer in terms of employment and educational opportunities. It will offer vocational education. There will be the option of providing academic instruction through the facilities of the Armed Services Institute courses. The Department of Health, Education, and Welfare will contract with local school authorities for educational training.

But more importantly, if the Senator from Vermont will only listen, it will offer the men a valuable education in how to work and how to gain the kind of work experience which will make it possible for him to be a good employee.

All this sudden interest in vocational education and guidance, much as it is appreciated, is designed primarily, it seems to me, to becloud the issue about the youth employment bill. There will be education, to be sure; but I repeat that a young man who will enter one of these camps will receive more education in the camp than he would by standing around a street corner as a school dropout. A school dropout will not return to a vocational school merely because someone tells him he ought to do so. What he needs is work experience. He needs to have an environment in which he will learn how to work and take instruction vocationally, and also how to learn in an academic manner.

Mr. PROUTY. Mr. President, will the Senator yield?

Mr. HUMPHREY. I yield for a question.

Mr. PROUTY. Does the Senator believe that all the camps which are listed on page 5666 of the CONGRESSIONAL RECORD of April 4 are in existence or could be rehabilitated within 60, 90, or 120 days?

Mr. HUMPHREY. I am not sure that they can be.

Mr. PROUTY. I may advise the Senator from Minnesota that some of the camps listed are nonexistent. I mentioned two of them yesterday; I learned about another one today. If this list is supposed to be accurate, but is not, how can we rely on the testimony and evidence given?

Mr. HUMPHREY. The list which the senior Senator from Minnesota placed in the RECORD under date of April 4 is the list.

Mr. PROUTY. That is the list to which I have reference. It contains the names of two camps which are nonexistent. I dare say there are many more.

Mr. HUMPHREY. I suggest that the Senator not make generalizations. Because he sees a mosquito, it does not mean that there is a plague.

Mr. PROUTY. I was told by Secretary Wirtz that there was a camp in Vermont.

Mr. HUMPHREY. The list does not show any camp in Vermont.

Mr. PROUTY. There is none shown on the list, but I was told by the Secretary of Labor that there was. Obviously, he got the information from someone else.

Mr. HUMPHREY. I am not going to gnat pick about nits.

Mr. PROUTY. There was supposed to be a camp located in South Dakota.

Mr. HUMPHREY. Mr. President, I do not yield for this purpose.

The PRESIDING OFFICER. The Senator from Minnesota declines to yield.

Mr. PROUTY. Apparently the Senator does not wish the facts to be brought out. I think it is high time that someone brought them out.

Mr. HUMPHREY. I am delighted to have facts brought out. I want to have them brought out in a friendly, persuasive, pleasing, lucid manner. I want the Senator from Vermont to have all the facts brought out. I think he should be treated with respect and dignity. When I have finished my remarks, I shall listen to the Senator from Vermont tell us all of the little mistakes he believes are in the RECORD. I shall listen attentively. If the camps are not in existence, he can arrange to have them built.

Mr. PROUTY. They could not be built under the appropriation to be authorized.

Mr. HUMPHREY. The camps which are listed will provide for the first year's enrollment under the program.

Mr. PROUTY. It is not possible to provide for 8,200 individuals——

Mr. HUMPHREY. Mr. President, I do not yield for this purpose.

Mr. PASTORE. Mr. President, may we have order?

Mr. HUMPHREY. The Senator from Vermont should not get too excited. We shall be here awhile.

Mr. PROUTY. The Senator from Minnesota and I rode together on the subway last week. We were supposed to make a television program.

Mr. HUMPHREY. I remember. For the first time in my life, I did not have a chance to get a word in. It was a unique experience.

Mr. PROUTY. The Senator from Minnesota insisted that the whole program be made over again.

Mr. HUMPHREY. I thought it was a good idea.

Mr. PROUTY. It came out on the television yesterday, and it was pure propaganda in support of the youth employment program.

Mr. HUMPHREY. I am delighted. I did not know we did so well.

Mr. PROUTY. Did remarkably well.

Mr. HUMPHREY. I thank the Senator from Vermont for his praise. I thought my performance on the program was less than I had hoped for. But if it was so effective as the Senator says it was—and he is an opponent of the bill—I am overwhelmed.

Mr. PROUTY. It was pure propaganda.

Mr. HUMPHREY. I thank the Senator for his compliment. I did not know I would receive it.

Mr. President, I wish to quote the statement of another gentleman who had a wonderful work experience in the Civilian Conservation Corps. He spoke before the Clark subcommittee. His name is A. L. Ratliff. He is a land acquisition engineer from Arlington County, Va. He said:

> I feel personally that this thing you people are considering is one of the most important bills that we have before us today. There are many men like me who with an opportunity will go ahead and make good citizens and take advantage of the opportunity. Otherwise I don't think they will.
>
> I haven't too much more to say. I just say it was my salvation.

Mr. President, these men are responsible citizens. They testified as to their experience with the Civilian Conservation Corps.

The Youth Conservation Corps and the Hometown Youth Corps will be the salvation of many thousands of young Americans today. Why will the programs contained in the Youth Conservation Corps offer such an opportunity for salvation?

Enrollees will leave their depressing local surroundings for a totally new start, among new companions and friends. They will travel to a well regulated community under the direction of experienced camp foremen. They will receive work assignments within their capacity to complete satisfactorily. They will participate in additional educational and training activities. They will engage in organized recreation, sports, and intracamp activities. Each of these factors will play an important part in transforming the outlook, attitudes, job skills, and employability of the YCC enrollees.

The opponents of this legislation dismiss the impact of this work experience as being essentially esthetic in nature, as being "nice" and "good" but not contributing to the employability of the enrollees. They say in the minority views:

> Supplying them with suntans and an appreciation of outdoor living simply will not help them find jobs.

I say that giving them the opportunity to work diligently, under professional, trained leadership is precisely what will help them to find jobs and to keep them, and also to find themselves and be able to become better citizens.

I also contend that a YCC enrollee will acquire on-the-job skills that will compare most favorably with those learned in a vocational education program conducted for a similar period of time. But the enrollee will also benefit from the additional personal experiences found only in a resident work-camp experience. Rather than describing the YCC as being seriously deficient in its training potential, I prefer to look at a YCC experience as job training—plus.

One should also understand that many industrial firms and businesses provide extensive job training courses for their employees. These companies do not expect new workers to come fully trained, ready to begin their particular jobs. In fact, they frequently prefer to train new workers to the requirements of their specific assignments in a manner that corresponds directly with the established procedures of the company.

However, these companies are seeking employees with mature and responsible work habits. If these basic work attitudes exist, the employee can be trained to his specific responsibility, and often at company expense.

Other enrollees may graduate with a new awareness and determination to resume formal academic training, or to seek enrollment in a particular job training program. They will enter into such an experience with a full realization of their abilities, and possessing a new sense of personal confidence.

On April 4, I placed in the CONGRESSIONAL RECORD an extensive list of the job and training opportunities that would exist in the Youth Conservation Corps. Moreover, I demonstrated that this would not be make work, but would be planned and programed conservation work accomplished under the direction of experienced foresters and rangers. In fact, every job is one which the Forestry Division of the Department of Agriculture or the National Park Service, of the Department of the Interior, or some other similar service of a Federal agency or a State agency has found to be necessary and needed. These programs are waiting to be accomplished. They have been authorized, planned, and programed. I also suggested various approaches that could be used to provide the complementary academic and vocational training in each camp. The use of teaching machines and home study courses under the general supervision of an education specialist offers many possibilities.

I also wish to commend the distinguished Senator from New York [Mr. JAVITS] for his committee amendment that emphasized the need for vocational training and educational services adapted to the special needs of Youth Conservation Corps enrollees.

That amendment was adopted. So all the talk about whether there will be educational opportunities is beside the point, inasmuch as there was written into the bill that specific language which makes that mandatory. Where such services were shown to be deficient in a particular camp, the Javits amendment provides for the enlargement, improvement, and development of such services. I believe this amendment made quite explicit the intentions of the Senator from Minnesota and other Senators who originally sponsored this legislation.

FISCAL RESPONSIBILITY

Finally, a word about fiscal responsibility. Any businessman who approved an audit of his business affairs which took into consideration only the annual expenses would be rightfully judged an economic ignoramus. This is no less true in regard to the Youth Employment Act, particularly the Youth Conservation Corps. In response to an inquiry from Representative AL ULLMAN, of Oregon, the Forest Service recently calculated that a very conservative dollar estimate of the direct and indirect benefits of a Youth Corps would be about $7,000 per enrollee, or $7,000 for a $3,985 annual cost per enrollee—or let us say approximately $4,500, including costs of job equipment. These figures and their supporting evidence are to be found on page 5839 of the CONGRESSIONAL RECORD for April 4, 1963.

Recently, I had printed in the RECORD examples of expenses and income in relation to two specific YCC camp locations. Once again, the annual operating funds would clearly bring an excellent return over a period of years.

I notice that the present Presiding Officer of the Senate is the distinguished junior Senator from Wisconsin [Mr. NELSON]. When he was Governor of Wisconsin, his State had experience with the youth camps, as did Minnesota. So we have an idea of the cost to build the camps and to put young men to work in them. I hope that at an appropriate time during the debate, the distinguished former Governor of Wisconsin, now the junior Senator from that State, will give the Senate the benefit of his observations.

Mr. PROUTY. Mr. President, will the Senator from Minnesota yield?

The PRESIDING OFFICER (Mr. NELSON in the chair). Does the Senator from Minnesota yield to the Senator from Vermont?

Mr. HUMPHREY. I yield.

Mr. PROUTY. Is it not true that the Senator from Wisconsin stated before the committee that the cost per enrollee in the camps in that State was, $3,100?

Mr. HUMPHREY. I believe it was approximately that amount.

Mr. PROUTY. But they are summer camps, used mostly for 6 weeks, generally for high school boys while on vacation, are they not? The cost is not comparable to the cost under this bill.

Mr. HUMPHREY. I understand that the comparison is not complete. For example, a long session is more expensive than a short one. As another example, let me point out that I maintain a summer home on a lake in Minnesota. We do not use it during the winter. Our experience while using it in the summer is very rewarding, but is more costly, on a monthly basis, than the cost if it were used during the entire year. One does not have to be very wise to ascertain that the total cost of a long program will be greater than the cost of a short one; but I believe the testimony is that the annual cost per boy in the camps will be between $3,900 and $4,900. We shall go into that matter in full; and I did that on April 4. Certain camps have already been constructed. Many of them need rehabilitation. The YCC enrollees will be able to rehabilitate some of them. We have had other camps—for military purposes—which needed rehabilitation, and they have been put into good shape.

If any new camps are needed, they will be constructed in due time.

However, the figures used for the cost of the camps are misleading in terms of what are considered to be the high costs. In that connection, I refer to the statement I made on this point on April 4. At that time I said:

> ACTUAL COST OF PROGRAM
>
> Opponents of this legislation have charged that it will cost between $9,000 and $12,000 per year to support one YCC enrollee.

That is quite a span or spread in the estimates; namely, between $9,000 and $12,000.

Then I said:

> As Secretary Wirtz repeatedly testified before the Clark subcommittee, these figures are exaggerated and misleading.
>
> They are exaggerated and misleading in two fundamental respects: one, they are flatly contradicted by the cost data supplied by the Departments of Labor, Interior, and Agriculture; two, they fail to take into consideration any of the substantial financial returns that will accrue from the conservation projects undertaken by the YCC.

Then I placed in the RECORD the "Estimated Annual Costs Per Enrollee," as prepared by the executive agencies; and that totaled $3,985. These estimates were prepared through the cooperative efforts of the Departments of Agriculture, Interior, Health, Education, and Welfare, Labor, the Army, and the Bureau of the Budget. They are based on a 50-man camp operation.

I must confess that if I had to choose between an estimate made by a single Senator, even though I had the highest regard for him, and an estimate made by an interagency group, composed of such Departments as the Interior Department, the Labor Department, the Department of Agriculture, the Department of Health, Education, and Welfare, the U.S. Army, and the Bureau of the Budget, I would tend to believe that the Government agencies estimate would be just a little more accurate.

Mr. PROUTY. Mr. President, at this point will the Senator from Minnesota yield?

Mr. HUMPHREY. I yield for a question.

Mr. PROUTY. Is it not a fact that the hearings of June 12, 20, 21, and 23, 1961, set forth on pages 409 and 410, estimates made by the Department of the Interior and the Department of Agriculture, which are listed as follows:

For a 25-man unit, $12,297 per boy per year.

For a 50-man unit, $9,016 per boy per year.

For a 100-man unit, $8,203 per boy per year.

For a 200-man unit, $7,171 per boy per year.

These are the same agencies which are estimating costs under this bill.

Mr. HUMPHREY. But, in addition, Mr. Farrow, who was in charge of similar camps—50-man camps, in Pennsylvania—said they are paying $385,000 a camp.

I never knew the Federal Government to construct anything or to engage in any activity for less money than a State or municipal government would require.

Let us assume that everything that the Senator has said is correct. I have no right to dispute the authenticity of his figures. However, the trouble is that the Senator from Vermont is speaking about operation of the camps for 1 year. The Senator is not talking about amortizing the camps even over a period of 5 years.

If we were to make estimates in that manner, we would have to say that the rental cost of a U.S. Senator during his first year in office would be $25,000 because perhaps that is what he had to pay for his house. If such a figure were to go to the Senator's constituents, it would be very misleading. No businessman—and I am sure the Senator is a businessman with business principles and business understanding—would ever contemplate talking about the cost of a project that was not amortized.

Mr. PROUTY. Mr. President, will the Senator yield further?

Mr. HUMPHREY. I yield.

Mr. PROUTY. I would never contemplate amortizing a 20-year program when it might continue only from 1 to 5 years.

Mr. HUMPHREY. I said 5 years.

Mr. PROUTY. Mr. President, will the Senator yield further?

Mr. HUMPHREY. I yield.

Mr. PROUTY. I should like to use the figures suggested by the Senator or perhaps an amount less than those figures. The Senator knows that it has been estimated that the cost per enrollee might run as high as $4,500.

Mr. HUMPHREY. That would be the outside cost.

Mr. PROUTY. According to the Senator's figures, that amount is correct.

Mr. HUMPHREY. Actually the amount was estimated at $3,955.

Mr. PROUTY. But that figure made no provision for materials or work equipment which would be necessary in the camps. Using the figure of $4,250—and forgetting all about the amortization figure of $250 to which the Senator objects——

Mr. HUMPHREY. No; I do not object. I am for it.

Mr. PROUTY. I am not including it anyway. I am decreasing the figure from $4,500 to $4,250. As a result of yesterday's $10 million cut in the appropriation for title I, it was stated—and the Senator's report in the CONGRESSIONAL RECORD of Thursday, April 4, so demonstrates—that approximately $15 million would be used for rehabilitation purposes in camps which are now in existence. Is that correct?

Mr. HUMPHREY. I do not recall that particular figure.

Mr. PROUTY. It would be very close to $15 million. It might be $14,667,000, or some such figure.

Mr. HUMPHREY. Yes.

Mr. PROUTY. If we subtract $15 million from $50 million, which was authorized yesterday, the remainder is $35 million. If we divide $4,250 into that $35 million, we discover that we would have accommodations for only 8,235 boys within that appropriation.

Mr. HUMPHREY. I say to the Senator from Vermont that, first, the amounts that were dealt with yesterday were for the first year. The program is a continuing one.

Mr. PROUTY. I am talking about the first year.

Mr. HUMPHREY. The Senator is talking only about the first year?

Mr. PROUTY. Yes.

Mr. HUMPHREY. I am not for a 1-year program. The proposal is not an authorization for 1 year.

Mr. PROUTY. Will the Senator tell me how many boys would be enrolled the first year?

Mr. HUMPHREY. Certainly. One of the reasons there was printed in the

Record a list of available camps was to point out that many of the camps are ready to be used now, without great additional expenditures.

If the Senator will turn to page 529 of the hearings, he will observe that the rehabilitation cost to the Interior Department of making YCC camps ready for immediate occupancy would be $1,367,800.

The cost of YCC camps which would be ready to be occupied in 90 to 120 days would be $604,000. Camps varying in size from 25 to 200 men would be available at less than $2 million. That would presume that the program would be used to its maximum.

I should like the Senator to read what I said in the Senate on April 4, when I pointed out that there was a controversy over construction costs. As the Senator has pointed out, the cost of a 50-man camp was estimated to be $250,000, but amortized over a 20-year period, and rightfully so. They are considered to be usable structures with some rehabilitation. So we cannot estimate the cost on the basis of 1 year's use. We cannot lump in 1 year the total cost of the camp as the cost of an enrollee. The enrollee would be in for 1 year, let us say, but another man would follow him the next year. He would be in the same camp, as was indicated in the hearings. The camps that are already established would be used first.

Mr. PROUTY. Mr. President, will the Senator yield?

Mr. HUMPHREY. I should like to finish my statement first.

As I said on April 4, the opponents' figure of $9,000 annual cost per enrollee results from absorbing the entire permanent construction cost of a 50-man camp in the initial year of operation. It is unfair. It does not bear any resemblance to what we call cost accounting. In other words, the $9,000 per enrollee cost figure includes $5,000 that represents the entire payment per enrollee of constructing new permanent facilities.

First, some of the camps are already established.

Second, we should never under any stretch of the imagination try to prorate the cost of a camp in 1 year upon one enrollee.

The manner in which the opponents have used this $9,000 figure is seriously misleading. They have taken permanent construction costs, absorbed these costs in a single year of operation—as opposed to amortizing them over a longer time period—and then portrayed this extremely high cost figure as the average cost of supporting an enrollee in any year of operation.

I submit that is misrepresentation, misleading, and ought not to be permitted. If they choose to absorb all construction costs in the first year, then they must make quite clear that all future annual costs per enrollee will contain no construction funds at all.

So the second year the total cost would be $3,995 or less because that amount of money includes the share of the construction costs for an enrollee for 1 year. So the next year of the program would be entirely free of construction costs.

In any event, as I said on April 4, I submit that amortizing the cost of permanent facilities over their normal 20-year life expectancy provides a more accurate perspective of the true costs involved in supporting a YCC enrollee for a single year and over a reasonable length of time.

There are, moreover, additional factors which further discredit the cost figures used by the opposition. For instance, the estimated construction cost of $250,000 for a 50-man camp represents a maximum figure. Many camps built of local building materials and prefabricated structures will cost much less. Some 100- to 200-man camps will also cost proportionately a great deal less than the $250,000 allotted for each 50-man unit.

Finally—and this is most important—there currently exist enough camp facilities to accommodate almost 12,000 YCC enrollees on a year-round basis. These camps need only marginal improvements to bring them to operating conditions.

Then I asked unanimous consent to have printed in the Record a list of those camps. They appear in the Record at page 5666. The State of Vermont does not appear in the listing, but in Minnesota there are camps at Grand Marais, Sawbill, Long Lake, Cold Springs, Rochert, and Holt. Those are good camps. They have been used. The amount of money that would have to be expended in the State of Minnesota for such camps would be very limited. Some of those camps have been used already for a conservation program.

Mr. PROUTY. Mr. President, will the Senator yield?

Mr. HUMPHREY. I yield.

Mr. PROUTY. For what are those camps now being used?

Mr. HUMPHREY. The State of Minnesota had a Youth Conservation Corps program for a period of time before we got a Republican administration.

Mr. PROUTY. The camps were built back in the 1930's.

Mr. HUMPHREY. In Minnesota we try to help young men. They were used under Orville Freeman, the then Governor of the State of Minnesota.

Mr. PROUTY. Is it intended that they should be used in the proposed program?

Mr. HUMPHREY. They will be used again under the new Governor. As the Senator knows, recently there was a recount of votes in the gubernatorial election, and we have a Democratic Governor. Some of the camps will be used. There was a total camp capacity of about 275, which is more than the bill would provide for the State of Minnesota in enrollees.

Mr. PROUTY. How long have they been in existence?

Mr. HUMPHREY. Some of them have been in existence since the days of the Civilian Conservation Corps.

Mr. PROUTY. Then I submit——

Mr. HUMPHREY. We take care of our facilities.

Mr. PROUTY. Then they were not constructed in the manner in which camps would have to be constructed under this bill.

Mr. HUMPHREY. These are camps which are usable. They are camps in which one can sleep, eat, and go to school. They are warm and comfortable. They are situated in northern Minnesota, where it is as cold as it is in Vermont.

Mr. PROUTY. Perhaps colder.

Mr. HUMPHREY. Minnesotans are able to live in those camps.

So the camps are there. We do not have to build a new camp in the State of Minnesota. We will build one for the Senator. Vermont is not listed. We will build a brandnew camp for the Senator, but not an expensive one, since he wants to cut this program. We will build one on the easy side.

Mr. PROUTY. The Senator does not know what I want to do with this program.

Mr. HUMPHREY. I have a pretty good idea, and I do not want to spell it out.

Mr. PROUTY. I do not think the Senator does.

Mr. HUMPHREY. Let us continue with a discussion of the income factors and the cost factors.

I believe it is about time for the opponents of the bill to come to a recognition of the economic facts relating to this program. Then they will come to a realization of the savings which will come to the American public through the conservation projects, and the good which will come to the young men who participate in them.

When income factors are taken into account, the Youth Conservation Corps clearly represents the essence of fiscal responsibility. Personally I find it difficult to place a price tag on an opportunity to rescue a young man from a wasted, meaningless, and unproductive life. But those Senators solely obsessed with the notion of fiscal responsibility have their answer if they would look for it.

While I have dealt primarily with the proposal to establish a Youth Conservation Corps, the same arguments apply to title II of this bill, the State and community youth employment programs or the so-called hometown youth corps. The Senate report on S. 1 provides examples of where similar programs have brought amazing results, including the "workreation" projects in California, the urban service corps in Detroit, the jobs-for-youth program in Philadelphia, the mobilization-for-youth project in New York City, and the youth employment service in Cincinnati.

These local projects have given the Congress hard evidence that such local employment programs improve the employability of the enrollees and accomplish many needed public services that are currently not being done.

Those who oppose this legislation unfortunately find it necessary to overlook the almost unanimous support for S. 1 that was voiced during the recent Senate hearings. The minority views conveniently avoid noting the 60 public and private witnesses who favored the Youth Employment Act in comparison to the lone dissenter, the National Association of Manufacturers.

The only adverse witness on the Youth Employment Act who appeared was the representative of the National Association of Manufacturers.

They ignore the dozens of supporting statements as opposed to the two dissenting statements filed by the American Farm Bureau Federation and the U.S. Chamber of Commerce. They neglect to say that witnesses from such professional associations as the National Social Welfare Assembly, the National Education Association, the American Parents Committee, the American Legion, the Veterans of Foreign Wars, the American Municipal Association, the National Association of Counties, the Young Women's Christian Association, the National Conference of Catholic Charities, the National Council of the Protestant Episcopal Church, the Jewish Welfare Federation, the National Catholic Welfare Conference, and the American Personnel and Guidance Association, among others, found the programs contained in S. 1 quite worthy of their support.

I will match the witnesses for this bill against the opponents. Every religious group—Catholic, Protestant, and Jewish—the veterans organizations, judges, the county and State officials, municipal officials, and Governors testified in support of S. 1. Who was against it? The one live witness who came in was from the National Association of Manufacturers; which is a fine organization, entitled to its right of dissent. That representative presented its program against S. 1, primarily on cost. The chamber of commerce opposition was primarily on cost. The Farm Bureau was the other organization recorded in opposition.

Mr. President, I have a feeling that it is important to know that the National Education Association, which has more than a little idea about education, says it is a good program. Perhaps the educational aspects of the bill are satisfactory to the educators.

The National Conference of Catholic Charities, the National Catholic Welfare Conference, the National Council of the Protestant Episcopal Church, the Young Women's Christian Association, the American Municipal Association, the American Legion, the Veterans of Foreign Wars, the American Parents Committee, among others, all say, "We want this legislation."

That is pretty good support. I call these advocates of the proposal to the attention of Senators because, I say in all due respect, these organizations have rather substantial memberships in many States of the Union.

Instead, the minority views open with the allegation that the supporters of the Youth Employment Act are merely shouting slogans of a bygone age and close by comparing the Youth Conservation Corps to the Soviet Union's Young Pioneers.

I regret that that had to be in any minority views. There is not a single Member of this body who would propose a program which came anywhere near what the Soviet Union proposes in its Young Pioneers. It is a disservice to every group that testified for this bill—among others, the American Legion, the Veterans of Foreign Wars, the National Catholic Welfare Conference, and the National Conference of Catholic Charities—to compare them to the Soviet Union's Young Pioneers. I think that attitude itself demonstrates that the minority views are on rather weak ground. This unfortunate attack on the YCC is indeed "sloganeering," using slogans from a not-so-bygone era.

I respectfully suggest that the tragic problems of our unemployed young Americans will be neither understood nor alleviated through such tactics. I am proud to stand here as the principal author of this legislation; proud of the opportunities that the Youth Employment Act will bring to thousands of our young people. I call upon my colleagues to join me in supporting this urgently needed legislation.

I call upon my colleagues to join with this galaxy of witnesses, with this fine group of witnesses and supporters who have come in to support the proposed legislation. The testimony before the committee indicates that there has been strong national support, not merely from the organizations to which I have invited the attention of the Senate, but also from prominent individuals.

The judge of the juvenile division of the court of common pleas in Cincinnati, Ohio, Benjamin S. Schwartz, wrote to his fellow judges as follows:

> I am writing you because I am aware of your judicial position and concern about youth. We judges strive to provide a better and more constructive rehabilitation and employment program than furnished by commitment to State schools; and so we are deeply interested in the development of youth work camps and employment programs.

I ask Senators to listen to this language:

> The National Council of Juvenile Court Judges at its convention in 1959, and subsequent thereto, approved of the proposed Federal program in this regard, and for the past 2 years I have been chairman of the National Work Camp Committee. Presently we are interested and in favor of Senate bill No. 1 and House bill H.R. 1890, which are now pending in Congress. Enclosed is a reprint from the CONGRESSIONAL RECORD for your study. From it you can readily see that Senator HUBERT HUMPHREY, of Minnesota, has been an indefatigable worker for this program, and has spearheaded the effort. I am not putting in a political plug, as his and my politics are different; but we both believe that politics should play no part in this program. These bills are at a critical stage and we have a golden opportunity to accomplish their passage—but they require our utmost effort and support.
>
> If you will, contact your U.S. Senators and Representatives and let them know of your endorsement. Because of your high and respected position in your community, you can effectively arouse widespread citizen interest and support by your speaking and public contacts. Let the people know that these camps and employment training will be of inestimable value to our communities and Nation. Above all, these projects will be important for the youth with problems, who because of idleness and other handicaps appear increasingly before us. They will help the school dropouts and those youngsters who are presently walking the streets looking in vain for jobs.
>
> Appreciating your effort and interest, and with best wishes, I am,
>
> Sincerely,
>
> BENJAMIN S. SCHWARTZ.

Mr. President, this man represents judges of the juvenile courts of this Nation, who in conference on three occasions have supported this legislation. They came before the committee to testify for this legislation.

I will take the word of men who see, day after day, the heartache and tragedy of broken young lives, before the bench of the law; who try desperately to refashion those lives by providing young men and women with an opportunity for better lives.

What is their considered judgment? This man, as he says, is not of my political faith. He is a Republican. He says he disagrees with many views expressed by the Senator from Minnesota, yet he says he believes politics should play no part in this program.

But this distinguished citizen, who is intelligent and learned in the law, is speaking for the National Council of Juvenile Judges; and I suppose it would be fair to assume that judges of juvenile courts have an understanding of the proposals in this Congress. They are lawyers, students, and many of them are scholars. They live day in and day out with juvenile and youth problems. They support the legislation.

I ask any reasonable man to consider the evidence in the bill, the provisions of the bill, the testimony for the bill, and the many organizations that support the bill, and then compare that list to those who brought in testimony against the bill.

I have a complete list of the organizations which are for the bill:

The Association of State Foresters has written in support of the bill. Also the Commission on Youth Welfare, city of Chicago; the House of Representatives of the State of Kentucky; the Delaware Commission on Children and Youth; the Cook County, Ill., Department of Public Aid; Illinois Commission on Children; Massachusetts Committee on Children and Youth; Michigan Youth Commission; Common Council, city of Detroit; City Council, Virginia, Minn.; Youth Division, Department of State, New Jersey; Department of Public Welfare, State of New Mexico; Department of Employment, State of Oregon; Committee on Children and Youth, State of Oregon; Division of Youth Conservation Services, city of Philadelphia.

We have heard a great deal about Mr. Farrow, of Pennsylvania, but the city of Philadelphia, Division of Youth Conservation, supports this bill.

Also the Commission on Youth Guidance, State of Tennessee; Department of Social Welfare, Virgin Islands; National Education Association; Public Education Association, New York City; Institute of Education Research, Inc.; AFL–CIO; Louisiana Police Jurors' Association; Citizens Committee on Natural Resources.

The Izaak Walton League, one of the great voluntary conservation organizations of the world vigorously supports this legislation. Also the American

Municipal Association; American Parents Committee, Inc.; Family and Child Service, Bangor, Maine; Jewish Welfare Federation; Association of American Indian Affairs; Lower Eastside Neighborhoods Association, Inc.; Neighborhood Commons, Washington, D.C.; Friends Committee on National Legislation; Friends Neighborhood Guild, Philadelphia; Human Relations Council, Knoxville, Tenn.; National Catholic Welfare Conference; Protestant Episcopal Church in the United States; Jewish War Veterans, and the William J. Kerby Foundation, Inc.

Also the American Personal and Guidance Association; Americans for Democratic Action; National Council of Jewish Women; Young Women's Christian Association; Manpower Utilization Commission, city of Philadelphia; Mobilization for Youth, Inc., New York City; UAW; American Legion; United Neighborhood Houses, city of New York, and the National Federation of Settlements and Neighborhood Centers.

Also the National Congress of American Indians; National Jewish Welfare Board; National Conference of Catholic Charities; National Association of County Officials; National Urban League; National Social Welfare Assembly; Veterans of Foreign Wars; the Wilderness Society; and the National Parks Association.

They cannot all be wrong. Considering the variety and diversity of associations I have presented, one cannot ignore the fact that they have come out for this legislation. They cannot all be wrong. These are people who deal with the problems of youth, and they have studied this legislation. They have gone into it meticulously.

The National Association of County Officials met in Washington, D.C., and spent 2 days in their urban congress studying the legislation while the hearings were underway. They support the legislation. Why? If one ever was a local government official, he knows what the problems are at the local level. The mayor of a city, the Governor of a State, the youth commissioner, the social worker—all must face the problems.

I submit that the bill merits the favorable action of the U.S. Senate. My only regret is that it has taken so long. My regret that it is not a bigger bill. But we are trying to face the fiscal needs of the country and keep within reasonable budget limitations.

I say to those who think the bill should be bigger and who want to make it bigger and stronger, that I shall be delighted to join them; but the trouble is that those who want to make it bigger are those who most want to cut the budget. I do not think it adds up.

I thank the Senator from Pennsylvania for his leadership.

I am prepared now to listen attentively and patiently, as has been the case previously, to the Senator from Vermont make his case and comments, because I know he feels strongly about this bill.

Mr. PROUTY. Mr. President——

The PRESIDING OFFICER (Mr. INOUYE in the chair). The Senator from Vermont.

Mr. COOPER. Mr. President, will the Senator from Vermont yield to me so I may ask the Senator from Minnesota a question?

Mr. PROUTY. I yield.

Mr. COOPER. I read in the RECORD the remarks of the Senator from Minnesota and also his explanation of the bill. I have also read in full the statements of the Senator from Vermont. I expect to say something about the bill later, but I wish to ask the Senator from Minnesota a question or two about these provisions.

As I understand the argument of the Senator from Minnesota, he gives great weight to the fact that the Youth Conservation Corps as well as the State and community program would establish a work discipline.

I notice, on page 30, that a youth may enroll for 6 months, but his total enrollment may not exceed 2 years. It seems to me that is a long period of enrollment, not only in view of the fact that so few could participate in the program—15,000 in the beginning—but also because of the fact that if it takes 2 years to establish work habits, we do not have much hope of any real work habits ever being established. Why was the period of 2 years fixed? Why not 1 year?

Mr. HUMPHREY. I do not think it requires 2 years to establish work habits; but this bill is really, in part, essentially an employment bill. I do not think it goes as far as it should as an employment bill. Therefore, if there were a necessity for a young man to have a job, 2 years' experience would be to his advantage, and to the advantage of the country, since he would be working on projects already authorized, and which the Department of the Interior or the Agriculture Department have already planned. I would have no objection if the enrollment were limited to 1 year.

Mr. COOPER. That is not the most important point of the bill.

Mr. HUMPHREY. But 6 months is a minimum period. I do not think the enrollment period should be less than 6 months, because the administrative costs would go up substantially.

Mr. COOPER. I understand that is not the most important point of the bill, but the purpose of the bill is to return these young people to the regular labor market, with the hope that they may obtain employment.

I suggest that 2 years is a pretty long time to inculcate work habits.

Mr. HUMPHREY. That is only one of the attributes of the program. The matter of work experience is covered by page 30 of the bill, where it is stated, in subsection (c):

> Enrollment in the Corps shall be for a period of not less than 6 months; if permitted by the Secretary, an individual may reenroll, but his total enrollment shall not exceed 2 years.

It might be that he would like to stay on; the matter is under the discretion of the YCC officials. But he is not going to be overpaid. His cash income will be $60 a month. I doubt that very many would want to make a career out of it, so to speak.

I suggest to the Senator from Kentucky that, if he wanted to modify that period of time—I do not have any strong feelings about it—in order to assure a greater turnover of young people, I would have no objection.

Mr. COOPER. On page 9, line 12, the section refers to the criteria——

Mr. HUMPHREY. Is that on page 9 of the bill?

Mr. COOPER. Yes.

Mr. HUMPHREY. Does the Senator have the committee bill, the new bill, report No. 111?

I believe it is on the desk. The committee revised the bill.

Mr. COOPER. I refer to section 107(d).

Mr. HUMPHREY. "Composition of the Corps."

Mr. COOPER. Yes. It establishes a formula for apportionment. From the language it would appear that if a camp were established in a certain area, it would diminish the apportionment for that area. Is that correct?

Mr. HUMPHREY. No; I do not understand that to be the case.

Mr. COOPER. I will read the language. I read from page 30, the last line:

> (2) the extent of additional allocation which should be made to any State in order to compensate for benefits accruing to other States from the placement within such States of camps established or maintained under this title.

It seems to me that language would intend that if a camp were established in the State of Minnesota, other States must be compensated. This would mean that there would be less enrollment in the State of Minnesota. I do not see any relevancy to that section.

Mr. HUMPHREY. This language is placed in the bill as a compensating factor for many Eastern States which have very few Federal parks and Federal forests, to give them a little extra consideration in light of the land holdings in Federal parks and Federal forests located in the Western and Midwestern States.

I do not feel bound by these provisions. It is a compensatory factor to accommodate highly populated Eastern States.

Mr. COOPER. These are rather small items that I have noted——

Mr. HUMPHREY. They are worthwhile items, and they should be discussed.

Mr. COOPER. The first point I raised seemed to show that the intended purpose of training these people in work habits was contradicted by planning to keep them enrolled for 2 years. My second point goes to the fact that it does not seem relevant or proper to reduce the number of enrollees in a State because it might happen to have a camp in it. It might be a State which has the greatest unemployment under the other factor.

Mr. HUMPHREY. The unemployment factor is another compensatory factor. A State gets additional enrollees on the basis of the degree of unemployment. There is a 50-percent enrollment on the basis of the population of the State, and the other half is based on need. I do not believe I had in my original bill this language:

> (2) the extent of additional allocation which should be made to any State in order to compensate for benefits accruing to other States from the placement within such States of camps established or maintained under this title.

I believe that amendment was offered in committee by the Senator from Rhode Island [Mr. PELL].

Mr. COOPER. Yes; it is new language.

Mr. HUMPHREY. It was to take care of some of the Eastern States which had no Federal lands.

Mr. RANDOLPH. That is correct.

Mr. HUMPHREY. I shall be glad to discuss with the Senator this committee amendment, but I believe that the Senator from Pennsylvania [Mr. CLARK] may wish to have something to say about it.

Mr. PROUTY. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. JAVITS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. JAVITS. Mr. President, I am a member of the subcommittee and of the full committee, and have had contact with the proposed legislation during the time it has been pending, both in this Congress and the preceding Congress. I should like to state my position with respect to the bill.

First, there is no question about the need. The need is extremely urgent. If anyone had any doubt about that, the rate of high school dropouts, at about 30 percent of those in vocational schools at an even higher rate, brings so many new claimants into the labor market as to make it necessary for us to do something about the situation, if we are not to be inundated, not alone with unemployment, but with crime and juvenile delinquency. In my opinion, this is one of the main reasons why such legislation is needed.

The figures show a rate of unemployment by those in the 16-to-21 age bracket which is verging on three times the unemployment rate for the country generally. The unemployment rate in this age bracket is about 15.6 percent; that for the country generally is 5.6 percent, in round figures. Those figures are not nearly so impressive as the numbers. In February, 1,081,000 young people in the 16-to-21 age bracket were unemployed. In March, 1,202,000 young people in the 16-to-21 age bracket were unemployed.

This situation is completely intolerable on any grounds, let alone on economic and social grounds. So as we endeavor to cope with the general problem of unemployment, which hits this age group so heavily, we must do something special about it. So, in my view, a bill which seeks to meet that problem must be supported.

It is a grave problem in the city of New York, which represents about half the population of the whole State of New York, where in round figures there are at least 5 percent or more, as it is a great city and concentrates this problem. But New York City has roughly 1,100,000 unemployed in the 16-to-21 age bracket. It is a grave social problem, not only with us in our big city, but also in other big cities throughout the country.

The question is: What to do, and what to do which will give us the most for the money and the longest mileage for what we plan to do.

It is for that reason that I have opposed title I, the provision for the Youth Conservation Corps. I do not think we begin to buy in that provision what we ought to buy for what we expect to spend, considering the size of the problem. A mere reference to the bill demonstrates what I mean.

Under title II, provision is made for 60,000 enrollees. That is a community program, in which young men and women will be employed in the community on useful works—and there are legions of them. That title provides $50 million for the first year.

For the same $50 million, jobs would be provided for 15,000 persons in the YCC camps. Considering the size of the problem, this would be a completely uneconomical utilization of resources. It has been said that there are grave conservation problems in many States and that the Federal Government should help to solve those problems. I agree that it should; but the help should come through Department of the Interior conservation programs, not in this way, under the guise of helping to relieve youth unemployment, when we are doing it most economically by trying to implement conservation needs in the bill.

I agree that the members of the Civilian Conservation Corps had a fine experience in the 1930's. But there was not the draft then. That activity took place during the depths of an unemployment situation which ran, at one point, to about 25 percent of the employable population, and throughout the period of World War II in the 15-percent range. No such comparable situation exists today. In addition, we have the draft today. The YCC camp project which is provided in the bill will be nothing but paramilitary organization preliminary to the draft. Again, I do not think that activity ought to be bracketed into the bill under the guise of an effort to furnish employment to young people. Therefore, I am fully cognizant of what is afoot in title I.

When a motion is made to strike title I, I shall support it. If I support it, it will be only because I believe it is our duty to increase the number provided in title II, not to 60,000, but to 100,000, and to provide more money so that that program can function. It is a fine program on the homefront, with local participation. Incidentally, it will not penalize States and communities which cannot afford to contribute money, because their contributions can be as little as 25 percent and can be in kind as well as in money.

Mr. ROBERTSON. Mr. President, will the Senator from New York yield?

Mr. JAVITS. I yield.

Mr. ROBERTSON. The Senator from New York is correct in saying that title II is much more practical than title I of the bill. I shall certainly vote to remove title I. I know several Members of the Senate who will support the bill if it is reduced to title II, but who will not do so if title I remains.

Mr. LAUSCHE. Mr. President, will the Senator from New York yield?

Mr. JAVITS. I yield.

Mr. LAUSCHE. Will the Senator restate his reasons for his judgment that title I should be stricken?

Mr. JAVITS. I think the size of the problem, which is a problem running into 1,100,000 unemployed between the ages of 16 and 21, when related to the numbers to whom we need to give some special help, which is what the bill is all about, makes the use of that money for the YCC camp operation uneconomical in an area in which we cannot afford to use it economically. A mere reference to the bill will demonstrate that. Title II provides for 60,000 enrollees. For the same amount of money, there would be 15,000 enrollees under title I.

Mr. CLARK. Mr. President, will the Senator from New York yield?

Mr. JAVITS. I yield.

Mr. CLARK. The Senator realizes, does he not, that title II is financed, in part, probably to the extent of 50 percent, by the States?

Mr. JAVITS. I do. I see nothing wrong with that, especially in view of the fact that the States financing need not be in the form of money; it can be in kind—buildings, facilities, structures, personnel. It can be in anything other than money.

Mr. CLARK. But in results, so far as the taxpayers are concerned, much more money would be put into title II than into title I.

Mr. JAVITS. I understand; but at least it is broken down on the basis of local responsibility. Even in the conservationist area, title II entitles the States themselves to use personnel for conservation within the States. I see no reason why that is not a very mature, balanced approach, following the lines of the Area Redevelopment Act and the Manpower Retraining Act.

In case the Senator from Pennsylvania has any worries, I intend to vote for the bill. However, I shall lend myself to the effort to strike title I, because I do not believe it provides an economical use of our resources.

Mr. LAUSCHE. Mr. President, will the Senator from New York further yield?

Mr. JAVITS. I yield.

Mr. LAUSCHE. Ohio has 5 percent of the population of the country. If we divide the 15,000 enrollees under title I, Ohio would be entitled to supply 750 enrollees. The Senator from New York believes, does he, that the cost which would be entailed would not measure up to the good which would be done in solving the country's unemployment problem?

Mr. JAVITS. I must add a corollary to that, if the Senator will permit me to do so. It is that the utilization of the same amount of money under title II begins so much better to reach the great numbers of persons who are involved that I think, taking the scheme of the proposed legislation in totality, it would be an improvident utilization of the funds which are devoted to title I. That is the totality of my argument. That is the argument I made in committee.

I believe we have an opportunity to render a greatly needed service. I believe that the idea or concept of a corps—let us call it a domestic peace corps, because that is what it really is—which is broken down by communities is an extraordinary idea, one well worth the support of Congress.

There is a delineation, based upon a survey made by the mayor of the city of New York—my home city—which shows areas in which this kind of service can be very fruitfully rendered. The mayor of New York indicated a minimum of 1,800 jobs in departments and nonprofit agencies in New York City alone.

They include jobs in hospitals, libraries, schools, law courts, children's homes, public housing projects, settlement houses, social and civic centers, day camps, recreational facilities, including playgrounds, and private community service agencies, such as the Visiting Nurses' Association. For example, there is a strong movement in my city to keep school buildings open after hours, but the difficulty is to secure personnel to supervise them.

Incidentally, these opportunities would afford employment to youths who otherwise might turn their attention to lawless activities. Also, they would take off the streets youths who otherwise might give their attention to lawless activities.

So I believe title II is excellent. I am all for it. I should like to see title I and title II combined, and the funds proposed to be used for title I used in title II, where they can be expended most economically in the best interest of the scheme of the proposed legislation.

Finally, the vocational training amendment, which I had the honor to sponsor, and which is on page 42, lines 3 to 12, of the bill, ties directly into title II. I am grateful to the Senator from Pennsylvania [Mr. Clark], who is in charge of the bill, for having accepted that amendment. I think we all feel that it was a measurable improvement in the bill. But it ties directly into title II, and emphasizes the fact that we shall be training these young men for permanent roles in life, not merely to take them off the streets during the time they are enrolled in the program.

It would also accomplish tying this program in with other programs, notably the area redevelopment program and the manpower retraining program. It would also make it possible to use some of the resources made available by this act in order to supplement what may be going on locally, in terms of vocational training. I think that would greatly strengthen the bill.

Finally, the local contribution is really reduced to a minimum. The formula is excellent—as low as 25 percent, if the Secretary of Labor believes that a particular community cannot do any better. Again I emphasize that the contribution is to be one in kind.

So it seems to me this provision emphasizes the desirability of local interest; and any community in the country, no matter how poor, will be able to find an inkind contribution of 25 percent for so desirable a program.

A mixed Federal-local program is always desirable, especially when it can be managed without deprivation to communities which are under par economically.

So I think the plan is excellent, and I believe it will be strengthened if we combine titles I and II. If the motion to strike out title I, which I understand will be made by the Senator from Vermont, is agreed to, I shall move to combine titles I and II and to increase the amount to $100,000, and to increase the various other amounts so that they will be sufficient to carry on a program of $100,000, rather than one of $60,000. I think we would then have a much better piece of legislation which would command a much greater majority both in this body and in the other body.

Mr. RANDOLPH obtained the floor.

Mr. MAGNUSON. Mr. President, will the Senator from West Virginia yield to me?

Mr. RANDOLPH. I yield to the Senator from Washington.

Mr. MAGNUSON. Mr. President, in commenting on the measure now before the Senate, let me state that the State of Washington has made a beginning in this particular field with the establishment of a so-called State youth conservation group. It is a very modest beginning. Last year fewer than 100 young people were working on the program; but their accomplishments were amazing. In particular in the forests, where 56 of those who were eligible were employed, in a short period of time they built more than 14 miles of roads, opened up approximately 100 camps which had been more or less abandoned in the forest reserve and other places, and, above all, created a great number of fire lanes, which in turn more than pay for their cost, because the reduction in the number of costly forest fires in our area is in proportion to the increase in the number of fire lanes, with the resultant increased access to these timber resources. So the State of Washington is ready for this sort of national program. I am sure the cooperation there will be great, and the results will be exactly as they have been described today by many Senators.

I had intended to speak at length on the bill. Today, I came across an editorial entitled "If We Look Around Us, We'll See That the President Is Right." The editorial was published in the Seattle Times on March 31; and it pertains to this bill and to the program under it, and deals at some length with the waste of manpower which occurs when there are idle youth and when there are problems in connection with teenagers and juvenile delinquency. The editorial also deals with the matter of work camps similar to the CCC camps of the late 1930's.

I wish to have the editorial printed in the Record, because it states succinctly and briefly my views on this bill and this program. Therefore, Mr. President, I ask that the editorial be printed at this point in the Record.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

[From the Seattle Times of Mar. 31, 1963]

If We Look Around Us, We'll See That the President Is Right

Critics of President Kennedy's recommendation that Congress enact a Youth Employment Act frequently contend that it is "unnecessary because States and local communities can accomplish what needs to be done."

The simple truth is, however, that neither local and State agencies of government nor privately supported welfare agencies are getting even close to meeting the critical need for expanded employment opportunities for youth.

Mr. Kennedy has cited statistics that demonstrate that the situation has reached a condition of national emergency.

"The annual birth rate since 1947," Mr. Kennedy told Congress, "has been 30 percent higher than it was in the 1930's. As a result, the number of youths under 20 rose from 46 million in 1945 to 70 million in 1961. They will number 86 million by 1970.

"Unemployment among young workers today is two and a half times the national average, and even higher among minority groups."

While Mr. Kennedy's figures are based on national surveys, the situation in our own community is equally bad for youngsters—especially those who have dropped out of school. And, as Mr. Kennedy emphasizes with national statistics, youngsters of minority races have fewer employment opportunities here than do others.

The Reverend Samuel B. McKinney, pastor of Mount Zion Baptist Church, spoke of the plight of Negroes here last week when he lamented conditions in the community which contribute to such incidents as when two teenagers were shot to death and another was wounded. While Mr. McKinney mentioned a broad sweep of social conditions (which are by no means confined to Negroes) he gave emphasis to the lack of employment opportunities available to youths.

Mr. McKinney suggested the need for "work camps" similar to the Civilian Conservation Corps of the 1930's, which even old critics of the New Deal recall as having served useful purposes.

Mr. Kennedy's program, in the opinion of the Times, contemplates action even superior to the former Conservation Corps. It would, of course, reestablish such forest camps. But even more important it would be the beginning of incity training programs for youths to give them work experience and discipline aimed at fitting them for private employment.

Briefly described, Mr. Kennedy's program calls for local youth corps to work in hospitals, schools, parks, and on other nonprofit community projects. Payment, shared equally by the local agency and the Federal Government, would be $60 monthly with board where needed.

This is not envisaged as a program solely to "get the teenagers off the streets." It is one to carry on useful work which otherwise would not be done, and, more important, to teach the youngsters how to work.

The waste of manpower from idle youth is something the Nation can ill afford, in addition to what is being done to the teenagers born of a generation where vocational opportunities are becoming increasingly limited.

> It is true enough that many would prefer to take the easy route of becoming welfare charges. But it is equally true that economic conditions which deny them job opportunities are a compounding factor to moral stagnation.
>
> It is this situation that Mr. Kennedy seeks to get at in his pleas that Congress act on his recommendations. And it is this situation his critics contend can be met by local agencies without Federal pump priming.
>
> Mr. Kennedy's critics ought to get out and see how the situation is not being met. And Seattle is no exception to the national rule.

Mr. INOUYE. Mr. President, will the Senator yield?

Mr. RANDOLPH. I yield to the distinguished Senator from Hawaii.

Mr. INOUYE. Mr. President, I call up my amendment, No. 47, and ask that it be stated.

The PRESIDING OFFICER (Mr. McGovern in the chair). The amendment will be stated.

The Legislative Clerk. On page 49, after line 17, it is proposed to insert the following new section:

> Sec. 301. The term "State" as defined in this Act shall include the District of Columbia, Puerto Rico, Virgin Islands, Guam, and American Samoa. To the extent there are qualified applicants, programs, and appropriations, each State as defined herein shall be assured of not less than fifty enrollees under title I and fifty enrollees under title II.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Hawaii.

Mr. INOUYE. Mr. President, I offered a very simple amendment that will assure that no State shall receive less than 50 enrollees respectively under title I and title II, subject however to the availability of qualified applicants, programs, and appropriations.

American Samoa, Guam, the Virgin Islands, Puerto Rico, and the District of Columbia are included in the definition of "States" for the purposes of this amendment.

As the companion bill was reported in the House there is an amendment which protects the sparsely populated States, such as Alaska, Nevada, New Hampshire, Delaware, South Dakota, and Hawaii; however, the House amendment fails to give adequate assurances for such areas as American Samoa and Guam.

My amendment does this and in addition encompasses title II in the same way as the House amendment affects title I.

I have tried my best to be reasonable in this amendment. I am pleased to advise my colleagues that I have discussed this amendment with the prime sponsor of the measure and with the Senator in charge of the bill and have received their approval.

Under this amendment, the State must have qualified applicants. Further, under this amendment, the State must have a qualified program. Finally, there must be adequate appropriations. I believe that the floor I have suggested is at a reasonable level. For example, under the present bill under title I, Hawaii would draw four-tenths of 1 percent of the national enrollment. Based on population figures Hawaii would therefore get 30 enrollees and such additional enrollees as may be allocated due to unemployment. Under this amendment, Hawaii would be assured of a floor of 50 enrollees to work in our national parks and in other Federal and State conservation, recreational, educational activities.

Under the present bill, American Samoa and Guam would also be entitled to less than 10 enrollees per territory. My amendment would give them 50 enrolees under title I plus 50 under title II.

May I assure Senators from the heavily populated States that the amendment will not adversely affect their States. The amendment would give the sparsely populated States an opportunity of carrying out an effective and meaningful youth program. I am certain my colleagues will agree with me that it would be most difficult to carry out any program which will have any impact if such area be entitled to less than 10 enrollees. Further I believe that my amendment draws attention to the modesty of this bill. I believe it represents an effort to meet a program facing our national youth. The program will be developed on a sound basis and if it works well it can be expanded. Through this amendment the smaller States would be assured of full participation.

Like many of my colleagues I am impressed by the fact that General of the Army George Marshall, who worked closely with the CCC program in the thirties said of this program and his work that it had been "one of the most inspiring experiences which I have ever had." We can build on a record of a tried and effective program that was an unqualified success.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. RANDOLPH. I am happy to yield to the Senator from Pennsylvania.

Mr. CLARK. As I understand the amendment, it would establish a floor of 50 enrollees below which no State would be required to fall, so that there would be at least 50 enrollees from the smaller States. Is that correct?

Mr. INOUYE. The Senator is correct.

Mr. CLARK. Mr. President, I hope very much that the ranking minority member of the committee will agree to the amendment, which is quite noncontroversial, so that it may be disposed of now by voice vote and the Senate may move on to the next order of business.

Mr. PROUTY. Mr. President, I have no objection to the amendment.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Hawaii.

The amendment was agreed to.

Mr. GRUENING. Mr. President, will the Senator yield?

Mr. RANDOLPH. I am privileged to yield to my friend, the Senator from Alaska.

Mr. GRUENING. Mr. President, I highly commend our distinguished colleague from Hawaii [Mr. Inouye], who has greatly strengthened the bill and has taken into consideration the onetime stepchildren outside the so-called continental United States, two of which are now happily a part of the Union. But he is no less solicitous for those who still do not have the full measure of self-government to which all Americans properly feel themselves entitled. I congratulate the Senator from Hawaii [Mr. Inouye] on his valuable amendment. As time goes on, those of us who knew that the admission of Hawaii to the Union would greatly strengthen our Union have had our expectations daily confirmed by observing the actions of the distinguished junior Senator from our 50th State. His amendment will be beneficial to the citizens of Hawaii, Alaska, Guam, Samoa, Puerto Rico, the Virgin Islands, and the District of Columbia.

Mr. INOUYE. I thank the Senator.

THE YOUTH EMPLOYMENT ACT—A HANDCLASP, NOT A HANDOUT

Mr. GRUENING. Mr. President, I am astounded and perplexed when I read some of the reasons advanced in opposition to the Youth Employment Act, S. 1. For example, let me quote from the minority views on S. 1 appearing in Report III:

> We do not believe that shouting the slogans and attempting to revitalize the emergency programs of a bygone era contribute to the solution of the problems of our youth in the 1960's.

That so-called bygone era gave to this Nation a rebirth of confidence in many ways, one being the effective administration of the Civilian Conservation Corps which put more than 3 million jobless young men to work building forest trails and shelter cabins and creating improvements of lasting value.

In writing my book, "The State of Alaska," I was pleased to acknowledge the positive value of the CCC. One unique Civilian Conservation Corps project in the then Territory of Alaska was the restoration and relocation of a great number of totem poles, monuments of the culture of the Northwest Indians which would otherwise have disintegrated and been lost. Thanks to the work of the CCC the colorful, descriptive, and monumental totem poles stand today—continuing tributes to the men and women who carved them, continuing tributes to the men who helped preserve them when as youths they went north to Alaska, and in so doing kept a valued portion of Alaskan lore for posterity.

There is no need to relive the past as it was. But one can learn by past experience. If that experience proved bad, it should be tabled. If that experience provided building blocks which can be reused, perhaps in different shapes, let us set to work confident and reassured, rather than creating doubts where only illusory shadows flit.

In my discussion of President Kennedy's proposed Youth Conservation Corps on March 21, 1961, I said:

> This is a most refreshing new look by the executive branch of the Government at a vital program.

In 1960 as a cosponsor of the distinguished senior Senator from Minnesota's [Mr. Humphrey] Youth Conservation Corps bill, I discussed the need to set to work developing our natural resources.

In Alaska the CCC enrollees built trails, shelter cabins, cleared away obstructions, planted trees, checked soil erosion, and did other sorts of work needed but which did not fit into a category of Federal, State, or private activity. The need continues. Man still requires trails, and cleared lands upon which and in which he may better appreciate this great country.

The U.S. Senate has in past years expressed its approval of this legislative need, and I trust it will do so again.

The New York Times in 1961 observed editorially:

> In the spirit of the CCC almost a generation ago, the YCC today can be a tremendous force for the conservation of American youth in the 1960's.

So let us take a page from our progressive past, examine it positively, and then, if you will, copy the best and mix it with the new.

In its 9 years of productivity the Civilian Conservation Corps, established by act of Congress in March 1933, gave employment and work training to 3 million men, most of them joining up at the ages of 17 or 18.

The bill we consider today is different in many ways. It spells out precisely the age limitations. It allows its participants to keep regular hours of work, perform useful activities, complete their education, learn to live together, and to practice personal and public hygiene.

Title I, the Youth Conservation Corps, provides for a YCC to be administered by the Federal Government for work on Federal lands, mainly forest and park lands. For young men only, it provides them with the opportunity to learn, and it gives us here today the opportunity to strengthen the Nation internally.

Title II, the State and community youth employment program permits all States and communities to participate if they desire. Conservation camps could be established on State lands to improve existing natural resources of recreational facilities.

Work opportunities are vast—in hospitals and libraries, for example, and in improving blighted city areas. Both young men and women could participate in title II. The cost-sharing formula is similar to that incorporated last year in the Accelerated Public Works Act, giving us yet another example of why it is never to late to reuse.

The educational scope of the bill is illustrative of the thinking which has accompanied the proposal. Subjects can be taught at the YCC camps or at community facilities.

I will not detail what has been detailed. But I believe we would do well to consider the calculable and incalculable benefits embodied in the text of the proposed bill.

Mr. President, Congress appears no closer to enacting a general education bill today than yesterday, nor indeed we seem no closer this Congress than during the last. The passage of S. 1 will give us some progress in this important area.

I am convinced that S. 1 will help correct the national high school dropout deficiency which persists.

I am convinced that S. 1 will in a modest way meet the advances of automation which give us statistics such as 15.6 percent of youths aged 16 to 21 are unemployed, a disproportionately large number.

I am convinced that the young men and women, aged 16 to 21 seek no handout, but rather a handclasp. Our handclasp can be inspired or insipid.

I have read the report on S. 1 and consider it an excellent analysis of the need for the legislation. No one asserts that S. 1 provides the only answer to unemployment, lack of skills, inadequate education, or automation, but the bill does provide some tools to help meet these specters which will, if untended, grow to enormous size.

The merits of S. 1 are known in Alaska and I ask unanimous consent to have printed in the RECORD at this time a copy of a letter I received from Mr. Victor Charles, secretary, Northwestern Alaska Chamber of Commerce, Nome, Alaska.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

APRIL 3, 1963.

Hon. ERNEST GRUENING,
U.S. Senator,
Senate Office Building,
Washington, D.C.

DEAR SENATOR GRUENING: The Northwestern Chamber of Commerce at Nome heartily endorses your bill S. 1 and the establishment of a Youth Conservation Corps in Nome.

A suggested site for location of a Youth Conservation Corps is the U.S.S.R. Mining Co. Camp No. 5, which is no longer used by the mining company.

Your good efforts in behalf of S. 1 are appreciated and we gladly give you our support in favor of this bill.

Sincerely yours,

VICTOR CHARLES,
Secretary, Northwestern Alaska Chamber of Commerce.

Mr. RANDOLPH. Mr. President, I yield to the distinguished Senator from Virginia [Mr. ROBERTSON].

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed at this point in the RECORD a memorandum on the bill prepared by a staff member, testimony on the bill by Dr. Austin S. Murphy, which I thought was very thoughtful and helpful, and an editorial published in the Washington Evening Star of March 11, 1963.

There being no objection, the memorandum, editorial, and statement were ordered to be printed in the RECORD, as follows:

MEMORANDUM ON S. 1

I. THE COST OF THE YCC

The Secretary of Labor estimated that the 12-month cost per enrollee is $3,985. This cost does not include the expense of materials and equipment, estimated to add between $150 and $1,000 per enrollee. It assumes camp construction costs of only $250,000 per installation amortized over a period of 20 years.

However, Department of Agriculture and Department of Interior figures in 1961 showed annual costs per boy as follows:

In a 25-man unit: $12,297 per boy per year.

In a 50-man unit: $9,016 per boy per year.

In a 100-man unit: $8,263 per boy per year.

In a 200-man unit: $7,171 per boy per year.

Moreover, Richard G. Farrow, director, Bureau of Youth Services, Office for Children and Youth, Pennsylvania Department of Public Welfare, testified that the cost per camp was $385,000 for camps in Pennsylvania, built in accordance with specifications of the general State authority.

The cost per camp is amortized for 20 years, but the program is authorized for only 5 years, and the congressional annual appropriations process does not provide for amortization. For the authorized 15,000 enrollees in the title I program, 300 camps of 50 men each would be required. At $250,000 per camp, this amounts to $75 million, $15 million more than the total annual appropriation for the first year of the program. The Secretary of Labor estimated the cost per enrollee for housing, amortized over 20 years, would amount to $250 per year. Assuming that materials will cost $1,000 per enrollee, this gives a total annual cost per enrollee of $4,985. Subtracting $250 for housing gives $4,730 per enrollee minus housing costs. If 15,000 men are enrolled in title I, this gives a possible full cost for title I, without housing, of $70,950,000, or $10,950,000 more than the amount to be appropriated for title I.

II. ARGUMENTS AGAINST TITLE I (FROM MINORITY VIEWS IN REPORT)

1. Title I does not meet the problem: The problem is that of giving employment opportunities to youths coming into the labor market, not make-work or stopgap jobs. This is the view of the Washington Post, not noted as antiadministration. Secretary of Labor Wirtz testified that "there is no suggestion that this training program will qualify one of these enrollees for a skilled occupation."

2. The case for S. 1 was poorly conceived: In a list of existing camps submitted by Secretary Wirtz, one such camp supposed to be located in Vermont was nonexistent. Another camp located in Arizona was in an area with an average daytime temperature of 125°.

3. The YCC will not provide skilled training: (See Secretary Wirtz' quoted statement above).

4. The cost of the YCC. (See above.)

5. The potential discipline problem in the camps: There is nothing in the bill, which has been modeled after the old CCC, to provide the necessary discipline through the use of Army personnel and methods as was the case in the CCC.

6. The Corps would weaken family ties: The $60 per month pay goes directly to the enrollee who may enroll without permission of his parents. Senator GOLDWATER proposed an amendment to provide permission in writing of parents for enrollment and to provide that a portion of the enrollee's pay would go directly to his parents.

7. Antidiscrimination: Senator GOLDWATER proposed an amendment to bar discrimination on the basis of race, creed, or color, pointing out that the old CCC model contained a specific provision prohibiting racial or religious discrimination, but his amendment was rejected.

III. OTHER ARGUMENTS RELATED TO TITLE I

1. The educational purpose of the bill infringes upon State responsibilities and powers: Although the stated purpose is to provide work experience, the clear intent of the bill is also to give educational experience to the high school dropout, a student not now effectively reached by conventional educational methods. The 5-year authorization plus the 20-year amortization of construction costs implies a continuing program of an educational nature for title I. This raises the question whether an amendment to the bill would be appropriate to provide grants-in-aid to States who would themselves administer title I type work experience on Federal park and forest lands in addition to their authority to provide work under title II of the bill.

2. Educational opportunities are hard to provide through Federal auspices in newly constructed camps by comparison to their provision by existing State educational organizations, whether at home or in camps within the State.

3. States and communities are already showing some initiative in youth employment programs: "Workreation" programs

in California, other local work programs in Boston, Chicago, Cincinnati, Seattle, Detroit, Philadelphia, New York City; and Youth Conservation Corps activities in Massachusetts, Oregon, Wisconsin, and the city of Philadelphia.

IV. TITLE II

The language of title II provides "useful work experience opportunities for unemployed youths" in "programs for the employment of young people in State and community service activities, hereinafter authorized, including the conservation, development, and management of the natural resources of the State and community and the development, management, and protection of recreational areas within the State and the community."

Senator Clark, on the floor of the Senate, Tuesday, April 9, said:

"State recreation facilities and forest lands are deteriorating for lack of hands on the State and local payrolls to do the work. Help is needed in the cities' playgrounds, libraries, and hospitals, and to clean up blight."

This seems to imply that title II authorizes programs of work experience in city community facilities, including hospitals, by a generous interpretation of the language of the bill.

Although the report, in describing title II, does not explicitly refer to such programs, nothing in its language is inconsistent with Senator Clark's interpretation.

V. ARGUMENTS FOR TITLE II

1. Title II provides far more work experience for the money expended.

2. Title II provides for education at the State and local level according to the constitutional authority for education. If title I were deleted and title II amended to provide for State administration of work experience on Federal lands within a State as well as State and local lands in that State, the potential expenditure in the first year of the program would be $150 million even though the Federal appropriation were only $100 million.

3. Several of the arguments against title I do not apply directly to title II, such as, weakening of family ties, the difficulty of providing training in camps through Federal auspices, and the unreality of the work experience in park lands for city bred youths. Also, title II provides for the employment of young girls as well as young men.

VI. GENERAL COMMENT

A hasty study of the bill and the report suggests that the Congress is groping toward a new type of education for the high school dropout whose needs are not met with conventional programs. It is generally agreed among educators that many high school dropouts also find vocational education a poor substitute for on-the-job experience. The question is raised whether the Congress is moving toward a new type of educational system for such unskilled but healthy and physically mature young people. If this surmise is correct, it strengthens the argument that Federal legislation should move in the direction of grants-in-aid to States, and that the responsibility for education of this type should remain in control of the States.

STATEMENT OF DR. AUSTIN S. MURPHY, DIRECTOR OF THE EDUCATION DEPARTMENT, NATIONAL ASSOCIATION OF MANUFACTURERS

(Statement before the Subcommittee on Employment and Manpower, Committee on Labor and Public Welfare, U.S. Senate, on S. 1, the Youth Employment Act, February 28, 1963)

My name is Austin S. Murphy, and I am director of the education department of the National Association of Manufacturers. I appreciate your courtesy in providing an opportunity for me to present the association's views on the Youth Employment Act.

Our organization includes more than 16,000 companies in all industries and in all parts of the Nation. While we are not specifically a spokesmen for either small business or large business, the fact is that more than 80 percent of the association's members employ fewer than 500 workers and 28 percent employ fewer than 50. The association's policies are formulated by its members, and more than 3,000 individual representatives of member companies participate in the policy forming process. For these reasons I can assure you that this statement reflects the views of a broad and representative cross section of manufacturing industry.

The Youth Employment Act has two objectives. Title I establishes a Youth Conservation Corps to provide temporary employment for young men and to accelerate conservation programs. Title II authorizes the initiation of local area youth employment programs in which young people will be trained and employed in State and local community service activities. Both of these proposals are of major concern to us because they bear directly on the long-range interests of our members in the fields of education, conservation, fiscal policy, and industrial relations.

The National Association of Manufacturers regards passage of the proposed legislation as inappropriate and unnecessary at the present time. In our opinion, it appears unlikely that these programs will make a significant contribution to a meaningful solution of the problem of unemployment among youth. At the same time, initiation of the programs would require an increase in Government expenditures, starting at $100 million in the next fiscal year, at a time when the size of current and prospective Government deficits is being questioned by many citizens and Members of Congress. In addition, the proposals appear to envision direct Federal participation in the education process, which we regard as undesirable.

We are in complete accord with those who regard unemployment among youth as one of the serious problems facing our economy today. We cannot, however, accept the view that creation of jobs by Government flat represents a worthwhile solution of that problem. To the contrary, it is our opinion that there is much greater promise for both unemployed youth and for the economy as a whole in a program designed to create an ever-growing number of jobs through stimulation of our rate of economic growth.

In the time at my disposal, I should like to do two things. First, I would like to review briefly the provision and implications of the proposals which the committee has before it. Second, and of equal importance, I would like to outline an alternative program which, in our opinion, represents a constructive approach to a lasting solution of the youth unemployment problem.

THE YOUTH CONSERVATION CORPS

Title I of the bill, the Youth Conservation Corps Act, establishes a Youth Conservation Corps in the Department of Labor for the dual purpose of providing temporary employment for young men between the ages of 16 and 22 and of accelerating conservation programs. Enrollees are to be drawn from each of the States on the basis of population with consideration given to the additional needs of depressed areas. Enrollees will be provided with supplemental training and educational services in addition to the program of work and on-the-job training which stems from the primary mission of the Corps.

This proposal represents an attempt to solve the problem of unemployment among youth by means of made work and the creation of jobs on Government payrolls. No attempt appears to have been made in previous testimony on this proposal to document a need for this particular approach. Nor, have estimates been provided as to the probable impact of the Youth Conservation Corps on the economies and levels of employment in the local areas where such camps may be located.

Specifically, consideration of the program, as outlined in the bill, gives rise to three objections. First, establishment of the Youth Conservation Corps represents a relatively weak and unsatisfactory solution to the problem of youth unemployment. Second, there appears to be a very real question as to whether the establishment and operation of such camps is feasible at the present. Finally, there is also a question as to whether participation in the Corps will have a favorable effect on the well-being, development, and safety of the individuals concerned.

EMPLOYMENT ASPECTS

Clearly, the proposed Youth Conservation Corps is patterned after the CCC camps of the 1930's. The differences between today's conditions and those that gave rise to the original program, however, are substantial. More importantly, this proposal raises a question as to the wisdom of approaching the problem of unemployment through the discredited theory of make-work programs particularly during periods of prosperity.

During the 1930's the country was fighting a major depression. The unemployment rate at times exceeded 20 percent of the labor force and periods of joblessness affected virtually every family. In this context employment opportunities for youth were sharply curtailed. The CCC program was designed to ease the problem by providing work, maintaining morale, and improving the skills of the enrollees. The Corps appears to have gained general public approval at the time.

The conditions which gave rise to the CCC program of the 1930's, however, are not present today. Although the rate of unemployment, in total and especially among younger workers, is undesirably high, it is far from a level which indicates the need for a depression program. In this connection it is significant that then Secretary of Labor Goldberg when he presented this program to your committee in 1961 voiced some doubt as to whether the Youth Conservation Corps approach is suited to current needs. He said:

"I know that, measured against the task assigned to it, the Civilian Conservation Corps compiled a constructive record in the thirties, and I have been impressed by the number of people I know who profited through an association with the corps.

"But times are very different now. We feel we should try this type of program on a pilot basis first to determine whether it is geared to work as well today as it did in the 1930's." [1]

In addition this approach raises the more fundamental problem of the consequences for our economy of an attempt to solve the unemployment problem through the creation of additional jobs and public payrolls. True, this instance involves only a handful of men on a tentative basis. Experience has shown only too well, however, the rapidity with which such tentative pilot projects lead to vast, unwieldy, and well-entrenched programs.

The well-being of our economy and the standard of living of our people depends, in the first instance, on a steady growth in the production of goods and services by the private economy. There is widespread agreement today that the current tax burden which has resulted, in large part, from past expansions of public agencies, has the effect of erecting a barrier to growth and investment in the private economy and contributing to unemployment. The solution suggested here of increasing public payrolls to reduce unemployment will, in my opinion, inevitably worsen our problem rather than serving to provide a meaningful solution.

FEASIBILITY

There are two aspects to the problem of whether the Youth Conservation Corps program is feasible under today's conditions. One is whether young boys in the 16-to-22-year-age bracket will voluntarily participate in such a program. The other is whether an adequate number of qualified supervisory personnel will be available to operate the camps.

The first of these problems appears to be imponderable. To my knowledge the Labor Department has not documented a desire on the part of any substantial number of young people to become members of the Corps. The experience of the military, which in many respects offers a somewhat similar life, has been that even under the compulsion of potential draft, not enough volunteers appear to fill their quotas. There seems to be a substantial question, therefore, as to whether there is a sufficiently large number of potential enrollees to make the project worthwhile.

It is equally difficult to estimate whether there will be an adequate supply of competent supervisory personnel for the projected camps. The Civilian Conservation Corps was organized on the basis of camps of 180–200 men, each of which had 10 to 14 civilian supervisory employees and technicians including an educational adviser. Primary responsibility for the administration of each camp rested with two Army Reserve officers, and the Army also provided supplemental services such as dental officers, chaplains, and the disbursing facilities of its finance offices.

Two characteristics of the CCC organization appear to be lacking today. One is the fact that the Department of Defense will not participate in the proposed program. The other is that the abnormally high unemployment rates during the 1930's provided an unusually large pool of individuals that could be drawn upon to fill the administrative positions in the camps. It is somewhat doubtful, however, that under today's conditions there would be an adequate number of qualified individuals, willing to leave their homes and friends for extended periods, to participate in this program, especially in view of the shortages which are said to exist of doctors, dentists, teachers, and other skilled workers.

For example, one of the specific requirements of S. 1 is that the Secretary of Labor shall "insure the provision of a system of training and educational services to enrollees of the Corps, in addition to the regular program of work and on-the-job training." In the CCC a similar requirement was satisfied by assigning an educational adviser to each camp. Yet we find that, even in the 1930's when unemployment in general was high and educators were hard hit, the Civilian Conservation Corps experienced some difficulty in maintaining its staff of educational advisers. The American Youth Commission describes the situation as follows:

"Turnover rates for educational advisers have been chronically high throughout the life of the Corps; educational advisers with excellent qualifications for their work have usually left the Corps for other employment at the earliest opportunity."[2]

EFFECT ON THE INDIVIDUAL

Evaluation of a program such as the proposed Youth Conservation Corps must, in the final analysis, rest on its effect on the individuals who participate in the program. Will the existence of the Corps cause potential dropouts to leave school sooner than would otherwise be the case? Will the later employment experience of enrollees be better than it would have been without the training? Will it aid their individual development? Will it contribute to their well-being?

There is probably no way to measure the employment effects of a program such as we are considering. The life of the CCC paralleled the expansion following 1933, the recession in the late 1930's, and the early phases of World War II. Individual experience was probably governed as much by these factors as by the effects of Corps' enrollment. One can only conjecture, therefore, as to whether membership in the Youth Conservation Corps will effectively increase the employability of the individuals concerned. We have no guides.

There appears to be a substantial question, however, as to whether participation in this program during a period of general prosperity will aid in individual development and adjustment or whether it will lead to a feeling of isolation, demoralization, and the development of "poor attitudes." A question can be raised as to whether the fact of being socially and economically isolated from his contemporaries during this formative period could lead to development of a sociophychological pattern, which would result in the enrollee becoming a potential member of the hard-core unemployed rather than a productive and useful member of society. Some light is cast on this problem in the report of the American Youth Commission which comments on the adjustment problems of trainees to camp life as follows:

"It is not surprising that many new enrollees give up and go home before they have had time to get acclimated to camp life. Others become sullen or rebellious, defiantly breaking the rules until they get themselves expelled with a disciplinary discharge. Records show that out of a total enrollment of 2,500,000, nearly 500,000 have ended their camp experience through desertion or for disciplinary reasons."[3]

At another point the Commission stated that:

"The major weakness of the CCC consists of the limited extent to which it prepares most enrollees to participate in self-governing forms of group action or even to direct their activities as individuals. From this standpoint the Corps is of little assistance in the development of contributing citizenship."[4]

As to the physical health of the individual, camp life in the CCC apparently presented something of a hazard. The accident rate seems to have been a major problem throughout the life of the organization although concerted safety programs reduced the rate from 288.5 per thousand in 1934 to 127.52 in 1938. Also, although the death rate in the camps was lower than that for the general population in cases of tuberculosis and appendicitis, it appears to have been somewhat higher in cases of automobile and truck accidents, pneumonia, drowning, railroad accidents, and meningitis.

SUMMARY

In the foregoing paragraphs I have drawn several conclusions from the experience of the Civilian Conservation Corps. This did not stem from any desire to criticize that organization. Rather it was necessitated by the fact that the CCC experience offers the only parallel on which to base a judgment.

Granting the many differences between the Civilian Conservation Corps and the proposed Youth Conservation Corps, I believe that the following conclusions are justified:

1. Establishment of the corps represents a weak solution to the problem of unemployment among youth, yet contains the dangerous precedent of attempting to solve the problem by the creation of jobs on public payrolls.

2. There has been no apparent effort to document either (a) the willingness of a sufficiently large group of potential enrollees to participate in the plan to indicate a need for it, (b) the availability of a sufficiently large group of qualified supervisory personnel to indicate its feasibility, or (c) the probable effect of youth conservation camps on the economy of the local areas in which the camps will be located.

3. The experience of the Civilian Conservation Corps casts serious doubt on whether the proposed Youth Conservation Corps will contribute significantly to the future employability, personal development or the health and well-being of the enrollees, or whether it may have an opposite and undesirable effect.

In view of the many doubts and uncertainties surrounding the proposal for a Youth Conservation Corps and its fundamental inadequacy as a means of correcting youth unemployment, we believe that its adoption is undesirable. Such an organization would tend to deprive participants of the employment opportunities that might arise in their own communities during their absence at camp. Furthermore, substituting Government paternalism and regimentation for community, church, and family influences is a departure from the traditional American way of life and hinders the objectives of promoting responsible citizenship in its broadest sense.

LOCAL AREA YOUTH EMPLOYMENT PROGRAM

Title II, the Local Area Youth Employment Act, establishes a program of work experience for unemployed young people between the ages of 16 and 22. This section provides that the Secretary of Labor will notify State and local government officials as to the number, skills, and qualifications of available unemployed youth; assist and cooperate with local authorities in developing employment programs for those available; and provide, in cooperation with local school authorities, for the selection and referral of the youths for enrollment in approved programs.

The program is designed so that it will in no way interfere with existing activities. It is specifically provided that enrollees in the program will be employed either on publicly owned or operated facilities, or projects sponsored by nonprofit private agencies, that the program will permit or contribute to an undertaking that would otherwise not be initiated, and that no enrollee will displace a regular worker.

The National Association of Manufacturers is opposed to this proposal. It contains the weakness noted earlier in connection with the Youth Conservation Corps of attacking the unemployment problem by adding the unemployed to the public payroll. In addition, the employment is provided on wholly make-work projects. The procedures established destroy individual initiative and self-reliance in seeking employment. And, the training aspects of the programs appear to duplicate, to a large extent, those provided by the Manpower Development and Training Act.

In our opinion, this proposal is wholly deficient as a contribution to the development of a meaningful solution to the problem of unemployed youth. As is the case with the proposed Youth Conservation Corps, the solution suggested is to create jobs on the public payroll for those who happen to be unemployed and thus reduce the apparent rate of unemployment for this group. It is true, of course, that to the extent that this program would take individuals out of the labor market, it would ease the unemployment problem. It is difficult to believe, however, that anyone seriously thinks that the creation of make-work projects, by administrative order is in any way, other than pure semantics, a solution to the problem of youth unemployment.

---

[2] "The Civilian Conservation Corps" Recommendations of the American Youth Commission of the American Council on Education, 1940, p. 11.

[3] Ibid. p. 9.

[4] Ibid., pp. 16–17.

Another objection to this program is that it distorts traditional views as to individual responsibility for employment. Finding employment is generally considered a responsibility of the individual while the function of the Government is limited to providing a climate conducive to industrial growth and expansion and to individual development. The philosophy underlying this proposal, however, appears to be that the Government should assume responsibility both for creating jobs and for tailoring them to the needs and qualifications of specific groups of individuals.

There appears to be no justification for centralization in the Federal Government of a vast program of community helps under the guise of a solution to the unemployment problem. Such programs sap individual initiative and self-reliance, they inhibit the development of a feeling of pride and accomplishment in their work on the part of individuals concerned, and they impose an intolerable burden on both individuals and industry who will be expected to underwrite these ventures by accepting higher tax burdens.

I should also like to note that the objectives of on-the-job training and the continuance of school programs established in title II seem to duplicate the programs already available under such authority as the Manpower Development and Training Act, the programs of the National Science Foundation and the U.S. Office of Education and those provided for in the National Education Improvement Act. For example, the Labor Department has recently announced the initiation of demonstration projects under the Manpower Development and Training Act that will provide training as industrial draftsmen, X-ray and laboratory technicians, skilled garment workers and other occupations.

In sum, then, this program appears to have the twin deficiencies of failing to provide a meaningful solution to the unemployment problem and of creating unnecessary and burdensome make-work programs that destroy individual initiative and self-respect. For these reasons, our association opposes this proposed legislation.

THE EDUCATIONAL ASPECTS

Both the program of the Youth Conservation Corps and that of the local area youth employment program provide for a substantial extension of Federal authority in the educational process. The Youth Conservation Corps program appears to anticipate the development of "a system of training and educational services" wholly under Federal control and without reference to State and local programs. The local area youth employment program anticipates the use of local school facilities by enrollees but contains an implicit budgetary control by the Department of Labor.

The position of our association in regard to Federal aid to, or participation in, the educational process is well known and has been presented to committees of Congress frequently in the past. Briefly, we believe that the framework of education in this country should be the exclusive responsibility of the States and should be free of Federal intervention. In our opinion, neither the provision of education, the promotion of educational content, nor financial participation in State or local school systems is the business of the Federal Government.

Clearly the programs proposed in this bill are in opposition to these views. While we recognize and are fully sympathetic to the seriousness of the unemployment problem among some younger people we do not regard it as sufficiently drastic to justify reversing or making an exception to views which we have developed as a result of investigation and discussion over an extended period of time.

We must conclude, therefore, that even by itself this aspect provides a compelling reason for opposing this legislation.

AN ALTERNATIVE PROGRAM

In recent years two approaches have been developed to a solution of the problem of unemployment among youth. One emphasizes working with the individual to insure that he is qualified for, aware of, and able to take advantage of available employment opportunities. The other stresses the need for increasing the total number of employment opportunities in the economy through a heightened rate of economic growth.

The National Association of Manufacturers gives greatest weight to the latter approach. We recognize the need for adequate training and motivation of the individual. We also realize that jobs must exist before any degree of skill can be translated into productive activity and individual earning power. Accordingly, our analysis emphasizes the need for creation of an ever-growing number of jobs in the economy and we rely on existing education institutions to provide necessary training.

This approach appears well suited to current conditions. Although there would probably be general agreement that there is room for constructive improvement in our educational system, my contacts with employers do not reveal a degree of dissatisfaction that warrants an important extension of Federal influence in the educational process or the establishment of a separate Federal system. At the same time, the present level of unemployment among youth clearly indicates the lack of a sufficient number of job openings.

In my opinion, therefore, a solution to the problem of unemployed youth can best be achieved by adopting programs that will increase the rate of growth in the years immediately ahead. As the President pointed out in his 1963 Economic Report (p. xii):

"Yet past experience tells us that only sustained major increases in production can reemploy the jobless members of today's labor force, create job opportunities for the 2 million young men and women entering the labor market each year, and produce new jobs as fast as technological change destroys old ones."

In the context of rapid economic expansion and an ample number of employment opportunities it can be confidently expected, on the basis of generations of experience, that the educational system will adapt its programs to whatever needs emerge.

I recognize that consideration of specific programs that will insure a more rapid rate of economic growth is not the concern of this committee and I shall not presume upon your time to discuss the problem at length. I should like to note, however, that the three elements which are common to industry's decisions and thus are key factors in stimulating or retarding the rate of economic change are profit opportunity, capital investment, and the assumption of risk. For several years profit performance has been unsatisfactory, reflecting, in part, the steady upward trend of wage costs. Capital formation has been blocked by the steep graduation of individual tax rates and the excessive top rate of corporate tax. And, in some cases, burdensome intrusions by overzealous Government officials have created an unwillingness to accept risk.

In its current session, the Congress is being urged to take action aimed at reducing unemployment and reducing the barriers to investment through tax rate reform. I feel that proper tax rate reform will prove highly constructive and effective in stimulating the rate of economic growth and reducing the level of unemployment among youth. Our association is striving to achieve this objective by endorsement of the concepts in the Herlong-Baker bills. I urge you to support them.

[From the Washington Star, Mar. 11, 1963]

NOT THE CCC AGAIN

Thirty years ago this country, engulfed in a cataclysmic depression, turned to such innovations as the Civilian Conservation Corps for a way out. In that period of massive unemployment, the CCC was a desperation move, one of the emergency strokes dreamed up by the New Deal to stem the receding tide of prosperity.

If there were few who questioned the logic of a "make work" program in those dark days, there are many who wonder whether a CCC-type Youth Conservation Corps (a high-priority administration goal) should be considered even as a stopgap for today's comparatively low-scale unemployment. And this holds true, we think, despite President Kennedy's most recent appeal for enactment of his youth opportunties bill. Among those who have their fingers crossed on this proposal is Dr. Austin S. Murphy, director of the National Association of Manufacturers' Education Department.

Testifying before a Senate Labor Subcommittee, Dr. Murphy raised many questions, among them: (1) Would there be enough volunteers between 16 and 22 to make the corps worthwhile? (2) With no Army officers such as directed the CCC, would there be adequate and competent camp supervisory personnel? (3) Would a corps encourage more school dropouts? (4) Would the sociopsychological effect cause the enrollee to become "a potential member of the hard-core unemployed rather than a productive and useful member of society?"

Whatever its value, the CCC won no prizes for character building. That was indicated by the fact (Dr. Murphy noted) that nearly 500,000 youths, or one-fifth of the corps, washed out through desertion or for disciplinary reasons. In short, Dr. Murphy found the whole idea of make-work by Government fiat reprehensible and destructive of individual initiative and self-reliance in seeking employment.

He added:

"Finding employment is generally considered a responsibility of the individual while the function of the Government is limited to providing a climate conducive to industrial growth and expansion and to individual development. The philosophy underlying this proposal, however, appears to be that the Government should assume responsibility both for creating jobs and for tailoring them to the needs and qualifications of specific groups of individuals. The solution suggested here of increasing public payrolls to reduce unemployment will, in my opinion, inevitably worsen our problem rather than serving to provide a meaningful solution."

The real solution, Dr. Murphy suggested, can be found in the Herlong-Baker tax rate reform bills. Unlike the administration proposal, the NAM-supported plan stresses sharp reductions in corporation as well as upper and middle personal income tax brackets during the first stages of a 5-year program. This approach, NAM believes, would stimulate economic growth and create new jobs. Of course, it does not necessarily follow that the NAM is right or that its recommendations, if adopted, would produce the needed jobs. But its approach seems more promising than a revival on a small scale of the old CCC.

Mr. RANDOLPH. Mr. President, those who seek to bring into being the proposed legislation and secure its final enactment into law are attempting to weld together two aims to achieve a twin goal. First, we are intensely interested in the conservation of the human resources of youth—often the disadvantaged youth—of the United States. Second, we are most earnest in our efforts to bring about the conservation of the natural resources of water and woodland in our Republic.

I had thought that this afternoon I might speak of the period when I had joined with other legislators in the other body in the 1930's to bring the Civilian Conservation Corps into being. I shall not allow myself to indulge in that nostalgia.

Mr. President, again the Senate is confronted with the responsibility to bring forth legislation which will effect partial remedy for some of the hundreds of thousands of young people in America whose lives have been denied a sense of purpose and direction.

For 7 years the eloquent senior Senator from Minnesota [Mr. HUMPHREY] has given leadership in this effort to weld into one legislative program the two aims of conservation of the human resources of our youth and conservation of the natural resources of water and woodland. For the past 4 years I have had the privilege of being closely allied in this task with my colleague from Minnesota and with the capable senior Senator from Pennsylvania [Mr. CLARK], who conducted the hearings on the pending measure and who guided S. 1 through to its favorable report by the Senate Committee on Labor and Public Welfare.

As chairman of the former Special Subcommittee on the Youth Conservation Corps, and as floor manager of the Youth Conservation Corps bill which passed the Senate in 1959, I have deep and fundamental convictions about the importance of this measure in regard to both the rehabilitation of our disadvantaged young people and the conservation of our water and forest resources. And with the exception of the larger enrollment authorized by the earlier bill, I believe that S. 1 is a better measure than that passed in this forum in 1959.

It has been broadened by means of title II to include the provisions of the State and community youth employment program. It has received the benefit of further reflection by Members of the Senate, and further hearings and expert testimony. And finally, it has benefited from the advice of experts in the various departments of the executive branch, in an administration which supports the measure rather than opposing it, as did the previous administration.

In view of the many thousands of man-hours which have, during the past 4 years, been invested in the framing of the Youth Employment Act, it disturbs me that the minority report would employ such trivial and specious terms in its attack on the bill. Regardless of one's views on this legislation, one might hope that a committee report, whether of the majority or the minority, would address itself to the substance of the bill rather than deal in ridicule and fear fostering.

In illustration, I shall quote one short paragraph from the minority views at this time, Mr. President, before turning to the positive features of the pending measure. But this passage is, I believe, revealing of the general lack of objective inquiry or factual discipline on the part of the minority in its so-called report on S. 1. Writing of the lack of compulsory allotments from the pay of enrollees to their parents, the minority moves into a flight from reality:

> These aspects of the Youth Corps smack ominously of totalitarianism. Removing young people from their homes without the permission of their parents and placing them in a Federal corps is reminiscent of the Hitler youth programs of Nazi Germany and bears a striking resemblance to the various Young Communist organizations. The Soviet Union's Young Pioneers seem particularly close to the proposed Youth Conservation Corps in both name and spirit.

I remember that in 1937 the very distinguished senior Senator from Virginia who now sits in this body [Mr. BYRD], then a Member of this body, voted for the Civilian Conservation Corps, as did also the able senior Senator from Louisiana [Mr. ELLENDER], my good friend from Georgia [Mr. RUSSELL], who now presides over the Senate Armed Services Committee and the highly respected senior Senator from Arizona [Mr. HAYDEN], and President pro tempore of the Senate.

I remember also that in that same year the equally distinguished junior Senator from Virginia [Mr. ROBERTSON], then a Member of the House of Representatives, voted for this legislation. He was joined by other Members of that body who are now members of the Senate, including the two eminent Senators from Alabama [Mr. HILL] and [Mr. SPARKMAN], as well as the very able senior Senator from Washington [Mr. MAGNUSON], and the distinguished minority leader [Mr. DIRKSEN].

I also remember that Representative Clifton Woodrum, of Virginia, in 1939, after the Civilian Conservation Corps had been in being for more than 5 years, requested an additional $50 million. Why was that? Was it because the program had failed? No. It was because in 5 years a distinguished Virginian like Cliff Woodrum, a man who was interested in the dollar but also interested in human resources, joined in the effort.

I have gone back these few moments to indicate that some of the present opposition was not then opposed when the Executive order created the Civilian Conservation Corps in 1933, by the greatness of the vision of the then President of the United States. This became, with the action by the Congress in 1937, the original act and the precedent for the pending measure.

I remind Senators that the vote in May of 1937 in the House of Representatives was 389 to 7 in favor of the Civilian Conservation Corps; and in the Senate of the United States in 1937 the vote was 67 to 2 that the Civilian Conservation Corps should be created.

Why do I go back and give the Senate these votes? Because there has been a direct attack upon title I of the bill. It was all we had in 1933, 1934, 1935, 1936, 1937, 1938, and 1939. We had no title II. We had only title I. Yet an attack has been made by the Senator from New York [Mr. JAVITS] upon title I. Attacks have been made by others upon title I.

I say sincerely that it would not only be wrong, but it would be less than realistic if the amendment which will be offered to cut out title I from the bill should receive a majority vote of the Members of the Senate.

To return to the quotation I cited a moment ago in the minority report, Mr. President, it tests the credulity of serious-minded men and women to suppose that one can really perceive such a threat implicit in the practice of making allotments home on a voluntary rather than a compulsory basis. Especially is this so when the tender parent-child relationship, invoked by the minority report, may, in fact, often be one between a son and an irresponsible father who would use the allotment to continue his dereliction. But I shall not unduly labor this relatively minor point. I have emphasized this passage only to indicate that the minority view presents something less than a searching and scholarly analysis of the pending measure.

Mr. President, the Senator from Pennsylvania [Mr. CLARK] has offered a systematic explanation of the different provisions of S. 1. I shall not cover the same material. However, I do draw the attention of my Senate colleagues to some of these points in more detail.

There are approximately 800,000—though some estimates range as high as 1 million—young Americans who are out of school and out of work. Not only is this age group expanding rapidly due to the high birth rate of the late war years and early postwar years, but the unemployment rate among these young people is also increasing.

In 1953, the rate of unemployment among youths 18 to 19 years old was 6 percent. Since 1954, 1 out of every 10 male youths in this age bracket has been unemployed, with every recession being followed by leveling off at a higher rate of unemployment. This is not fictional—it is factual. Thus, in 1962, the unemployment rate for the age bracket of 18 to 19 years old was 13 percent for white males and 22 percent for nonwhite. For the overall age group of 16 to 21, the most recent figures indicate an unemployment rate of above 15 percent. Yet, depressing as these figures are, they do not fully indicate the intensity of the problem as it is registered in certain locales.

I see on my left the distinguished chairman of the Public Works Committee of the Senate [Mr. MCNAMARA]. May I refer to his city of Detroit? In one Detroit neighborhood, of approximately 125,000 persons, 70 percent of the youth between the ages of 16 and 21 were out of school and unemployed, according to a recent survey. This neighborhood certainly is not unique among the metropolitan areas of our country. It is gratifying to know that the Senator from Michigan [Mr. MCNAMARA] and other Senators who come from metropolitan areas, who know the problems of unemployment in Detroit, in Akron, in Chicago, and other cities, are among the most ardent supporters of the pending legislation.

This deficit in the fulfillment of the needs of our young people is matched, Mr. President, by the large and accumulating backlog of needs in the field of resource conservation. Of the more than 770 million acres of land in the public domain, 260 million are in national parks and forests and 110 million are in State, county, and other local public ownership. In West Virginia there are more than 1,824,000 acres in national forest lands. Our State parks comprise approximately 76,000 acres. These areas are scenic wonderlands and tourists will increasingly visit the mountain domain. The Governor of West Virginia, who favors this bill, has written that the facilities and natural resources in our State are available.

It is estimated that in those lands under the management of the Department of Interior and the Department of Agriculture the backlog of conservation needs for the next decade would provide work for 41,000 men annually in the national forests, and 45,000 men annually in parks, refuges, reservations, and other public lands.

Among all classes of forest ownership, according to Secretary of Interior Udall, we "now have 40 million acres requiring reforestation, and not less than 150 million more than are overcrowded, insect-infested, diseased, or are of low quality, second-growth timber." The importance of meeting these needs is not a matter of mere sentiment or theory, Mr. President; it is a question of plain economics and commonsense.

In the southeastern United States alone, there are over 11 million acres of publicly owned forests. Again, to quote Secretary Udall:

> If these lands could be thinned of valueless second-growth scrub oak, thereby releasing the young pine for normal development, pulpwood harvest could start in 10 years and continue on an annual rotation basis. In these humid States, where pine makes rapid growth, the expenditure of $3,000 on improvement of timber stands will produce, in 10 years, a revenue of $5,000.

I would suggest that this is a fair return on the investment, especially when viewed in conjunction with the many other tangible and intangible benefits to the young people who would participate in this activity.

This is the program, Mr. President, which the minority refers to as a "throwback to the thirties," one of the "desperation procedures that may have been appropriate in the 1930's." Presumably, because the CCC worked with such outstanding success and almost universal acclaim in the 1930's, this fact alone would, according to the minority, negate the validity of the YCC as an approach to the problems of our unemployed youth today. I confess myself somewhat at a loss to understand this line of reasoning, especially as it emanates from proponents of a conservative economic and political philosophy. For it has always been my belief that the political conservative attempts to conserve the tried and tested methods and values of the past. Surely, the experience of 9 years with the CCC, with an enrollment of 2,500,000 to 3 million, and more than 20 years in which to follow the record of CCC alumni would remove this program from the limbo of radical experiments.

The validity of the approach of the YCC does not rest on re-creating circumstances identical with those of the 1930's. Let us hope that the minority does not insist on this. For in addition to the basic economic improvements created through reforestation, fire protection, seeding, maintenance of park recreation areas, and a host of other activities, the values realized by the young men are of a fundamental and enduring nature and are just as meaningful in the context of the 1960's as in that of the 1930's.

The late Gen. George Catlett Marshall, one of the most eminent of Americans, was generally regarded as having some knowledge of the character of men. As Chief of Staff of the U.S. Army, he was closely involved in the supervision of the CCC. In an appearance before a Senate Subcommittee on Appropriations on May 31, 1940, in his capacity as Chief of Staff, General Marshall had this to say of the CCC:

> My connection with this organization has been one of the most inspiring experiences which I have ever had. I told Mr. Fechner * * * I thought it was one of the greatest moves we had ever made in this country, and that it was a most unique movement.

I do not believe, Mr. President, that General Marshall was ever regarded as a wild-eyed liberal, profligate spender, or man of desperation.

As a Member of the U.S. House of Representatives during the entire New Deal, and as an early proponent of the CCC, I remember well the circumstances that generated that program. The record is replete with individual testimonials to its value, such as that I have quoted from General Marshall. And the record of the many hearings on the YCC is rich with the testimony of those who perceive similar values in the measure which is now pending before the Senate. To illustrate, I quote from a letter addressed to me in 1959 when I was serving as chairman of the Special Subcommittee on Youth Conservation Corps, a letter from a juvenile judge in the State of Oregon:

> As a juvenile judge of ——— County, I am deeply interested in your YCC bill which presently is in your committee. It was my good fortune to spend several years in the CCC camps for which you helped draft the legislation back in the 1930's.
>
> Personally, I can think of no motivating force that could equal the inspiration which I received as a result of this camp experience. Although 25 years have lapsed since I was first involved in the program, I want to personally acknowledge to you my thanks for helping draft the camp program which I am sure has left an everlasting and inspirational impression upon the minds of many thousands of our citizens. It gives me great pleasure to know that you again are associated with a similar program, especially at a time when people in all walks of life are wondering about working opportunities and rehabilitation methods for helping our youth.

This, Mr. President, is the testimony of a former CCC enrollee who is now a distinguished juvenile judge. I believe he speaks with some authority on this subject. I believe his testimony, and that of thousands of others who have benefited from the CCC, reveals the travesty of the minority statement that dispenses with this program in terms of "romantic images of sunburned, well-fed and happy young men tramping through the woods dressed in uniforms."

The minority also extends this line of attack in assailing the presumed inadequacy of the pending measure as a means of increasing the employability of the enrollees.

> The underlying purpose of the program—

States the minority report—

> is said to be the improvement of the employment prospects of our youth. Supplying them with suntans and an appreciation of outdoor living simply won't help them find jobs.

By adroitly amputating the statements of Secretary of Labor Wirtz and ignoring much of the testimony submitted in the hearings, the minority makes it appear that its opinion is substantiated by Secretary Wirtz.

Nothing could be further from the facts. In addition to instilling such fundamental habits as self-discipline, a sense of responsibility, the capacity to work with others, and a sense of group morale—not inconsiderable factors in themselves in improving the employability of a young man.

Title I of the Youth Employment Act will provide the opportunity for training in such skills as automotive repairing, carpentry, construction equipment operation, electrical wiring, masonry, metalworking, plumbing, surveying and mapping, truck driving, and many other skills. The young men will not, of course, be journeymen in these skills after 6 months or a year in the corps, but neither would they be journeymen after a similar period in any school of vocational education or union apprenticeship program. To refer once again to the testimony of General Marshall regarding the CCC:

> They have companies that are working everyday operating bulldozers, tractors, trucks, road graders. They have dynamite explosive squads; they have bridge builders, and at the same time, what is a tremendous advantage, they have a going organization to feed them, house them, look after their health, and generally administer them.

Finally, Mr. President, in addition to the skills which will be employed in the actual operations of the Youth Conservation Corps, I draw the attention of my colleagues to page 542 of the hearings on S. 1, where there are listed some 59 subjects which can be taught at the camps through accredited home study schools and the Armed Forces Institute.

On the question of the average enrollee costs of title I, a subject which moves the minority to some of its more impassioned rhetoric, administration experts and committee staff members have, after hearings conducted over 4 years on three different proposals, arrived at an average camp construction cost of $250,000 and annual enrollee costs of

$3,985. Despite the careful analysis and frequent reexamination of these figures, the minority would substitute a camp construction figure of $385,000, based on the experience in Pennsylvania with an embryonic program of 3 camps ranging in capacity from 14 to 40 enrollees.

By ignoring the already existing and partially prepared facilities of camps listed on pages 526-529 of the hearings, and by selecting the now discarded tentative figures of the administration in 1961, the minority arrives at an average enrollee cost of from $4,000 to $12,000, which is then compared, in a process of irrelevance, to the $2,300 cost of maintaining a young man at Harvard. To pass by the fact that $2,300 is but a fraction of the total annual cost of maintaining and educating a young man at Harvard, a much more relevant comparison would be with the $25,000 estimated by Prof. Charles Shireman, of the University of Chicago, to be the costs to society for sending a juvenile delinquent through a succession of correctional institutions.

One should hardly need to point out to the minority that the choice offered the Senate, and American society, is not between enrolling these young men in a Youth Conservation Corps or Harvard. Rather, it is quite possibly a choice between the Youth Conservation Corps, and thus a sense of purpose and direction, or a life of aimlessly loitering on the street corners of our cities and towns and eventually drifting into a pattern of delinquency.

Yet on this point, also, the minority seems to have entered the world of make believe. In the effort to discredit title I the minority has completely reversed the thrust of a program which is designed, in part, to prevent delinquency, and has substituted instead the image of camps which would provide harbor for hardened young criminals and even murderers. This fearsome picture has been created almost solely out of the lack of reference in the bill to the term "good character" as a prerequisite for enrollment.

As is known by persons familiar with the bill, the original draft of S. 1 contained the provision of good character, as did the earlier measures presented to the Senate. The phrase was not lightly dispensed with by the majority. On the contrary, it was deleted only after considerable discussion in committee and in the light of particularly poignant testimony offered by some young people in hearings chaired by the junior Senator from Massachusetts [Mr. KENNEDY]. The deletion was accepted by the majority on the grounds that the restricting phrase might disqualify some young people who had experienced only minor brushes with juvenile authorities. But, as the minority well knows, the legislative history of this measure clearly reveals that the intent of Congress is that the YCC not be used as a dumping ground for incorrigibles. The bill is phrased so that experienced administrators and youth workers will be allowed to use their own discretion in the important work of youth rehabilitation and the prevention of juvenile delinquency. This feature of the program is but one aspect of the multifaceted approach of this administration to the problem of the prevention, control, and eradication of juvenile delinquency.

Mr. President, the minority has had at least 4 years to come forth with substantive and constructive proposals to meet the burgeoning problems of our unemployed and disadvantaged youth. I grow weary of this constant nay saying and nit picking when proposals such as the one now before the Senate are made by the majority. The problems of this segment of American youth and the problems of our unmet conservation needs have been held under searching inquiry during the 4 years since the first YCC bill was passed by this body. Questions of camp costs, staffing, educational provisions, contributions to employability, and character building have all been raised. In my judgment they have been adequately answered in the hearings, and sound and prudent solutions are offered in the pending proposal. It is now time—and past time—for action.

I urge the Senate to pass the bill and the House to concur in its passage. We already have the pledge of the President of the United States that he will immediately sign the measure.

Mr. WILLIAMS of Delaware. Mr. President, I call up my amendment which is at the desk. I ask that in lieu of its being read, the amendment be printed at this point in the RECORD.

The PRESIDING OFFICER. Without objection, the amendment will be printed.

The amendment is as follows:

On page 42, between lines 20 and 21, insert the following:

"REQUIREMENTS AND LIMITATIONS WITH RESPECT TO GRANTS TO PRIVATE NONPROFIT AGENCIES

"SEC. 205. (a) The Secretary shall, immediately after making any grant under this title, or otherwise making available (directly or indirectly) funds appropriated for carrying out the purposes of this title, to any private nonprofit agency, submit to the Congress a full and complete report concerning—

"(1) such private nonprofit agency, including (but not limited to) (A) the number, identity, and salary, of its officers, directors, and principal employees, (B) when, by whom, and for what purposes such agency was organized, and (C) other relevant data with respect to the organization, its functions, purposes, and methods of operation, and

"(2) the amount of such grant or of such funds, the purposes for which such grant was made or such funds were made available, and any conditions or limitations imposed with respect to such grant or to such funds by the Secretary.

"(b) Any audit reports made by or to any instrumentality of the Federal Government on the expenditures of any such agency which has received any funds appropriated to carry out the purposes of this title shall be available to any Member of Congress upon request of such Member.

"(c) (1) No private nonprofit agency which is organized or incorporated after the date of enactment of this Act shall be eligible to receive (directly or indirectly) any funds appropriated to carry out the provisions of this title if any of the incorporators or individuals who organized such agency is, at the time such agency applies for any such funds, a Member of Congress or an officer of the Executive Branch of the Government who is required to be appointed by the President, by and with the advice and consent of the Senate.

"(2) No nonprofit agency shall be eligible to receive, directly or indirectly, any funds appropriated to carry out the purposes of this title, if at the time such agency applies for such funds, or at any time thereafter, any of the officers, directors, or principal employees of such agency is a Member of Congress or an officer of the Executive Branch of the Government who is required to be appointed by the President, by and with the advice and consent of the Senate."

On page 42, line 22, strike out "205" and insert "206".

On page 43, line 19, strike out "206" and insert "207".

On page 45, line 9, strike out "207" and insert "208".

On page 46, line 17, strike out "208" and insert "209".

On page 48, line 12, strike out "209" and insert "210".

On page 48, line 20, strike out "210" and insert "211".

On page 49, line 8, strike out "211" and insert "212".

Mr. WILLIAMS of Delaware. Mr. President, the purpose of the amendment is—

First, to require that immediately after any grant is made under this title to any private nonprofit agency a full and complete report be submitted to Congress giving the name of the company, a list of its directors, employees, and so forth, and their salaries along with the purpose for which such grant was applied.

Second, to provide that funds made available under all grants shall be subject to audit and that all such audit reports shall then be available to any Member of Congress upon his request.

Third, to provide that no nonprofit agency shall be eligible to receive, directly or indirectly, any funds appropriated to carry out the purposes of this title, if at the time such agency applies for such funds or at any time thereafter, any of the officers, directors, or principal employees of such agency is a Member of Congress or an officer of the executive branch of the Government who is required to be appointed by the President by and with the advice and consent of the Senate.

I understand that the Senator from Pennsylvania [Mr. CLARK], who is in charge of the bill, is willing to accept the amendment.

Mr. CLARK. Mr. President, will the Senator from Delaware yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. CLARK. The Senator has been kind enough to show me a draft of the amendment. We have gone over the text of it together. I think the purpose he has in mind, which is sound, is to prevent undue influence on the part of Members of Congress or the executive branch in the granting of funds under title II, to nonprofit organizations.

I ask the Senator, because the amendment was not read in full, whether, as he agreed, subsection (b) has been stricken.

Mr. WILLIAMS of Delaware. That is correct. The amendment is exactly as we have agreed upon it.

Mr. CLARK. Mr. President, I am prepared to accept the amendment and take it to conference.

Mr. PROUTY. Mr. President, I too, have seen the amendment. It is an excellent proposal. I am happy to accept it.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Delaware.

The amendment was agreed to.

Mr. WILLIAMS of Delaware. Mr. President, I ask unanimous consent that I may be permitted to insert in the RECORD excerpts from the audit reports of two earlier grants which were approved under Public Law 87-274, the Juvenile Delinquency Act of 1962.

These two reports show the need for more careful auditing and supervision of these grants.

For 2 months I have been trying to get copies of the audit reports on the estimated 18 to 20 grants that were approved last year under the above authority, but thus far I have been furnished with only these 2 partial reports.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

PARTIAL REPORT ON THE AUDIT OF HARLEM YOUTH OPPORTUNITIES UNLIMITED, INC.

DEPARTMENT OF
HEALTH, EDUCATION, AND WELFARE,
Washington, March 6, 1963.

Hon. JOHN J. WILLIAMS,
U.S. Senate,
Washington, D.C.

DEAR SENATOR WILLIAMS: In response to your telephone request to Mr. Bernard Russell, I am enclosing our regional auditor's report of his examination of the financial records of Harlem Youth Opportunities Unlimited, Inc.

For your information, there is also enclosed a chronology of events leading up to the visit of our regional auditor. In all grant programs, we are concerned that grantees follow proper financial procedures. Thus, the request for an interim financial report was followed by an examination of the financial records by our regional auditor. His report noting specific deficiencies will be followed up by a visit now scheduled for early next week to insure correction of those deficiencies. (Note copy of follow-up letter to Dr. Kenneth Clark, executive director.) This visit will include the regional auditor and members of the staff of the Office of Juvenile Delinquency and Youth Development.

I hope this answers your questions.

Sincerely,
IVAN A. NESTINGEN,
Under Secretary.

FEBRUARY 8, 1963.

AUDIT OF JUVENILE DELINQUENCY GRANT—HARYOU

At the request of the Special Assistant to the Secretary for Juvenile Delinquency we have made a review of the fiscal transactions of Harlem Youth Opportunities Unlimited, Inc., Demonstration Project No. 62008, as reported on a preliminary financial statement for the period July 1, 1962, through November 30, 1962. Although we made the usual verification of the actuality and accuracy of expenditures and fund balances, our chief attention was directed toward the propriety of expenditures to date and acceptability of the fiscal and related procedures now in use. We made no attempt to evaluate program operations or personnel qualifications since these areas are outside the scope of our competency. We were accompanied during the review by Mr. ——— of the Special Assistant's staff.

We invite your attention to the following:

1. Mr. C. L. Alexander was appointed program director August 15, 1962, at an annual salary of $13,500. Available documentation showed that his services were terminated January 15, 1963, but that he is to continue receiving his full salary through March 15, 1963. According to Dr. Clark, executive director, this payment ($2,250) represents terminal leave. The attached statement of personnel policies makes no provision for this expenditure.

2. The budget includes a listing of positions and salaries. Comparison of payroll data with the approved budget is shown on the attached schedule. It will be noted that although the budget provided only one consultant, four positions with variations of that title have been filled, three on a part-time basis.

In connection with the position of chief project consultant (executive director), a special meeting of the Haryou executive committee on October 2, 1962, took the following actions.

(1) The salary of an executive director was set at $20,000 a year.[1]

(2) Dr. Kenneth B. Clark was retained on a prorated basis at a salary of $20,000 a year to be drawn against the item in the budget for project director.[2]

(3) An additional fund of $2,000 was made available to Dr. Clark to meet special demands of his position.[3]

3. Legal fees amounting to $2,653.75 (see attached invoice dated November 27, 1962) involved services before and after July 1, 1962, the approved beginning date for this project. The estimated dates of the various services were based on information supplied by the attorney during our visit to the project. Of the total amount billed, $900 was paid by the Harlem Neighborhoods Association and the remainder ($1,753.75) expended from the Haryou Federal Fund account. There was no other data available to support the equity of this allocation of the costs of legal services. No attempt was made to relate the amount of the fee charged to the value of the services rendered.

4. The statement of conditions governing these grants provides that the funds may not be used for entertainment. It is not clear whether the following expenditures fall within that prohibition:

Haryou Open House—Nov. 20, 1962:	
Catering	$350.00
Flowers	63.20
Invitations	56.00
Total	479.20

5. The rental lease provides that the lessor (YMCA) will be responsible for arranging and erecting partitions. Despite this clause, Haryou paid the YMCA $343.25 to reimburse it for costs incurred due to partition work in the leased premises.

6. Of the 16 people on the payroll at one time or another during the period, 6 were either part-time or hourly employees. Nevertheless, no time, leave or attendance records were kept.

FEBRUARY 20, 1963.

Dr. KENNETH CLARK,
Haryou
New York, N.Y.

DEAR MR. CLARK: We have just received the auditor's report of the audit conducted of your books on January 29, 1963. A number of deficiencies were noted, including the following:

1. An inordinate amount of terminal leave payment for the resigning program director.

2. The listing of positions and salaries is not consistent with the same listing on the approved budget.

3. No attempt was made to relate the amount of the legal fees to the value of services rendered.

4. There was question about the expenditure for entertainment.

5. There was question about the reimbursement to the lessor for construction work done on the premises.

6. Inadequate attendance records were kept.

Because of these and other deficiencies noted, it is imperative that I meet with you and our regional auditor at your earliest possible convenience to discuss remedying these deficiencies.

I look forward to hearing from you very soon.

Sincerely yours,
BERNARD RUSSELL,
Director, Office of Juvenile Delinquency and Youth Development.

PARTIAL REPORT ON THE AUDIT OF ASSOCIATED COMMUNITY TEAMS, INC.

THE SECRETARY OF HEALTH,
EDUCATION, AND WELFARE,
Washington, D.C., February 21, 1963.

Hon. JOHN J. WILLIAMS,
U.S. Senate, Washington, D.C.

DEAR SENATOR WILLIAMS: This is in response to your letter dated February 7, 1963, to Secretary Celebrezze, regarding expenditures made by Associated Community Teams, Inc. The delay in response, as I explained by telephone, was due to the fact that we were awaiting an interim financial audit of the project expenditures which was initiated on January 8, 1963.

The following is in response to your questions:

1. Total expenditures to November 30, 1963	$29,296.67
Funds obligated	6,337.89
Total	35,634.56

Questions 2 through 5 are answered in the two enclosures, "Summary of Salary Expenditures" and "Statement of Cash Receipts and Disbursements."

6. Amount of private capital pledged, $9,315.

7. Amount of private capital advanced, none.

I trust this answers your questions.

Sincerely yours,
IVAN A. NESTINGEN,
Under Secretary.

Associated Community Teams, Inc., statement of cash receipts and disbursements Aug. 2, 1962, to Nov. 30, 1962

Receipts:	
Grant from U.S. Department of Health, Education, and Welfare	$62,500.00
Disbursements:	
Salaries, gross	16,537.00
Rent	7,155.74
Office supplies and expenses:	
Stationery	985.09
Repairs	140.39
Moving expense	50.00
Miscellaneous	189.50
Total	1,364.98

---

[1] No such position or salary provided in the budget.

[2] According to Dr. Clark, he is employed at Haryou on a one-half time basis. See item 6.

[3] No charges were made to this fund during the audit period. However, on Dec. 11, 1962, a payment was made to Dr. Clark ($46) as reimbursement for expenses incurred in August and November of 1962. As indicated on the attached memorandum dated Nov. 30, 1962, this amount was charged against the special $2,000 fund.

Associated Community Teams, Inc., statement of cash receipts and disbursements Aug. 2, 1962, to Nov. 30, 1962—Continued

Disbursements—Continued	
Telephone	$369.52
Luncheons	21.50
Periodicals	38.44
Travel	[1] 181.55
Postage	160.31
Press and publicity	25.00
Security service	40.00
Insurance	333.92
Payroll tax expense	573.94
Consultant fees	500.00
Accounting	75.00
Rent appraisal fee	150.00
Incorporation expense	350.00
Purchase of office equipment	1,019.77
Telephone security deposit	400.00
Total	29,296.67
Less: net payroll taxes deducted	1,281.91
Total disbursements	28,014.76
Balance Nov. 30, 1962	34,485.24
As follows:	
Chemical Bank New York Trust Co.	34,460.37
Petty cash	24.87
Total	34,485.24

[1] Not staff travel but travel reimbursement for candidate as director.

OFFICE OF JUVENILE DELINQUENCY
AND YOUTH DEVELOPMENT,
February 21, 1963.

Enclosed is a copy of the audit of the Associated Community Teams, Inc., which you requested. In addition I am enclosing copies of a memorandum detailing the chronology of this audit and a letter indicating our followup of the audit.

If I can be of any further help, please feel free to call upon me.

At the request of the Special Assistant to the Secretary for Juvenile Delinquency we have made a review of the fiscal transactions of the Associated Community Teams, Inc., training project No. 63201, as reported on a preliminary financial statement for the period July 1, 1962, through November 30, 1962. Although we made the usual verification of the actuality and accuracy of expenditures and fund balances, our chief attention was directed toward the propriety of expenditures to date and acceptability of the fiscal and related procedures now in use. We made no attempt to evaluate program operations or personnel qualifications since these areas are outside the scope of our competency. We were accompanied during the review by Mr. ———— of the Special Assistant's staff.

We have the following comments:

1. Accounting system: At the time of our visit, January 30, 1963, the accounts consisted of a cash disbursements book and a check book. The last posting to the cash book was November 30, 1962. Check transactions, as reflected in the stubs, involved a number of errors which were not adjusted in any systematic way. The balance in the checking account was not carried forward after January 7, 1963. These accounts are inadequate to control the expenditures being made by this agency. When requested to prepare a statement of expenditures (as of November 30, 1962) it was necessary to call in a CPA for this purpose. The position of bookkeeper-auditor provided in the approved budget has not been filled.

2. Board of directors meetings: Although an official minute book was purchased, the formal (original) minutes were not available. Loose copies in a manila folder were provided and covered the following meetings: August 11, 16, 23; September 7, 27; October 11, November 8, 20; December 13, 20, all in 1962. After encountering a reference to a meeting on October 25, 1962, we asked about the corresponding minutes. A freshly made photocopy was given us. We were assured by Mr. Wingate, acting executive director, that the file of minutes was now complete. Other than as noted in this memorandum, no particularly significant entries were found.

3. Rent of premises: Associated Community Teams, Inc., has formally rented space (approximately 25 rooms) on the first (3,737 square feet) and second (3,917 square feet) floors of the Adam Clayton Powell Community Center on West 137th Street in New York City. The period of the lease is July 9, 1962, through December 1963 (6 months beyond the present project termination date). Use of furniture and fixtures in the space and maintenance of the premises are included in the rental which amounted to $1,155.74 for the initial period from July 9, 1962, to August 31, 1962, and $6,000 per quarter, payable in advance, for the remainder of the lease term until December 1, 1963, when a payment of $2,000 will be due. Before establishing this rate the agency obtained two appraisals of the premises. The first (Frost) resulted in a $3-per-foot estimate including furniture, utilities and maintenance. The second (Hanson) produced the same rate including janitor services but no utilities. The lease at the rate of $2,000 per month was thereafter completed.

The terms of this lease provide for $6,000 payments on September 1, December 1, 1962, March 1, June 1, 1963, etc. It should be noted that any payment on June 1, 1963, for a quarterly period will cover 2 months beyond the present approved termination date of this project.

4. Personnel: There is attached a schedule setting forth the salary data concerning personnel employed during the period of audit and comparing titles and rates of pay with the approved budget. In addition, the minutes of November 20, 1962, authorize the appointment of Mr. Carl Johnson as director of peace corps and acting project director at a salary of $15,000. This rate exceeds any of the salaries provided in the approved budget.

During the period under audit there were no time, leave or attendance records department. Some time thereafter a procedure for daily sign in and out sheets was instituted.

No procedure was in effect for formally documenting personnel actions (appointments, changes in pay, etc.). The minutes indicated Board approval of some appointments but made no mention of others.

No written statement of conditions of employment or personnel policies (leave policies, working hours, etc.) could be located.

5. Other: Two reported expenditures require future adjustment. A payment of $400 (miscellaneous) covers a deposit with the telephone company and a reported unliquidated obligation (subsequently paid—check No. 1134, $483.16) covers expenses of Mr. ————, a per diem consultant. A refund is due on this payment because only a portion of Mr. ————'s time was devoted to Associated Community Teams, Inc. According to correspondence between Associated Community Teams, Inc., and Mr. Russell of Department of Health, Education, and Welfare the remainder of Mr. ————'s time is chargeable to the President's Committee on Juvenile Delinquency.

Copies of some of the Associated Community Teams, Inc., publicity material are attached for your information.

FEBRUARY 20, 1963.

Mr. LIVINGSTON WINGATE,
Associated Community Teams, Inc., Adam Clayton Powell Community Center, New York, N.Y.

DEAR MR. WINGATE: We have just received the report of our regional auditor in New York who audited your books on January 30, 1963. He notes a number of deficiencies, including the following:

1. The accounting system: The balance in the checking account was not carried forward after January 7, 1963. The last posting to the cashbook was November 30, 1962. The position of bookkeeper-auditor provided in the approval has not been filled.

2. Board of directors meetings: The formal (original) minutes were not available.

3. Rent of premises: The terms of the lease provided for payment beyond the life of the grant.

4. Personnel: Inadequate time records were kept.

These and other deficiencies noted make it important that I discuss this with you and our regional auditor at your earliest convenience. Please contact me immediately so that we can arrange this meeting for a followup on the audit.

I look forward to hearing from you soon.

Sincerely yours,

BERNARD RUSSELL,
Director, Office of Juvenile Delinquency and Youth Development.

Mr. LAUSCHE. Mr. President, I speak in opposition to the bill. I shall not vote for it, for a number of reasons.

First. The bill will not result in a 5-year program entailing the expenditure of $100 million a year. It envisions a program which will last interminably, except that it might be ended by an international involvement of great consequence or by the acute distress of the Treasury of the United States. The bill provides that the act shall expire at the end of 5 years. I feel rather safe in saying that not one of the proponents has a sincere belief that at the end of 5 years the act, by expiration of time, will die. If there is to be any change at the end of 5 years, the change will be in the direction of an expanded program, rising in cost, precipitating the Federal Government into still greater debt, cheapening the dollar, and not solving the problem of youth unemployment.

Second. The bill, if passed, will cost the Federal Government at least $4,250 a year per youth to take boys, both delinquent and nondelinquent, out of local communities, where there are resident families, frequently not having an income in excess of $4,250 a year.

Certainly the program can be lauded. It can be described as one concerned with the conservation of our youth. I join with those who aim at that objective; but I respectfully submit that there are better methods of trying to solve the problem than the expenditure of $4,250 per person in the various communities of the Nation.

I have before me the statistical abstract of the United States, for the fiscal year 1962. A moment ago I listened to the argument made by the Senator from West Virginia [Mr. RANDOLPH] who vigorously supports the bill. The per capita income in West Virginia is $1,674 a year. Yet, Mr. President, under the most optimistic appraisal we contemplate the expenditure of $4,250 a year to keep a 16-year-old boy at one of the contemplated camps.

Third. The bill does not contain any provision to insure fair and impartial treatment of enrollees on the basis of religious and racial background. Under the provisions of the bill to insure nondiscriminatory, nonprejudicial treatment, reliance will have to be placed on the magnanimity and fairness of those who administer the law. I concede that those who will administer it will aim to be impartial and fair; but their declarations and promises are but a poor substitute for the historic concept that ours is a government of laws, not of men.

It is argued that the Secretary of Labor is a man of magnanimity, impartiality, and objectivity. Conceding that he is, what justification is there for the Congress to abdicate its responsibility in connection with the passage of law, by substituting therefor the minds of individuals?

For the past several years I have listened to the argument, "Do not write into law what you expect the law to be, but depend upon those who will administer it to be fair, just, and impartial."

Mr. President, I cannot subscribe to such an operation. If we demand objective, impartial treatment on the basis of racial and religious background, the way to achieve it is to write it into the law.

Fourth. The calculation of the cost of the program is hazy and confused, and obviously is not supported by the admitted facts. On page 29 of the report is set forth the testimony given 2 years ago; namely, that the per-person cost of the 1961 program was to be $12,297. On page 12 of the report is set forth a compilation of figures prepared by the Secretary of Labor, Mr. Wirtz. In his opinion, it will cost $3,985 per enrollee, without some incidental costs. When they are included, I have calculated that the figure will be $4,250 per enrollee.

Mr. President, I cannot understand what figures were used when the bill was formerly before us and when the per capita cost was said to be $12,297, whereas the present figure is $3,985.

I heard the Senator from Pennsylvania argue that the figures submitted by the Secretaries of the various departments must be accepted as sacrosanct. However, a mere use of pencil and paper will demonstrate that the calculations made by the Secretary of Labor and by others cannot be supported. If the figures they gave are correct, under title I there will not be 15,000 enrollees and under title II there will not be 60,000 enrollees.

Fifth. The program envisioned under the bill deals with symptoms of unemployment, not with the real causes. We have listened to arguments about opportunities to stimulate employment. It is argued that this can be done by reducing taxes and by spending more money at the Federal level. Mr. President, the arguments that employment will be stimulated by reducing taxes and spending more money at the Federal level are based upon opinions expressed and principles declared, I believe, by the economist, Mr. Keynes. However, although he argued that these two modes will help relieve unemployment in times of depression, he included a third factor, which is completely disregarded by the proponents of the proposed tax cut and of increased spending, which are urged by the proponents of the bill; and that third element is that when one tries to stimulate employment by cutting taxes and increasing public spending, it is necessary to insure the stability of prices and wages.

But it is impossible to reduce taxes, increase spending, and at the same time permit the cost of goods and services to continue to rise without always standing still; and that is exactly what we are doing: We are contemplating taxing less, spending more, and subscribing to cost increases and wage increases which have no relationship to productivity, but would neutralize and destroy every measure taken by the Government to relieve unemployment.

Within the past 2 months the Administrator of the World Bank, Per Jacobsson, made two statements on this subject.

He very effectively pointed out that if we desire to put people to work, by reducing taxes, and increasing spending, we must not forget the responsibility of stabilizing wages and prices.

I ask the question, to what extent have we in this Congress tried to stabilize prices? Everything we have done has tended to lift them far beyond a justified increase commensurate with increased productivity. Since this program will deal only with symptoms and not with causes, I will not support it.

Sixth. The bill, if passed, instead of inducing youth to remain in school, will act as an incentive for them to depart from school.

Seventh. While the bill on its face is a public works bill, it contains provisions in title II requiring the payment to enrollees of the age of 16 to 22 of the same regular wage scale and work wage paid to adult employees in the area. I cannot subscribe to that provision in the bill. The provision is found on page 41 of the measure. I should like to read it:

> SEC. 204. (a) The Secretary is authorized to approve for assistance under this title any State, county, municipal, or local programs submitted hereunder if he determines, in accordance with such regulations as he may prescribe, that—
>
> (5) the rates of pay and other conditions of employment are appropriate and reasonably consistent with the rates and conditions applicable with respect to comparable work in the locality.

I interpret that language to mean that as a condition of a right to obtain grants, the wage scales and the working conditions fixed shall be those that prevail in the community where the project is to be promoted.

Finally, I am opposed to the bill because the Federal Government ought not to enter this field. As has been pointed out on the floor of the Senate on a number of occasions, the debt of the Federal Government is $305 billion. According to the figures submitted by the administration, in the fiscal year 1964 we shall have a deficit amounting to about $11 billion. In my judgment, the deficit will be far more than $11 billion. The purchasing power of the dollar has dropped from 100 cents in 1941 to about 45 cents in 1963. Our short-term foreign creditors are calling upon our gold in payment of their claims against our Government. Those conditions are too menancing for me to support the proposed program, the cost of which cannot be predicted.

It is argued that the program worked well in the 1930's. However, a different condition prevails in 1963 than existed in the 1930's. I am not one who will join those who say that conditions in 1963 are similar to the conditions that prevailed when the Civilian Conservation Corps was adopted in the 1930's.

Now, Mr. President, coming to a different topic, I send to the desk four amendments, which deal with different parts of the bill. If agreed to, they would write into the bill provisions that there shall be no discriminatory adverse treatment of enrollees on the basis of religion, race, or creed. I ask that they be printed.

The PRESIDING OFFICER. The amendments will be received and printed.

Mr. PROUTY. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. LAUSCHE. Mr. President——

Mr. KUCHEL. Mr. President, what did the Senator from Ohio say?

The PRESIDING OFFICER. The Senator from Ohio is seeking recognition.

Mr. LAUSCHE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

Mr. TOWER. Mr. President, I object.

Mr. KUCHEL. Mr. President, I object.

The PRESIDING OFFICER. Objection is heard, and the clerk will continue to call the roll.

The clerk resumed and concluded the call of the roll, and the following Senators answered to their names:

Mr. HUMPHREY. I announce that the Senator from Oklahoma [Mr. EDMONDSON], the Senator from Florida [Mr. HOLLAND], the Senator from Tennessee [Mr. Kefauver], the Senator from Missouri [Mr. Long], the Senator from Alaska [Mr. Bartlett], the Senator from New Jersey [Mr. Williams], and the Senator from Alaska [Mr. Gruening] are absent on official business.

Mr. KUCHEL. I announce that the Senator from Colorado [Mr. Allott] is absent because of the death of his mother.

The Senator from Wyoming [Mr. Simpson] is absent on official business.

The Senator from Utah [Mr. Bennett], the Senator from Kentucky [Mr. Morton], and the Senator from Pennsylvania [Mr. Scott] are necessarily absent.

The PRESIDING OFFICER. A quorum is present.

Mr. TOWER obtained the floor.

Mr. PROUTY. Mr. President, will the Senator yield to me?

Mr. TOWER. I yield to the Senator from Vermont.

Mr. PROUTY. Mr. President, I move that the vote by which the Senate agreed to the amendment of the Senator from Delaware [Mr. Williams] be reconsidered.

Mr. WILLIAMS of Delaware. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. TOWER. Mr. President, I send to the desk amendments to S. 1, and ask that they be stated.

The PRESIDING OFFICER. The amendments offered by the Senator from Texas will be stated.

The Legislative Clerk. It is proposed on page 30, line 7, to strike the period, insert a colon and the following:

> *Provided*, That the Director may exclude from enrollment such classes of persons as he may consider detrimental to the well-being or welfare of the Corps except that no person shall be excluded on account of race, color, or creed.

On page 43, line 3, strike the period, insert a colon and the following:

> *Provided*, That the Secretary may exclude from enrollment such classes of persons as he may consider detrimental to the well-being or welfare of the Corps except that no person shall be excluded on account of race, color, or creed.

The PRESIDING OFFICER. Does the Senator wish to have the amendments considered en bloc?

Mr. TOWER. Yes; or as one amendment.

The PRESIDING OFFICER. Without objection, it is so ordered. The amendments will be considered en bloc.

Mr. TOWER. The effect of the amendments would be simply to place in the bill what was essentially the language in the bill establishing the CCC camps. It is similar to the language of the act establishing the Civilian Conservation Corps.

I should like to ask the distinguished Senator from Pennsylvania [Mr. Clark], who is handling the pending bill on the floor of the Senate, what the attitude is on his side about the amendments. It is my belief that some form of rapprochement has been arrived at.

Mr. CLARK. In my opinion, while I believe the amendments are unnecessary, they do no particular harm to the bill, and I am perfectly willing to take them to conference. I will accept the amendments.

Mr. DIRKSEN. Mr. President, will the Senator yield?

Mr. TOWER. I yield.

Mr. DIRKSEN. I do not want to see any tags added. If the amendments are taken to conference and then kicked out on the first meeting of the conferees, all this will have proved to be an exercise in futility. I believe the Record had better show that this action means something more than taking an amendment to conference. I will not go along with any such attitude.

Mr. CLARK. Let us be candid. I will be a conferee. I will support the amendments in conference.

Mr. DIRKSEN. It is generally understood in legislative practice that when it is said, "I will take it to conference," there is about a 90-percent chance against such an amendment remaining in a bill.

Mr. HUMPHREY. I hope the Senator will not say that too many times. The Senator from Texas has offered an appropriate amendment. Similar language was contained in the basic law establishing the CCC. It is not a matter of taking the amendments to conference. It is a matter of adopting them. I congratulate the Senator from Texas.

Mr. DIRKSEN. Then it is understood that this is something more than merely taking an amendment to conference.

Mr. CLARK. Certainly.

Mr. DIRKSEN. And that it will not be dumped at the very first meeting of the conferees.

Mr. CLARK. It is my intention to support the expression of the sense of the Senate.

Mr. TOWER. Does not the Senator feel that we should have a yea-and-nay vote on it?

Mr. DIRKSEN. Yes.

Mr. HUMPHREY. No.

Mr. HRUSKA. Would it not be a better understanding of the sense of the Senate in expressing its view on the amendment if there were a yea-and-nay vote?

Mr. HUMPHREY. We are all men of experience in the Senate. We are all men of good faith and integrity. Why not have a voice vote on it? I would suggest a voice vote, unless there is some intention to delay the Senate, and to take extra time in the consideration of the bill.

Mr. TOWER. I have no intention of engaging in any dilatory tactics. I would like to be in Texas tomorrow, but I believe it is important that the sense of the Senate be recorded, so that the question may not be dealt with lightly.

Mr. HUMPHREY. Does not the Senator feel that the sense of the Senate is recorded just as well by a voice vote?

Mr. TOWER. The Senator has had many years of experience in this body. Certainly he knows that a yea-and-nay vote carries much more weight in reflecting the sense of the Senate.

Mr. CLARK. I shall be glad to amplify what I said before. If I am the chairman of the conference committee, the amendments, if they are adopted by a voice vote, will be just as binding on me in conference as would be any other provision in the bill. I shall support them.

Mr. TOWER. I am sure the Senator will be bound. A yea-and-nay vote, however, would be much more impressive on the conferees from the House of Representatives.

Mr. DIRKSEN. There are two parties to a conference. There are the Members from the House on one side of the table, and Members of the Senate on the other side. If I were the chairman of the House conferees, and I did not want to accept the amendments, I believe the first observation I would make in the conference room would be that the Senate did not even bother to record itself on the amendments. Therefore, I would conclude that this was just another of those things. However, on the other hand, if an impressive vote is had on the amendments, it would be possible to say to the House conferees, "This is the way the Senate feels, and it has recorded its feelings." In other words, the conferees would have a weapon in their hands.

Mr. HUMPHREY. Mr. President, I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. JAVITS. Mr. President, before the vote, let us understand what this proposal amounts to. Let us understand that the amendments, although I agree with my colleagues in the Senate that they are valuable amendments, and I shall support them on a yea-and-nay vote, do not do what we are discussing earlier today. We were talking about the possibility of segregated CCC camps, and we were talking also about the possibility of segregated units in communities which employed title II.

The pending amendments, in my view, will deal with the policy of the administration of the act not to exclude an individual because of his race or color. There is no danger that anyone will be excluded on that ground. However, there is the danger that there may be segregation and discrimination in the operation of the camps, on the basis that I have described.

Therefore, in voting for the amendments, I still say that before I would be prepared to see this bill become law, I would insist on assurances from the Secretary of Labor, which I am seeking now, that in the way in which he hands out the money he will not allow the operation of separate Negro and white CCC camps and separate Negro and white units. I shall support the amendment. It is a fine amendment. However, let us not assume that it blankets the field.

The PRESIDING OFFICER. The question is on agreeing to the amendments, en bloc, offered by the Senator from Texas. The yeas and nays have been ordered, and the clerk will call the roll.

Mr. HUMPHREY. I announce that the Senator from Alaska [Mr. Bartlett], the Senator from Oklahoma [Mr. Edmondson], the Senator from Alaska [Mr. Gruening], the Senator from Florida [Mr. Holland], the Senator from Tennessee [Mr. Kefauver], the Senator from Missouri [Mr. Long], and the Senator from New Jersey [Mr. Williams] are absent on official business.

I further announce that, if present and voting, the Senator from Alaska [Mr. Bartlett], the Senator from Oklahoma [Mr. Edmondson], the Senator from Alaska [Mr. Gruening], the Senator from Missouri [Mr. Long], and the Senator from New Jersey [Mr. Williams] would each vote "yea."

Mr. KUCHEL. I announce that the Senator from Colorado [Mr. Allott] is absent because of the death of his mother.

The Senator from Wyoming [Mr. Simpson] is absent on official business.

The Senator from Utah [Mr. Bennett], the Senator from Kentucky [Mr. Morton], and the Senator from Pennsylvania [Mr. Scott] are necessarily absent.

If present and voting, the Senator from Colorado [Mr. Allott], the Senator from Utah [Mr. Bennett], the Senator from Kentucky [Mr. Morton], the Senator from Pennsylvania [Mr. Scott], and the Senator from Wyoming [Mr. Simpson] would each vote "yea."

Mr. HUMPHREY. On this vote I have a pair with the senior Senator from Florida [Mr. Holland]. If he were present, he would vote "nay." If I were at liberty to vote, I would vote "yea." Therefore, I withhold my vote.

Mr. SMATHERS. On this vote I have a pair with the senior Senator from Tennessee [Mr. Kefauver]. Were he present and voting, he would vote "yea." Were I at liberty to vote, I would vote "nay." I, therefore, withhold my vote.

The result was announced—yeas 71, nays 15, as follows:

[No. 49 Leg.]

So Mr. Tower's amendments were agreed to en bloc.

Mr. TOWER. Mr. President, I move that the vote by which the amendments were agreed to be reconsidered.

Mr. HUMPHREY. Mr. President, I move to lay on the table the motion to reconsider.

The motion to lay on the table was agreed to.

Mr. TOWER. Mr. President, I intend to offer an amendment which at this point I wish to read and explain. I understand that the distinguished majority leader will move that this amendment be laid on the table. Therefore, I wish to have the Senate understand what the amendment provides, because after the motion to lay on the table is made, there will be no opportunity to debate; and I think it important that Senators understand what they will be voting on.

The amendment I intend to propose is as follows: On page 25, in line 20 after the word "responsibility," insert the following: "which agreements with Federal agencies shall (A) prescribe that there shall be no discrimination on account of race, creed, color, or national origin in the employment of the resources, areas, and facilities to be protected, conserved, developed or managed, and further, there shall be no such discrimination practiced in the use of any facilities provided for enrollees, and (B) shall give the Attorney General of the United States the right to enforce such proscription."

The intent of the amendment which I intend to offer is to provide that young people will not work on any project or facility which will be segregated and, further, that they will not be segregated in their camps or their living quarters or the facilities they use, and that no facility provided for the enrollees, regardless of where the facility may be located, may be segregated.

Today it was said that this amendment is not needed. But I submit that if we wish to be sure that a practice of nondiscrimination will prevail in the administration of this measure, it is encumbent upon us to fix it into the law.

Furthermore, if the Attorney General or other appropriate Federal officials are going to administer the law in this manner anyway, I think they should have the appropriate legal authority.

Mr. President, when I offer the amendment, I understand that a motion to lay the amendment on the table will be made. In that case, a Senator who favors the adoption of my amendment will vote "nay," on the question of agreeing to the motion to lay the amendment on the table.

Therefore, Mr. President, I send my amendment to the desk and ask that it be read.

Mr. KUCHEL. First, Mr. President, will the Senator from Texas yield?

The PRESIDING OFFICER (Mr. McIntyre in the chair). Does the Senator from Texas yield to the Senator from California?

Mr. TOWER. I yield.

Mr. KUCHEL. First, let me say that I intend to support the amendment.

Second, I wish to ask the Senator from Texas whether I am correct in my understanding that the text of his amendment represents the law of the land today.

Mr. TOWER. That is my understanding. Certainly the amendment is in the spirit of the Bill of Rights, and is in the spirit of the decision in the case of Brown against the Board of Education of Topeka, Kans.; or, at least, I would say it is consonant with the rule of that case. There may be debate as to whether this is the law of the land or whether this is the law of that case.

Mr. KUCHEL. I rise to congratulate the Senator from Texas; and if a motion to lay on the table the amendment of the Senator from Texas is made, I hope the Senate will reject the motion to lay the amendment on the table.

The PRESIDING OFFICER. The amendment of the Senator from Texas will be read.

Mr. GOLDWATER. Mr. President——

Mr. TOWER. Mr. President, I ask unanimous consent that, first, I may yield to the Senator from Arizona, before the amendment is read.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

Mr. GOLDWATER. I merely wish to add, following the answer the Senator from Texas gave to the Senator from California, that it is also the determination of the President, as witnessed by his housing order during the past year; namely, his order that wherever Federal funds are spent, there will be no discrimination. I call that fact to the attention of Senators.

Mr. TOWER. Mr. President, I ask that my amendment be read at this time.

The PRESIDING OFFICER. The amendment of the Senator from Texas will be read.

The Chief Clerk. On page 25, in line 20, after the word "responsibility," it is proposed to insert the following: "which agreements with Federal agencies shall (A) prescribe that there shall be no discrimination on account of race, creed, color, or national origin in the employment of the resources, areas, and facilities to be protected, conserved, developed, or managed, and further, there shall be no such discrimination practiced in the use of any facilities provided for enrollees, and (B) shall give the Attorney General of the United States the right to enforce such proscription."

Mr. MANSFIELD. I recognize a triple play when I see one; I recognize the combination of Tower to Kuchel to Goldwater.

I was happy to note that the distinguished acting minority leader, the Senator from California [Mr. Kuchel], stated that the amendment proposed by the Senator from Texas [Mr. Tower] is the law of the land, and to hear that statement corroborated by both the Senator from Texas [Mr. Tower] and the Senator from Arizona [Mr. Goldwater].

Therefore, Mr. President, in view of the fact that the Senate has already adopted an antidiscrimination amendment, and the further fact that these additional facts have come to light in the public debate, I move that the amendment of the Senator from Texas be laid on the table.

Mr. KUCHEL. Mr. President, on this question, I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. TOWER. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator from Texas will state it.

Mr. TOWER. Are we to understand that in voting on this question, a vote "yea" will be to lay on the table my civil rights proposal?

The PRESIDING OFFICER. That is correct.

Mr. TOWER. I thank the Chair.

Mr. MANSFIELD. That is correct. I thought the Senator from Texas was about to say something in further explanation.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Montana [Mr. Mansfield] that the amendment of the Senator from Texas [Mr. Tower] be laid on the table. On this question, the yeas and nays have been ordered; and the clerk will call the roll.

The legislative clerk called the roll.

Mr. HUMPHREY. I announce that the Senator from Oklahoma [Mr. Edmondson], the Senator from Florida [Mr. Holland], the Senator from Tennessee [Mr. Kefauver], and the Senator from Missouri [Mr. Long] are absent on official business.

On this vote, the Senator from Oklahoma [Mr. Edmondson] is paired with the Senator from Missouri [Mr. Long]. If present and voting, the Senator from Oklahoma would vote "yea," and the Senator from Missouri would vote "nay."

On this vote, the Senator from Florida [Mr. Holland] is paired with the Senator from Tennessee [Mr. Kefauver]. If present and voting, the Senator from Florida would vote "yea," and the Senator from Tennessee would vote "nay."

Mr. KUCHEL. I announce that the Senator from Colorado [Mr. Allott] is absent because of the death of his mother.

The Senator from Wyoming [Mr. Simpson] is absent on official business.

The Senator from Utah [Mr. Bennett], the Senator from Kentucky [Mr. Morton], and the Senator from Pennsylvania [Mr. Scott] are necessarily absent.

If present and voting, the Senator from Colorado [Mr. Allott], the Senator from Utah [Mr. Bennett], the Senator from Kentucky [Mr. Morton], the Senator from Pennsylvania [Mr. Scott], and the Senator from Wyoming [Mr. Simpson] would each vote "nay."

The result was announced—yeas 50, nays 41, as follows:

So the motion to lay on the table Mr. Tower's amendment was agreed to.

Mr. TOWER. Mr. President, I intend to offer another perfecting amendment to the bill, which I shall read. I expect the same fate for this amendment as the previous one met, so I shall not offer it until I have had an opportunity to explain its intent to the Senate.

On page 42, between lines 20 and 21, insert the following new subsection:

> (c) The Secretary of Labor shall provide no assistance or cooperation to any private agency or any agency of any State, county, or local government, unless such agency (A) shall prescribe that there shall be no discrimination on account of race, creed, color, or national origin in the employment of the resources, areas, and facilities to be protected, conserved, developed, or managed, and (B) shall give the Attorney General of the United States the right to enforce such proscription.

Mr. President, I think this amendment which I am about to offer is even more important than the previous amendment. Though we might not expect discrimination in the enrollment of people in the program, and might not expect the program to be operated in such a way that there would be segregated facilities for the corps members, still there is some doubt about whether the program could not be made beneficial to certain facilities privately or publicly owned in which segregation and discrimination are practiced.

I do not believe that there is any ironclad protection against that, so the intent of my amendment is to provide that the enrollees in the program may not work on facilities with respect to which there is segregation or discriminatory practices exist.

If a motion to table the amendment is made, Senators should realize that if they vote "yea" they will be voting for discrimination.

Mr. President, I offer the amendment which I send to the desk and ask to have stated.

The PRESIDING OFFICER. The amendment will be stated for the information of the Senate.

The Chief Clerk. On page 42, between lines 20 and 21, it is proposed to insert the following new subsection:

> **(c) The Secretary of Labor shall provide no assistance or cooperation to any private agency or any agency of any State, county, or local government, unless such agency (A) shall prescribe that there shall be no discrimination on account of race, creed, color, or national origin in the employment of the resources, areas, and facilities to be protected, conserved, developed, or managed, and (B) shall give the Attorney General of the United States the right to enforce such proscription.**

Mr. MANSFIELD. Mr. President——

Mr. TOWER. Mr. President, I ask for the yeas and nays.

The PRESIDING OFFICER. The Senator from Montana is recognized.

Mr. MANSFIELD. Mr. President, it appears to me that the third amendment on the same subject is being offered for the purpose of killing the measure under consideration. Therefore, I have no hesitation in moving that the pending amendment be tabled, and on that question I ask for the yeas and nays.

Mr. TOWER. Mr. President, will the Senator yield for a question?

Mr. MANSFIELD. I yield.

Mr. TOWER. I am still at a loss to understand, Mr. President, why, if it is said that these amendments are unnecessary to prevent discrimination, we cannot put them into the bill. It is said that if these amendments are put in the bill they would kill the bill. Am I to understand that some of my good friends from the South will vote for the bill with the understanding that there will be an antidiscriminatory administration of the bill, even if such provisions are not in the bill itself?

Mr. MANSFIELD. Mr. President——

Mr. TOWER. I wonder if this does not impugn the rationality of my colleagues.

Mr. MANSFIELD. Mr. President, I yielded to the Senator from Texas, who I thought was about to propound a question, but instead he has made a political speech, which I am sure will come in handy in the coming campaign.

Mr. TOWER. No.

Mr. MANSFIELD. Mr. President, I refuse to yield further.

Mr. President, I think it is unfair to direct a question to the South generally, because as I look over the delegation on this side of the Chamber I do not see a southern delegation, a western delegation, a northern delegation, or an eastern delegation, but rather a democratic grouping representing all parts of the Nation. I think we are aware of what is transpiring this afternoon. The purpose is to kill the bill. I am not at all certain that the Senator from Texas is in favor of the bill now under consideration.

Therefore, Mr. President, I ask for the yeas and nays on the motion to table.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is on agreeing to the motion by the Senator from Montana [Mr. Mansfield] to lay on the table the amendment offered by the Senator from Texas [Mr. Tower].

On this question the yeas and nays have been ordered, and the clerk will call the roll.

The Chief Clerk called the roll.

Mr. HUMPHREY. I announce that the Senator from Oklahoma [Mr. Edmondson], the Senator from Florida [Mr. Holland], the Senator from Tennessee [Mr. Kefauver], and the Senator from Missouri [Mr. Long] are absent on official business.

On this vote, the Senator from Oklahoma [Mr. EDMONDSON] is paired with the Senator from Colorado [Mr. ALLOTT]. If present and voting, the Senator from Oklahoma would vote "yea," and the Senator from Colorado would vote "nay."

On this vote, the Senator from Florida [Mr. HOLLAND] is paired with the Senator from Pennsylvania [Mr. SCOTT]. If present and voting, the Senator from Florida would vote "yea," and the Senator from Pennsylvania would vote "nay."

On this vote, the Senator from Tennessee [Mr. KEFAUVER] is paired with the Senator from Wyoming [Mr. SIMPSON]. If present and voting, the Senator from Tennessee would vote "yea," and the Senator from Wyoming would vote "nay."

On this vote, the Senator from Missouri [Mr. LONG] is paired with the Senator from Utah [Mr. BENNETT]. If present and voting, the Senator from Missouri would vote "yea," and the Senator from Utah would vote "nay."

Mr. KUCHEL. I announce that the Senator from Colorado [Mr. ALLOTT] is absent because of the death of his mother.

The Senator from Wyoming [Mr. SIMPSON]is absent on official business.

The Senator from Utah [Mr. BENNETT], the Senator from Kentucky [Mr. MORTON] and the Senator from Pennsylvania [Mr. SCOTT] are necessarily absent. If present and voting, the Senator from Kentucky [Mr. MORTON] would vote "nay."

On this vote, the Senator from Colorado [Mr. ALLOTT] is paired with the Senator from Oklahoma [Mr. EDMONDSON]. If present and voting, the Senator from Colorado would vote "nay" and the Senator from Oklahoma would vote "yea."

On this vote, the Senator from Utah [Mr. BENNETT] is paired with the Senator from Missouri [Mr. LONG]. If present and voting, the Senator from Utah would vote "nay," and the Senator from Missouri would vote "yea."

On this vote, the Senator from Pennsylvania [Mr. SCOTT] is paired with the Senator from Florida [Mr. HOLLAND]. If present and voting, the Senator from Pennsylvania would vote "nay" and the Senator from Florida would vote "yea."

On this vote, the Senator from Wyoming [Mr. SIMPSON] is paired with the Senator from Tennessee [Mr. KEFAUVER]. If present and voting, the Senator from Wyoming would vote "nay" and the Senator from Tennessee would vote "yea."

The result was announced—yeas 58, nays 33, as follows:

So Mr. MANSFIELD'S motion to lay on the table Mr. TOWER'S amendment was agreed to.

Mr. CLARK. Mr. President, I move that the vote by which the Senate laid on the table the amendment of the Senator from Texas, be reconsidered.

Mr. HUMPHREY. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. DIRKSEN. Mr. President—and I would like to have good attention from the other side of the aisle to this statement—the other day I appeared on a television program with a distinguished Ph. D. named Dr. Burns, who has written a book entitled "Deadlock of Democracy."

In that book, in a number of chapters, he makes a great deal of the wicked coalition between the Republicans and southern Democrats.

I told Dr. Burns at the time we were making the telecast that the chapters I read seemed like interesting fiction, and nothing more. I do not know where Dr. Burns is this afternoon. I assume he is at Williams College. I wish he had sat in the gallery this afternoon and had heard these votes, and had heard the nay votes, with some exceptions, on the tabling motion on this side, and so many yea votes to table on the other side. If any thesis was ever disproved in this piece of fiction called "Deadlock of Democracy" it was done here on the Senate floor this afternoon. All hail to this wicked coalition they have been talking about.

Mr. HUMPHREY. Mr. President, will the Senator yield?

Mr. DIRKSEN. I yield.

Mr. HUMPHREY. Wickedness is being banished this afternoon.

Mr. DIRKSEN. Yes.

Mr. HUMPHREY. This has added to our theme of salvation of last week.

Mr. DIRKSEN. I hope that my friend from Minnesota will get on his knees, where I will join him, so that we may supplicate providence in the interest of salvation. May our entreaties be loud and long, because all of us will need it, and his program will need it more than anything else.

Mr. HART. Mr. President, what I have to say will be neither loud nor long. It is not a time now to evaluate phrases or test motivations of any yea-and-nay vote today. I speak as one who has been troubled ever since I came here with respect to what the right approach is in connection with this basic problem: Shall we shut off money to certain regions or shall we not when they discriminate in their use of schools and when we are told, "No. Education must come first. The children shall not be denied it. Give us time."

This is what has troubled many of us. I have reached the point, with some continuing doubts as to the wisdom of the course, but nonetheless with determination to pursue it, that instead of approaching this problem tangentially, as we did this afternoon, we had better hit it head on.

The money which we in Congress appropriate comes from the pockets of all Americans. I do not want any longer to be put in the position of explaining to some Americans, "Yes, we take your money, but you cannot use the facilities."

I do not care whether it relates to a youth in a camp in a forest, or to a little girl seeking admission to a school whose parents happen to be in the military service of this country, or to a child seeking a vocational education or rehabilitation, or anything else.

Now is the time, since so many seem to be demonstrating a new concern, to say, "All right, let us say it first to those agencies of the Federal Government on the executive side who disburse some of this money. Are they free to withhold it when they find a State program discriminates?"

Michigan has just been told that its program for aid to dependent children of unemployed parents does not qualify because it discriminates. How does it discriminate? It makes eligible parents who are under covered employment under the unemployment insurance system. They say it discriminates against children of parents who are not under covered employment, more or less.

I salute the Department of Health, Education, and Welfare for standing up and saying it is a discriminatory program and they will not get any money, though it is tough to explain it to some children. What are they going to do about continued disbursement of Federal money to impacted school districts, where there is no semblance of a school district seeking to desegregate?

Is there not here chapter and verse for discriminatory treatment? What are they going to do about that? What are they going to do about that, not next year, but now?

They have already told Michigan.

Let each agency of the executive branch examine the statutes and find out whether they can or cannot now, as we seek explicitly to prohibit or bar disbursement of these Federal funds, contributed by every American, to programs and facilities into which some Americans cannot get.

It just does not make sense. It does not make sense as a matter of right and wrong, and as a matter of our appearance in the eyes of the rest of the world. Either way, we are wrong. Let us get right.

How do we get right? We get right by telling the executive agencies to get right where they can. Where they cannot, let us make it right. Let us do so, not by action such as this bill contemplates, by trying to tack on the kind of amendment that has been proposed.

The distinguished Senator from New Jersey and I had an embarrassing experience a couple of years ago when a very small bill came through here to return to a State a facility which the Army had been using as a hospital, so that the State could use it in a vocational or rehabilitation program. I forget which it was.

We were beaten when we sought to attach a condition that the facility shall be used openly and without discrimination. We tried it on the floor, and we were overwhelmingly rejected. We were told by our good friends that the way to accomplish one purpose was not in a hit-or-miss fashion, but that the way to do it was by doing it right across the board. That was a couple of years ago, and we have not done anything in an across-the-board fashion. I believe that we had better develop a basic statute which will have the effect of being applicable to every program that we propose to adopt, and say that which by implication we tell the rest of the world anyway, that we will treat each American equally and freely when we take his money.

If we cannot do it on an across-the-board basis, then I welcome some who have joined us today, and let us do it with every program.

This is 1963. I heard something said about the Emancipation Proclamation. It is time to get right on it. How can we defend a practice of sending money which enables a State to deprive a program or an institution, which, I understand the Constitution says, ought not to be.

I do not see how it adds up. As I say, I for one have resolved this dilemma which has bothered me ever since I came here, in part having seen what I saw this afternoon, to approach it this way. I hope other will join me.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. PROUTY. Mr. President, I might say that I am not offering an amendment at this time. I shall speak on the bill. If any Senators wish to leave now, I do not see any reason why they cannot leave. We will have a quorum call later.

Mr. PASTORE. Mr. President, will the Senator repeat his statement?

Mr. PROUTY. When I have concluded my remarks, we will have a quorum call.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. PROUTY. I yield.

Mr. MANSFIELD. Is it the Senator's intention to offer an amendment at the conclusion of his remarks? I ask the question only for the information of the Senate.

Mr. PROUTY. I am not in a position to say at this time. I shall let the majority leader know.

Mr. PASTORE. Mr. President, will the Senator yield further?

Mr. PROUTY. I yield.

Mr. PASTORE. Is the Senator in any position to tell us about how long he will take?

Mr. PROUTY. I believe it would be perfectly safe for the Senator to be absent for an hour. I will make sure that it is.

Mr. PASTORE. I thank the Senator.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Hackney, one of its reading clerks, informed the Senate that, pursuant to section 194 of title 14 of the United States Code, Mr. BONNER, chairman of the Committee on Merchant Marine and Fisheries, had appointed Mr. GARMATZ, Mr. LENNON, and Mr. MAILLIARD as members of the Board of Visitors to the U.S. Coast Guard Academy for the year 1963, on the part of the House.

The message also informed the Senate that, pursuant to Public Law 301 of the 78th Congress, Mr. BONNER, chairman of the Committee on Merchant Marine and Fisheries, had appointed Mr. DOWNING, Mr. GILBERT, and Mr. VAN PELT as members of the Board of Visitors to the U.S. Merchant Marine Academy for the year 1963, on the part of the House.

The message announced that the House had agreed to a concurrent resolution (H. Con. Res. 134) establishing that when the House adjourns on Thursday, April 11, 1963, it stand adjourned until 12 o'clock meridian, Monday, April 22, 1963, in which it requested the concurrence of the Senate.

YOUTH CONSERVATION CORPS

The Senate resumed the consideration of the bill (S. 1) to authorize the establishment of a Youth Conservation Corps to provide healthful outdoor training and employment for young men and to advance the conservation, development, and management of natural resources and recreational areas; and to authorize local area youth employment programs.

Mr. PROUTY. Mr. President, the young people of our country will never get to know what a wonderful thing a free society is unless we enable them to play a part in it.

We tell them in their textbooks that ours is a land of opportunity; and yet, when they close their textbooks and face the world, they find no such opportunity.

If these young men and women ever come to believe that ours is the land of unfulfilled promises—not a promised land—we will be sitting on a powder keg that has more explosive force than all the atom bombs of unfriendly nations.

At this very moment almost 800,000 young people are both out of school and out of work. America needs their fresh ideas and their bright young hope, but the ideas will stagnate and the hope will dim unless we find a way to use them—and find it we must.

The situation is getting worse instead of better and day by day a tremendous economic waste walks hand in hand with a great human tragedy.

During the 1960's, the increase in the number of 16- to 21-year-olds in the work force will be 5½ times greater than the increase during the 1950's.

Statistics are a key to bookkeeping, but by themselves they do not open the door that lays bare all that they mean in the way of bitter frustrations, hopelessness and despair.

When we hear that 31 percent of all colored girls in the 18-to-19 age group are without jobs, how much do the figures really tell us about what this means in terms of humiliation and loss of pride? When we hear about the overall rate of 14-percent unemployment among the 16-to-21 age group, what do the figures tell us about the resentment that is building up and the faith in our society that is being washed away?

If America fails to get on the move, the number of unemployed youths in 1970 will be one-third greater than today.

Twenty-six million youths will enter the labor force in the 1960's. Almost 3 out of 10 of these youngsters will not have completed high school, and 2½ million will not have finished the eighth grade.

How are these boys and girls—without adequate training, without sufficient education—going to find the path to the great satisfactions of a working life?

In the good old days, the untrained young man or young woman could find an unskilled job, and in rural communities they could always turn to employment on the farm. But the good old days are gone. The need for unskilled workers and farmers will decline by 12 percent during the 1960's, in the face of the fact that the number of youngsters then entering the labor force will be 40 percent higher than the number during the previous decade.

Technological changes have altered the character of employment in this country; and we need, as never before, skilled, well educated workers.

If, then, the times are new and the problems are new, why does the administration recommend, and the committee report, two programs which resemble very closely the Civilian Conservation Corps and the National Youth Administration of the 1930's?

True, there is something beautiful about a campfire, something grand and glorious about open air and sunshine; but when we transport thousands of young men to woody fairylands for 6 months or a year, and then return them to city streets, ill equipped to face life, we do them a great disservice.

Secretary of Labor W. Willard Wirtz has conceded that when these boys come back from a year's camping in the woods, they will not be ready for skilled or semiskilled occupations.

A table which I have before me shows the projected percentage change in the various types of occupations during the 1960's. I ask unanimous consent that it be printed at this point in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Median school years completed by major occupational groups

Occupation	Median school years completed		Employment	
	1952	1962	Percent change, 1952–62	Projected percent change during 1960's
Professional and technical workers	16+	16.2	56.2	43
Clerical and sales workers	12.4	12.5	20.1	28
Proprietors and managers	12.2	12.5	19.1	21
Skilled workers	10.1	11.2	−3.1	20
Semiskilled workers	9.1	10.1	−6.3	13
Service workers	8.8	10.2	30.9	34
Unskilled workers and farmers	8.3	8.8	−20.8	−12

Source: U.S. Bureau of the Census and U.S. Department of Labor.

Mr. PROUTY. Mr. President, the table demonstrates how truly fantastic and out of date the Conservation Corps scheme really is. The figures show that during the 1960's, the demand for professional and technical employees will increase by 43 percent. The need for skilled workers will increase 20 percent, and the required number of service workers will jump 34 percent.

It is in the face of facts such as these that the Senate is about to act on a bill, costing millions of dollars, which will not give our teenagers the skills the times demand.

Young people do not need a pick-and-shovel operation in the tall timbers. They need the kind of advanced vocational or technical training that will qualify them for the skilled and technical jobs that are available.

This situation was brought sharply to focus by Dr. William B. Logan, a member of the President's Panel of Consultants on Vocational Education, who recently said:

> There are 4 to 6 million unemployed; at the same time there are 4 to 6 million job openings. The difference is skills.

Why do we find ourselves in a situation in which hundreds of thousands of teenagers are looking for jobs, and at the same time hundreds of thousands of jobs are going begging?

To a large extent, our public education system is at fault. It has failed to keep in tune with the social and economic changes that have been going on during the past 30 years.

Our schools are teaching skills that now are obsolete, and they are failing to teach new ones that are needed in order to meet changing industrial patterns.

An 18-month national survey conducted by Judge Mary C. Kohler, concluded that there was—

> A conspicuous failure to attack archaic vocational and trade schools on a national level; no attempt has been made to temper the academic methods to the student's ability; with but few exceptions trade schools are not teaching service skills; vocational training exists in a fairyland that has not much relation to the real world of work.

In the name of commonsense, why should we train people for jobs that existed yesterday? The technological revolution in our economy has produced a demand for so many skills of so many new and different types, that we have, in fact, developed large labor shortages—shortages that can be found even in areas with long and persistent unemployment.

As an example of the need, 900,000 more persons could be employed, if they were available in the field of health services, alone.

Training and education will not solve all our problems; but if they are more fully financed and are more adapted to the times, they can help us make a real beginning.

If even an administration Cabinet member, such as Secretary of Labor Wirtz, will admit that Youth Conservation Corps boys will not learn enough in the woods to prepare them for skilled occupations or semiskilled occupations, how can any Member of the Senate be led to believe that the solution of the 1930's is an answer to the problems of the 1960's?

I recall the words which are written under the bust of Mark Twain in the Hall of Fame:

> Loyalty to petrified opinion never yet broke a chain nor freed a human soul.

Mr. President, the clock will not be, cannot be, and must not be turned back.

I have spoken earlier about what the unemployment problem of our young people costs this Nation in the way of human values and human attitudes. I am quite conscious of the fact that it is a problem that will not be solved without the expenditure of a substantial sum of money. But if we have to spend more money in order to prepare our children for the needs of tomorrow, let us spend it wisely and well; and let us try to reduce other, less essential, programs.

In 1961, the present administration gave the members of the Senate Labor and Public Welfare Committee some information that is wishes we would forget, about the cost of the Youth Conservation Corps. Yet this information was based upon estimates submitted by the Department of the Interior and the Department of Agriculture, and we cannot forget it.

These Departments told the committee that the annual cost per boy of the Youth Conservation Corps would be as follows:

In a 25-man unit: $12,297 per boy per year.

In a 50-man unit: $9,016 per boy per year.

In a 100-man unit: $8,263 per boy per year.

In a 200-man unit: $7,171 per boy per year.

Pause and reflect for a moment, if you will, Mr. President, on this unreasoning disregard of the solvency of the Federal purse and the welfare of the American boy.

Herman Melville, the great writer once said:

> The sea was my Harvard and my Yale.

He meant that it was on the sea that he had come to grips with life.

At a cost of $12,000 a year for a tour in the forests, the Youth Conservation Corps boys will be able to do Melville one better, by saying: "The woods were my Harvard and my Yale, and my Cambridge and my Oxford, too."

Let us compare what it costs a parent to send a boy to an Ivy League college with what it will cost the Federal Government per boy in the Youth Conservation Corps. Annual tuition fees and room-and-board costs at Harvard are $2,300. The same figure holds true for Yale, and smaller amounts for Dartmouth and Princeton. In a word, a worthy American boy could be given a complete college education for what it would take under the Youth Conservation Corps, to send a lad into the birches.

A few minutes ago I mentioned the persistent labor shortages that exist at the same time that millions of young persons are unemployed. Under the Manpower Development and Training Act, programs to match the unemployed with the unfilled jobs are now being established.

The estimated total cost per trainee in the manpower statutes projects was $1,178, of which $492 represented the average training cost, and $686 the average training allowance charge.

This training, which enables people to qualify for work, costs but a small fraction of the camping expenses per boy in the Youth Conservation Corps.

Recognizing that the public would regard the corps as sheer folly if the 1961 cost estimates were spotlighted, the administration is now telling us that the annual camping cost per boy would be around $4,000.

How is this fantastic reduction in estimates now possible? Believe me, it is more political than actuarial in nature.

Sar A. Levitan, a Library of Congress scholar, wrote a paper for the W. E. Upjohn Institute in which he pointed out that it would cost about $5,000 per enrollee to construct new camps. This expense, he said, would be in addition to the cash outlays for enrollee compensation, food, clothing, supervision, transportation, work equipment, and so forth.

How, then, does the administration maintain now that the Youth Corps will cost $4,000 per boy per year? Secretary of Labor Wirtz gave his answer to this question when he told the Senator Labor and Public Welfare Committee that all construction costs would be amortized over a 20-year period.

I asked the Secretary whether he contemplated a 20-year Youth Conservation Corps program and he answered in the negative.

Listen for a moment to what the impartial expert on employment matters, Sar Levitan, has to say about how the costs of the Youth Conservation Corps should be calculated:

> It would cost about $5,000 per enrollee to construct new camps. This amount would have to come out of the first year's appropriation and cannot, according to Federal budgetary practices, be amortized over the useful life of the camp.

He goes on to point out that if unutilized facilities were available, it would still require an appreciable though indeterminate initial outlay to alter and renovate such facilities.

During the course of the Senate hearings, I asked Secretary of Labor Wirtz where the Federal Government would house the 15,000 enrollees in the Youth Corps if existing facilities are used. The Secretary replied as follows:

> Where are we going to put them? That question I cannot answer.

In view of all the circumstances I have set forth, neither the Senate nor the public has a clear picture of what the Youth Conservation Corps will cost, whether old facilities are used or new ones are constructed.

All we know is that the expense will be tremendous even if we accept the most modest estimates.

Many words might be said regarding title II of the bill which authorizes a public employment and training program largely in public service jobs.

Such a program, properly drafted, might well prove to be of some use as a temporary remedy or stopgap measure.

However, the language of the bill will tend to encourage its use for political purposes. There are no firm criteria by which it can be ascertained what the Federal share of program costs will be in any given State.

Under the terms of the bill the Secretary of Labor would be at liberty to pay as much as 75 percent of the costs of a given program. The bill requires only that he consider certain factors among others in making his decision.

Apparently, if the administration encounters a rough political situation in a particular State, one of its Cabinet members will have the privilege of dumping in Federal money so that jobs can be doled out to alleviate the situation.

There is no question that there is a growing need for educational and medical services, including help of all kinds in schools and hospitals. Needs such as this should be given priority in title II but they are not.

A community employment program can do much to improve the services in our health and educational institutions, but such a program must be written with a view to public and not political needs.

It is to be hoped that by providing work opportunities in schools and hospitals, thousands of our youngsters will be encouraged to continue their education.

In the meantime we must revamp our institutional vocational educational programs so that they will be able to cope with the scientific and technological revolution which is shaking our social and cultural foundations to the roots.

We are still training people to work on machines that are rarely, if ever, used by industry, and at the same time industry is begging for people to perform other skills and jobs remain unfilled.

If we can make major revisions in our vocational training activities we will be able to entice many of our young people to stay in school. When that is accomplished, make-work programs such as that contemplated in title II may no longer be necessary.

During the past year the American taxpayer, through all forms of taxation, paid a total public school bill of $18.1 billion. Of this, $5.6 billion was for high school education. Only $254 million, or 4.5 percent of this high school budget, was spent on vocational education.

Are we not really behind the times? Consider the fact that only 4½ percent of the secondary school budget was spent to supply the types of skills needed by the 80 percent of our school population who will enter the labor force without a college education. In its school message the administration asks for only $73 million for vocational and technical courses that will meet a pressing need.

In asking for approval of a Youth Conservation Corps it decided in favor of relief and against supplying young citizens with skills and job opportunities.

In this day of $100 billion Federal budgets and at this time when we are facing an annual deficit that may exceed $14 billion, some programs must be reduced or postponed in the interest of national solvency.

At the appropriate time I shall offer a substitute measure for the pending bill. This substitute is adapted to the needs of our swiftly moving times and will give our young people the opportunities they have read about in school but have not seen.

My substitute proposal would be expensive, but it would cost substantially less than the administration bill, and, in my judgment, it would do far more to promote the welfare of our teenagers.

At this time when the Federal purse is subject to heavy drains, we must give top priority to programs which will safeguard and enhance our traditions of liberty and opportunity.

As I told the Vermont Legislature only 2 weeks ago, a nation that can spend billions of dollars to send a man to the moon can surely afford the small investment it takes to plant the feet of our children firmly on the ground.

Simply giving young boys from city streets a tour of the woods will not solve their adjustment problems nor will it give them the skills and training they need to face life and play a working role in our society.

I have quoted the words of Mrs. Agnes Meyer several times during this debate. I think repetition may be a good thing, because she expresses a point of view which I share 100 percent.

In 1961, Mrs. Agnes E. Meyer, of the Meyer Foundation, in her appearance before the Employment and Manpower Subcommittee, pointed out:

> No matter how much a young man may profit from the training and healthful influences of the Youth Conservation Corps, he will eventually have to return to the home from which he came and be again subjected to the detrimental influences from which he has temporarily escaped. This proved to be a great difficulty to many of the CCC graduates.

Dr. Kenneth Clark of the faculty of the College of the City of New York, who is research director of the Northside Center for Child Development, has stated that we are really looking for the easy way out when we send youngsters to work camps. I quote now from Dr. Clark:

> Realism would argue that it would be easier for the society to send youth to work camps rather than to strengthen the schools and enrich their curriculums; it would be more economical in the short run to send youth to work camps rather than to tackle the complex social and economic problems which are related to the deprivation and deterioration found in underprivileged communities; it would be less disturbing to send youth to work camps than to deal with the basic problems of prejudice and discrimination which blunt the motivation of a substantial proportion of the young people in our society. The fact remains, however, that these unsolved and difficult social problems will not disappear and will confront these same youth when they return to society.

Richard G. Farrow, director of the Bureau of Youth Services of the Pennsylvania State Department of Welfare, also brought sharply to focus the fact that young people have real problems after they leave forest camps. In his testimony during the hearings, Mr. Farrow said:

> Each of the boys must return to a community after his enlistment. He must once again start on his search for employment.
>
> Assume he is better equipped, following his camp experience, than he was before. Still, in our present labor market he may not find his place.

Mr. Farrow also pointed out that while sometimes a boy changes his attitude during camp enrollment, the change persists, and I am quoting him now: "until he leaves and then he has to go back to a community which by and large has not changed as much as he has. He has to fit in with this change to an old situation, which he finds often to be very difficult."

Because of the fact that young people, once their camp tour is over, must return to the bad environment they came from, frequently a great deal of disillusionment sets in.

Mr. Farrow, of the Pennsylvania Bureau of Youth Services, also commented on this point. He said:

> We are only too well aware that some of our graduates have been unable to sustain the change that was effected within the program and have become involved in further difficulties with further institutional experience resulting.

In conclusion on this point, may I say that many supporters of the Youth Conservation Corps have suggested that boys who drop out of school because they have no aims in life will find themselves properly oriented after a year in the country.

If, Mr. President, rural life is what gives a boy aim, direction and motivation, how do we explain the fact that the rural dropout rate is as high as the urban dropout rate?

For example, both New York and New Jersey have lower dropout rates than many of the rural States such as Virginia, West Virginia, and Mississippi.

THE CAUSES OF DROPOUTS

The various studies and articles concerning the dropout problem and unemployment among the young indicate a few basic facts. A brief summary of these factors follows:

First. Psychological problems cause students to leave school.

Irene M. Josselyn, M.D., editor of the Journal of the American Academy of Child Psychiatry, calls dropping out of school an escape. Youths who are hostile and rebellious toward authority leave school, according to Dr. Josselyn, only to find themselves unable to accept the authority of a foreman on a job.

Edgar Friedenberg, an associate professor of education at Brooklyn College, claims that dropouts leave school because of moral revulsion from the middle-class life of the school.

Second. Inadequate vocational training causes dropouts and then prevents those who have left school from finding work.

The Nation's vocational training programs are criticized for not being professional enough; for leaving too little time for specific training; generally unskilled teachers; and for not starting soon enough in the student's school career.

A more basic criticism, in terms of S. 1, is that much vocational training is not designed to prepare the young for the types of jobs that are available. On January 25, 1963, Senator PROXMIRE inserted a Reader's Digest article entitled "Why Johnny Can't Get a Job," into the RECORD. The article presents an eloquent plea for a revamping of our vocational training system so that our young will be able to learn trades that are in demand.

The National Education Association Journal of May 1962 pointed out that "the inexcusable tragedy of unemployment lies in the fact that the number of available, but unfilled, skilled jobs in the United States is generally equal to the number of those unemployed because they possess no skills."

Third. Marriage, in the case of girls particularly. The Conference on Unemployed, out-of-school youth in urban areas has pointed out that one-fourth of the Nation's 18-year-old girls are married, and the figures for 17- and 16-year-olds are high also.

Fourth. Feeble enforcement of attendance laws is blamed for some dropouts, particularly in agricultural States.

Fifth. Economic and cultural deprivation is a major cause, again according to the 1961 Dropout Conference. Poverty, lack of intelligence, and the problems of minority groups are all included within this subheading.

Mr. CARLSON. Mr. President, will the Senator yield?

Mr. PROUTY. I yield.

Mr. CARLSON. I dislike to inject myself into this discussion, which is a very profound one, not only on this legislation, but also on the subject of training our youth for their future livelihood.

Some weeks ago I made a statement on the floor of the Senate in regard to the need for expanding our vocational education programs. I said at that time that there were probably 1,600,000 jobs available for persons who were not able to fill them, because they were not trained to fill them. I said I thought we were living in an age in which we should devote more of our Federal funds to training our young men and women to use their hands, which is not a bad idea even in this space age.

Mr. PROUTY. The Senator is correct. I had hoped to have an amendment prepared, which I would offer as an amendment to this bill, providing for a more realistic vocational education program; but it would have been too complex and too involved to offer as an amendment on the floor. I think it should be sent to committee, so it can be given thorough consideration. I shall certainly do that when the President's educational request is under consideration.

Mr. CARLSON. I assure the distinguished Senator from Vermont that I shall be glad to assist him when that amendment comes to the floor, because I believe this is one field which we have sadly neglected in the training of our youth.

Mr. PROUTY. That is true. As I stated in the course of the debate, many of the skills being taught in some of our vocational schools today are obsolete. There is no need for them. I have used Milwaukee, Wis., as an outstanding example of what can be done in the field of vocational education. I think the school dropout in that city is only about 5 percent, which is much lower than it is in other cities of comparable size, primarily because a great deal of money is spent on vocational education within the confines of Milwaukee. The program has demonstrated what can be done under a proper vocational education system.

Mr. CARLSON. I wish to bring up at this time a subject which I had intended to discuss this morning with the distinguished Senator from Pennsylvania [Mr. CLARK], who is in charge of the bill, in regard to the employees necessary to manage the agency. I have read the bill and the report. Is there any reference in the bill or the report that would indicate the number of personnel required to establish the proposed agency?

Mr. CLARK. There is nothing specific. I think the Senator has reference to title I.

Mr. CARLSON. Yes.

Mr. CLARK. The cost figures appear on page 12 of the report. The Senator will note the item, "Camp and work supervision," $700 per enrollee.

Mr. CARLSON. May I inquire of the distinguished Senator from Pennsylvania the number of camps expected to be constructed under this program?

Mr. CLARK. There is no estimate in that regard. The position of the administration is that they do not intend to commit themselves as to where and how many enrollees there will be in each of the camps.

If the Senator will refer to page 526 of the printed hearings, he will see there a list of various existing camps, furnished at the request of the Senator from Vermont.

I point out that the information appears in the appendix of the hearings. It is not completely accurate. The Senator from Vermont and the Senator from Arizona have already found one or two instances of inaccuracy, but the information is generally accurate. The administration is not prepared at this time to state how many new camps would have to be built, and how many of the existing camps could be utilized for the purpose of the program.

Mr. CARLSON. Does the Senator from Pennsylvania agree with me that there might be 300 camps, in order to have a figure on which to base this discussion?

Mr. CLARK. Let me do a little mental arithmetic: 300 divided into 15,000 would be an average of 50 boys to a camp. I hope it would not be that small a number, because, for reasons of economy, and also in order to expedite the work program the average number of enrollees in a camp should be nearer 100 than 50. In some instances, as in the larger national forests and parks in the West, the number of enrollees might be as high as 200.

The administration wished—and the committee agreed with it—to keep a good deal of flexibility in this regard.

One of the problems is the ability to distribute the camps equitably across the country, and, if possible, to place one camp in each State. I do not think it will be possible to do that. For example, the Senator from Rhode Island was much concerned that there should be a camp in Rhode Island. Yet there are no available Federal lands in that State.

I think I can hazard the statement that most of the camps under title I would be located in the Mountain and Western States, where the largest percentage of national park land, fish and wildlife and game preserves, and national forests exists.

I think I am revealing no secret when I say I shall try very hard to have a camp located in the Allegheny National Forest in northwestern Pennsylvania.

Mr. CARLSON. Mr. President, I believe that the Senator from Pennsylvania would be justified in doing that. The Senator referred to the list on pages 526 to 528. I find that Kansas is one of the States that does not have listed an area for a proposed camp.

Mr. CLARK. Is there a substantial area of Federal land in the State of Kansas? I do not know, although perhaps I should.

Mr. CARLSON. Many areas are occupied by military installations, and there were a number of the earlier CCC camps. There were at least five or six within our State.

Mr. CLARK. I cannot give the Senator any assurance as to whether Kansas will get a camp. But I am sure that he will be assiduous in trying to get one, if the bill is passed.

Mr. CARLSON. My purpose in raising this question this afternoon is that I am somewhat familiar with the original CCC program. As I remember, each of those camps required a substantial number of personnel. Was any thought given to the number of personnel that would be required to operate the camps that would be established under the bill?

Mr. PROUTY. I can give the Senator the figures for 1961.

Mr. CLARK. We have figures. The figures appear at page 717 of the hearings. It shows a comparison of the number of staff jobs in the Civilian Conservation Corps with the number of staff jobs in the Conservation Corps plan submitted by the Kennedy administration in 1961, both under the Wirth plan, which is the CCC plan, and the Kennedy administration plan, for a 50-man camp, a 100-man camp, and a 200-man camp.

In all candor, I must tell my good friend from Kansas that the estimate of the cost per enrollee given by the Secretary of Labor Mr. Wirtz, for the 1963 plan is substantially less than the estimate of the costs for 1961.

As the Senator from Vermont has been careful to point out, it is susbtantially less. I suspect that the 1961 figures are a little higher than the Kennedy figures would prove to be.

Mr. CARLSON. I was trying to check the figures found at page 717. I note that under the Wirth plan, for a 50-man camp, there would be 7 positions, whereas under the Kennedy administration plan there would be a total of 14 new positions.

Mr. CLARK. I am sure the Senator is correct. I have stopped looking at the exhibit on that page. My staff assistant has called my attention to Secretary Wirtz' testimony on page 153 of the record, where he states that his expectation is that the Wirth staffing will be closer to the fact than the 1961 expectation.

Mr. CARLSON. Under the Wirth plan, shown at page 717, the total number of positions would be seven. There would be a superintendent, two foremen, a mechanic, a clerk, a recreational leader, and one cook.

Mr. CLARK. I am sure the Senator is correct.

Mr. CARLSON. Following the schedule under the administration's proposal, there would be a total of 14 positions. For a 100-man camp, under the Wirth plan the number of positions would be 15, whereas under the Kennedy administration proposal the number would be 24. For a 200-man camp, the Wirth plan shows a total of 22, and the Kennedy plan a total of 35.

Mr. CLARK. I am sure the Senator is correct.

Mr. CARLSON. Mr. President, if there is no objection, I should like to have this table placed in the RECORD at this point.

Mr. CLARK. I would be glad to have the Senator do so.

Mr. CARLSON. I ask unanimous consent that the table found at page 717 may be made a part of my remarks at this point in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

COMPARISON OF THE NUMBER OF STAFF JOBS IN THE CIVILIAN CONSERVATION CORPS WITH THE NUMBER OF STAFF JOBS IN THE CONSERVATION CORPS PLAN SUBMITTED BY THE KENNEDY ADMINISTRATION IN 1961

THE 50-MAN CAMP

Wirth plan: total positions, seven: superintendent, two foremen, one mechanic, one clerk, one recreational leader (with first-aid training), one cook.

Kennedy administration plan: total positions, 14: superintendent, 1 general foreman, 3 foremen, 1 mechanic, 2 clerks, 1 medic, 1 education and recreation, 1 assistant, 1 chief cook, 1 cook, 1 administration superintendent.

THE 100-MAN CAMP

Wirth plan: total position, 15: superintendent, 1 assistant superintendent, 4 foremen, 2 mechanics, 1 recreational leader, 1 chief clerk, 1 clerk, 3 cooks, 1 medical aid.

Kennedy administration plan: total positions, 24: superintendent, 1 assistant camp superintendent, 1 general foreman, 4 foremen, 2 mechanics, 1 education and recreation, 3 clerks, 1 chief cook, 3 cooks, 2 medics, 2 assistants, 1 supply, 1 administration superintendent, 1 administration aid.

THE 200-MAN CAMP

Wirth plan: total positions, 22: superintendent, 1 assistant superintendent, 7 foremen, 3 mechanics, 1 recreational leader, 1 chief clerk, 2 clerks, 1 physician, 1 storekeeper, 4 cooks.

The Kennedy administration plan: total positions, 35: superintendent, 1 assistant camp superintendent, 1 general foreman, 8 foremen, 3 mechanics, 1 educational and recreation, 4 assistants, 3 clerks, 1 doctor, 3 medics, 1 chief cook, 5 cooks, 1 supply, 1 administration superintendent, 1 administration aid.

Source: Conrad L. Wirth, final report to the Secretary, Civilian Conservation Corps, Department of the Interior, January 1944, pp. 9–10. "Annual Cost—Youth Conservation Corps Estimates," Department of the Interior, found at p. 409 of hearings on S. 404 and S. 2036, 1962.

Mr. CARLSON. As the distinguished Senator from Pennsylvania well knows, I am concerned over the ever-increasing Federal employment rolls. That is one reason why I bring this question up at this time. If 250 or 300 new camps were established in this country, with the schedule of employment shown under the Wirth plan, the number of additional Federal employees could run to 7,500 or 10,000.

Mr. CLARK. I have not done the mathematics on what the Senator says, but I have no reason to question the accuracy of the Senator's statement. The figure sounds rather high, but I am willing to take his word for it.

Mr. CARLSON. It could well reach that figure, based on the number and the average size of the camps proposed.

Mr. CLARK. My attitude on this point is that we are really straining at gnats, when we ought to go out, like St. George, and kill the dragon. If we want to cut Federal expenditures, and if we want to curtail or reduce the number of Federal employees, the place to do it is in the space program and in the Defense program, in which we will spend a billion dollars a week. In the program here proposed it is proposed to spend $100 million for a whole year. That is one-tenth, for a whole year, of what we are spending on defense in 1 week.

I do not know whether the Senator agrees, but I do not have much sympathy with the mad race between us and the Soviets to get the first man to the moon, at a cost of $8,800 million. We could save a little money there.

Mr. CARLSON. The Senator from Pennsylvania has made a good statement. Of course, we must realize that this is a new program. This is not a matter of curtailing an old program.

We already have two and a half million Federal employees on the rolls. If I wanted to be political, I might say that in the past 2 years the administration has increased the number of Federal employees by 127,000.

Mr. CLARK. I know that my friend does not want to be political. He is one of the most nonpolitical Members of the Senate. I honor him for that point of view. Title I does not embrace a new program. It deals with an established policy and program of earlier Democratic administrations, when the CCC plan was in effect. Those of us who support the pending bill feel very strongly that the program was a good program, and should not have been abandoned.

While it was in effect, in 1939, there were 14 CCC camps in Kansas, with an average of 3,000 enrollees.

Mr. CARLSON. I know that there were a great number of them in Kansas. I visited them, and I became familiar with the work of those camps. I make these remarks because we shall be confronted with a problem, and I did not want to let this occasion pass without at least making reference to it.

Mr. CLARK. The Senator's observations are quite pertinent with respect to title I. However, under title II the same situation does not apply.

Mr. CARLSON. I thank the Senator from Vermont.

Mr. PROUTY. I am glad to have yielded to the Senator from Kansas. The information with reference to the camp personnel was given to the committee this year, and the facts which are found in the record were furnished at my request. These studies were made in 1961. The costs seemed to be of not too much consequence or importance to some of the administration witnesses, I regret to say.

Furthermore, I found that some of the camps, which are listed as being available for occupancy within a reasonably short period of time, are actually nonexistent. People in the areas who are familiar with the situation have told me that they are not there.

One such situation arose in Vermont. We were told that a certain camp could be used within a short period of time. That camp was found to be nonexistent.

A short time ago, the senior Senator from Minnesota, mentioned a camp that was located in his State. I have consulted some persons in Minnesota with respect to four of such camps. He said that the camps are supposed to handle anywhere from 50 to 70 occupants, and that the most that 4 of them could handle would be 18. They are more or less of the rural, primitive type of construction. With respect to the fifth camp, he said he had never heard of it. It is not where it is supposed to be. When we go down the list we shall probably find that about half of the camps are nonexistent. Those that are in existence will require a great expenditure of money in order to rehabilitate them.

We have not gone into this subject very thoroughly. That is why I was justified in trying to have the bill referred to the Committe on Interior and Insular Affairs. I believe it could look into the subject better than the Labor Committee could, because we are not familiar with these problems. Unfortunately, that proposal was rejected.

Mr. CLARK. When the Senator was talking about Minnesota, was he talking about the Federal camps listed on page 527?

Mr. PROUTY. I was referring to page 5666 of the CONGRESSIONAL RECORD.

Mr. CLARK. I invite the attention of my friend to the fact that the Minnesota camps are listed on page 527 of the hearings. It shows four Forest Service camps and two Bureau of Sport Fisheries and Wildlife camps.

I wonder whether the adverse comments he has made would apply to the information furnished by the administration, or whether he is talking about something else.

Mr. PROUTY. I am talking about the insertion made by the Senator from Minnesota [Mr. HUMPHREY] on page 5666 of the CONGRESSIONAL RECORD of April 4. Senators have been given so many facts and figures which do not jibe that I do not know what the situation is. I make that statement quite frankly to the Senator from Pennsylvania.

Mr. CLARK. I have quickly compared the two lists, and they are identical. These are Federal camps. I cannot answer for the Senator from Minnesota, but I am sure he will wish to make some comment on that point when he returns to the Chamber.

Mr. MILLER. Mr. President, will the Senator from Vermont yield?

Mr. PROUTY. I yield, without losing the floor.

Mr. MILLER. Mr. President, I should like to have the attention of the Senator from Pennsylvania. I wish to ask him two or three questions about the bill with a view possibly to clearing up some legislative history, which I am sure that he as a lawyer recognizes might be desirable.

The first question is: What about the failure of an enrollee to maintain proper standards of conduct, as a result of which it is determined by his administrator that for the best interests of the program and his fellow enrollees he should no longer be an enrollee? Is there anything in the bill which indicates how such a situation would be handled?

Mr. CLARK. It is clear enough from the experience of the CCC and also from the testimony in the record, which I shall ask my assistants to see if they can locate while we are speaking, that if an enrollee is dismissed for disciplinary reasons, his way will be paid back to his home. If he deserts—and a number of them will desert; they did in the CCC—he will be on his own.

Mr. MILLER. The Senator said he would be discharged. Suppose the infraction is not quite so severe as to warrant discharge, but that perhaps some disciplinary action should be taken short of actual expulsion.

Mr. CLARK. I assume the situation would be the same as it would be in any other work camp.

Mr. MILLER. Would there be any provision for activities similar to the guardhouse activities in the military? Is there any thought along those lines? I am wondering how discipline could be enforced under certain conditions.

Mr. CLARK. The Senator from Iowa served with me in the Air Force in the China-Burma-India Theater during the war. I am sure he will agree with me that that kind of situation can best be left to the commanding officer or superintendent of the camp. No effort should be made by Congress to write any such provisions into the bill. In my opinion, this is clearly a case for administrative discretion.

Mr. MILLER. If the Senator will forgive me, I was not old enough at the time the CCC camps were operating full swing to know exactly how they were operated; but I know the Senator from Pennsylvania was. Can he tell me how they were operated?

Mr. CLARK. I regret that fact, but I must admit it.

Mr. MILLER. Can the Senator tell us how the CCC actually handled disciplinary problems under such circumstances?

Mr. CLARK. I must plead a good deal of ignorance, because although I was old enough to know, I was not smart enough to have found out.

Nevertheless, I think I can say that, in general, those camps were operated as civilian, and not military, installations. A kind of discipline was enforced on those young people which I think would be enforced on any older people who were working under contract in a national park or a national forest.

I observe the senior Senator from Vermont on his feet. I am sure he can enlighten both of us on that point.

Mr. AIKEN. No. I was about to ask whether the commanding officer could discipline a member of the Youth Corps unless the laws of the State where the camp was located so provided. Would the bill take the members of the Youth Corps out of the jurisdiction of the State? I do not see how that could be done.

Mr. CLARK. This is a problem which would have to be handled on an ad hoc basis, depending on the kind of discipline the Senator has in mind. But if we are to enter into a situation involving enforcement of State laws, by that time we had better provide for sending the enrollee home. I cannot take the problem seriously.

Mr. AIKEN. If a member of the Youth Corps were given a rating at the end of his period of service, I could see how the commanding officer might give him demerits on his rating. But I do not see why the laws of the State would not apply for any other purpose.

Mr. PROUTY. I am sure my colleague from Vermont is correct in that respect. The camp director is in charge of discipline within the camp only.

Mr. AIKEN. Is it intended that members of the Youth Corps should take an oath of office of any kind, so that they would be subject to military discipline?

Mr. PROUTY. No.

Mr. CLARK. There is no such provision. The Department and the majority of the committee were strongly of the view that the bill should not have any military implications whatever.

Mr. AIKEN. Then I should say that such discipline could be administered only if it were authorized by the laws of the State.

Mr. CLARK. I am sure that is correct. I do not believe it is a serious problem.

Mr. MILLER. Following up that question, is it not correct to say that there is nothing in the bill which would cause an enrollee not to come under the jurisdiction of the State and local authorities in cases of violations of the law?

Mr. CLARK. The Senator is correct. State law is applicable on Federal lands.

Mr. MILLER. I thank the Senator from Pennsylvania. While he may not be very much concerned about such situations, I think it well for us to consider disciplinary problems. Sometimes if disciplinary problems are not handled properly, an entire program can get off to a bad start.

My next question relates to the phrase "in the public interest," on page 41, line 15, of the bill. The subparagraph (3) reads:

> The program will permit or contribute to an undertaking or service in the public interest.

I ask the Senator from Pennsylvania what is intended by that phrase.

Mr. CLARK. Again, this is a general and all-encompassing phrase. Let me give a couple of examples. The Senator is referring to title II, which relates to State and local projects. The bill provides that upon the application of a State, county, or municipality, or on the application of a nonprofit private civic organization, Federal funds may be made available. In the case of a private civic institution, it must have clearance from the State agency which regulates the particular nonprofit institution.

Mr. MILLER. Perhaps I can clarify my question and save a little time. Is it the intention that these shall be projects which are available to the general public? Is that what is intended by the language? Are they to be parks, playgrounds, and things of that nature, which are available to the general public? If that were the intention, I would be satisfied.

Mr. CLARK. The only exception I would make—and I do not really think it is an exception—would be that this language would include hospitals.

Mr. MILLER. Hospitals available to the general public?

Mr. CLARK. Yes.

Mr. MILLER. Yes.

Mr. CLARK. Some of them might be private hospitals, but they would be available to the ill. They might not necessarily be public hospitals or public recreational centers, but they could be privately operated facilities.

Mr. MILLER. But facilities available to the general public?

Mr. CLARK. Yes.

Mr. MILLER. That explanation satisfies my question on that point.

On page 42 of the bill, line 13, subsection (7) provides:

> The program includes standards and procedures for the selection of applicants including provisions assuring full coordination and cooperation with local and other authorities to encourage students to maintain or resume school attendance.

However, the language does not tell us the kind of standards.

Mr. CLARK. That is purposely left flexible, within the discretion of the Administrator. He is supposed to establish standards by administrative regulation, so that the public generally and the prospective enrollees in particular will be able to tell before they apply for enrollment what standards they will have to comply with. Generally speaking, they would be commonsense standards, which the Senator from Iowa or I would write if we were attempting to enroll young people in this program.

Mr. MILLER. I trust they would be commonsense standards; but it seems to me that it is for the legislative body to set guidelines regarding standards, rather than merely to say that an Administrator or an executive officer shall set standards. I notice in the first title of the bill that something is said about standards. I believe that in a moment I can find the part to which I have referred.

Mr. CLARK. Let me say that of course the standards would have to be for the purposes set forth in the bill. For my part, having been an executive—I refer to my service for some 6 years as mayor of Philadelphia—I have a real horror of trying to write into a legislative bill strict standards and procedures. I believe it better to have the bill lay down the principles, and then give the Administrator discretion as to how he will carry out the directions of the legislature.

Mr. MILLER. I agree. My hope had been that we might point out that the standards for the selection of the applicants under this title would be such educational, intellectual, and moral standards as would make it reasonable to believe that following a suitable training period under this program, the enrollee would be capable of exercising acquired, specialized skills which would give him a reasonable prospect of permanent employment.

The Senator from Pennsylvania will notice that I have mentioned three things: educational, mental, and moral qualifications. Let me ask whether that would fall within the framework of what he would consider to be reasonable standards to be drawn up.

Mr. CLARK. I would prefer not to write them into the bill. I have no objection to making a little legislative history right now. Primarily, the bill is intended to take care of school dropouts, although others will be included. But I think that one who dropped out of school at, let us say, the 8th grade or the 9th grade would be as eligible for admission as would one who dropped out of school when he was in the 11th grade or the 12th grade.

I am not much in favor of writing moral standards. I believe there has been too much of that in the history of our country.

The Senator's third suggestion was——

Mr. MILLER. Educational and intellectual capabilities.

Mr. CLARK. Of course these young people will be screened; and I assume that low-grade morons who could not do the work would not be enrolled.

I point out that in section 205(a) on page 42, in lines 25 and 26, there is a vague criterion: "whose participation in such programs will be consistent with the purposes of this title."

Then the bill refers to the purposes of the title; and, again, they are rather general.

Again I say I would much prefer not to have any legislative criteria written into the act.

Mr. MILLER. Let me point out that I did not mention the criteria of health or physical condition.

The Senator from Pennsylvania will note that on page 25, section 104 provides, beginning in line 5, that the Secretary is to have authority to "establish adequate standards of safety, health, and conduct for enrollees of the Corps."

My point is that in title I we have attempted to write adequate standards; but we have not done that in title II. That is why I should like to write a little legislative history here, for the guidance of the Secretary.

Mr. CLARK. Well, I am glad to state my view of the standards to be established, for the guidance of the Secretary. Under subsection 7, on page 42, we might well refer to the standards of "safety, health, and conduct" which are referred to on page 25, in lines 5 and 6. Obviously, those standards under title II will be somewhat lower than those under title I, because the young people will live at home and will be doing part-time work. It might well be that there would be included under title II boys and girls who had some physical handicaps in terms of health, but who nonetheless were able to perform work as clerks in libraries or were able to do some hard work in hospitals. So there would have to be some different standards.

Nevertheless, I think there should be standards of "safety, health, and conduct" under title II, as well as under title I; and I am glad to join the Senator from Iowa in making that legislative history.

Mr. MILLER. I thank the Senator from Pennsylvania.

One statement the Senator from Pennsylvania made disturbs me—namely, his statement to the effect that the primary purpose of this legislation is to cover school dropouts. If I correctly heard the Senator's statement, I wish to say that I am surprised that that is indeed the purpose, because we have a very serious problem with respect to the lack of employment among bona fide high school graduates who did not drop out of school; and if any priority is to be given as regards those who would be permitted to enroll in the program, I hope it will be given first to those who have actually persevered in their school work, but who, because of circumstances, are not able to obtain employment without additional training.

Mr. CLARK. The record as to dropouts shows that among those who dropped out of high school between January and October 1961, 28 percent were unemployed, whereas among those who did graduate from high school, 18 percent were unemployed. That is still too high a percentage, of course. But I think this training should be made available to both, because the high school graduate is likely to be able to find himself a skill, in terms of the educational opportunities available to him from both private sources and public sources, after he graduates from high school; and, indeed, this is one of the major arguments being made at the moment by the Senator from Vermont as to why we should step up the program in vocational education. In my opinion, such a program would not be nearly as useful for school dropouts as it would be for high school graduates, in view of the upgrading of the labor force, with which all of us are familiar.

Mr. MILLER. It seems to me, however, that the difference between 18 and 28 percent, while great, is not too great. But if we were to say that this measure is primarily for the purpose of helping school dropouts, such a statement might serve to induce larger numbers to become dropouts. A certain amount of glamour will be attached to this program; and it seems to me that if it is to be successful, it would be extremely undesirable to set up the program directed primarily at the enrollment of school dropouts—thus inducing still others to drop out.

Mr. CLARK. The Senator's argument relates to a discussion which continued at some length in the subcommittee, and also particularly in the full committee. One of the committee members took the position which the Senator from Iowa is now taking.

Mr. MILLER. The Secretary of the Interior took a similar position. Examination of House Report 199, dated April 8, 1963, shows the following at the bottom of page 62:

> However, Secretary Udall commented:
>
> "I think it would be a mistake to have this program be a dropout program."

Mr. CLARK. I do not wish to become involved in an argument with the Senator from Iowa. I merely read to him, from page 11 of the committee report, the point of view accepted by the 11 members of the Committee on Labor and Public Welfare who voted to report the bill to the Senate:

> Dropouts will be encouraged to resume school and high school graduates will be

> encouraged to continue their education. Job referral services will be available to the enrollee.
>
> This is a voluntary program. No one is to be "drafted" into it. The Director must take every step possible to encourage applicants to stay in school and complete their education, or to return to school if at all possible.

The problem is a philosophical one on which people can differ. It is the point of view of the majority of the committee which I share.

Mr. MILLER. I recognize that there is a philosophical difference in point of view, but I would hope that the philosophical point of view that could be agreed upon would be that the program is not directed necessarily and preferentially toward either the dropout group or the high school graduate group.

Mr. CLARK. The Senator is correct in that regard. Perhaps I overstated myself when I said that the program is designed primarily for school dropouts. It is for both. It is for high school graduates as well as for dropouts. But I would say that I do not think we would have a bill before the Senate now if we were not faced with the fact that there are 750,000 to 800,000 school dropouts each year. That fact has caused grave concern both to the administration and to the committee. It is one of the principal reasons why the proposed legislation is now before the Senate.

Mr. MILLER. I thank the Senator. I should like to end the colloquy by expressing the hope and, I might suggest, the admonition, too, that should the proposed legislation become law, the administrators would be well advised to see to it that when applicants are enrolled, those in charge bend over backwards to screen out the proposed enrollees who may be diverted from their high school or vocational educational training because they feel that the program is a more attractive program and perhaps would result in less homework and less study.

I believe the proper administration of the program should be calculated to see to it there are no artificial dropouts as a result of the program.

I thank the Senator from Vermont for yielding to me for these questions.

Mr. AIKEN. Mr. President, will the Senator yield so that I might ask a question of the Senator from Pennsylvania?

Mr. PROUTY. I am happy to yield.

Mr. AIKEN. My question is rather basic. Why would it be considered preferable to establish a completely new agency of Government rather than giving to established agencies of Government increased authority and increased funds with which to employ part-time workers? Of course, I refer to the Department of the Interior, the Department of Agriculture, the Army Engineers, the Department of Commerce, and possibly the Department of Health, Education, and Welfare also. What would be gained by establishing a completely new agency rather than giving the long-established agencies of Government increased authority and increased funds to hire the youth?

Mr. CLARK. In the opinion of the committee and the administration, the Department of Labor was best qualified because of the employment service work it is presently conducting to administer the program. The program was placed within the Department of Labor, an existing governmental department, for purposes of supervision and administration.

Mr. AIKEN. Would other departments of the Government, such as the Department of Agriculture, the Department of the Interior, and I would certainly include the Army Engineers, and other agencies of the Government, have an equal voice with the Department of Labor in administering the program?

Mr. CLARK. No. The setup would be something like the following: First, with respect to title I, in instances in which camps would be located on public lands under the jurisdiction of the Department of the Interior—that is to say, in national parks—the Department of the Interior, through the National Park Service, would have general supervision over the work which the boys in the camps would do. But the Department of Labor would be responsible for recruitment, not only of the boys themselves, but of the supervisory staff which would administer the actual camp services. The work would be done under the supervision of the Department of the Interior. But, I point out to my friend, the boys would receive a good deal of instruction. They would have some education. They would receive technical training. That would be arranged for them by the Department of Labor.

The same would be true with respect to work in the national forests which is under the Department of Agriculture.

However, when we come to title II, Federal agencies other than the Department of Labor would have nothing whatever to do with the program.

Mr. AIKEN. I am not talking about title II. I was asking the question only with reference to title I. What would the young men be taught in the camps?

Mr. CLARK. I should like to refer to the report, where the subject is set out at great length. I refer to paragraph G at the middle of page 11 of the report, which refers to the subjects which could be taught at the time in conjunction with the work described, and it runs a very wide range. It is set forth at considerably greater length at page 542 of the hearings. It includes agriculture, civil engineering, concrete engineering, diesel engines, foundry, machine shop, stenotype, welding, and metal crafts, to name a few.

If the Senator will turn to page 542 of the hearings, he will find that statement amplified.

Mr. AIKEN. The boys would also be given guidance services, I believe.

Mr. CLARK. Yes. The Senator is correct.

Mr. AIKEN. Who would supply the instructors?

Mr. CLARK. The Department of Labor.

Mr. AIKEN. The Department of Labor would supply all the instructors. The bill at page 31 provides as follows:

> (b) Enrollees as well as applicants for enrollment may be furnished with such quarters, subsistence, transportation (including travel from and to the place of enrollment), equipment, clothing, training, educational and recreational services, medical, dental, hospital, and other health services, and such other expenses (including funeral and burial expenses) as the Secretary may deem necessary or appropriate for their needs.

Does the Senator feel that that provision might be subject to abuse? When an enrollee even applies for enrollment, he is entitled to all of those benefits over a 6-month period, including training and the health provisions? I am not saying that the provision is bad. I am saying that it would appear possible to be abused.

Mr. CLARK. Of course, there is a possibility of abuse.

Mr. AIKEN. It depends on the administration completely.

Mr. CLARK. Applicants for enrollment, if rejected, would be returned. They would not get into the corps. They would be there for only a few days to be screened.

Mr. AIKEN. It is my understanding that the Forest Service is pretty well overwhelmed with applications from boys coming out of high school at the present time, or from those who are in high school or in college.

Mr. CLARK. They are overwhelmed with applications for summer employment. The ceiling on the appropriation in my opinion is quite inadequate. Of course, the rate of pay for that work is substantially higher than the boys would receive under the proposed program.

Mr. AIKEN. Suppose the Secretary of Labor says that we are going to put 200 boys in a certain park. Would the Secretary of the Interior have veto power?

Mr. CLARK. Oh, yes.

Mr. AIKEN. He would have such power?

Mr. CLARK. Yes.

Mr. AIKEN. Jobs cannot be instituted contrary to the desires of the heads of the departments in which the jobs would be located. Is that correct?

Mr. CLARK. Yes. The Senator is correct. An interdepartmental committee consisting of the Secretaries or their representatives of the various interested departments would work that out.

Mr. AIKEN. Is it also possible that the Department of Labor would designate what subjects would be taught?

Mr. CLARK. Yes.

Mr. AIKEN. Would the Department designate also what subjects could not be taught? I am thinking of the wrangling going on in the civil defense program at the present time, where all reference to communism was to be restrained, and the order was issued that no reference could be made to J. Edgar Hoover or any of his writings used.

What is there to guard against that?

Mr. CLARK. I think the principal safeguard in that regard is that this is a work program, not an ideological program. The extent to which the enrollees would be working with books would be largely confined to the use of such books for instruction in a particular skill.

Mr. AIKEN. I think it would be fine to teach the enrollees skills, to help them carry on jobs, but I think it would be very bad if some of the instructors intended to indoctrinate in any philosophy whatsoever other than the doctrine on which our own Government is founded.

Mr. CLARK. I thoroughly agree with my friend from Vermont. I think we can make a little history to that effect now.

Mr. AIKEN. Yes.

Mr. CLARK. I point out that I was not quite accurate when I gave all the authority to the Department of Labor. It would enlist, recruit, administer, and work out the housekeeping involved, but the educational program would be directed by the Office of Education in the Department of Health, Education, and Welfare.

Mr. AIKEN. I wished to be sure that work in a national forest, for example, would be under the supervision of the Forest Service.

Mr. CLARK. It would be.

Mr. AIKEN. Rather than to have a new agency come in and say, "We are changing our practices to fit the needs."

Mr. CLARK. The Senator is correct.

Mr. AIKEN. We all agree that there is a need. We know that more boys would like to work in the forests if they could. I was very close to the old CCC program. The sad part about it was that when the boys had to go home, after they had stayed the limit, many of them did not wish to go home, any more than the people who come from foreign countries, on student visas or visitor visas, wish to go home when their time expires.

Mr. CLARK. Many of them did not have homes to which to go.

Mr. AIKEN. That is true. We want to make sure that these young people have jobs to which they can return.

Mr. CARLSON. Mr. President, will the Senator yield?

Mr. PROUTY. I yield to the Senator from Kansas.

Mr. CARLSON. Earlier in the colloquy with the distinguished Senator from Pennsylvania I stated that I was not familiar with the national park areas in my State. Through the kindness of a very excellent staff I have been informed that on page 209a of the hearings of the Senate there is a table which lists the fact that Kansas has at the present time 107,114 acres of national forests eligible under title I, plus 110,808 acres of State parks eligible under title II.

I wished to clear up the record. I thank the excellent staff for this information, and I thank the Senator from Vermont.

Mr. CURTIS. Mr. President, will the Senator yield?

Mr. PROUTY. I yield to the Senator from Nebraska.

Mr. CURTIS. I wish to make an inquiry of the Senator from Pennsylvania, who is in charge of the bill.

Who would select and employ the instructors who would carry on the education?

Mr. CLARK. The Department of Health, Education, and Welfare.

Mr. CURTIS. What qualifications would be required of an instructor?

Mr. CLARK. I suppose that the instructors would have to be competent to teach the skills which the particular camp needed to have taught. That would depend on what kind of work was to be done at the particular camp, and whether it was in a national park, national forest, or a wildlife refuge.

Mr. CURTIS. Would all of the instruction be in the manual arts, work with the hands or machines, and forestry; or would there be instruction in academic subjects?

Mr. CLARK. I think if it were found—and I am sure it would be, in all too many instances—that the young people at the camps could not read and write adequately, and therefore could not assimilate instruction books relating to the various kinds of skills, they would teach reading, writing, and elementary arithmetic. I do not think they would go into American history, philosophy, atomic energy, or anything like that.

Mr. CURTIS. Civil engineering is mentioned.

Mr. CLARK. That would consist of running a transit. It would be very elementary.

Mr. CURTIS. Is there anything in the bill relating to the qualifications of instructors?

Mr. CLARK. No.

Mr. CURTIS. Who would do the job of evaluating, counseling, and guidance services, which would be coordinated with the work of the program in order to direct the boy through the preenrollment phase of private employment?

Mr. CLARK. In most instances that would come from the local high school counseling and guidance service. Very few of the camps would be located so far away from a high school that the guidance and counseling service would not be available on a part-time basis.

Mr. CURTIS. Is that what the bill provides?

Mr. CLARK. No; there is nothing in the bill about it.

Mr. CURTIS. I raise the question because some very fine physicians, psychiatrists, psychologists, and others have pointed out that a grave mistake is being made in connection with the National Defense Training Act. They have said that people who are literally amateurs—who have perhaps no training, or 6 weeks' training—are carrying on counseling and guidance services. In some instances they analyze the students, they inform him that he has a problem, and they proceed to solve it; though perhaps he is a very normal individual who needs a pat on the back, a smile, and a little encouragement, rather than to have an amateur operate on his emotional and nervous system.

I am concerned about a bill which would allow the carrying on of an educational program with nothing in it as to the qualifications of those who are to instruct.

I have another question. Would there be a chaplain service?

Mr. CLARK. I doubt that there would be. The bill provides for the conduct of religious services. Again, I am speaking for myself. There was no testimony on the subject, because I do not think any member of the committee thought it worthwhile to raise the question. I doubt that there would be a resident priest, rabbi, or chaplain, but I am sure there would be interdenominational religious services.

Mr. CURTIS. Would those be provided in facilities of the Youth Conservation Corps?

Mr. CLARK. That question was never raised in the committee.

Mr. CURTIS. It has been raised in the Supreme Court. I think the Court was wrong, but it has been raised. I wondered if the Congress was bowing to the Supreme Court and bypassing the question, or what provision had been made.

Mr. CLARK. All I can say to my friend from Nebraska is that this seemed to members of the committee to be a matter of ordinary common sense, and nothing to become excited about. There would be religious services. That is all I can say.

Mr. CURTIS. Does the bill provide for that?

Mr. CLARK. I am trying to find that in the report, if the Senator will indulge me a moment.

Mr. CURTIS. I looked at the report, under the subject of education and training. I found nothing about it.

Mr. CLARK. If the Senator will indulge me for a moment, and perhaps go to another subject while we are looking it up, I am sure we can find that information.

Mr. CURTIS. Mr. President, while the Senator is having that subject checked, if the distinguished Senator from Vermont would permit me to proceed on his time for a couple of minutes, I should like to make an observation or two.

My sympathies are with the young men of America who will need this program. I point out that the bill under consideration by the Senate today is the symptom of something radically wrong in our economy. A growing economy, providing jobs, would be far better. An opportunity to have a job, to seek promotion, to learn, and to advance in a position with some permanency, would be much better than "made work" under a Government organization.

I am aware that made work can sometimes be very helpful to the public. It is helpful to have our national forests cared for, brush cleared, trees trimmed, and all the other things that must be done. But to rotate boys in those areas for from 6 months to 2 years does not offer them anything permanent. It cannot be justified as an educational system, because we are inaugurating it without curricula or requirements on the part of anyone who will instruct.

I now turn to the distinguished Senator from Pennsylvania in reference to my question as to what the bill provides in regard to religious services.

Mr. CLARK. In response to the Senator from Nebraska, there is nothing in the bill, but on page 11 of the report, under the heading "Education and Training," there is this sentence:

> There will be recreational facilities with sports, and religious services will be provided for enrollees of all faiths.

Mr. CURTIS. Is that a part of the Federal responsibility?

Mr. CLARK. Yes.

Mr. CURTIS. While I have grave doubts as to many parts of the bill, I commend the committee for putting that section in it, and not bowing to the Supreme Court and its philosophy in this field. In the New York prayer case, the majority opinion was bad enough, but under the concurring opinion by Justice Douglas, if carried out, this body could not have a chaplain. The chaplaincy service of the Armed Forces would have to be abolished, and all sorts of ridiculous things done that go far beyond the concept of the Founding Fathers; namely, that the Government should not operate a church and tax the people to do it.

I thank the Senator from Vermont for yielding so generously.

Mr. PROUTY. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. KENNEDY in the chair). The clerk will call the roll.

The legislative clerk called the roll, and the following Senators answered to their names:

The PRESIDING OFFICER (Mr. KENNEDY in the chair). A quorum is present.

The bill is open to further amendment.

Mr. PROUTY. Mr. President, I send an amendment to the desk and ask that it be stated.

The PRESIDING OFFICER. The clerk will state the amendment.

The legislative clerk proceeded to state the amendment.

Mr. PROUTY. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with, and that the amendment be printed in the RECORD at this point.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment, ordered to be printed in the RECORD, is as follows:

Beginning with line 1 of page 24 of the bill, strike out all through line 7 on page 39, and insert the following:

"SECTION 1. This Act may be cited as the 'State and Community Youth Employment Act'."

On page 39, line 12, strike out "SEC. 202" and insert "SEC. 2".

On page 39, line 12, strike out "title" and insert "Act".

On page 39, line 24, strike out "SEC. 203" and insert "SEC. 3".

On page 39, line 25, strike out "title" and insert "Act".

On page 40, line 2, strike out "title" and insert "Act".

On page 41, line 2, strike out "SEC. 204" and insert "SEC. 4".

On page 41, line 3, strike out "title" and insert "Act".

On page 42, line 18, strike out "title" and insert "Act".

On page 42, line 22, strike out "SEC. 205" and insert "SEC. 5".

On page 42, line 22, strike out "title" and insert "Act".

On page 43, line 1, strike out "title" and insert "Act".

On page 43, line 19, strike out "SEC. 206" and insert "SEC. 6".

On page 43, line 21, strike out "204" and insert "4".

On page 45, line 9, strike out "SEC. 207" and insert "SEC. 7".

On page 45, line 9, strike out "title" and insert "Act".

On page 45, line 13, strike out "title" and insert "Act".

On page 46, line 3, strike out "title" and insert "Act".

On page 46, line 8, strike out "title" and insert "Act".

On page 46, line 9, strike out "title" and insert "Act".

On page 46, line 13, strike out "title" and insert "Act".

On page 46, line 17, strike out "SEC. 208" and insert "SEC. 8".

On page 47, line 7, strike out "title" and insert "Act".

On page 47, lines 8 and 9, strike out "209 of this title", and insert "2 of this Act".

On page 47, line 11, strike out "title" and insert "Act".

On page 47, line 13, strike out "title" and insert "Act".

On page 47, line 19, strike out "title" and insert "Act".

On page 48, line 12, strike out "SEC. 209" and insert "SEC. 9".

On page 48, line 12, strike out "title" and insert "Act".

On page 48, line 20, strike out "SEC. 210" and insert "SEC. 10".

On page 48, line 21, strike out "title" and insert "Act".

On page 48, line 25, strike out "title" and insert "Act".

On page 49, line 2, strike out "title" and insert "Act".

On page 49, line 6, strike out "title" and insert "Act".

On page 49, line 8, strike out "SEC. 211" and insert "SEC. 11".

On page 49, line 12, strike out "title" and insert "Act".

On page 49, line 16, strike out "title" and insert "Act".

Mr. PROUTY. I might explain to Senators that, except for a technical change, the amendent is identical with my printed amendment 44, which is on Senators' desks at the present time. It seeks to strike out title I.

Mr. President, before Senators leave the Chamber, I ask for the yeas and nays on the amendment.

The yeas and nays were ordered.

Mr. CLARK. Many Senators are eager to know whether they should go to dinner or remain in the Chamber. It would be an act of kindness if the Senator would let us know how soon the Senate may be able to vote.

Mr. PROUTY. If the amendment that I am proposing is agreed to, the Senate should be able to move very rapidly insofar as the bill is concerned.

Mr. CLARK. When will the Senate be able to vote on the amendment?

Mr. PROUTY. I do not believe it will take too long. I have a rather short statement to make. I believe Senators would be well advised to remain in the Chamber.

Mr. MANSFIELD. Mr. President, on the basis of the statement of the distinguished Senator from Vermont, I suggest to the attachés of the Senate that they notify all senatorial offices to the effect that there may be a vote within the next half hour.

I thank the Senator.

Mr. PROUTY. Mr. President, I am not in the least opposed to healthful recreation, out-of-doors experience, or the spirit of comradeship which exists among campers. I spent much of my young life in such an environment. Such a life—for 6 months or even 2 years—has a great deal of emotional appeal. It would be, in the words of the senior Senator from Minnesota [Mr. HUMPHREY], a very popular program.

I submit, however, that if popularity is the basis upon which we should legislate, the Congress should adjourn and go home.

There are several reasons why I have offered this amendment. I shall consider each of them briefly.

First. Admittedly, the problem of youth unemployment is essentially one of lack of skills in unemployed youth. With the advent of automation, unskilled labor is rapidly disappearing, at least in relation to the vast increase in our labor supply. The increased sophistication in the most minor jobs in our economy requires skills which our educational system has not provided.

Thus, the primary objective in any Federal program to cope with unemployment among our young people should be to assure them the opportunity for training in order that they may assume a proper place in our economic structure.

Training is sorely lacking under the provisions of title I of the bill. The entire record of hearings on S. 1 establishes that title I is a conservation measure, to clean up our national parks with the help of young men living in camps—far removed from training facilities and competent instructors.

Secretary Wirtz, several times in his testimony before the subcommittee, emphasized, as on page 123 of the hearings:

> I call attention to this: First, there is no suggestion that this training program will qualify one of the enrollees for a skilled occupation. That, we should dismiss completely.

What is the point, I should like to know, in spending $50 million to "dismiss completely" the thought of training these young men for skilled work? Everyone admits they must have training to be employed, and that the lack of such training is the real reason why they are not employed now.

Hence, title I of the bill ignores the root of the problem. In effect, it proposes that we shift unemployed young men into the woods for 6 months or 2 years; and then return them to an unemployed status, no better equipped to enter the labor market, with no essential change in them other than that they are 6 months or 2 years older. On return from camp, they still would be beset by the same problem—no job; and they would have less chance to obtain one, because they would still have no skill, and they would then be much older than their competition.

Indeed, the proposal of title I might be popular. Time spent in the wilderness is a magnificent opportunity. But I have no doubt that the proponents of title I are going to be revisited rudely by a multiplication of the present problem should the YCC get underway and return older, unskilled men to the labor market.

Lipservice has been paid to training in title I. It is, however, only lipservice. The West is a big place, and its distances are far. I cannot imagine these boys at hard work during a day and then being transported to the "local public education facilities" as suggested by Secretary Celebrezze of Health, Education, and Welfare, for training. There are not that many hours in a day.

Second. I oppose title I, and am seeking to have it deleted from the bill, for a second reason. The chief administration witness on this bill, Secretary Wirtz, testified:

> We are satisfied completely that the experience, the work discipline, and in effect the certification, that we can give employers, at the end of this 6-month training period will open employment doors to them * * *. We would be able to say: This is a boy who has shown himself to be responsible. He has been exposed to work.

It is my firm belief that there is no justification for spending the vast sums proposed to be authorized in the bill—$50 million for 15,000 young men to go to camp for "work experience."

In view of the reduction made yesterday in the authorization for title I and the expense involved in renovating certain camps which are supposed to be available, it would be impossible under the program to accept many more than 8,200 enrollees unless the present authorization were exceeded.

That experience can just as easily be acquired under title II of the bill or, indeed, in the on-the-job training under the Manpower Development and Training Act. In short, there is nothing sacred about the work experience, on jobs largely unrelated to labor's requirements, which one would acquire in these camps. He could much more profitably acquire such experience under existing programs in his own hometown, and at one-fourth of the cost as shown by the administration figures in title II.

Third. S. 1, and more particularly title I, is essentially a conservation measure.

I would not be misunderstood. Of course I favor conservation legislation. My action during the last few days of debate on wilderness legislation shows my attitude with respect to conservation of our wilderness and our park areas.

Under our committee system, however, the Committee on Labor and Public Welfare is not the place to consider conservation legislation. That is within the jurisdiction of the Interior Committee. They have had no chance at all to look into what is essentially a conservation bill.

There has been a massive propaganda and advertising campaign to promote title I of the bill. I think it is wrong to obscure the serious problems of our unemployment situation among young people by disguising the fallacies of title I as a conservation program.

Certainly we need conservation legislation. I am in favor of it. But it is wrong to pull the wool over our conservationists' eyes by attempting to convince them that this is fine legislation. Not only would conservation suffer a setback as a result of title I; the serious problem of unskilled youth on our street corners would likewise receive little relief from it.

The Director of the National Park Service, Conrad Wirth, who has held that post since 1951, testified at the hearings on the bill. He, more than any other man, should certainly know something about conservation and the people to do the job.

Under extensive questioning, Mr. Wirth testified that he now has 6,000 permanent employees who are "rangers, road maintenance people, and things like that." He stated several times in his testimony that he needs 1,000 more permanent employees in the field of the Park Service. He also has 4,000 temporary summer employees and could use 4,000 or 5,000 more each summer; that is, as Mr. Wirth testified, "during the season when we can work."

From his testimony, I gather that Mr. Wirth has little doubt that he has enough applicants for these seasonal jobs. His problem is budgetary sums large enough to hire them. However, that problem should not be solved by a Youth Conservation Corps. It is not a labor problem or an unemployment problem. It is one of conservation and budget with which the Labor Committees are not and should not be concerned.

Certainly the 1,000 additional permanent and 4,000 additional temporary personnel which Mr. Wirth can use in the Park Service cannot possibly cost $60 million per year, as would the Conservation Corps under title I.

So that there may be no doubt about the nature of the YCC and its real intentions, I asked Mr. Wirth what he considered to be the objectives of title I. He listed three objectives—none of which has much to do with providing skills to unemployed youth in order that they would be better equipped to enter the labor market.

At page 195 in the hearings, Mr. Wirth listed the objectives of title I as he sees them. They are:

> (It) is a conservation program.
>
> (It) will be of great social value to the boys.

And almost parenthetically—

> (It) is a training program for work and to learn how to work and to take orders and do those kinds of things.

Almost any job—certainly any job under the present training programs of the Federal Government—will provide work experience, discipline, and good work habits. But the difference is that under such programs a young man can also acquire skills to assist him in the competitive labor market.

Mr. President, I should like to sum up my feelings and attitudes about title I of Senate bill 1.

The YCC does not, cannot, and will not get at the root of our problem of unemployed youth—not even if twice the already exorbitant price of $60 million is authorized for it. It makes only a pretense at training, which everyone recognizes as the real essential to solve the unemployment of youth.

The expense of the program—ranging from the administration's figures of as high as $12,000 to only as low as $4,000—is nothing short of unthinkable. Especially is this true when a quick look at title II of the same bill provides more nearly for a combination of work experience and training which may be a partial answer to this problem. Even title II of S. 1 requires an expenditure of only approximately $1,000 per man.

In closing, I should like to quote again from Secretary of Labor Willard Wirtz. The Secretary is an extremely able and dedicated man. His view of the Youth Conservation Corps sums up well, I think, the sheer folly of title I, especially as it relates to the problem of unemployed youth.

He said:

> The largest shortages ahead, or the enlargement of the shortage for the future, as part of the technological development which we call automation, are going to be principally in skill jobs. Those are where the shortages would develop during the next 10 years.
>
> And, consistently with my answer to an earlier question, it would not be thought that there would be any high percentage of qualifications as a result of these programs for the complete satisfaction of any skilled or even semiskilled or semiprofessional jobs. They would not do that.

There, Mr. President, is title I in a nutshell. It does not get at the heart of the problem. It is simply the icing on the cake, the popular thing to do, the something-for-everyone provision which will make other programs, some of which are necessary, seem palatable.

Mr. President, this youth unemployment situation is far too serious for us to be playing games with.

Mr. CLARK. Mr. President, the pending amendment would cut the bill in half, and would murder the part of the program which calls for work by youth on Federal lands, national forests, or national parks.

The case for title I is made in the committee report, which was placed in the Record yesterday, and has been referred to many times during the debate today. I do not need to refer again to it.

The case in support of title I has been made today on the floor. Accordingly, I shall not attempt to answer the arguments of the Senator from Vermont, which in my opinion have already been adequately covered.

Therefore, Mr. President, I hope the pending amendment will be defeated, and that the Senate will vote promptly.

Mr. PROUTY. Mr. President, I shall take only a few minutes to read from the minority views of the House committee members on this Youth Employment Act. I begin to read from page 60:

Cabinet Officers Disagree Over the Real Purpose of the Corps and the Training It Will Provide

One of the most discouraging aspects of this legislation is the fact that it is apparently all things to all people. Arm waving and high-sounding platitudes have been substituted for specifics and clarity of purpose. There is confusion among the various Cabinet officers as to just what title I is expected to do. Although both Secretary Wirtz and Secretary Celebrezze insisted that young men would be trained effectively in the camps, when questioned on this point, Secretary Celebrezze stated: "Occupational training will be provided. The object of this program should be to assure that the youth is better prepared for a job in his home community than he was when he joined the Corps."

While Secretary Wirtz stated: "It will not qualify them for many of what we consider the usual skills."

And Secretary Freeman said: "I don't conceive that every one of these young men is going to be able to go back to the labor market with a fully developed skill * * *. This program isn't designed to turn someone out of a camp to go and run Univac or even to be a bricklayer or even to be an apprentice carpenter."

Also in reply to a question by Congressman Landrum as to whether or not the enrollee will have to go to vocational school when he gets out, Secretary Freeman stated: "I think many will; yes."

Moreover, both the Secretary of Interior and the Secretary of Agriculture emphasized that in their opinion the primary purpose of this legislation is conservation. As Secretary Udall put it: "My responsibility is, of course, the conservation responsibility and, as far as my own view of the program is concerned, the benefit to the young people is coincidental."

Finally, the experience gained in the old CCC program clearly demonstrated that real education in fields unrelated to daily tasks cannot be accomplished in conservation camps. As Conrad Wirth stated: "Growing kids need their rest. And so the idea of putting in a lot of hours at night for study after putting in 8 hours of work was not good, in my opinion."

Of course, he was referring to the experience with the CCC camps.

I read further:

Notwithstanding this experience and the realistic evaluation by Mr. Wirth, Secretary Celebrezze testified: "We will form a regular class section where they can work during the day and go to school during the evening."

THE RETURNING ENROLLEE—UNTRAINED, UNSKILLED, AND UNEMPLOYED

When the enrollee returns from the corps, his problems will not be any less than they were when he first enrolled. As has been noted, he will not receive training in a particular, employable skill. If he is a school dropout his class will be 6 months to 2 years further ahead of him. The best that can be said is that with nothing more than a "changed outlook" he will once again have to compete for an ever-diminishing number of unskilled jobs or seek further training and education.

The plight of the returning enrollee was unwittingly but dramatically underscored by Secretary Celebrezze when he stated: "When he comes out he can go to work for a city in their parks department trimming trees, these are skills which you can learn in the 6-month periods and have some useful employment when you go back, either working for your city or working for a private nursery as far as that goes."

The following colloquy between Congresswoman Green, Secretary Udall, and Congressman Perkins is also a fair evaluation of the employment problems of the returning enrollee:

"Mrs. Green. I was wondering for the young man who comes from one of the urban centers, who may be a school dropout or may not. How much value would it be really to that person to transport him to one of our beautiful parks or forests in Oregon, for example, for 6 months and then he would go back to the city streets? What skills would he have?

"Mr. Perkins. He could learn how to operate all types of farming equipment and it would stimulate him so that he may want to go and seek employment on the farm.

"Secretary Udall. I am sure this is what will happen as a practical matter. I think this was the experience under the old program."

Certainly jobs on farms are not too plentiful in many parts of the country at the present time.

The minority views continue, as follows:

With respect to the proposed employment of returning enrollees in city parks and on farms, it should be noted that under title II young people are supposed to find employment in city parks. This would mean that title I and title II enrollees would be fighting over the same seasonal jobs, the same pick and shovel, or possibly sharing them. The potential farm employment picture was also graphically described by Secretary Freeman when he stated: "Only 1 in 10 of the boys now on farms can expect to make a good living in agriculture and if the underemployment now existing on our farms were translated into man-years of unemployment, it would add more than a million to our figures of unemployed."

Mr. President, I yield the floor.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Vermont [Mr. Prouty]. On this question, the yeas and nays have been ordered; and the clerk will call the roll.

The legislative clerk called the roll.

Mr. HUMPHREY. I announce that the Senator from Virginia [Mr. Byrd], the Senator from Oklahoma [Mr. Edmondson], the Senator from Louisiana [Mr. Ellender], the Senator from Arizona [Mr. Hayden], the Senator from Florida [Mr. Holland], the Senator from Missouri [Mr. Long], and the Senator from Ohio [Mr. Young] are necessarily absent.

On the vote, the Senator from Arizona [Mr. Hayden] is paired with the Senator from Colorado [Mr. Allott]. If present and voting, the Senator from Arizona would vote "nay," and the Senator from Colorado would vote "yea."

I further announce that, if present and voting, the Senator from Ohio [Mr. Young] and the Senator from Missouri [Mr. Long] would each vote "nay."

On this vote, the Senator from Virginia [Mr. Byrd] is paired with the Senator from Florida [Mr. Holland]. If present and voting, the Senator from Virginia would vote "yea," and the Senator from Florida would vote "nay."

Mr. KUCHEL. I announce that the Senator from Colorado [Mr. Allott] is absent because of the death of his mother.

The Senator from Wyoming [Mr. Simpson] is absent on official business.

The Senator from Utah [Mr. Bennett], the Senator from Kentucky [Mr. Morton], and the Senator from Pennsylvania [Mr. Scott] are necessarily absent.

If present and voting, the Senator from Utah [Mr. Bennett], the Senator from Kentucky [Mr. Morton], the Senator from Pennsylvania [Mr. Scott], and the Senator from Wyoming [Mr. Simpson] would each vote "yea."

On this vote, the Senator from Colorado [Mr. Allott] is paired with the Senator from Arizona [Mr. Hayden]. If present and voting, the Senator from Colorado would vote "yea," and the Senator from Arizona would vote "nay."

The result was announced—yeas 41, nays 47, as follows:

[No. 53 Leg.]

YEAS—41

Morton
Scott
Simpson
Young, Ohio

So Mr. Prouty's amendment was rejected.

Mr. CLARK. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. MORSE. Mr. President, I move to lay that motion on the table.

The **PRESIDING OFFICER**. The question is on agreeing to the motion to lay on the table. [Putting the question.]

Several Senators addressed the Chair.

The **PRESIDING OFFICER**. The Senator from Illinois is recognized.

Mr. **DIRKSEN**. Mr. President, will the Presiding Officer repeat the vote? Was it 41 in favor and 47 opposed?

The **PRESIDING OFFICER**. The vote was 41 to 47, as previously stated.

Mr. **DIRKSEN**. Mr. President, let us be clear. The vote for the amendment was—

The **PRESIDING OFFICER**. 41 yeas and 47 nays. The amendment was rejected.

The question is on agreeing to the motion to lay on the table the motion to reconsider.

The motion to lay on the table was agreed to.

UNANIMOUS-CONSENT AGREEMENT

Mr. **MANSFIELD**. Mr. President, if I may have the attention of the distinguished minority leader [Mr. DIRKSEN], the Senator from Vermont [Mr. PROUTY], the Senator from Arizona [Mr. GOLDWATER], and other interested Senators, I should like at this time to raise the question of the possibility of a time limitation on remaining amendments—say 10 minutes to each amendment, divided 5 minutes to each side.

Mr. **DIRKSEN**. Before the majority leader puts that request, Mr. President, I wonder if he would object to a show of hands or an expression of the sentiment of the Senate, as to the number of amendments likely to be offered.

Mr. **MANSFIELD**. I believe that is a good suggestion. How many Senators have amendments which they are contemplating offering at this time?

Mr. **GOLDWATER**. Mr. President——

Mr. **MANSFIELD**. One.

Mr. **GOLDWATER**. Will the Senator yield?

Mr. **MANSFIELD**. Yes.

Mr. **GOLDWATER**. I have five.

Mr. **PROUTY**. Mr. President, I think I have about five.

Mr. **KEATING**. I have one amendment. I am perfectly willing to agree to a time limitation.

Mr. **MANSFIELD**. There will be 10 or 12.

Mr. President, I ask unanimous consent——

Mr. **GOLDWATER**. Mr. President, before the Senator makes a unanimous-consent request, let me say that I have no intention of trying to delay the Senate. I doubt that I shall ask for a record vote on any of my amendments. I think my explanations of the amendments will be well within the 10 minutes on each amendment.

I suggest that nature be allowed to take its course. So far as I am concerned, I have no desire to discuss the amendments at great length. I am long overdue on an engagement with my wife, which I do not wish to miss.

Mr. **MANSFIELD**. The Senator is not alone.

Mr. **GOLDWATER**. I know that. I would suggest that the debate be allowed to continue. I think my amendments are necessary to make the bill a better bill; but even if they are rejected I think it is necessary to establish a record. I do not intend to delay the Senate. The longest explanation I have will probably be no longer than 2½ double spaced, typewritten pages.

Mr. **MANSFIELD**. Mr. President, in reply, I wish to say that the Senator from Arizona is always most considerate.

Would it be agreeable for me to propound the unanimous-consent request that there be 20 minutes on each amendment, to be divided 10 minutes to a side, exclusive of the amendments to be offered by the Senator from Arizona, who has indicated that his amendments can be considered in a shorter period of time?

Mr. **PROUTY**. Mr. President, will the Senator yield?

Mr. **MANSFIELD**. I yield.

Mr. **PROUTY**. I am agreeable to that request, with the exception of a substitute amendment which I intend to offer later. I assure the distinguished majority leader that I shall not take a great deal of time.

Mr. **MANSFIELD**. Mr. President, I ask unanimous consent for the limitation, with the exception of the substitute amendment to be offered by the Senator from Vermont and with the exception of the amendments to be offered by the Senator from Arizona [Mr. GOLDWATER].

The **PRESIDING OFFICER**. Is there objection to the request by the Senator from Montana?

Mr. **GOLDWATER**. Mr. President, I assure the majority leader that I shall not consume more than 10 minutes on any amendment.

Mr. **MANSFIELD**. We understand.

Mr. **GOLDWATER**. Unless some Senator wishes to engage me in a discussion. This morning I had a 20-minute speech, which required 2 hours.

Mr. **MANSFIELD**. We shall do our best to give the Senator the field to himself.

Mr. **GOLDWATER**. As it turned out, there was a great deal of discussion.

The **PRESIDING OFFICER**. Is there objection to the request of the Senator from Montana? The Chair hears none, and it is so ordered.

Mr. **GOLDWATER**. Mr. President, I call up my amendment No. 39 and ask that it be stated.

The **PRESIDING OFFICER**. The amendment will be stated for the information of the Senate.

The LEGISLATIVE CLERK. On page 29, between lines 16 and 17, and on page 43, line 2, after the period, it is proposed to insert the following:

> Male individuals who have attained age eighteen shall not be eligible for enrollment or participation until they have fulfilled their obligation of military service under the Selective Service Act or can present a certificate from their local Selective Service Board indicating that they have volunteered for induction and that they have been rejected or deferred for a legitimate reason.

The **PRESIDING OFFICER**. The Senator from Arizona is recognized.

Mr. **GOLDWATER**. Mr. President, before I yield to my friend from Oregon, I wish to make a correction of an error which was inadvertently made in the printing of the amendment. On line 2 of the amendment appear the words "line 2," which should be "line 1." I call the attention of the clerk to that correction. It was an error in printing, and not an error in reading. I ask unanimous consent that that correction be made.

The **PRESIDING OFFICER**. The correction will be made.

Mr. **GOLDWATER**. I am happy to yield to my friend from Oregon.

Mr. **MORSE**. Mr. President, I wish to take a minute to comment on the last vote of the Senate, dealing with the amendment to strike title I. I had hoped that this brief comment of mine might be made before the vote, but I was in the cloakroom talking with one of the most able and best informed conservationists in our country, Mr. Spencer Smith. By the time I reached the Chamber, the rollcall had already started.

I wish the RECORD to show that a large group of conservation organizations have been for the purpose of title I long before the bill was introduced. I wish to have the RECORD show that title I has had the enthusiastic, longtime support of such organizations as the Wildlife Management Institute, the National Wildlife Federation, the Wilderness Society, the Citizens Committee on Natural Resources, the National Parks Association, and the National Audubon Society.

I know of no group of organizations more dedicated to the cause of sound conservation, both of our so-called natural resources and our human resources, than this group of ardent supporters of title I. I think the RECORD should show, and I am pleased to have it show through my lips, the support by these conservation organizations of title I of the bill.

Further I wish to thank Prof. Spencer Smith for his great help in bringing the facts in support of title I to the attention of Senators. For some years now I have relied heavily upon Spencer Smith for factual assistance in the preparation of many of my arguments in the large number of debates I have engaged in on conservation and natural resource issues. I have found him to be one of the best informed conservationists in the country. Spencer Smith is dedicated on the major tenet that guides and directs me in all my work on conservationist issues, namely, "each generation is but the trustee of God's gift of natural resources to our country. Each generation has an obligation to see to it that we leave those natural resources to future generations of American boys and girls in a better condition than that in which we found them." Title I of the Youth Corps bill now before the Senate is essential to our keeping faith with that trusteeship obligation.

Mr. **GOLDWATER**. Mr. President, in explanation of my amendment, it would make the programs for young men under both titles, in effect, supplementary to the military draft program by limiting male eligibility to those who, being of the proper age, have either completed their military obligations under the Selective Service Act or who have been legitimately rejected—such as for health reasons—after having volunteered for induction.

This linking together of the programs set forth in the bill with the selective service program is justified by every consideration of logic and fact. Under repeated questioning, the Secretary of Labor admitted that the work experience acquired by young men under the bill would not train them specifically to fill jobs for which the labor supply was insufficient to meet the demand. He merely speculated hopefully that the youngsters who completed a stint in the corps would acquire habits of work and discipline that would make them more attractive as possible employees to employers looking for workers.

If this be so, military service would be far more effective in achieving the professed objective than the programs proposed in the bill. Not only would such service help to strengthen the national security, it would also instill principles of patriotism and national loyalty which are not acquired on the streets by idle and unemployed young dropouts. Far more than under the bill, military service would inculcate habits of work and discipline, and under conditions which would not single out or stigmatize individuals in any way, as enrollment under the S. 1 program would do, the requirement of military service being, at least in contemplation of law, universal in its applicability to our male young people.

Moreover, a tour of duty in any branch of our service provides excellent opportunities and facilities for education and vocational training in skills designed to enhance the future earning power of the young draftees after they have completed their military service. Nothing in the programs proposed under S. 1 offers equal advantages for self-improvement both educationally and vocationally.

A further consideration which should not be overlooked is that the young men at whose enrollment the bill's programs are primarily directed are precisely those who, in all logic and fairness, should be the first ones drafted. Military service will not interrupt their education, the assumption being that their education has in most cases already been interrupted, in fact, terminated. Being unemployed, their military service will in no way adversely affect their dependents; to the contrary, most of the enrollees will themselves have been dependents, and those responsible for their support can only profit by their induction.

Thus, my amendment, by requiring fulfillment of their obligation under the draft laws as a condition precedent to enrollment under the bill, serves not only the primary national goal of an adequate military defense, but achieves the objectives professed by S. 1 in a far more effective and comprehensive manner.

Mr. CLARK. Mr. President, the amendment of the Senator from Arizona was carefully considered in committee, and rejected by a vote of 11 to 3. I hope the Senate will also reject it. In my opinion, and that of the committee, it would create an administrative situation which would be very difficult to deal with. It would be impossible to administer, as a practical matter. Therefore, I hope the amendment will be voted down.

Mr. GOLDWATER. Mr. President, in brief reply, I may observe that the failure to enact this amendment would create equally difficult administrative problems in the area of defense. I hope the Senate, in its wisdom, will accept the amendment.

The PRESIDING OFFICER (Mr. BAYH in the chair). Is there further discussion?

Mr. COOPER. Mr. President, will the Senator yield for a question?

Mr. GOLDWATER. I yield.

Mr. COOPER. Would enrollment in the corps relieve the enrollee from discharging his military obligation?

Mr. GOLDWATER. As I understand the bill—and the Senator in charge of the bill can correct me—enrollment in the corps would not overrule the possibility of the enrollee's being drafted.

Mr. CLARK. The Senator is correct. We wrote that provision in on the motion of the Senator from Arizona.

Mr. COOPER. If a boy were enrolled in the corps and his number were called by the local draft board, would he be required to enter the military service?

Mr. GOLDWATER. As I understand, that is correct. My only purpose in offering the amendment is to give the boy what is actually a better opportunity for training and discipline, under the tutelage of the military service, rather than under this loosely knit organization.

Mr. COOPER. I agree with the Senator that service in the Army, Navy, or Air Corps would provide better training and discipline.

I wish to ask one further question.

Suppose a boy between the ages of 16 and 22 should be rejected by the armed services. Would the amendment of the Senator from Arizona affect that boy in any way?

Mr. GOLDWATER. No. In fact, a part of my amendment carries the language that if he displays a physical-disqualifying certificate from the draft board, he will be available for this particular corps.

Mr. COOPER. May I ask one further question? Assume that a boy had registered but had not been called up, and there was no necessity for him to report. Could he become a member of the corps even though he had not been called up?

Mr. GOLDWATER. As I understand, he could become a member of the corps, but he would be subject to the draft. As I have said, and I repeat, my only purpose is to try to—I do not like to use the word "force," but induce the boy to try the military service before he tries this avenue.

Mr. COOPER. Would he be required to enlist before he could become a member of the corps?

Mr. GOLDWATER. As I understand the language of the bill, the answer is "No"; he would not be required to do so.

Mr. COOPER. He would not be required to do so under the amendment of the Senator from Arizona?

Mr. GOLDWATER. No. He would have to show a certificate that he was disqualified physically, technically, or otherwise; but, as I understand, under the terms of the bill, he could still be drafted if he were physically qualified to be drafted.

I repeat, my interest is to try to induce young people to seek military service before they seek the rather nebulous training of hacking out trails in the woods.

Mr. COOPER. Would the amendment of the Senator from Arizona require the boy to make an effort to join the military service?

Mr. GOLDWATER. Yes.

Mr. COOPER. Would the Senator consider that a form of coercion?

Mr. GOLDWATER. No, I would not, because, under the full language of the bill, if it is used in the way in which I think it will be used to rid the streets of juvenile delinquents, coercion is already written into the bill. My amendment would give young persons an opportunity to seek what I think is a better way of training than is offered by the bill.

Mr. COOPER. I agree. I would rather see them in the military service, but my question is whether it would require them to enlist before they would be eligible to join the corps.

Mr. GOLDWATER. I do not think that is true.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Arizona.

The amendment was rejected.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. GOLDWATER. Mr. President, I call up my amendment numbered 40.

The PRESIDING OFFICER. The amendment offered by the Senator from Arizona will be stated.

The LEGISLATIVE CLERK. It is proposed, on page 29, line 13, after the word "individuals" to insert the words "of good character" and on line 15, to strike the comma and all the language following the comma on lines 15 and 16.

Mr. GOLDWATER. Mr. President, I think this amendment, of all those that I will offer, is the most important one. As I understand, in the original draft this subject was covered, but the language was removed during subcommittee considerations of the bill.

As the amendment well defines its purpose, it deals with the question of character. Whom are we going to admit into the corps?

In his appearance before our subcommittee in 1959, dealing with the bill, S. 812, Mr. Conrad L. Wirth, Director of the National Park Service, testified that when he was Director of the Civilian Conservation Corps there was a 200-man camp in Yellowstone with enrollment made up of boys from a very large city. The camp had been operating for barely 2 weeks, and here I quote from Mr. Wirth's testimony, "when the superintendent got a call for help from the camp commander, he had a riot on his hands."

Considering the lives and backgrounds of many of the youngsters who will be enrolled in the YCC under this bill, such outbreaks would not be surprising. In other words, discipline will be an important problem and no amount of advance verbal reassurance can guarantee that such outbreaks will not occur or that they can properly be handled when they do.

Despite this problem, and despite the recognition in the final report of the old CCC of the valuable contribution to that program made by the armed services, the committee rejected my amendment to provide participation by the armed services in the proposed programs. Moreover, the subcommittee previously had eliminated the requirement that enrollees be of "good character" which had been in the first committee print considered by the subcommittee. In its place was substituted a general requirement that enrollment would be limited to individuals "whose participation in the corps will be consistent with the purposes of this title."

This requirement is so vague as to be meaningless; it merely confers unlimited power on the Federal authorities in charge of the YCC to determine who shall be accepted for enrollment without a single concrete standard in the legislation to guide them. This is not only a dangerous procedure, representing as it does a further abdication by the Congress of its constitutional legislative function, but it is entirely impracticable. If genuinely undesirable characters are to be excluded from the Corps, and no specific criterion exists for determining their acceptability, it would require an entire corps of social workers, psychiatrists, social psychologists and educational and vocational counselors to make an individual determination of acceptability for each separate applicant for enrollment. I see nothing in the bill or in the testimony for that matter, to indicate how and by whom these determinations would be made, and how extensive an investigation and study of each applicant would be necessary to make a correct determination on his eligibility.

My concern is not a mere phantom. I notice that when he appeared before the subcommittee, Dr. Carl Hansen, the very able and estimable Superintendent of Schools for the District of Columbia, testifying on the original bill before the subcommittee added the enrollment requirement of "good character" answered a question of Senator PROUTY's as follows:

> Senator PROUTY. If I understand you correctly, you are suggesting that we should take the delinquents and send them to the [YCC] camps.
>
> Dr. HANSEN. This would be my suggestion. Now, I understand, I know this, from the point of view of the product at the end of 6 months, and being able to make a record to show that this has been very successful and productive, it is much more difficult, and there is a far greater risk of failure and upheavals and assaults in the camp and that sort of thing.
>
> But what are you going to do? Leave these youths out on the street alone?

It is plain that Dr. Hansen sees these YCC camps as a repository for intractable youngsters, even for hardened juvenile delinquents. I do not believe the American people want that sort of thing. Hence, I offer my amendment to restore the bill's previous language requiring applicants to be of "good character" as a qualification for enrollment.

I believe this is a very serious question. I wish that more Senators were present in the Chamber. If there are repercussions from the enactment of the pending bill, I feel certain that they will come from the failure of the bill to provide any basis for judgment of good character. The proponents of the bill might argue contrarywise. However, it seems to me that a convicted murderer, or a man suspected of murder, could well qualify as an applicant. If Dr. Hansen's views are held generally across the country by people concerned with juvenile delinquency, we are creating, in effect, in title I, a juvenile delinquency corps to be placed in the Nation's forests and lands.

Mr. COTTON. Mr. President, will the Senator yield?

Mr. GOLDWATER. I am happy to yield.

Mr. COTTON. I was not present during all of the colloquy which took place before the unanimous-consent agreement was entered into. Was there any agreement entered into between the distinguished Senator from Arizona and the majority leader that there would be no yea-and-nay votes on any of his amendments?

Mr. GOLDWATER. No. I merely said that I did not believe I would call for a yea-and-nay vote. I believe it is important enough that we should have one. If our colleagues were still within earshot of the bells, I would certainly yield to the Senator for that purpose.

Mr. COTTON. The amendment is of paramount importance. I was prosecuting attorney of a rural county during the CCC camp days. We had some problems that were baffling to the civilian authorities, particularly those of our rural county. We ran into extreme difficulties. The Senator's amendment goes to an extremely sensitive point.

I sincerely hope that if no such agreement has been entered into, none will be. I hope the Senator will ask for a yea-and-nay vote. If he does not, I would like to ask for it.

Mr. GOLDWATER. At the suggestion of my friend from New Hampshire, I ask for the yeas and nays.

Mr. CLARK. Mr. President, will the Senator withhold his request for the moment?

Mr. GOLDWATER. Yes.

Mr. CLARK. The Senator knows that the good character requirement was initially included in the bill. It was stricken out. It is a matter on which the committee toiled for quite a long time. I personally believe it is tweedledee and tweedledum, whether it is good character or whether it is the way it is written in the bill.

The principal advocate of the present language in the bill is the junior Senator from Massachusetts [Mr. KENNEDY]. I would not like to accept the amendment in the absence of the Senator from Massachusetts, because I know he feels very strongly about it. If the Senator would be willing temporarily to withhold his amendment and bring up his next one, I should like to inquire of the Senator from Massachusetts whether he wants a yea-and-nay vote or whether he will accept the amendment. I have asked the Senator from Massachusetts to come to the Chamber.

Mr. GOLDWATER. I would naturally be very much interested in hearing what the junior Senator from Massachusetts has to say about this amendment. I was quite surprised that it was his vote that eliminated this provision.

As I said in my explanation, I cannot believe that the American people are willing to accept such a bill without some guarantee that their children will be going to camp with people of good character.

Mr. CLARK. If the Senator will withhold his amendment, it can be discussed at greater length.

Mr. GOLDWATER. I have some more discussion of it. I should like to read an article published in the Northern Virginia Sun of March 6, 1963.

> YOUTH CORPS BACKER CHARGED IN BURGLARY
>
> PHILADELPHIA.—Michael Ford, 16, who last month testified before a House subcommittee on the city's Youth Conservation Corps, was arrested Tuesday on burglary charges.
>
> The boy's stepfather, Robert Williams, went to police after finding a loaded revolver in the suspect's room. "I think I made the right decision," Williams said.
>
> Police charged Ford in the burglary last Saturday of a bakery near his home. They said $1,070 in cash and $642 in checks was taken. The youth said he found the gun and money in an alley over the weekend. He said he discarded the checks and spent all but $13 of the money on clothes and a portable radio.
>
> Williams said the boy is "in the clutches" of a street gang. "I knew damned well he was mixed up in something," Williams said.
>
> The youth testified last month at the invitation of Representative CARL D. PERKINS, Democrat of Kentucky, and told the subcommittee if more boys were interested in the Youth Conservation Corps "there would be less tendency for them to get into trouble."

I do not believe I could offer any better testimony for the need of my amendment than that which this supporter of the bill has given.

If the Senator from Pennsylvania wishes, I shall be glad to defer the further consideration of the amendment until the junior Senator from Massachusetts comes to the Chamber. However, I hope the Senator in his wisdom, will accept the amendment.

Mr. CLARK. If I may interrupt the Senator, it was my hope that we might arrange to accept the amendment and thus avoid the necessity for another yea-and-nay vote.

As to the boy from Philadelphia, we can never tell whom the other body will call as a witness. We did not call him as our witness.

Would not the Senator from Arizona consider taking up his next amendment?

Mr. GOLDWATER. I shall be happy to do so; but, as I mentioned earlier, I do not preclude the possibility of a yea-and-nay vote on this amendment. This is probably the most important amendment I shall call up. However, I shall be glad to sidetrack it by unanimous consent, with the understanding that it will be taken up again when the junior Senator from Massachusetts is present.

Mr. CLARK. Mr. President, the junior Senator from Massachusetts has just entered the Chamber.

I should like the attention of the junior Senator from Massachusetts. The Senator from Arizona has called up his well-known "good character" amendment. The Senator from Massachusetts may recall that he very ably sustained his position with the committee, and the committee went along with him to strike "good character" from the bill and to substitute language to the effect that the members of the Corps should be composed of those whose participation in the Corps would be consistent with the purposes of this title. The Senator from Arizona now suggests that he would like to have a yea-and-nay vote on the amendment to substitute the words "good character."

While the Senator from Massachusetts was not in the Chamber, I did not wish to make a decision whether to accept the amendment or to let it proceed to a yea-and-nay vote and to stand by the committee. Perhaps Senators would be more enlightened if the Senator from Massachusetts would state the principal reasons why he persuaded the committee to strike "good character" and to write in the other language. I assure the Senator from Massachusetts that I shall support him in whatever he chooses to do.

Mr. KENNEDY. Mr. President, the committee report shows the reasons for the changes in the initial language. In the proposed language guidelines are established in the reference back to the purposes of the title itself.

What we are really attempting to do by this provision is to provide guidelines and at the same time give a degree of flexibility to the director. Language should not be adopted which places the director in a straitjacket. By having the guidelines and flexibility provided with regard to enrollment the administrator can protect the purposes of the legislation and insure the success of this program.

The paramount question is the motivation of the young people who apply for this opportunity. We cannot by the words "good character" better insure the correct motivation of these young people.

The administrator would have a degree of flexibility, which is of the utmost importance. Any administrator would be interested in the successful implementation of the program itself. Therefore, we must assume he would be judicious in admitting into the program persons who would take proper advantage of the program.

Mr. MANSFIELD. Mr. President, will the Senator from Arizona yield?

Mr. GOLDWATER. I yield.

Mr. MANSFIELD. The distinguished junior Senator from Massachusetts has given a very good explanation of the language on page 29, lines 12, 13, 14, and following, in the bill. It is my understanding that the Senator from Arizona desires to include, after the word "individuals" on line 13, the words "of good character." It is my further understanding, reading the bill as it covers the subject, that individuals of good character are not excluded. Is that correct?

Mr. KENNEDY. That is correct.

Mr. MANSFIELD. Therefore, it appears to me that what the Senator from Massachusetts has desired to do is to open the program to all persons, those who may not be of good character, but who may need assistance—and the bill provides them an opportunity to better themselves—as well as those of good character, because they are not excluded.

The Senator from Massachusetts has a good point. I hope that on the basis of his explanation the amendment offered by the Senator from Arizona will be rejected.

Mr. GOLDWATER. Let us pursue the point a little further. Let us read the statement of purpose which the Senator from Massachusetts, the Senator from Pennsylvania, and the Senator from Montana believe will cover the situation. I read the statement of purpose, section 102:

> STATEMENT OF PURPOSE
>
> SEC. 102. The purpose of this title is (1) to provide useful work experience opportunities for unemployed youths so that their employability may be increased through participation in such programs of conservation planned and designed by, and under the immediate supervision of, the various Federal agencies charged with the responsibility of planning and carrying out such programs; and (2) to enable the Federal agencies charged with the responsibility of conserving and developing natural resources and recreational areas to accelerate programs planned by such agencies to fulfill such responsibility.

I ask any Senator to explain how this language would solve the problem of good character. When the subject was discussed in committee, I offered the language contained in my amendment, but it was rejected. A question was raised as to what constitutes "good character."

Let us take a negative approach. Let us consider the case of a boy shipped out of a large metropolitan city, a boy who has become a nuisance to the police because of repeated crimes and because of gangster associations. Certainly such a boy is not a boy of good character; he is not a boy with whom American families would want their children to associate.

Mr. KENNEDY. Mr. President, will the Senator from Arizona yield?

Mr. GOLDWATER. I yield.

Mr. KENNEDY. As the Senator will recall, at the time of the subcommittee hearings four young people appeared and testified on the mobilization program on the East Side of New York City. The record shows that two of them had some desire to drop out of school, while two of them had had brushes with the law. All four had indicated their association with the mobilization program and stated that they were benefiting substantially from it.

I am concerned that the purpose of the bill might not be fulfilled by adding the words "good character." A rigid definition of this phrase would exclude many young people who today have the appropriate motivation and could benefit substantially from the proposed legislation.

I do not believe that the proposed language would turn this into a program for hardened juvenile delinquents. To assume so would be to fail to recognize what any capable administrator would try to do if he were trying to make the program successful.

What we are attempting to do by this language is to avoid the possibility of a narrow, strict construction being placed on the words "good character" which might exclude very deserving young people.

Mr. GOLDWATER. Mr. President, the junior Senator from Massachusetts has given us four examples. Two of them are dropouts. I do not consider a boy who drops out of high school to have a bad character. In fact, I think I am more concerned than are the proponents of the bill about the dropouts, because I believe we are not here providing the real answer for them. However, that is beside the point.

Two of the examples the Senator from Massachusetts gave are dropouts. Two of them had "brushes with the law." What kind of "brushes with the law" did they have? Did they receive a parking ticket, or did they exceed the speed limit, or did they violate a curfew? Certainly such things would not brand them as having bad character.

But suppose the "brushes with the law" had been participation in a gang holdup or participation in a gang which beat up an elderly person—such as occurs night after night in the city of Washington, D.C. Can such a boy be said to have a good character? No.

So it seems to me that the Senator's premise about these youths having good character does not apply.

The bill refers to providing employment for youths, and refers to developing the natural resources. We do not point the finger at a boy who has had a minor altercation with the law, and therefore say, "You are a bad citizen; you have a bad character." The courts decide such things.

Under the bill, however, in the absence of language such as is proposed in the amendment, the administrators could select anyone they might wish to select. Frankly, I think Congress has to provide some legislative guidelines in order to guide the administrators in the exercise of discretion in connection with such matters.

Mr. KENNEDY. Mr. President, in further explanation let me say that it is felt that the standard of good moral character as a qualification for admission to the Corps is unsatisfactory. It lacks precision in definition, and presents the danger of an unduly restrictive interpretation which possibly would deny a second chance to a deserving young person.

The section on composition of the Corps clearly does establish standards for qualification. The Director is required to limit enrollment to those whose participation in the Corps will be consistent with the expressed purposes of the two programs contemplated in this legislation. These purposes are: First, to increase the individual's employability; and second, to enable the appropriate Federal agencies to accelerate their programs and fulfill their responsibilities in conserving and developing natural resources and recreational areas.

It is clear that the Director would violate his statutory duty if he were to admit individuals whom he felt were not likely to benefit in a way which would result in their increased employability. In the case of title I, he would also be derelict if he selected individuals who possessed a character history which made it doubtful that they would contribute and cooperate within the program so as to help carry out the mission of the Federal departments involved.

It is also to be assumed, in construing this section of the bill, that the Director, who is to be charged with the responsibility for an effective administration of this program, will not adopt a selection procedure which will make a successful performance by him impossible. It is not tenable to assume the contrary.

The proposed criteria to guide the Director in determining enrollment are, in essence, good character standards, which are preferable to a rigid "good moral character" prerequisite which could be construed to exclude any individual who had had a brush with the law. The present language would enable a judgment to be made on the basis of the capacity of the individual to work in a healthy way with others in the group and to develop the work disciplines, skills, and educational opportunities offered by the program.

This legislation is not intended as a juvenile delinquency program. However, the Director should be allowed the discretion to make available the benefits of this program to a properly motivated young person whose background suggests that his participation in the program would be entirely consistent with the objectives of this legislation.

Mr. GOLDWATER. I should like to be able to agree with the Senator from Massachusetts, Mr. President; and I should like to be able to agree that every Administrator appointed in connection with the program, by whatever administration might be in office, would be one who would carefully select those who would be admitted to this Corps. But knowing human nature as I do and knowing politics as I do, I cannot believe that would be so. Therefore, I believe we have to write into the act enough legislative guidelines so that we shall have some control over the action of the administrators, no matter what they might be doing.

I repeat that the statement of purpose, as referred to by those who oppose the amendment—namely, that we are offering this provision merely as an alternative—simply does not fill the bill.

Mr. GORE. Mr. President, will the Senator from Arizona yield?

Mr. GOLDWATER. I yield.

Mr. GORE. I am sure the distinguished Senator from Arizona recalls the admonition that he who is without sin should cast the first stone.

A few minutes ago the Senator referred both to the determination of good character by the courts and its determination by the Administrator. As a lawyer, I know that the establishment of good character is a matter of proof in court.

Would the distinguished Senator require the Administrator to hold a public hearing in order to determine, for each youth who might have cast a stone or might not have cast one, whether he had a good character, before the Administrator acted upon the applications? If so, would that be an adversary procedure? Would it be under oath? How would the Senator require the Administrator to proceed in establishing "good character"?

Mr. GOLDWATER. If the Senator from Tennessee will read my amendment, I think he will find merely the words "of good character." I do not make any reference to hearings or procedures or anything of the sort. I think "good character" is susceptible of a fairly acceptable definition which all of us understand.

I am directing my remarks to the problem of juvenile delinquency, which today is not a small problem. When we refer to enrolling 15,000 boys in the one program and 60,000 in the other, we must keep in mind the words of Dr. Hansen, the Superintendent of Schools for the District of Columbia, which is one of the most crime-ridden cities in the United States; namely, that he looks upon this program as a good place to dump these boys. For example, FBI figures show that in 1961, city arrests totaled 3,851,000; and these crimes extend from criminal homicide, forcible rape, robbery, aggravated assault, burglary, larceny, auto theft, other assaults, and so forth and so on.

I assume that if the words of my amendment were in the bill, the Administrator would be very careful in asking questions. If there were doubt in his mind, I think he might well ask for a court record or a police record. I am not suggesting any investigation. I am merely suggesting the application of commonsense.

While we would like to assume that commonsense will be used in the administration of this act, I think all of us are at least wise enough or at least not so naive as to believe that the act would be universally well administered.

Mr. GORE. Mr. President, will the Senator from Arizona yield again to me?

Mr. GOLDWATER. I am happy to yield.

Mr. GORE. There is no question in my mind that the distinguished Senator from Arizona has the best of motives in mind. I am raising the question of the administrative procedures. In each case, how would an administrator undertake to establish good character? The Senator from Arizona has referred to court records and court procedures and hearings; yet he says he does not want to make the procedure impracticable.

I suggest that perhaps the Senator from Arizona would wish to give more consideration to this requirement. If it were a rigid requirement, and if it called for a determination which the Administrator would have to reach before admitting an applicant, that would involve a rigid and costly procedure, and it might very well make the administration of the program quite impracticable, if not impossible.

Mr. GOLDWATER. In reply, Mr. President, let me say, to begin with, that I really have grave doubts that a great many persons of bad character would seek to be admitted to the program. I merely wish to include the words "good character" as a requirement, so they will always be a guideline to the administrator. Certainly he will have access to records. The administrators will be established in the cities concerned. If there is a question, there will be access to the courts and to the police; and in case of deeper questions, I have no doubt that the FBI would be glad to answer them.

I see no real administrative problem here, but I do see a problem of greater magnitude if the bill should be used as a dumping ground for bad characters, as Dr. Hanson has suggested.

I yield to my friend, the Senator from New Jersey.

Mr. CASE. I thank the Senator.

I should like, if I may, to make a brief statement of my attitude toward the bill, and then I should like to ask a question of the Senator in charge of the bill or one of its proponents.

The section of the title referred to has given me real concern. I am concerned about many questions. One of them is that we should not, through the title referred to, constitute a kind of withdrawn group of boys who would be marked by delinquency, or relative mental incompetence, or something less than normal intellectual capacity, or any other thing which would create a stigma upon them for the rest of their lives, and which would make them, in association with others of the same kind, worse rather than better citizens later on.

I am concerned about the question which the Senator from Arizona has raised. I am not assured by the answers made by some of the proponents of the measures who have attempted to put the argument on legalistic grounds in speaking of the difficulty of proof of good character and that sort of thing.

If I can, I should like to get the assurance of one of the sponsors of the bill—perhaps the majority whip or one of the other proponents in a position to speak with authority—to make a legislative record that would be solid and sound, and with which we could go to our constituents and to the country. I should like to have it well settled on the floor of the Senate now that it is not intended that the use of the Corps, as suggested by Dr. Hansen, shall be as the Senator from Arizona fears it might be. I should like to have it clear in the RECORD that it is not intended to herd off by themselves boys who are not able to get along in the world. If the program is to be successful, we must have it across the board. We must have a cross section of American youth of the best sort.

Therefore I should like to have the question gone into a little bit more on the affirmative side rather than continuing the attempt to take the amendment apart on the grounds of technical difficulty in administration.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. GOLDWATER. I yield.

Mr. MANSFIELD. The Senator from New Jersey places too much emphasis on the name of one person who has been mentioned time and time again by the Senator from Arizona. That is a Mr. Hansen who, I believe, is the Superintendent of Schools for the District of Columbia. After all, he was only one of the many witnesses before the committee. Too much emphasis has been placed on the possibility that the YCC would be composed of juvenile delinquents, hoodlums, and the like.

I should like to point out that section 107(a) reads as follows:

> The corps shall be composed of male individuals who are permanent residents of the United States—

And so forth.

What does a draft notice state? Does it state that before a man can be inducted into the Army he must be of proven good character? We have placed too much emphasis on Dr. Hansen and what he has had to say based upon conditions in the city of Washington, and most especially in the Washington schools. We ought to place emphasis on the majority of youngsters in our country. I would be willing to wager that they number 99 percent of the juvenile population. They are good, decent, young men and young women.

I believe we are wasting a great deal of time over a great deal of littleness. I most respectfully suggest to the Senator from Arizona that he ask the reaction of the junior Senator from Massachusetts as to whether or not he would be willing to accept the language proposed by the Senator from Arizona, and thereby bring the question to a head. With the permission of the Senator from Arizona, I should like to ask the Senator from Massachusetts for his reaction.

Mr. GOLDWATER. I yield for that purpose.

Mr. KENNEDY. The examples which the Senator from Arizona has stated have done a great deal to clarify what he believes the words "good character" really mean.

Mr. MANSFIELD. Mr. President, if the Senator from Arizona will yield, I should like to suggest most respectfully to the Senator from Massachusetts that he seriously consider withdrawing his objection to the proposal of the Senator from Arizona and accept the amendment.

Mr. KENNEDY. Mr. President, the junior Senator from Massachusetts withdraws his objection.

Mr. GOLDWATER. Mr. President, I should like to know the attitude of the Senator in charge of the bill and whether he accedes to the action of the junior Senator from Massachusetts.

Mr. CLARK. Mr. President, in view of the colloquy, which I think has made a good deal of useful legislative history, I commend the junior Senator from Massachusetts for being willing to withdraw his objection to the amendment of the Senator from Arizona, and I am happy to accept the amendment.

Mr. GOLDWATER. I thank my distinguished friend from Pennsylvania. It is a very wise move. I believe it will make the bill far more palatable to many of us, and certainly to the House.

Mr. HART. Mr. President, will the Senator yield?

Mr. GOLDWATER. I yield to the Senator from Michigan.

Mr. HART. I should like to speak for a moment so that the legislative record may reflect my concern and, I believe, the concern of other Senators. By the colloquy in which we have engaged, I understand that it is not intended to create a corps into which young men who have had bad records may not be accepted.

Mr. GOLDWATER. No.

Mr. CLARK. Definitely not. I believe there is really no difference between the Senator from Arizona [Mr. GOLDWATER], the Senator from Massachusetts [Mr. KENNEDY] and myself as to what is intended. We do not want the YCC to be reform school camps. We do not want them to be camps for young men who have been vicious criminals, who have violated the law and are probably beyond redemption. We desire the camps to be available to young men who have had an occasional brush with the law, who may have strayed a little from the path of righteousness, but who are capable of being rehabilitated. And we definitely wish the camps to be available for men of good character.

Mr. HART. I should like to cite an example that occurs to me. If a boy steals a car, it is more than merely a brush with the law. What about the boy 15 years old or 14 years old who commits such a crime? Is the opportunity to be accepted in a camp to be denied him?

Mr. CLARK. Not necessarily. That is what I desire to make clear. If the subsequent record of the boy who had stolen the car had been good, if the officer who had looked into his background believed that he should be given another opportunity, certainly he should be admitted to the Corps.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. GOLDWATER. I yield.

Mr. MANSFIELD. I would hope that a requirement of "good character" would be applied with a good deal of liberality and compassion. I make that statement as one who was court-martialed twice before he was 16 years old while serving in the Navy in the first war. The court-martials were only deck and summary court-martials, but they could very likely be considered a blot on my character. But thanks to a great many other good people who helped me, I was able, in a sense, to be rehabilitated. [Laughter.]

So I think the Senator from Michigan has a good point. It is not a case of being 100 percent perfect in character. Many in this body may have had brushes one way or another with the law, although most of us would probably not admit it, at least not to our constituents. But it has happened and will happen again.

I plead that it be the intent of the amendment proposed by the Senator from Arizona that compassion, understanding, and tolerance be shown, and that the amendment would not mean, as I do not think it does, that a boy must have a perfect character before he could become enrolled in the YCC.

Let us suggest the requirement be administered with understanding. Let us make the intent clear so that no one will be penalized; so that in effect what the Senator from Massachusetts intended when he corrected the language in the bill will be carried into operation. Let us keep in mind that, so far as the Selective Service Act is concerned, as a comparison, there is no designation in that act that I am aware of calling for "good character."

Mr. GORE. Mr. President, will the Senator yield?

Mr. GOLDWATER. I shall yield in a moment. The legislative record made here makes definitely clear that it is not the intention of the Senator from Arizona to apply a hidebound definition to the words "good character." I think "good character" is universally understood.

Character varies throughout a person's life.

So long as the majority leader has confessed some of his misdeeds, I might say that I spent the better part of a day in a Mexican jail for hitting a Mexican policeman with a pot of mustard. I was not aiming at the policeman, but I hit him.

While I do not claim perfect character, I think that little blot on my record, which cost $25, has been forgotten even by the Mexican police.

By my amendment I do not wish to prohibit acceptance of any boy who has done something for which he has served which in the judgment of the courts has been satisfied, so that he is again a citizen in good standing.

I think we are all talking about the same thing. The junior Senator from Massachusetts [Mr. KENNEDY], the Senator from Pennsylvania [Mr. CLARK], the Senator from Montana [Mr. MANSFIELD], and I have been discussing the same thing, and we are all in agreement.

I am very happy that the Senator in charge of the bill is willing to accept the amendment.

I now yield to my friend from Tennessee.

Mr. GORE. Mr. President, as I said earlier, I consider the good will of the distinguished Senator from Arizona manifest. There is no question of his own character or good will in this case. I have raised a question as to procedure, and I should like to have it clarified.

If the effect would be as the distinguished senior Senator from Montana, the junior Senator from Massachusetts, and senior Senator from Pennsylvania have stated, with which I understand the junior Senator from Arizona agrees, I raise no objection, but I should like to have the situation clarified.

Is it the purpose of the Senator, by his amendment, that before any youth could be admitted in this program the administrator would have to make an affirmative finding that he was a youngster of good character?

Mr. GOLDWATER. No. That would not be a universal requirement. If the administrator had some doubt, he could take that into consideration. He might interview the boy and then say, "Something bothers me about this boy. I think I had better look into it more." Then he would have the right to do so.

The only thing I am trying to do is to establish that "good character" will be a part of the determination. As I said earlier, although there are a large number of juvenile delinquents in this country, I do not think this program is necessarily going to be flooded with them. I do not think what Dr. Hansen suggests necessarily is going to be adopted by similar officials across the country.

I merely wished to get back to the original language which was in the bill at the outset, which I think is good language. It is only binding on the Administrator when he has some doubt, and then he would have to take that factor into consideration.

Mr. GORE. Do I correctly understand the distinguished Senator to say that only in cases in which questions are raised, either by someone else or within the mind of the Administrator himself, would a determination of good character be necessary?

Mr. GOLDWATER. I think the Senator has stated it properly.

Mr. GORE. I withdraw my objection.

Mr. GOLDWATER. I wish to give one quick example.

Let us assume that this language is not provided, and the Administrator takes in a boy the town knows to be bad. With the absence of the "good character" provision the Administrator would be pretty much bound to take anybody who might come along. This provision would merely say, "We have given you this backing, to use your judgment. If you like the boy, take him in. If not, take another look."

Mr. President, I do not believe there has been action on the amendment.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Arizona [Mr. GOLDWATER].

The amendment was agreed to.

Mr. GOLDWATER. Mr. President, I ask unanimous consent that there may be printed in the RECORD at this point table 20, "City Arrests by Age Groups, 1961," which appears in "Crime in the United States."

There being no objection, the table was ordered to be printed in the RECORD, as follows:

TABLE 20.—*City arrests by age groups, 1961*

[2,776 cities over 2,500, population 85,158,360]

Offense charged	Total	Age																	
		Under 15	15	16	17	18	19	20	21	22	23	24	25–29	30–34	35–39	40–44	45–49	50 and over	Not known

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. GOLDWATER. Mr. President, I call up my amendment No. 41 and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated for the information of the Senate.

The LEGISLATIVE CLERK. On page 41, line 12, after the word "enrollees" it is proposed to insert the following:

> by providing work experience and training in occupational skills for which the Secretary of Labor certifies an existing labor shortage.

Mr. GOLDWATER. Mr. President, the explanation of this amendment is very brief. It was discussed earlier today.

The "Statement of Purpose" set forth in titles I and II of the bill (sections 102 and 202) specifically asserts that the purpose of both programs is to increase the "employability" or "unemployed youths."

Despite persistent questioning during the hearing, the administration's spokesmen for the program—particularly the Secretary of Labor—were unable to inform the subcommittee what categories of labor shortages, what occupational skills in short supply, would be met by either of the programs. The best the Secretary of Labor could predict was that a tour of duty in the Corps would inculcate desirable work habits and discipline in the enrollees, thus making them more attractive as employees to potential employers.

In view of the purely speculative nature of the Secretary's prediction in the face of the unequivocal statement of purpose contained in the bill, I offer an amendment designed to assure that the projects established or expanded under title II are not mere boondoggles by requiring the Secretary of Labor to determine what skills are in short supply and to assist State and local projects which provide experience in such skills.

Earlier today I alluded to the fact that on March 24—I believe that is the correct date—in checking both the Washington Post and Times Herald and the Evening Star, I found in the morning newspaper 1,500 help-wanted advestisements and in the evening newspaper 1,100 help-wanted advertisements. The reason these jobs cannot be filled is simply that young people today do not have the necessary skills. As I mentioned earlier, the unskilled laborer is being replaced by automation. The boy we should worry about in the future and the boy we should worry about today must receive better training and skill. The problem is as simple as that.

I would ask that the Secretary of Labor keep close scrutiny on the whole process, to the end that we do not get into—I will not use the word "boondoggling," for that is an old word—programs which would not produce skilled workers. If one goes into the metropolitan centers on the west coast, where the aerospace industry is more or less concentrated, one would find not 1,500 ads, I dare say, but 5,000 help-wanted ads on every weekend in the classified ad section.

Mr. President, I am very hopeful that the Senator in charge of the bill will agree to accept this amendment. It would insure that the Secretary of Labor would keep a rather sharp eye on what is being done.

Mr. HUMPHREY. Mr. President, will the Senator yield?

Mr. GOLDWATER. I am happy to yield.

Mr. HUMPHREY. I should like to have a point of clarification in respect to the Senator's amendment.

Of course, the main purpose of the bill is employment. One of the other purposes of the bill, as the Senator well noted, is training, development of work habits, and development of certain skills or at least semiskills.

As I understand the intent of the Senator's amendment, it is to see that the enrollees at least develop toward employability, once they leave the camps, "by providing work experience and training in occupational skills." I believe that that part of the language, that far, is highly desirable.

There is one point which might cause some difficulty, and I ask for the Senator's tolerant consideration of this point. The amendment would require the Secretary to certify that there is an existing labor shortage at some particular time. This would mean a great deal of examination of an area or a region as to whether there was a labor shortage in a particular skill. It might well be, for example, that a young man might get some training which would be very helpful to him later in life, and with respect to which at the moment there might not be an existing labor shortage.

I think the standards the Senator would apply are desirable. If the Senator would give consideration to my suggestion, I would feel that the amendment was highly desirable. I suggest inserting on line 12, page 41, after the word "enrollees" the following: "by providing work experience and training in occupational skills."

Mr. GOLDWATER. I point out that the bill already so provides, if not by direct language, by inference.

Mr. HUMPHREY. Yes; the inference is there.

Mr. GOLDWATER. I do not want to be redundant, but the Secretary of Labor himself has testified this bill would not accomplish training in the skills that are needed.

Mr. HUMPHREY. That is highly questionable; is it not?

Mr. GOLDWATER. That is what he said. It may be highly questionable. At times persons in public life say things that are highly questionable. But the Secretary of Labor is charged with the preparation of unemployment figures, and he has at his fingertips knowledge of the skills in which there is a shortage of labor.

Let me give the Senator an example. No kind of training in the world is going to get a West Virginia coal miner, or the son of a coal miner, back to mining coal, but let us say that in the State of West Virginia, or Pennsylvania, or Minnesota, there is a shortage of good welders or men who understand the operation of machine tools. Instead, then, of teaching a boy about the problems of coal mining, which industry for the time being is pretty dead in this country, he is taught something by means of which at least he can go out in the labor field and demonstrate his skill.

All I am suggesting is that the Secretary of Labor keep a sort of overseer's eye on the situation, so as to preserve a proper balance.

Mr. HUMPHREY. I think that point is well made. The only difficult point is providing that the Secretary of Labor must certify an existing labor shortage. This is an administrative process which requires a good deal of examination of the labor shortage.

There may be a labor shortage this month, and not later, or vice versa. If the language were, "by providing work experience and training in occupational skills which the Secretary of Labor determines would be helpful to the labor market," or something along those lines, I think we would have standards that would be desirable. But it is proposed to have the Secretary certify that there is now an existing labor shortage, per se. I do not believe this program, in the 6 months' or 1 year's time which will be provided an enrollee, would necessarily develop a fully qualified welder in that period of time.

Mr. GOLDWATER. Nor do I. I am not asking the Secretary of Labor to do something that is going to be an added burden to him. I know the figures are available on almost a monthly basis on the skills in which there is a deficiency of labor. I do not propose, by this amendment, that every day there will be a certificate or edict from the Secretary of Labor that "tomorrow we must train 25 percent in this skill, or 35 percent in the other," but I suggest the meaning that the Secretary of Labor keep the administrators of the corps constantly appraised of the skills across the Nation in which there is a deficiency of labor.

Frankly, I think this proposal gets to the real meat of the proposal of the Senator from Minnesota. The Senator from Minnesota wants young people trained in skills that are needed in the employment field. The Secretary of Labor says there is no suggestion that this training program will qualify one of the enrollees for a skilled occupation.

I am merely asking the Secretary of Labor to sit in as a sort of umpire, as a sort of third base coach, so that if the enrollee heads for home from third base, he may be headed in the right direction and have the proper tools before he hits home plate.

Mr. HUMPHREY. I should like to consult with the Senator from Arizona on this question. The amendments the Senator from Arizona has offered have been helpful and thoughtful and have helped make the legislative history on this bill. The debate has been extremely helpful. For example, with reference to the good character reference, I am one of the Senators who thought it was a helpful proposal, particularly in light of the colloquy which took place.

I should like to make a suggestion, while discussing this question on the floor. What would the Senator think of having this language in his amendment: "by providing work experience and training in occupational skills or pursuits in classifications in which the Secretary of Labor finds there is reasonable expectation of employment"?

Mr. GOLDWATER. I find nothing wrong with that language.

Mr. HUMPHREY. It does what the Senator says he wants done.

Mr. GOLDWATER. That is exactly what I suggested needs to be done, and it does it in a way which removes the objection of the Senator from Minnesota to the word "certify," which has a stronger connotation than the word "finds." I am willing to modify the language in the way suggested by the Senator from Minnesota.

Mr. HUMPHREY. I will send the amendment to the desk. The modifying language reads:

> By providing work experience and training in occupational skills or pursuits in classifications in which the Secretary of Labor finds there is a reasonable expectation of employment.

Is that modifying language agreeable?

Mr. GOLDWATER. Mr. President, I ask that the language suggested by the Senator from Minnesota be substituted for the appropriate language in my amendment.

The PRESIDING OFFICER. The Senator has the right to modify his amendment.

The question is on agreeing to the amendment offered by the Senator from Arizona [Mr. GOLDWATER] as modified.

The amendment, as modified, was agreed to as follows:

> On page 41, line 12, after the word "enrollees," insert the following: "by providing work experience and training in occupational skills or pursuits in classifications in which the Secretary of Labor finds there is reasonable expectation of employment."

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. GOLDWATER. Mr. President, will the Senator be lenient with me and allow me to retain the floor technically while I consult with my attorney?

Mr. HUMPHREY. While the Senator from Arizona is doing that, let me say to the Senator from New Jersey [Mr. CASE] that I feel the observations he made with respect to the prior amendment on good character were very much to the point of what the original sponsor of the bill had in mind.

The Senator will recall that 4 years ago there was a discussion along this line in the Senate, and the phraseology was clarified. I wish to add my word, as one of the sponsors of this legislation, to the history which has been made.

Mr. GOLDWATER. I am very happy the Senator from Minnesota has made that statement.

I have no further amendments to offer. In closing, I wish to say that I hope, in the course of this Congress, we can really get at what I refer to as the guts of this problem. It is education. It is vocational education.

One reason why I like the proposal of the Senator from New Jersey, generally speaking, is that it offers a new avenue for dropouts. There were dropouts when I was in high school. There were dropouts when he was in high school. There will always be dropouts. I would like to see industrial high schools, manual arts high schools, and manual training high schools come back. We do not have to hand out degrees to every man, woman, and child in this country. That does not necessarily make them better educated. Give them a chance to follow the education they wish to follow during the 4 years of their lives devoted to that pursuit. In that way I think we can solve the problems of juvenile delinquency and unemployment to a remarkable degree.

I hope that in the coming days of this Congress we can enter into a serious discussion of the deficiencies of our educational system as it exists and our seeming refusal to recognize that not all young people want to go or can go to college.

I thank the Senator for his complimentary remarks. I am in sympathy with the objectives of the bill. I wish I could vote for the bill.

If it were not for title I in the bill, I think the Senator might find me marching down the aisle with him, arm in arm. He has at least planted a germ of thought in this body, and I hope it grows.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. KEATING. Mr. President, I send an amendment to the desk and ask the clerk to state it.

Mr. HUMPHREY. Mr. President, will the Senator yield to me for a moment?

Mr. KEATING. I yield.

Mr. HUMPHREY. Will the Senator agree to a limitation of time on his amendment?

Mr. KEATING. Five minutes would be satisfactory.

Mr. HUMPHREY. Mr. President, I understand it comes under the limitation of debate.

The PRESIDING OFFICER. The Senator is correct.

The amendment offered by the Senator from New York will be stated.

The LEGISLATIVE CLERK. It is proposed, on page 26, line 6, between the word "services" and the word "to", to insert the words "consisting of at least 10 hours of vocational training per week per enrollee in subjects other than those connected with conservation."

Mr. KEATING. Mr. President, the Senate has heard much debate about the need for vocational training of young people, and the various opportunities for continuing education under the provisions of this bill.

In fact, the bill does contain a number of phrases acknowledging the necessity of a program of vocational education in conjunction with work experience, and authorizing the Secretary of Labor to set up such a program in conjunction with State and local authorities. The language of the bill however, is neither mandatory nor explicit.

The distinguished Senator from Minnesota assured us, in a statement in this body on April 4, that at least 10 hours a week should be devoted to instruction in these conservation camps. I have searched this bill in vain looking for such a provision, and finding none I offer an amendment to require, under title I, at least 10 hours of vocational training a week to prepare these boys for useful work when they return to their homes. Further, my amendment provides that this instruction be in skills other than those connected with conservation. It may be a fine idea to work outdoors in the parks and forests for 2 years. The boys will get fresh air and sunshine, and, hopefully, will acquire good work habits and a sense of responsibility. Unfortunately however, speaking for my own State, there are very few jobs for conservationists in Queens, botanists in Brooklyn or timbermen in Troy. What we need is more appliance repairmen, more office workers and sales people, more auto mechanics, cooks, and more skilled workers.

I believe this amendment will provide realistic training for our young people in conjunction with conservation work experience and will better prepare them for work as useful citizens, contributing to their communities and their country, when they return home from the camps.

Mr. HUMPHREY. Mr. President, I have discussed this amendment with the Senator from Pennsylvania, and I discussed it earlier, of course, with the Senator from New York. I believe it is a worthy amendment. It would fulfill the objective of the legislation. Speaking for the Senator who is in charge of the bill and as one of its sponsors, I am happy to accept it.

Mr. KEATING. Mr. President, I yield back the remainder of my time.

Mr. HUMPHREY. I yield back the remainder of my time.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from New York [Mr. KEATING].

The amendment was agreed to.

Mr. FONG. Mr. President, the Youth Employment Act now under consideration by the Senate, numbered S. 1, is directed at one of the most vexing and serious problems facing the Nation's economy today: the unemployment of vast numbers of our young people.

It is indeed a baffling anomaly that in a Nation which undoubtedly enjoys the highest standards of living in the history of the world, and in a Nation which boasts one of the most comprehensive educational systems in the world, there are over half a million unemployed teenagers today—a figure, according to latest Government statistics, that represents an intolerably high rate of 15.6 percent of all youth in the labor market, a figure that is nearly three times the national average; a figure that represents over 10 percent of the jobless persons in the United States. In my own State, unemployment among youths 16 to 21 years old is 14.1 percent.

These figures become even more startling in view of Labor Department predictions that of the 26 million youngsters who enter the work force during the 1960's, 7.5 million will be high school dropouts who will be thus ill equipped for space-age work.

Moreover, new workers have swelled the labor force by 21 percent since World War II, but there was only a 17 percent increase in jobs.

Two years ago, 2.6 million Americans attained their 18th birthday. Two years from now the number reaching that age will be one-half more than that figure.

Simultaneous with this explosion of youth into the Nation's labor force during the 1960's will be the elimination of some 2.5 million jobs annually because of mechanization and automation, and a yearly loss of a million "entry" or low-level training jobs—the kind whereby young people matriculate in the work world.

We all know that young persons have a more difficult time competing for jobs when the economy is in a sluggish condition and that their problem is considerably aggravated by the failure of many to finish high school.

In today's labor market, unskilled jobs account for only 5 percent of all U.S. employment, and the number is steadily declining. In other words, to be able to get and hold good jobs, workers must have at least a high school education or be proficient at some skill.

Yet, at the critical dropout age, 16 to 17 years, almost 20 percent of the Nation's boys and girls were not enrolled in school. The comparable rate for my State is about 13 percent. The rate of high school dropouts on the national level has continued at high levels, despite a steady decline in jobs available to those without high school education, and despite the fact that the unemployment rate among dropouts is far higher than for high school graduates.

Each year there are about 750,000 to 800,000 teenagers who drop out of high school, 3 to 4 out of every 10 students. In vocational schools the figure is higher still—2 out of 3.

The consequences of this are not hard to predict: for example, of the 350,000 high school dropouts between January and October 1961, 27 percent were jobless in the fall of 1961, compared with 18 percent of those who finished high school.

These figures show that we are faced with a momentous educational challenge to school, retrain, and prepare these youngsters for gainful employment.

This measure represents only a modest beginning, but nonetheless a beginning, and a step in the right direction to tackle what the President called America's No. 1 economic problem, our high level of unemployment.

S. 1 is designed to somewhat alleviate the unemployment of young people by giving jobs and training to them, so that their employability may eventually be increased.

Under the bill, 75,000 youths 16 to 22 years old will be enrolled in the next year—and perhaps thousands more in the 5 years scheduled for the program—to work on public service projects in their own States and local communities, and on national projects to preserve our natural resources.

What results can we expect to see, if this measure is enacted?

First, youth employment enrollees will acquire a wide array of skills from their on-the-job work experiences, as well as from vocational schooling on which the bill places special emphasis. Many will also be able to complete their basic high school education.

It is hoped that the acquisition of these skills and the experience on these jobs will enhance the future employability of the enrollees.

Second, the nature of youth employment work projects is designed to help build reliable, dependable, and mature work habits which form the basis of any successful employment experience.

The enrollees in the programs will be trained to self-discipline and will learn some of life's valuable lessons of the meaning of work and of give-and-take living.

Third, the work to be performed under the act's programs covers a broad field of services valuable to the Nation and to the many communities in which they are performed.

They will perform services in our hospitals, libraries, playgrounds, and other welfare activities; in eliminating blight from our burgeoning urban complexes; and in preserving our vast acreages of national wildlife reservations, watersheds and forests, outdoor recreation facilities, and other conservation projects.

The bill calls for an initial appropriation of $100 million for fiscal 1963, a pilot year which may be expanded 4 additional years into 1968.

While it is true that our large national debt and our shaky economic condition render many Federal programs ill-advised at this time, the youth employment bill is a proposal which deserves high priority.

Even with the millions of dollars in matching funds the States must provide under the bill, the measure is not designed to wipe out, or even put a small dent in our intolerably high unemployment rate. My own State stands to benefit, according to Labor Department estimates, only to the extent of 60 boys under the conservation programs and $200,000 under the State and community youth employment programs. Mr. President, I will vote for this measure for the proposal is a start in the right direction to conserve primarily our youth and, in so doing, conserve our national resources and serve our communities.

Mr. PROUTY. Mr. President, on behalf of the junior Senator from Iowa [Mr. Miller], the Senator from New York [Mr. Keating], and myself, I send to the desk an amendment and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated.

The Legislative Clerk. On page 31, after line 8, it is proposed to insert the following new subsection:

> (e) Notwithstanding any other provisions of this title construction which has traditionally been performed by construction trades workers shall continue to be contracted out for construction by such workers.

Mr. PROUTY. Mr. President, during his testimony in 1961, Pat Brown, the Governor of California, indicated some of the projects that a youth employment program could work on in California. He listed among others the following types of work: first, construction of fences on State property; second, development of campsites; and third, construction and maintenance of roads involving bulldozer operations, and so forth.

Now, if Governor Brown is right in his belief that the youth program will be used for road projects involving construction and maintenance, then we are going to find that in approving this bill we are taking jobs away from older men with families.

On an annual basis, some of the highest unemployment rates are in the construction industry and if the committee reported youth bill takes jobs away from older construction workers, the present situation will get worse instead of better.

Andrew Biemiller, representing the AFL–CIO, had this to say about the problem in 1961:

> We would like to urge, however, that the legislation make clear that work performed by these young men should not be permitted to create greater unemployment for others.

Now I have read title I very carefully, and I find in it no safeguards which would prevent the Youth Corps from usurping road construction work normally performed by breadwinners with families.

As Mr. Biemiller stated:

> Road construction which has traditionally been performed by construction trades workers should continue to be contracted out.
